The Journal.

Man, know thyself. All wisdom centers there; To none man seems ignoble, but to man.—Young.

MADAME ADELAIDE RISTORI.

So long as Shakspeare, Goldsmith, Corneille, Goethe, Schiller, Racine, and other dramatists are so universally read—so long as the human mind seeks entertainments and amusements—so long as man possesses a love for music, poetry, and oratory—so long as he possesses imitation, sympathy, affection, and love of art, so long will the theater, the opera, and the concert occupy a place in society. That there is any necessary connection between the drama and a low lewd life, we do not admit; but it is palpable that the theater, as conducted at the present day, almost everywhere, caters to *perverted* human nature. Contemplate the lascivious after-pieces, with their vulgar, bawdy, *double entendres*. Look at the ballet-dancers, with their immodest dresses and still more immodest gestures. Listen to the vulgar slang of the half-drunken clown. Lop off the excrescences, weed out the worthless parts, and what

PORTRAIT OF MADAME ADELAIDE RISTORI, MARCHIONESS CAPRANICA DEL GRILEN.

would be left on the common theatrical stage? Happily, now and then a moral, intellectual, and refined person, one who would do honor in any or every sphere of life, is to be found reflecting honor and sun-like radiance upon an otherwise decaying profession. We could name other ladies besides Madame Ristori who are believed to be of this description. But of the thousands who strut and blurt upon the boards, alas, how few there are who are not sadly perverted and hopelessly low! We say hopeless, knowing how strong the tendency downward is to those who are surrounded and impelled by such contaminating influences as pervade our play-houses. Look at the men play-actors. Who and what are they? Bloats, the majority of them. But this is not the place for a review of the theater. Let us look at Ristori.

Behold a woman! Not a weakly, effeminate, helpless, sickly apology of a woman, but a vigorous, healthy woman of mature years. Aside from her art, aside from her education and acquirements, taken simply as a human being, she is a rare specimen of an actress.

First, she is well; free from aches and pains. There is no whining, complaining, or unnecessary fault-finding. Her vital powers are ample—a good stomach, large heart, ample lungs. Being healthy, kindly, and loving, she is in feeling, hopeful, youthful, and joyous. The general make-up is symmetrical—in body, brain, and feature.

The brain is somewhat above the average in size, but the body is sufficient to support it, and its contour is at once shapely and womanly. Instead of rising prominently at the crown, which is peculiar to most men, her head is highest in the region of Benevolence and in Veneration. That is a fine top-head; the organs in the moral and spiritual group are prominent. The social group, comprising friendship, love of children, of friends, of home, and of husband, is well evinced, precisely as it should be in a woman.

The features, particularly from the nose up, are evidently like those of her father, whom she, no doubt, most resembles, and they seem to be massive and slightly masculine. Observe the very prominent nose, with something of the Roman in it, yet not enough to indicate belligerency. Observe the full and ample chin, the full lips and mouth, indicating vigor, strength, and affection. How prominently and evenly developed the entire forehead! Then note how well set and expressive the eye. It looks as though there were something above and behind it; and though the features be in perfect repose, such an eye would reveal the strong character of which it is the instrument. The head is broad at the temples between the ears, through Ideality, Constructiveness, and Sublimity, while Time, Tune, and Order are prominent. See how conspicuous the brow at Individuality, Size, Weight, Color, and Comparison! What a face to cut in marble! Ristori has been true to nature and herself. Her parentage, birth, education, and training have all been in the line of life she now leads, con-

sequently there is a oneness in both organization and character such as we seldom meet, and there is a pointedness and concentration of mind and spirit which make her what she is—the queen of the drama. The following biographical sketch must conclude our description of this gifted lady, whom weak and foolish people idolize.

BIOGRAPHY.

Madame Adelaide Ristori, Marchioness Capranica del Grillo, was born in 1826 at Civita di Friuli, which is on the border of northern Italy, between Venetia and Lombardy. Her parents were poor, and attached to a company of traveling comedians, called the Cavichi troupe. Her first appearance on the stage was at the very early age of two months, when she was introduced in a basket, in a play entitled "New Year's Gifts." In her fourth year she commenced to take child's parts, which she continued to do until twelve years of age, when the celebrated actor and director Moncalvo engaged her for *soubrette rôles*, under whose managership she made her first appearance, in 1840, as "Francesca di Rimini," in which character she achieved her first success and decided her future life.

Mademoiselle Ristori then abandoned her wandering life, and joined a theatrical company playing under the especial patronage of the King of Sardinia (Charles Albert, the father of the present king), under the directorship of Gaetano Bazzi, and with the advice and assistance of an admirable actress and estimable woman, Madame Carlotta Marchiona, under whose guidance she progressed rapidly.

In 1844, while at the theater of Livourne, Leghorn, Ristori may be said to have really commenced to establish her reputation in those wonderful creations which are now inseparably connected with her name as an accomplished actress. Henceforth her course was upward and onward to success.

In 1846, however, a marked epoch in Mademoiselle Ristori's life occurred. The Marquis Capranica del Grillo, the heir to one of the noblest Roman ducal families, became infatuated with the pretty young actress, and their marriage was solemnized shortly afterward. But the young heir had not obtained the consent of his parents to a match which they considered far below his station, and the consequence was a temporary estrangement between the families, which, happily, was soon restored. For a time succeeding her marriage Ristori withdrew from the stage, but returned to it as a tragic actress. Her success as a tragedian was not won in a single day. At first her impersonations in this new rôle were not very successful, but she studied to overcome the obstacles in her way, and at last was rewarded with a complete triumph, which was accorded for the first time on the occasion of her appearance in the character of "Francesca di Rimini," at the Italian opera-house in Paris, on the occasion of the opening of the *Exposition Universelle* in May, 1855. The audience that greeted the début was not a very large

one; but by chance Alexander Dumas, Eugene Scribe, and Jules Janin were present. On the next day the former wrote: "Last night I was at the representation of 'Francesca di Rimini' at the Salle Ventadour. I looked around the theater, but did not see Rachel. I beg that she will go and see how the death-scene is performed." M. Scribe called immediately on Ristori, and, in her absence, left his card, on which he inscribed: "Eugene Scribe, in acknowledgment of his admiration for Madame Ristori, and with thanks for the great pleasure he experienced last night." Jules Janin was the most enthusiastic in her favor. "Ristori, Ristori!" he wrote, "she is the rage of the day! She is tragedy itself. She is comedy itself. She is the drama. She reigns—she governs—she commands, and the crowd obeys." Her next appearance before a Parisian audience was in the more difficult part of "Myrrha"—a part in which the actress, as the impersonation of unnatural crime, has very little of the sympathy of the audience. But Ristori, true to the Grecian ideal, represented the guilty heroine as beautiful, with a dignity and grandeur almost divine, though the victim of unalterable fate. Her success was immense. The situation which she represented was one which is so common in Grecian tragedies—in which is portrayed the conflict of the heart as moved by human impulses, and the will as subject to destiny. She was no less successful as Mary Stuart, a character in which she was subject to comparison with other artists who had made the part peculiarly their own. But she created a new Mary Stuart, and her identity with the character was most complete.

The first season ended on the 10th of September. She gave thirty-six performances, the gross receipts of which amounted to half a million of francs. This success was so gratifying that she secured the theater for the three following years. During her residence in Paris she was the recipient of many generous testimonials of the estimation in which she was held by the most enlightened artists and literati of the country.

Ristori has met with the greatest success in England, Spain, Germany, and Russia, and her arrival in this country naturally excited great expectations. Her first appearance on the American stage was made on Thursday evening, the 20th of September, in the rôle of *Medea*, and her début was a perfect ovation. She has since made her appearance in the characters of Judith, Elizabeth, Francesca di Rimini, Phædre, Myrrha, Adrienne Lecouvreur, Mary Stuart, Deborah, Lady Macbeth, Bianca, Norma, and Semiramis, all with the greatest success.

The character of *Medea*, in which Ristori made her first appearance in this city, was a part refused by Rachel; but Ristori was so successful in this part, that the author of the play, M. Legouve, wrote in her album, "Rachel killed me; you have restored me to life."

Ristori has led an unblemished private life. Not even the breath of scandal has ever been raised against her. She is the mother of two interesting children, and is universally esteemed as a woman of piety and of generous instincts.

Madame Ristori is about five feet five inches in height, well formed, and compactly built, yet with that delicacy of complexion which one usually finds associated with elevation of mind and excellence of character. Her eyes are dark, soft, and subdued naturally, although when under the inspiration of tragic representation they glow with all the intensity of passionate emotion. Off the stage, she appears the quiet, dignified, courteous, yet modest and unassuming woman. The adulation received wherever she has favored an audience with her unsurpassed personations, has failed to render her vain or in the least degree pompous.

ONCE MORE—WHAT IS EDUCATION?

BY HON. JOHN NEAL.

Is *that* education which unfits a man for the business of life? that which breaks down his health and obliges him to become a teacher or a professor, that he may propagate error, and perpetuate the very system, whereby he has become emasculated?

Is *that* education, which, under the name of accomplishment, enfeebles the understanding, dissipates the time, and interferes continually with more serious occupation? Let us have embellishment, if you will—we need it, every hour and at every turn; let us have accomplishment, by all means, taking care that we do not misunderstand it for the business of life; unless we mean to be musicians or drawing-masters, linguists or riding-masters, professionally, which is making it a business, and a business worth following. In other words, as we can not hope to learn everything, or to be accomplished in everything, let us choose that for which we have most inclination, the inclination being almost always the evidence of inherent natural aptitude.

"Are you not ashamed to play so well?" said Philip to Alexander, on hearing him blow the flute like a master. And the same question, substantially, might be propounded to many of the accomplished around us, who, with something better to do, have wasted their time upon trifles, not for exercise, not for the wholesome purpose of recreation—as Dr. Beecher split wood or fiddled, or Jeremy Bentham played the organ, or John Pierpont turned little ivory boxes—not with a due regard to the proportions that should always be taken into view, between one study and another, or one amusement and another, when we consider that we have only so much time allowed us here; that every breath, every pulsation, is counted and predetermined for us, and that, inasmuch as we can not hope to be omniscient, whatever may be our inclinations or advantages, we should be satisfied with reasonable acquisitions.

It often happens that we ourselves do not know what we are good for. How, then, are others to know? Ask Phrenology.

Most men have to go through a long course of blundering experiment, only to be disappointed, baffled, and humiliated at every change, while the few, the very few, with a strong decided proclivity, launch into the very career a phrenologist would have recommended.

SELF-KNOWLEDGE NECESSARY TO A CHOICE.

We are to choose for ourselves among all the arts and sciences, and all the accomplishments of life; and choose at our peril, or life is a failure, if not altogether, at least so far as we have misapplied our faculties and our time.

How important, therefore, that we should understand ourselves; that we should know just what we are capable of, and what we are good for. And the sooner the better.

But how are we to know this? By interrogating Phrenology and Physiognomy, through the priesthood of these two sciences, and by studying *ourselves*, in the light of their experience. I know of no other way.

EDUCATED FOR AN EMERGENCY.

There is a story in the old "American Preceptor," or in "Webster's Third Part," I forget which, not having seen either for sixty years, which may serve the purpose of illustration. A vessel was wrecked upon some island inhabited by savages, with a terrible

reputation. A boat's crew and a few passengers reached the shore—I give the substance of the story, and only from recollection, without remembering the words. The savages gathered about them with fierce countenances and lifted spears; and having made prisoners of the whole party, among whom were scholars, and naturalists, and learned men, were holding a consultation together in a low voice, with gestures and looks not to be misunderstood. At this moment, a poor basket-maker, who happened to be among them, and who saw that they had no time to lose, if they hoped to conciliate the savages, began to make signs, which arrested their attention. First touching his head, then pointing to theirs, and then at a growth of tall sedge not far off—he signified his desire to gather some of it. Curious to see what he wanted to do, they signified their assent, and he soon gathered an armful of the flags, out of which he wove a tall showy cap, like a helmet, and placed it upon the head of the chief personage. He was delighted, and his followers were half crazy to see their leader crowned so adroitly, and so suddenly. The consequence was, that all the others, little and big, male and female, insisted on being capped and plumed in the same way. The basket-maker had his hands full. But what became of the others? of the scholars, and learned men, the sailors, and the naturalist? They were all spared for the sake of the poor basket-maker, who persuaded their captors that only a particular kind of sedge would answer his purpose, and that it would take all their time to hunt it up, if the manufacture was to be encouraged, and all the tribe furnished with caps. I dare say the story as I tell it now may be somewhat embellished, but as I have said before, it is the substance I am after, when I ask which of all this large party was the *educated* man? Of what use to all the others was all their learning and all their experience? By happening to understand the business of basket-making, the uneducated basket-maker, who it may well be supposed could neither read nor write, was able to save not only his own life, but the lives of all the rest. So far, then, was he not the only *educated* man of the whole?—educated, that is, for the emergency that had occurred.

Do not understand me to recommend the business of basket-making to everybody, without regard to his inclinations or aptitude; or the amusement of basket-making, to the overtasked theologian or professional man. No, indeed—not I—I should as soon think of recommending Latin and Greek, or the mathematics to everybody, either as a business, or by way of recreation. Of course, too, it will be seen at once that, under different circumstances, any of the others, even the sailors, might turn out to be the *educated*, and the only educated persons among those castaways.

ADVANTAGES OF MECHANICAL TRADE.

Another little anecdote, and we shall be prepared for a definition, and then, perhaps, the question propounded at the outset will have answered itself.

A vessel was captured by the Algerines and carried into port. On the prisoners being paraded before the Dey, they were severally questioned about their past lives and their occupations.

One was a sailmaker. The Dey ordered him off to the dockyard. Another was a cook, "Away with him to the bakery!" said His Highness; another was a carpenter, another a shoemaker, each of whom was instantly provided for. At last they came to a pale, cadaverous-looking body, who, when questioned as to what he was good for, answered that his pursuits were *sedentary*. "What kind of business is that?" said the Dey. On being answered through the interpreter or dragoman, that he made books, and wrote magazine sto-

ries for a living, the Dey ordered him a pair of feather breeches and set him to hatching chickens.

Of course, I shall not be understood to mean that everybody should learn everything, or that our unhappy author's education was neglected because he did not understand sail-making, nor the business of a pastry cook, nor that of a carpenter, or a shoemaker; I only mean to ask if, on the whole, a definition may not be supposed, and honestly accepted, whereby all the rest of the party might be shown to be educated men, while the book-wright was, for the time being at least, the *uneducated*?

THE DEFINITION.

To the question, therefore, which has been reiterated two or three times already, "What is education?" I answer, *that only is education which best fits a man for the discharge of all his duties in life, his duty to God, to his fellow-men, and to himself.*

Tried by this standard, how little is there of education among those who are called the educated! How little they know of themselves, how little of others, how much less of what may be regarded as the business of life, whereby children are to be trained, families provided for, and a worthy inheritance bequeathed to coming ages! What dreadful mistakes are made by having our business, our studies, and our opinions chosen for us, so that the professions are over-crowded, and ambitious young men are satisfied with being lawyers, or politicians, or doctors, or preachers, not because they have now, or ever had, a predilection for either pursuit, but because they are fitted for nothing else, want to be genteel and fashionable, and are, on the whole, rather proud of their helplessness, and small feet and dainty hands, and are not ashamed of being paupers—family paupers, at the best.

HOW TO CHOOSE A PURSUIT.

These considerations have now brought us to another stage of our inquiry. As we can not learn everything, and are not always able to choose for ourselves—to choose wisely, I mean—what are we to do, that our faculties may not run to waste? that our talents, whether many or few, may not be buried in a napkin, only to be reproduced at the Great Day, when to have been "too late" will bring down upon our heads a retribution too terrible to be thought of.

I answer. We are to study ourselves; and as I have said before, by the acknowledged lights of Phrenology and Physiognomy. Let us beware of undertaking too much. One step at a time is always enough; and one thing at a time, if by *thing* we may understand serious occupation, such as may be long continued, and is fitted by the elective affinities to link itself with other cognate pursuits, like parts of a dislocated map, till the student becomes a cyclopedia for himself, by a sort of spontaneous growth—supposing always that he does no violence to his own predilections, and is faithful to the suggestions of his understanding and conscience.

A MODEL SCHOOL.

And here let me give another very brief illustration. About five and forty years ago, Mr. Hill, an English barrister, son of the celebrated Rowland Hill, and the originator of cheap postage, set up a school at Bruze Castle, in England, where the scholars were encouraged to sit in judgment on themselves, and to govern themselves as a community. Though everything was taught which was deemed indispensable and gentlemanly, at Harrow and Eton and other like institutions, there was no *forcing*, and no exclusive standard of scholarship. A young man was not obliged to be either a mathematician or a blockhead, as at

Yale, where John Pierpont himself passed for a nobody, because he fell behind with his demonstrations, or at West Point, or at the Naval Academy, as well as at Cambridge and Oxford, where not to be a mathematician was to be unfitted for all the best business of life, yet, under another aspect, almost everything was taught; for in addition to their common school studies, which, of course, were to be pursued without much reference to aptitude or inclination, the boys were encouraged to try their hands, out of school hours, upon anything they had a fancy for.

Some betook themselves to whittling, and made kites, and cross-bows, built houses and boats; others to drawing or modeling in clay; others to dancing, or swimming, or rowing, and so on, till it was found, first, that there were no idlers; next, that constitutional preferences were continually declaring themselves, in a way not to be misunderstood; and thirdly, that in all these different occupations there was a continual reaching after the unattainable—in other words, after excellence, and a rivalry so generous, that every boy in the school seemed to share in the triumph of his companions, whatever might be the nature of their achievements. There seemed to be little or no jealousy, or heart-burning; but inasmuch, as even the dullest and slowest were always found to be good for something, and often capable of doing, in some way, what many of the brightest and cleverest could not do, all were encouraged and strengthened into self-respect and self-reliance.

PHRENOLOGY APPLIED UNAWARES.

Here we have the great leading principles of Phrenology reduced to practice; and that *unintentionally*, by a man, who, with all his vast comprehensiveness and foresight, had never made himself acquainted with Phrenology, or, at any rate, who had no idea of working out the great problems involved in that science, at Bruce Castle. And yet he did all this—and most effectually, so that the demonstration, though quite overlooked at the time, was complete and satisfactory to all who had made themselves acquainted with the system.

But how did he manage to stifle the instincts of jealousy, and to bring about such a feeling of brotherhood? *Simply by having many standards of excellence, instead of one.*

For example. The boy who wrote Latin verses would receive a certificate with a number upon it, corresponding to the degree of excellence. Another would have a similar certificate for good behavior, for reading, writing, or arithmetic; another for boat-building, another for playing the flute, another for gymnastics, etc., etc.

At the end of a month, all these items were added together, and as it was quite certain that no scholar would carry off the prizes in morals and manners, in languages and mathematics, in horsemanship and rowing, every one had a chance of being first in something; and as a matter of fact, almost every one proved to be first in something—if it were only at cricket, or in manifestations of bodily strength, or swiftness of foot.

Superadded to all this, however, was a system of self-government, which contributed to the growth of their conscientiousness and self-respect day by day.

Courses of inquiry were organized; judges or advocates and prosecutors appointed—or chosen, rather—and all offenses against morals or manners, or against what was understood as the common law of the school, were patiently tried, and upon conviction, the parties were fined, and the fines were deducted from the merit marks of the month or quarter, according to circumstances.

This beautiful system—so wise in itself, and so satisfactory in its results, year after year, has

been suffered to die out, probably on account of the death or absence of the originator. But something of its inherent vitality may still exist there as here.

THE ROUND-HILL SCHOOL.

It was introduced at Round Hill in this country, and the book, which the Messrs. Hills (brothers) published, giving the details of their system, ought to be in the hands of all our reformers and philanthropists, for the authors gave me two or three hundred copies for distribution, which I sent home while I was in England and had scattered "broadcast," as Mr. Everett would say, East, West, North, and South, all over the land.

But the Round-Hill Institution is no more; and although it did wonders for a time, I have had no opportunity of verifying there what I know happened over sea; nor do I know how much of the system was adopted, nor whether it was abandoned or improved upon here. But this I do know—that the Bruce Castle system ought to be substantially the groundwork of all our school education, from the lowest to the highest; for in no other way can the youth of our present generation ever become acquainted with themselves, before they are old enough to study Phrenology—or Physiognomy, which, after all, includes Phrenology so far as its external evidences are concerned, and lies within reach of all, without much regard to their ages, or qualifications, or opportunities.

THE INEVITABLE RECOURSE.

But if all our institutions of learning are so pitifully deficient; if our systems of education are so preposterous, and if there is no such school now upon the face of the earth as the Hills established at Bruce Castle—what are we to do?

We are to try our hands at *self-education*. But how?

In the first place, we are to make up our minds—we are to satisfy ourselves, once for all, about the meaning of the word *education*. Would it be education for a fisherman to be familiar with Latin, or Greek, or Hebrew? or with the laws of versification? If he were a whaler, to be sure, with a plenty of leisure and a long voyage before him, he might be encouraged—or if not encouraged, allowed—to study Hebrew or logarithms, if he had a fancy for either; provided, nevertheless, that he had first learned all that would be a help to him in the business of whale-fishing—navigation, for example, geography, and the relation of demand and supply, at least of spermaceti, in all the markets of the world; just as Elihu Burritt, the learned blacksmith, might be indulged in studying fifteen or twenty different languages, after he had learnt all that could be of use to him in shoeing horses or tiring wheels—so long as he stuck to the forge and anvil. Or how much advantage would it be to a shoemaker to write poetry, to the neglect of his proper business, like Robert Bloomfield? And yet, if he had leisure, and a sincere relish for poetry, like Hogg, the Ettrick shepherd, why should he not be encouraged? It might prolong his life, and make him a better shoemaker, by making him a happier man. We are to cultivate *all* our faculties, we are to cherish all our wholesome propensities, *if we can*, that is, if we have time for such self-indulgence, without sacrificing higher purposes. Otherwise, we are to subordinate even our aptitudes and preferences to the great business of life.

SOUND COUNSEL.

2ndly. We are to get introduced to ourselves, by studying Phrenology to begin with. But how?

If you happen to find yourself in New York, drop into Fowler & Wells, and get a chart of your character; buy a phrenological cast of the

life-size, with the organs carefully-marked and the groups colored, if such a thing is to be had.

3rdly. You must have a copy of the "New Physiognomy," by S. R. Wells, and study it carefully—I do not say *read* it—for the same reason that I would not say *read* a treatise on fluxions; but I say, *study* it carefully and patiently.

4thly. Subscribe for the PHRENOLOGICAL JOURNAL, and read it every month. This will keep you prepared, or booked up, as they have it on 'change, for whatever new discoveries may be made.

5thly. If you can not afford all this, even for so worthy an object as self-education, or if your circumstances will not allow you to visit New York, then go to the best practical phrenologist you can hear of, and get your head examined, and then call together two or three friends who may be disposed to put themselves in training, and send for the book and the JOURNAL, by mutual contribution. After which, you will soon find out what you are capable of, and may act accordingly. For your encouragement, allow me to mention a little circumstance which occurred more than forty years ago. I had an examination, by Deville, of the Strand, London, who told me that I wanted firmness, or, rather, that the organ of Firmness was deficient, or undeveloped. Nobody had ever suspected this before. I had often shown great firmness, and was even thought obstinate by some of my dearest friends. Nevertheless, I knew better; I had always had my misgivings, when great perseverance was called for, though I often persisted, under the most discouraging circumstances, till there were those who thought they knew me best, who used to say that one might as well undertake to turn the sun from its course with a straw, as me from any purpose I had once deliberately entered upon. And yet, if Deville was to be believed—if Phrenology was true, I wanted *firmness*! Deville was right! My perseverance was owing to the action of other organs—to self-esteem—to approbation—to the dread I had of myself; for I distrusted myself; I knew my own weakness, and often persevered, long after I wanted to give up, just as I have struck a bully when I felt pale and my teeth almost chattered, because I had not a tenth part of the personal courage that others gave me credit for, when, as a matter of fact, I was afraid of myself—afraid to be magnanimous, lest, upon after self-examination, I might find that my forbearance had been cowardice. And what has been the result? At this moment I have a large development of Firmness, a bunch half the size of a pigeon's egg, just where Deville found a smooth, plain surface, at the time I speak of.

But enough; what I have said about your JOURNAL, and about Mr. Wells's book, must have taken you by surprise; but knowing what I do, and believing what I do, I could not withhold what I believe to be the only means within reach for those who desire to educate themselves in the best possible way, in the shortest possible time, and the least possible cost.

Conclusion of the whole. Bear in mind, 1stly that what our young people are now, that will our country be, after a few years. Hence their duty.

2dly. That most people spend the greater part of their lives in a course of blundering, hazardous, and costly experiment, while trying to find out what they are good for—in other words, *what they are capable of*.

3dly. That if we would know the truth of ourselves, we must interrogate Phrenology, and follow out her teachings, as we would a course of religious training, after we had once become satisfied of the truth. And,

4thly. That the more we do, the more we may. Q. E. D.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless inner sight;
Lovely, but solemn it arose,
Unfolding what no more might close.—Mrs. Hemans.

THE MIND.

Within the brain lie mighty powers,
If rightly used on earth,
Which the immortal soul endows
With an imperial worth.

But if perverted be those powers
To weak and selfish ends,
'Twere better for this world of ours
If thou hadst never been.

Bridle thy selfish, sinful thoughts,
And tightly hold the rein,
For earnest zeal and faithful prayer
The wildest passions tame.

High in the dome is prayer and faith,
Should they not guide the soul?
While Conscientiousness holds place,
Each organ to control.

MARY E. B.

OBEYING A PRESENTIMENT.

A YOUNG lawyer, who had chambers in the Temple, had a nodding acquaintance with an old gentleman living on the same staircase. The old man was a wealthy old bachelor, and had a place in the country, to which he went for a week every Easter. His servants had charge of the place while he was away—an old married couple who had lived with him for twenty-seven years, and were types of the fine old English domestic. One Easter Tuesday the young lawyer was astonished to find the old gentleman on his Temple staircase, and made some remark about it. The old man asked him into his room, and said he had received a fearful shock. He had gone down, as usual, to his country place, had been received with intense cordiality, had found his dinner cooked to perfection, and everything as it had been from the beginning. When the cloth was removed, his faithful butler put his bottle of port on the table, and made the customary inquiries about master's health, hoped master was not fatigued by the journey, had enjoyed his cutlet, and so on. The old gentleman was left alone, his hand was on the neck of the bottle of port, when it suddenly flashed across his mind, "Here I am, a lonely old man; no one cares for me: there is no one here to help me if anything should happen to me. What if my old servant and his wife have been cheating and robbing me all this time? What if they want to get rid of me and have poisoned this bottle of wine?" The idea took hold of him so strongly that he could not touch his port. When the man came in again, he said he did not feel well, would have a cup of tea; no, he would have a glass of water and go to bed. In the morning he rang his bell, but no one answered. He got up, found his way down stairs; the house was empty—his two faithful old servants had vanished. And when he came to look further,

he found that his cellar, which ought to have contained two or three thousand pounds' worth of wine, was empty, and the bottle they had brought him the last night *was* poisoned.—*London Cornhill Magazine.*

MAN, THE FREE AGENT!

"THE world is what we make it." Each one of its denizens has to a great extent his destiny in his own hands. Fate is but a relic of heathenism, cherished by some in these days of metaphysical enlightenment. We can, if we will, control our own circumstances, and we do. There are men who say that they are *obliged* to do this or that by the mere force of concurrent events, and that it is impossible to avoid a particular result. In one respect, this is a virtual rejection of a great principle of human being—man's free agency. To say, "I am a creature of circumstance," is substantially declaring myself a feather in the breeze—a cork in the stream—a machine—a mere walking and talking automaton. It is to declare myself an irresponsible entity, a slave of fate. Away with such reflections—they are unworthy of a man! No, there is no man sunk so low in moral depravity, so hemmed in by brutalizing surroundings, who does not arrogate to himself individuality of opinion, individuality of interest, and a certain degree of independence of action. This would be best manifested by the attempt to restrict his liberty of action, or to convince him of weakness and servility. Go to the thief in prison and say to him, "Poor fellow, you are here by the absolute concurrence of events." He will answer, "Get out! I am here for stealing a thousand dollars, which I preferred to take in that way rather than to earn it by honest effort." The whole Scripture record, from Genesis to Revelation, abounds with evidences both illustrative and argumentative of man's free agency; the Spirit of God is given man, when he has made choice of the good, to aid him in carrying out his resolution. Man is held accountable for his acts, by his Maker, only on the ground of his individual will, and it is only so that he could be held responsible by a just God. Reason and Revelation are here in perfect correspondence.

Apart from the sphere of religion, men universally acknowledge their independence of choice. We daily hear men saying, "If I had done so and so, as I had opportunity, instead of doing as I have done, I would have secured such and such results;" thus perceiving and testifying to the freedom of choice which they possess. We at times hesitate long on the threshold of some undertaking, which we deem important, before coming to a determination, feeling that we hold results in our hands; and if our election is unfortunate in the results obtained, our intelligence does not suggest to us that Providence is against us, but that our failure is attributable to some carelessness or

oversight on our own part. Providence is against nobody. God and nature fight only against those who take up arms against God and nature, and refuse to be governed by the laws which regulate the universe. St. James enunciates this idea when he says, "Let no man say when he is tempted, I am tempted of God; for God can not be tempted with evil, neither tempteth he any man, but every man is tempted when he is drawn away of *his own lust* and enticed." This of *his own lust* indicates the man's individuality of action. Things in nature, as ascertained by man, work by fixed laws, and can it be that man, the noblest work of God, is less considered than the mere herb or beast? Our reason and our experience indignantly answer No! We are conscious of the ability to attain to a higher degree of happiness than our present condition recognizes; and that by a closer conformity to the apparent rules and regulations which govern human being. We are not surprised when informed that this or that man is healthy and vigorous, when we know he is judicious in the choice of his food and prudent in his mental and physical exercises. To be healthy, we must live healthfully, avoiding extremes in all things. As with the physical man, so with the spiritual man. There will be health and vigor of mind and spirit in proportion as we observe the laws which govern *spiritual* being. To obtain a knowledge of these laws, we must study the Book of revelation and the book of nature, the former especially, and cull therefrom what is "written for our learning."

H. S. D.

VENTILATING A CAR.—Prof. Hamilton, the horse tamer, of Hagerstown, Indiana, is an original genius, and as fond of a joke as he is of fresh air. The other day on the train going home from Cincinnati, he tried to raise a window in the car where he was sitting, and could not move it. He called the conductor to assist him, but with no better result. Instantly he knocked the pane of glass out with his cane, saying, "Now we will have a little fresh air." "Sir," said the conductor, "you must pay for that." "How much?" asked the professor. "One dollar," answered the conductor. Prof. Hamilton passed him a two dollar bill. The conductor was about to hand back a dollar in change, when the cool tamer of wild animals quietly said: "Never mind, I'll take another pane," and with another stroke of his cane let God's atmosphere in through a second window. "Well," exclaimed the conductor, "you can't have any more at that price. It's not first cost."

[In the present improved modes of constructing railway carriages there would seem to be little to complain of. The facilities for ventilation certainly appear sufficient, but the trouble generally is, that after a car has been running a little while, the ventilating apparatus becomes unmanageable. To obtain a breath of fresh, cool air for oneself and our panting fellow-travelers, we have more than once tugged at a window sash, and found it either immovable or so tight as to require unusual effort to raise it.]

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cubensis.*

My people are destroyed for lack of knowledge.—*Isaiah* iv. 6.

AN APPEAL TO SEXTONS.

O sextons of our churches—who light the fires and gas, Remember we are mortals! and that all flesh is grass; Have mercy on our noses, and turn the gas screws tightly—

If you would have us come to church and learn to walk uprightly.

We know you sweep and dust the churches; at least we suppose so—

But sometimes we are skeptical when the dust flies in our nose so;

We know your salary's small—that in all sorts of weather

You come and go, through rain or snow, for many days together;

But, sextons, O forgive us! if now we dare to mention, That air costs nothing, and demands your most profound attention.

It raps against the window panes, in pity on the people; It never sleeps, but as it sweeps and roars above the steeple,

It wonders how the sexton can the audience so stifle; It screams out loud and lustily that murder is no trifle— To breathe each other's breath (and none are sweet as roses)—

Breath scrofulous, breath feverish, that oft regales our noses

Some fifty times a minute, while we in church are sitting.

Gasping and yawning, fidgeting, our thoughts from sermon flitting.

O sextons! you are certainly the blindest, queerest fellows,

If not aware that all our lungs are simply human bellows, By which the fire of life is kept both bright and strongly blazing.

Then how can bellows blow, if there's no air to raise 'em. Have mercy on us, sextons, and do let down the windows, Or else we'll be quite well inclined to deem you worse than Hindoos.

Air is to us as necessary as milk is to a baby, We can not live without it—sextons can, it may be.

If we can't breathe, what care we for Apolloes— Paul speaks in vain, for we are all somnoles; What eloquence can reach a sinner when he's soundly sleeping?

He heeds no solemn warning—no friend who may be weeping.

Let down the window, sexton! see how the preacher brightens

With thoughts that breathe and words that burn! now scathes, and now enlightens;

Behold the thoughtless waken, no longer wait and falter, But listening to those brilliant words resolve their lives to alter.

OBSERVER.

By one who has suffered for want of breath,
And who does not care to choke to death.

HEALTH AT HOME; OR, HYGIENE IN ITS PERSONAL AND HOUSE- HOLD RELATIONS

BY JOHN H. GRISCOM, M.D.

To be well is to be happy, and to be happy is to be virtuous. The corollary deducible from this axiom is, that ill health produces unhappiness and leads to misery and vice. This is equally true of individuals and communities—single families, villages, cities, and states. It has been well said that "the sources of fever and crime are identical," in other words, that a people,

community, or family exposed to general causes of ill-health will be found careless, reckless, indifferent to order and virtue, and hence prone to misdeeds.

Take for instance a single household with every member in the enjoyment of robust strength, good appetites and digestion, sound sleep, and not afraid of exercise and open air; such will, as a general rule, be good-natured, free from depression, ready to participate in any good work, agreeable in social life, industrious, and hence prosperous, minding their own business, and therefore virtuous. On the contrary, how different, in almost every one of these particulars, are those with whom sound health is the exception and not the rule! Even when a single individual in a family is sickly, and requires more attention than the others, how does it detract not only from his or her comfort and ability, but from those of every other member of the household having the least interest in the invalid! A restraint, greater or less, is thereby placed upon all in health—their freedom of action is curtailed, and their natures, restricted of their usual exercise, find vent in irritable tempers, restless deportment, and discomfort to themselves and others, only to be avoided by that rare virtue, rigid self-control.

It is therefore a duty for every one to keep well, to avoid whatever may produce sickness, not only for their own sake, but that of those upon whom they must be dependent in case of illness. In proportion to the number sick in a family, are all these discomforts increased and aggravated; and it is easy to see that in a family in which the time and attention of one half the members are demanded for the nursing of the other half, the affairs of all must be more or less disarranged and neglected, and evils, more or less serious, of a moral as well as physical character, must ensue.

How to keep well is therefore a most important study for every individual, whether in a private or family relation; and in a brief series of articles it is proposed to present a few plain facts and illustrations, relating to some of the more frequent and manifest causes of ill-health, prevalent in the households of our land, and to point out the means of avoiding much of the sickness which prevails; in other words, *How to keep the doctor out of the house.*

It is to be observed, in the first place, that every animal on the surface of the globe is dependent for its life upon two things, which are always immediately and absolutely essential—without which it can not live. These are *Air* and *Food*. There are two other influences, which, though not essential to animal life, are necessary for the maintenance of good health and a vigorous, active existence, viz., *Light* and *Exercise*.

These will be treated of in the order thus given:

1st, *Air*. The very first action of an animal on being ushered into independent existence is to inhale a portion of the great ocean of air which surrounds the globe. This ocean is estimated to be not less than forty miles in depth, and at the bottom of it we are placed, so that its whole weight, known to be about fifteen pounds upon every square inch of the earth's surface, may be exerted to force its way into the deepest recesses

of the lungs. The instant that the mouth of a new-born animal is exposed to the air, the pressure of the latter is exerted upon it, and by the expansion of the chest a certain volume rushes in and enters deep into its organism, and this action is continued at the average rate of eighteen times a minute, until the last moment of life.

This single fact is of itself sufficient to prove to even the most thoughtless, that the air which surrounds us is of the first consequence to life, and that its purity is of essential importance to health. While in theory these truths may be universally admitted, in practice there are few facts so generally disregarded. It is remarkable that only within a comparatively recent period in the history of science have the mutual relations of the air and the body become fully understood. As late as 1665 it was stated, in a discourse on Respiration, by the President of the College of Physicians of London, himself a Fellow of the Royal Society, that, "it is not to this day known, or concluded on among physicians, *nor to be done either*, how the action is managed by nature, or for what use it is."

In the infancy of physiological science we can admit this statement of the then ignorance of physicians on this important subject, but we can not so easily forgive the temerity of the assertion, that this item of knowledge was never to be acquired, which is evidently the meaning of the above words, quoted from *Pepys' Memoirs*. Now, every school boy and girl, whose teacher has had the good sense to instruct them in the elements of Anatomy and Physiology, knows "how the action of respiration is managed by nature," and "for what use it is."

We know that the action of the chest in taking in and throwing out air is on precisely the same principle as that of the bellows in blowing a fire. We expand the chest, as we pull apart the sides of the bellows, by muscular force, and the vacuum thus created enables the air to force its way in by its own pressure, through the mouth and nostrils in the one case, and through the valve and nozzle in the other. The chest, like the bellows, becomes thus filled with air, which is forced out again after it has done its work inside; the chest is reduced in size by muscular contraction, and the air forced out, just as we force it from the bellows by pressing its sides together.

The amount of air inhaled at each expansion of the chest averages about one pint, and we therefore imbibe eighteen pints each minute, or 1,080 pints every hour, making about fifty hogs-heads every twenty-four hours. This great amount is necessary for every human being of average age, to sustain his life and health.

Can any one believe that this enormous amount of air is taken into the body in such a continual stream without some exceedingly important work to perform? And what is that work? For what purpose does the atmosphere, without any thought or care on our part, force its way down deep into our living frames? Surely it must be for something more than the mere pleasurable sensation of breathing, which, with a different construction (like that of the fish, for instance), we might never have known, and would therefore not have missed.

The answer to this question is, in truth, connected with the very existence of our lives from moment to moment. Let any one attempt to close his mouth and nostrils for thirty seconds, and he will realize how essential is every single act of breathing to his comfort, to say nothing of his existence.

In proportion to the importance of this question has been the depth of the knowledge of chemistry and physiology necessary for its answer; but modern science has fully unraveled the great secret which, less than two centuries ago, it was thought never would be revealed; and we can now give the solution in a few words.

The principal objects of the atmosphere, in its relation to animals, are two, viz.:

First. *The conversion of the food into blood.*

Second. *The continual purification of the blood.*

There is another result of respiration, which, though quite as important as these, may be called *secondary*, inasmuch as it flows, as it were, from the second one above mentioned; it is, the maintenance of the warmth of the body.

These general results of inhalation of the atmosphere which surrounds us in limitless abundance, will be hereafter considered more in detail, and we conclude this article with this double axiom:

The air was made for the lungs, and the lungs were made for the air, as certainly as the eye for the light, and the light for the eye, and it is as absurd as it is unnatural to separate them.

MUSICAL NATIONALITY.—Among the nations of antiquity, the people of Judea were, perhaps, the greatest cultivators of music. Their temple worship was on the largest scale of musical magnificence; and for that worship they had the two most magnificent instruments known to antiquity—the trumpet and the harp. In later times, the horn is the instrument of the Swiss and Tyrolean mountaineers. Its long and wild modulations, its powerful tones, and its sweet and melancholy simplicity, make it the congenial instrument of loftiness, solitude, and the life of shepherds. The guitar is the natural instrument of a people like those of the Peninsula—the piano like those of England and America. The lightness, yet tenderness of a guitar, its depth of harmony, yet elegance of touch, its delicacy of tone, yet power of expression, adapt it to a race of men who love pleasure, yet hate to toil in its pursuit.

The rich genius of Ireland has transmitted to us some of the noblest strains in the world. But they are essentially strains of the harp—the modulations of a hand straying at will among a rich profusion of sounds, and inspiring them with taste, feeling, and beauty.

The violin is Italian in its birth, its powers, and its style—subtle, sweet, and brilliant—more immediately dependent on the mind than any other instrument—inferior to the voice in vividness, and superior to all else in tone, flexibility, and grace. The violin has a soul, and that soul is Italian.—*Watson's Art Journal.*

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

OUR NEIGHBOR—WHO IS HE?

BY MRS. GEORGE WASHINGTON WYLLIS.

THAT'S what we would like to know. "Who is our neighbor?" and what are we expected to render up to him as our quota of the great "internal revenue" system of every-day life? In the country, everybody is supposed to be your neighbor, as far as you can see the smoke curling up from red-brick chimney tops or hear the cheerful sound of Sabbath-bells; in the city, the man that lives next door to you has no title to the name, for ten to one you know no more about him than you do about the Emperor of China. Is it the man who leaves his card at our front door once in a twelvemonth, and invites us to a party once in eighteen? Or is it the woman who "runs in" with her knitting and repertoire of scandal so perniciously often, that, contrary to the established rules of cause and effect, it seems as if she "runs out" again only one half as frequently? Is it the people who are forever watching our proceedings from the half-closed slats of their Venetian shutters—who practice the private detective system, and know to an ounce how much mutton you consume, whether you eat fish on Fridays, and how often your cook enjoys a "Sunday out?" Or is it the good soul who comes to tell you, in a spirit of the greatest kindness and affection, that deacon So and So thinks you little short of a heathen because you attend divine service only once a day instead of twice, and that Mrs. Faultfind says you really ought to give up wearing that old suit that looks as if it might have come out of the Ark?

After all, we don't think that good Samaritan, who figured in the early dawn of the Christian centuries, deserved so much credit. It was only subscribing to a charitable institution in embryo, and contributing a little oil and wine. Oil and wine don't cost much now-a-days, and charitable institutions are thicker than hops; but who can describe the amount of moral and mental heroism it takes to endure the neighbor of modern times, who is perpetually touching you up on the sorest points and overturning your most cherished projects and tormenting you with a dull repetition of platitudes, until you are ready to say with poor Rebekah, "I am weary of my life!"

Are we not all uncredited "good Samaritans" to a certain degree? If not, then there is no such thing as poetical justice in the world.

"Do be neighborly!" says the representative man or woman of this irritating class of society, which, freely translated, means "Do give up all your originality and individuality, and yield yourself a meek sacrifice to their claims." It means that you should hold yourself in readiness to be invaded at all times and

seasons—that you give up your delicious book or no less delicious reverie to "drop in socially" and hear about the children's measles and the price of tallow, starch, and candles—that you trim yourself off exactly according to their pattern, and attire yourself, figuratively speaking, precisely to their key-note!

No! better far a cheerful and contented existence in the Owhyhee Islands, where, at least, you can preserve your identity, untroubled by the vague doubt "whether I be I"—which assailed the old woman famed in nursery lore—than this state of "neighborly" servitude. Better a crust of bread in your own garret, with your old coat worn in your own way, than a banquet which imperatively involves a surrender of your pet characteristics, and a clanking of allegorical chains.

If one could only reduce society to an association, and pay in one's quarterly dues to be rid of the false and hollow things, what sum of money would be too formidable to purchase peaceable exemption? But, alas! no such compromise can be effected. We must pay, in our own selves—in the precious portions of our lives that can not be coined or minted. My neighbor is a conscienceless vampyre, who is content to prey upon humanity alone! Like Shylock, nothing but his "pound of flesh" will satisfy him!

Again, there are no clearly defined limits to endurance. My neighbor is to me what the ocean was to King Canute, and there is no more help for me than there was for his Saxon majesty! What do I owe him? How far am I to sacrifice my own rights and possessions to his? How am I to discriminate between my neighbor and the herd of social impostors that sail under the same colors? If he comes to me, seedy and importunate, and wants, in a husky whisper, to borrow five dollars (which he is certain of being able to repay next week), am I to ignore the fact that he has done the same thing half a dozen times before, without the least symptom of reimbursement, and lend him the five dollars, thereby nipping the tender bud of a new hat for myself? And if he comes the next week and wants five more, what then? Or, supposing me to be a woman and a housekeeper, am I obliged to get out my best china, and rub up my nicest silver, and sacrifice all manner of light biscuit and amber jelly and fragrant oolong to the social Moloch, once in so often? Shall I give up all my nicely planned morning, and let baking, washing, and mending go at loose ends, during all the weary hours that these tyrants choose to exact from me? I may declare stoutly that I won't, but then I know that's all mere empty sound and fury! When next my neighbor comes in her panoply of bonnet, shawl, and card-case, I shall go meekly down and lay my head under the Juggernaut wheels just the same as ever!

Slavery is not entirely abolished just yet! I am a slave, and so are you, unsuspecting reader, and Congress don't recognize our rights to relief!

Our social life is just at present slightly tintured with the universal essence of humbug, and we confess to a rabid desire for Reconstruction. We should like to shake "Our Neighbor" into his proper place—to keep meddling gossips at a distance, and set wearisome twaddlers at defiance, and boldly assert our own individual privileges. Our Neighbor should be the poor and suffering who have fallen by the wayside; has not the Saviour himself spoken it? he should be the weak-hearted and struggling in the great strife of existence—the bereaved and desolate! We need such neighbors as this, to keep alive the charity and tenderness that God implanted in our hearts. We need neighbors whose natures are congenial with our own—whose noble qualities excite our affectionate emulation—who are not afraid to tell us our faults and virtues alike, and who will love us and trust us through good and ill report! Not mere "fair-weather" neighbors, who guage us by money and rank, but strong, true hearts on which we may lean without fear of wearying or changing the steadfast support! Have not we all one such neighbor, to whom we may confide our troubles and carry our trials, confident of help and tenderness? And when we ask ourselves, "What is my duty toward my neighbor?" can we do better than remember what He was to the blind and the maimed, the poor and the outcast?

If we were all just such neighbors as God meant us to be, what a cosy, comfortable sort of world this would be to live in! There would be no quarreling, no discord, no petty jarring of the sweet bells of humanity! But just so long as I coax up my little selfishness, and he indulges his darling egotism, so long will my neighbor and I secretly yawn over each other's dullness and grumble, *sotto voce*, at the social arrangements that bring us into perpetual contact! And we shall both be to blame, and there will be no help for either of us!

"FOREVER THINE."

BY H. M. G.

"Forever thine," whate'er this heart betide,
"Forever thine," where'er our lot be cast;
Fate that may rob us of all wealth beside,
Shall leave us love till life itself be past.

The world may wrong us—we will brave its hate;
False friends may change, and false hopes decline;
Though bowed by cankering care, we'll smile at fate,
Since thou art mine, beloved, and I am thine.

Forever thine, when circling years have spread
Time's snowy blossoms o'er thy placid brow,
When youth's rich glow its purple light is fled,
And *lilies* bloom where *roses* flourish now.

Say! shall I love thy fading beauty less,
Whose spring-tide radiance has been wholly mine?
No! come what will, thy steadfast truth I'll bless,
In youth, in age, thine own, forever thine!

Forever thine at evening's dewy hour,
When gentle hearts to tenderest thoughts incline;
When balmy odors from each closing flower
Are breathing round me, thine, forever thine!

HE who never changed an opinion, never corrected any of his errors.

PORTRAIT OF REV. F. MAHONY—"FATHER PROUT."

REV. F. MAHONY—"FATHER PROUT."

THIS countenance beamed with good humor. There was a vein of the jolly closely interwoven with his mental and moral organization. His imagination was extensive and varied, as indicated by the wide-spread head in the regions of Ideality, Sublimity, Causality, and Mirthfulness. He could live in his thoughts and imaginations, and enjoy himself.

His nature was evidently an emotional and sensitive one, deeply impressed with a high sense of honor and integrity, and at all times alive to the claims of truth and propriety; but his Caution was not so influential as to cast a shadow over his love of the humorous, and to check his tendencies to an indulgence in the laughter provoking. His Benevolence was large, leading him to active charity, yet he would look upon poverty, squalor, and rags through the telescope of a good-nature, radiating warmth and cheerfulness.

He possessed large Hope, which gave to his disposition that earnestness of happy expectation which seemed to shed sunbeams wherever he went.

Possessing a large intellect, he appreciated keenly the merits of literature. There would be breadth and depth of thought in his composition—sound sense, sharpness, and the logic of utility in his sayings.

His head had considerable breadth in the region of Secretiveness and Acquisitiveness, showing that he was politic, shrewd, and economical, not caring to waste his time, or make any expenditure of mental or physical effort without its conducing to some substantial result.

He was evidently social in his tendencies; strongly appreciative of the good things of the table, and disposed to fraternize with those who did not look upon life from the restricted stand-point of the probationist. There was, in his opinion, something worth living for in this world, much of happiness to be experienced and afforded, and all things considered, he was one who would seek to live, not as an ascetic, but well and happily.

BIOGRAPHY.

Rev. Francis Mahony, better known as "Father Prout," whose death in Paris was recently announced, was a remarkable character. He was born in Cork, Ireland, and received his education at the hands of the Jesuits in France, but he cared less for religion than literature, and to the latter he mainly devoted his life. He soon became a leading member of that curious body known as Bohemians, his pungent wit and marvelous facility in writing giving him ready access to magazines and public journals.

He made his home in Paris, where his slashing Irish wit and rollicking Irish humor made him the nucleus of a large circle of admirers. His animal spirits were so exuberant, that when he got a chance to exercise his wit, his hitting was reckless. He lived by his intimate acquaintance with the poets and wits of classical antiquity, and showed great ingenuity in tasteful or whimsical applications of quotations to the occasion of the hour. But he had higher claims to the favorable regard of his contemporaries. Though not a great original genius, he was a genuine humorist in his own peculiar way, an able champion of the liberal cause in politics, social ethics, and religion, a pleasant comrade, and a man of genial, kindly temper.

The greater portion of his life's labors took the form of letters published in the London *Daily News* and *Globe*, wherein for twenty years he discussed the passing topics of the day. He was for a time a regular contributor to "Fraser's Magazine," in which his spirited and witty articles, written in the interest of the Tories, gained much popularity. Here he came into opposition with such liberal writers as Tom Moore and Sydney Smith, at whom his criticisms were aimed somewhat sharply, but whom he afterward learned to esteem and defend. It was most natural that he should single out "Tom Moore," the pet Irish poet and jester of the hostile party, for the object of his most particular attentions. A more magnificent literary joke was never conceived by mischief-loving wits than his critical essay on "The Rogueries of Tom Moore," in which he gravely and indignantly accused that minstrel of having stolen his most popular songs from

the French, Italian, Latin, and Greek originals, whereof true copies, ascribed to several half-forgotten authors, were supplied by the dexterity of Father Prout. This skill in the versification of different languages, though not very remarkable, considering the practice of our classical schools, was employed by Mahony with such an amusing effect in producing several versions of the most familiar ballads, that none of his performances are more likely to be kept in recollection. "The Groves of Blarney," "Judy Callaghan," and other popular compositions of his native Ireland, as well as the amatory lyrics of Moore, were thus disguised in the picked phrases of Catullus and Pindar, of Béranger and Ariosto, till the Muses of all nations seemed dancing a jig in a motley masquerade.

His pseudonym of "Father Prout" was one of his own invention. His "Reliques of Father Prout," began in "Fraser's Magazine" in 1834, collected into a volume in 1836, and reprinted in England in 1860, were a characteristic series of humorous sketches and learned disquisitions which met with great success, though they contained a great amount of nonsense, and many of the allusions have now lost their interest by the change of circumstances and of the public mind in thirty years since the Prout Papers were written.

He is described by an English biographer as a little elderly man, with an intellectual head, whose keen bluish eyes had a queer way of looking up sharply over the rims of his spectacles; his peculiarities made him a notorious person in Parisian society. He was "a clubbable man" as well as a skilled theologian; a song-writer and a profound Latinist, a gossiping old man and a companion of wild roysterers. He was also an indefatigable traveler and a linguist. He composed verses in various languages, wrote much on all sorts of subjects, and died in newspaper harness in Paris at the age of sixty-one, and has left a bright trace of his presence behind him in quitting this duller world.

NOVEL FUNERAL RITE.—The *Pall Mall Gazette* says: "The Queen's late huntsman was buried at Sunninghill. Lord Colville, the noble master of the buckhounds, Major-General Hood, Major-General Seymour, and Colonel R. H. Vyse met the body at the church. The favorite hunter of the deceased was shot previous to the funeral, and the ears of the animal were placed upon his coffin when in the grave and buried with him. A large number of the neighboring gentry were present at the funeral."

[We should infer from the above that some of the heathenish practices of India had been imported and grafted upon the remnant of the old English customs.]

A COUNSEL being questioned by a judge to know "for whom he was concerned," replied, "I am concerned, my lord, for the plaintiff, but I am employed by the defendant."

THOMAS HUGHES.

THIS excellent profile of the noted Liberal evinces among other things the following:

A ready appreciation of facts, a clear perception of the material, a sound judgment, a mind remarkable for its critical acuteness, a ready appreciation of men and measures, a steady determination, a firmness which is not easily shaken, a feeling of self-reliance, and a solid, utilitarian practicality.

We would not consider him a great talker, nor at all disposed to prolixity of speech or copiousness of diction. He is one who, when fully bent upon an undertaking, can scarcely be checked or put down in his course.

He has a strongly social nature, a deep appreciation of domestic ties, and of the relations of the home to the state or nation. He has strong moral feelings, particularly in the direction of Benevolence. The brain large at the base, and well-supported by a good *physique*, renders him vigorous and thorough in the accomplishment of his purposes. The nose is a strong one. It impresses one with the idea of solidity, power, and indomitability. He is patriotic, strongly appreciating the ties of home and country, and rather inclined to make much of the place and the nation of which he is a native. The arch of the top-head is a fine one, showing strong sympathy with religious things, and a nature deeply pervaded with moral and religious truth.

BIOGRAPHY.

Thomas Hughes, well known as the author of "Tom Brown's School-Days," etc., and at present member of Parliament for the district of Lambeth, London, was born at Uffington, Berkshire, England, in 1823, being the second son of John Hughes, Esq., of Downington Priory, Newbury, in that county. He was educated at Rugby under the celebrated Dr. Arnold, and at Oriel College, Oxford. In 1845 he took his degree of Bachelor of Arts, and subsequently that of Master of Arts. Having decided to embrace the legal profession, he entered, as a student, Lincoln's Inn; in 1848 he was called to the bar, and afterward practiced as a barrister, though social and political questions appear to have possessed greater charms for him than the solution of legal problems.

In 1856 he gave to the world "Tom Brown's School-Days," the publication of which, at the

age of thirty-three, elevated him at once to a high position in English literature. In 1858 he published "The Scouring of the White Horse," and in 1861 "Tom Brown at Oxford," which have also won a world-wide reputation. He was a frequent contributor to the periodical literature of the day, and edited for English readers editions of "Whitmore's Poems" and "The Biglow Papers."

In all his writings and speeches, Mr. Hughes was the firm friend and advocate of the working-men of London. The science of political economy was then comparatively unknown to the great bulk of the community. Many employers would recognize only such economical truths as told against the employed, who in their turn regarded with suspicion and dislike a science which was repeatedly used as a weapon against them. It was Mr. Hughes' aim to remove this feeling, to show to working-men that instead of denouncing political economy, they should make themselves acquainted with its principles, and turn the knowledge thus obtained to the advancement of their own interests and welfare.

At one period of his life he lived almost among London working-men, and was in constant and close social intercourse with many of the foremost leaders of the co-operative movement; and this insight into the routine of the working-class life was of immense advantage to him in his advocacy of their cause. He was a powerful defender of the working-class trade organizations, and in 1862, at the Glasgow Congress of the Social Science Association, during a discussion on "strikes" and "trades unions," made an eloquent and earnest defense of that system—and he has since, at various times, expressed his views on the same subject in several of the leading periodicals of London. In 1866, Mr. Hughes was induced to stand as candidate for member of Parliament for Lambeth. His constant advocacy of their cause had tended to make him extremely popular, and no sooner was it known that "Tom" Hughes had consented to stand as candidate, than every working-man seemed ready for action. There was no money spent in bribery, no free public houses opened, no paid committee men, as is generally the case in English elections, but the working-men had set their minds on electing "Tom" Hughes; the canvassing was all done by them gratuitously, and Mr. Hughes was elected member for Lambeth without a farthing of expense to himself. No doubt Mr. Hughes owed his election in part to the popularity of his books and to his quiet and unostentatious labors for the benefit of the working-classes of England. It was a fair advantage, however, and one that should not be grudged to him. The confidence of the people gained by Mr. Hughes is well shown in the following lines, which were sung in the streets of Lambeth at the time of his election:

"Now, it's not alone your book, Tom,
Straightforward, pure, and true,
Nor your kind and firmly look, Tom,
That won our hearts to you.

Nor yet alone that in the fight
You've fearless been and strong,
To help the poor man to his right,
To strive against the wrong.

Those count for much, I know, Tom,
But there's something stronger, too—
You've trusted us—and so, Tom,
We'll show that we'll trust you."

Mr. Hughes has long been an able and authentic literary champion of "Muscular Christianity," which he has both preached and practiced from his youth up. In all his works he has magnificently expounded and illustrated its doctrines; and his deeds in private have been no less earnest and useful in establishing them. A few years ago, in connection with a few friends, he established a Working-Man's College in Bloomsbury, London. In this college Mr. Hughes was the inspirer of a gymnastic department, which has been found of the greatest advantage to the pupils. He is said to be an ardent admirer of the gloves, although he is a detester of the prize ring, and does not disdain to take a "round" or two when he calls to look at the gymnastic department of the college.

We can not altogether pass over without remark his many expressions of good-will toward America. He has shown that the staunchest English patriotism is consistent with a cordial affection for the citizens of our own country, whose mighty struggle he watched in a sympathizing spirit. From the preface of the "Biglow Papers," edited by him in 1859, we select a few choice sentences, written a year before the election of President Lincoln, and no American need to be told that the man who could pen such lines could not be otherwise than a firm friend to the United States.

"Greece had her Aristophanes; Rome her Juvenal; France her Rabelais, her Moliere, her Voltaire; Germany her Jean Paul, her Heine; England her Swift, her Thackeray, and America her Lowell. By the side of all these great masters of satire the author of the 'Biglow Papers' holds his own place, distinct from each and all. The man who reads the book for the first time, and is capable of understanding it, has received a new sensation. In Lowell, the American mind has for the first time flowered out into thoroughly original genius. For real unmistakable genius, for that glorious fullness of power which knocks a man down at a blow for sheer admiration, and then makes him rush into the arms of the knocker-down, and swear eternal friendship with him for sheer delight, the 'Biglow Papers' stand alone. * * * * It is satisfactory, indeed, to think that Mr. Lowell's shafts have already, in a great measure, ceased to be required, or would have to be aimed at other bull's eyes. The servility of the Northern States to the South, which twelve years ago raised his indignation, has well-nigh ceased to be. The vital importance of the slavery question is now thoroughly recognized by the great Republican party, which, I trust, is year by year advancing toward an assured victory."

One of the first voices raised in England to cheer us was the voice of Thomas Hughes; on the platform, in the lecture-room, in the drawing-room, and through the columns of the magazines he has ever bravely and powerfully sustained our cause, and even now he is heard

appealing to his countrymen and entreating them to seize the greatest opportunity that will ever be given of making stronger the bands which tie them to the American people. At a meeting in London last April, for the purpose of promoting the "Freedmen's Aid Society," Mr. Hughes gave utterance to these noble words:

"But there is another reason why we should come forward on this occasion heartily and warmly, and that is the extraordinary importance of a cordial alliance between the two branches of the Anglo-Saxon race to the future of mankind. It does seem to me that two great nations, possessing and glorying in the same traditions and the same history, struggling at this minute with the same trials, both political and social, and animated, I trust, by the same hopes—I say it does seem to me that two such peoples as these, enjoying too, as they do, the freest institutions that ever have obtained in great nations upon the face of the earth, should go forward, not with jealousy, not with distrust of any kind, but with a cordial and rational wish to advance civilization and Christianity over the whole of this earth, and, as far as peaceful efforts can do it, to impart to all down-trodden people, and to all people who are in need of them, the glorious ideas of freedom, and the glorious hopes, which we who speak the English tongue in all climates of the world possess and enjoy—I do think that we ought to be stirred up to great exertions in this matter. I do think that when we look at the grand, the magnificent way in which the Americans have met their own great trial, English men's and women's hearts ought to be warmed toward them, and that we should show, as emphatically as we possibly can, our deep respect and reverence for the work which they have done, and the way in which they have done it."

Willingly will every American echo back the shout raised by the working-men of London of "*Glorious Tom Hughes!*" That name will never be forgotten by a country who know full well how to appreciate the noble deeds performed in its darkest hour.

Mr. Hughes is of medium height, neither slender nor stout, with a ruddy, genial, earnest face, whiskers of sandy hue at the side, and altogether having a look of ample health, vigor, elasticity, kindness, intelligence, and success. He is said to be no orator. His style is quiet, simple, colloquial, full of point—not a word too much. He often hesitates, stumbles, gets into a maze, and comes out backward. He speaks only when he has got something to say, and he is a man whom the people always welcome upon their platforms and listen to with attention. He is no demagogue; he stands aloof from the vain turmoil of common political agitation; he does not set class against class, or appeal to the narrow prejudices and interests of one portion of the community to disparage and condemn the others. His chief aim, on the contrary, is to foster those sentiments of mutual respect and kindness among them all, without which the freest political institutions are but means of mischief.

The reports which reach us daily from England indicate great activity on the part of the "reformers," and "Tom" Hughes is not the man, at such times, to be "off duty."

SLEEP.—A gentleman writing to a New York paper from Storkville, N. Y., recently, says: "The following very strange and anomalous circumstances have just transpired in our community. Mr. Gabriel Ellis, a flourishing dry goods merchant, had frequently remarked that he could sit up three weeks without any detriment to his health; and that after the expiration of that time he could go to sleep, and sleep without waking until the loss was made up. He was led to believe this fact from experiments made on a small scale. In the early part of February he sold out his store and invested the capital thus raised in a farm, which gave him leisure; and in compliance with the wishes of several scientific gentlemen, he began on the 11th day of February to abstain from sleep. Gentlemen sat up by turns to satisfy themselves of his strange faculty, and to preclude the possibility of being accused of momentary snatches of sleep, he would read audibly all night long, and keep his feet all day—watched all the while at his own request. He would comment in a clear, forcible, and intellectual manner upon what he read—deploring the heartlessness of "Iago," laughing at the imitable drollery and humor of the "Army Straggler," etc. On the 16th day of March, at the urgent solicitation of friends, he went to sleep for the first time, and did not wake until the ninth day of the present month.

He expressed the opinion that he could stay awake a year, and then sleep in proportion, without injuring his constitution. He never gets sleepy until he closes his eyes and resigns himself to slumber, at which time he gets asleep almost instantly, without regard to the noise or excitement around him.

Periodicity is the order of nature. This order can not be reversed or long violated without fatal consequences. The eccentric referred to above may stand the racket a little while, but he would soon fetch up in an insane asylum, or sleep to wake no more. This going a long time without sleep may be classed with other strange feats, such, for example, as going a long time without food, and then gorging. All such experiments are fool-hardy, and a challenge to the Almighty. We have night and day, summer and winter, a time for sleep and repose, and a time for work and study. We must conform to all the ordinances of God, or suffer, sooner or later, the inevitable consequences of their violation.

To give brilliancy to the eyes, shut them early at night, and open them early in the morning; let the mind be constantly intent on the acquisition of human knowledge, or in the exercise of benevolent feelings. This will scarcely ever fail to impart to the eyes an intelligent and amiable expression.

A WEATHER INDICATOR.—A very cheap and reliable barometer may be made by mingling two drachms of camphor, half drachm of pure saltpeter, half drachm of muriate of ammonia, and two ounces of proof spirits in a glass tube or narrow phial. In dry weather the solution will remain clear. On the approach of change minute stars will rise up in the liquid; while stormy weather will be indicated by a very disturbed condition of the chemical combination.

Religious Department.

"The man is thought a knave or fool,
Or bigot plotting crime,
Who, for the advancement of his kind,
Is wiser than his time.
For him the hemlock shall distill;
For him the ax be bared;
For him the gibbet shall be built;
For him the stake prepared;
Him shall the scorn and wrath of man
Pursue with deadly aim;
And malice, envy, spite, and lies
Shall desecrate his name.
But truth shall conquer at the last,
For round and round we run.
And ever the right comes uppermost,
And ever is justice done."

TO MY MOTHER.

BY REV. EDEN R. LATTI.

I know thou art safe in the mansion of peace
Thy gracious Redeemer has given;
Then why should I weep at thy spirit's release,
Since thou art accepted in heaven?
Thou hast left us, and gone to thy dwelling above,
Where sorrow and grief can not come;
Thou hast sought and obtained a bright mansion of love,
And angels have welcomed thee home.
Thou art gone to that land where they need not the sun
To banish the shades of the night;
Where God, the all-seeing, omnipotent one,
Is the life, and the heat, and the light.
"And there is no night there," for darkness and gloom
Can not enter that far-away sphere,
Where daybeams celestial forever illumine,
And summer encircles the year.
I never beheld thee, dear Mother, these eyes
Having barely been opened to the light,
Ere thou hadst in fondness looked up to the skies,
And thy spirit had taken its flight;
Yet, oh! I believe thou didst gaze upon me
With a fondness that could not be told,
Ere heaven had opened its portals to thee,
Or thy form had grown lifeless and cold.
I love thee, dear Mother; and well do I know
I shall freely partake of thy love,
When, no longer a pilgrim and stranger below,
I shall go to be with thee above.
Grown weary of life, of its cares and its woes,
My father has gone to abide
With thee, in that land where no blast ever blows,
And is sleeping in peace at thy side.
And some of thy offspring, in life's early morn,
Were doomed like the flowers to fade;
And now they lie, wrapt in a slumber forlorn,
Near the spot where thy ashes are laid;
And I, too, am coming to join thee at last,
(All my sins and my follies forgiven.)
When life with its cares and its sufferings is past,
And will view thee the first time in heaven.

THE HEAVENLY CHRONOMETERS.

A NEW YEAR'S SERMON.

BY REV. B. J. GETTELHEIM.

TEXT: "And let them be for signs, and for seasons, and for days, and for years."—Gen. i. 14.

THE EXISTENCE OF GOD.

THE heavens and the magnificent display of the starry host have at all times been appealed to as the highest testimony to the existence of a Creator, as wise as he is omnipotent. "The heavens declare the glory of God, and the firmament sheweth forth his handy work," is not only an axiom of Revelation, but an intuitive truth to every thinking mind. Who, in a calm unclouded night, can lift up his eyes and gaze

at the immense canopy spread above, studded with millions of twinkling lights, the lesser officered by the greater, all brigaded in groups, on parade—as it were—before their general, the moon, riding majestically over the vast arena, "telling the number of the stars, and calling them all by their names;" who can behold that thronging host, all living, moving, shining, dazzling, crossing each other's path, and yet always in their right place, none impeding the other; who, adding to the wonders of the night the continuous display of the greater luminary of the day, shedding down light and life on this lower world, can avoid becoming conscious of his own insignificance, or resist the inmost persuasion that there must be a Being of immense power and wisdom to control and harmonize such countless hosts of vast worlds?

THE UNANSWERABLE ARGUMENT.

But greater still than this array of marvels painted on the sky is the argument drawn from the mathematical relations which the heavenly bodies sustain among themselves and bear to this sublunary globe. Deny it who may, yet it is an indisputable fact, that the sun, moon, and stars are in intimate, almost organic connection with each other and with this earth. Who has placed them in this admirable reciprocity? Who but the great Creator of all, intending and ordaining them to be for seasons, and years, and days, and to give light upon the earth. In vain will caviling philosophy try to persuade even the shallowest mind that matter is uncreated. If so, each globe is a separate and independent Eternal, in itself an absurdity, and rendering their harmonious co-operation quite inexplicable. Have sun, moon, and stars, impelled by reason or moved by charity, each assumed such positions in space as to make them mutually helpful to one another? When and where had they a conference to limit their respective orbits and agree upon an eternal peace? The unquestioned harmony, then, and the reciprocal, dutiful services of the immense globes composing the universe, though separated by inconceivable distances, must always stand forth an irrefutable evidence of the oneness of the whole visible universe, and the conclusion of its common origin be inferred from its common subjection to the same controlling powers.

PROOF OF THE DIVINE HUMILITY.

We have here, also, a presumptive evidence of a great gospel-principle, namely, that "the less is blessed by the greater," without derogation to true dignity. Human pride and unbelief may indeed wonder at the condescension of Jehovah, and question the amazing humility of the Highest displayed in the problem of redemption, and scarcely consider it proper that the lofty Eternal should trouble himself at all about such perishing worms as we are. Yet the physical world demonstrates that the huge flaming globe of the day is the servant of this little planet we inhabit, though but a wee homeopathic globulus compared with the sun; the vastly greater stars are our handmaidens, marking on the heavenly dial the hours of our short day, the seasons of our fleeting years, and the longer cycles in the history of our frail race. If, then, the heavenly bodies, however grand and majestic, lose none of their luster in being bodyguards of this humble earth, shall it be against reason that the great Soul of heaven, the Eternal Himself, shall revolve round the souls he has placed upon earth, and become their light and life? Away, then, with all the cavils of that school that places the Creator so high above his creatures as to make it unbecoming his grandeur to think of or care

for them. To us here, sun, moon, and stars, apparently, have no other reason of existence but to serve us, and so likewise has God willed it, that the moral purity of heaven should in Christ bodily appear on earth to serve our humble race, thereby giving the children of man the true idea of real greatness, for who has to stoop most evidently is the Highest.

THE ETERNAL MEASURE TIME.

What appears still stranger to the human mode of thinking is, that God, who inhabiteth eternity, should condescend to regulate time for short-lived mortals, and more, should ordain *this* the primary use of our satellites above. For the law: "Let them be for seasons, and for days, and for years" (i. 14), precedes their destination to "be for lights, to give light upon the earth" (i. 15). What can this mean but to impress us deeply with the importance of time, and the duty of its systematic subdivision in all our doings? The greatest element in our existence is time. Life is time. So searchingly did God look into the affairs of this world, and so well did he adapt it to the need and comfort of his creatures, as to provide a universal time-piece, never erring the least part of a second, whereby all our enterprises should be measured and regulated as to time and season. Labor of every kind, husbandry, navigation, commerce, science, all would languish, if not utterly fail, without attention to time and season. It is sun, moon, and stars that herald the return of smiling spring; and forewarned of the approach of the young year, the farmer prepares implements and seed, thus being ready to begin and finish his work in the proper season. And so of his summer, and so of his harvest. To whom the "ordinances of Heaven" are not "for seasons," he may begin too late and protract seed-time into the period allotted to growth. But what sort of a harvest will *his* be? The day-laborer looks up to the sun to know when the time of refreshment has come; and again he looks up when the sky wanes into night, to ask for a full day's well-earned wages. The merchant-princes who send, and the navigators who sail, valuable ships and cargoes, depend on seasons for favorable winds, and on the stars for safe guidance on the trackless ocean they traverse. And so do traveler and pilgrim in the sand-felts of the desert. Ah, what would frail mortals do without that kind provision of Heaven whereby their hours, days, and years are measured with utmost correctness and their steps guided into the desired haven? Take away dates and years from our historical records, what chaos of jumbling facts would all the past present to the inquirer after practical truth, whether belonging to science, morality, or national life! Truth is established by experience, by repeated observation, and often by periodically returning coincidences and similitudes. How could a correct record of the past activities of our race be kept without reference to time and its subdivisions? How gracious, then, of the great Artificer in constructing this vast universe to introduce a self-registering apparatus to mark times and seasons of every event!

OUR BODILY DEVELOPMENT SUBJECT TO SEASONS.

No less can it be doubted that our very individual bodies, as to their development, are strictly bound to time. What but time makes infancy, manhood, and old age? As the tree requires certain periods to grow, flower, and fruit, so does man. You can not hurry an infant into bulky manhood, do what you may. Time alone can do it. Successive months and years are required to harden soft masses into bones, develop teeth, strengthen and stiffen limbs for locomotion, increase the mass of the brain, expand the chest and abdomen, and so bring on the period of puberty, gradually slid-

ing into manhood and womanhood, and then again softly descending the declivity of waning life till it stops at the grave. All this is the work of God by immutable laws and relations established between our bodies and the revolution of sun, moon, and stars. Then, my friends, "let them be for seasons;" do not artificially push forward the natural development of your bodies. You will surely fail and hurt yourselves in the attempt. "Which of you by taking thought can add one cubit unto his stature?" Why, then, force unnatural precocity?

SEASONS FOR MORAL AND MENTAL PROGRESS.

But while not many—if indeed any—will doubt the truth of the position assumed, namely, that God has ordained seasons both for our individual, social, and historical life, few may ever have given it a thought, that the stars, as time measurers, are to mark also the seasons of our moral and mental progress, so that every age may have its appropriate degree of development both in body and mind. Every period of life, no doubt, has its own natural features, both bodily and intellectual, which will be predominant in their season, and these must therefore pre-eminently be developed. Infancy, for example, is emphatically the season of obedience. It is helpless, dependent on others in every respect—natural indication enough that the child, so far from being blindly indulged in unbecoming liberties, should be mainly trained to patience and submission. Progressive age, culture, and example will, early enough—alas, too early—teach it to know it has a mind of its own. Why then forestall what will come in its own natural season? Why, while yet in its teens, allow or even teach a child to revolt against its destiny, which is to submit cheerfully to what is reasonably imposed on it. If any "powers that be are ordained of God," surely that of the parent and appointed teacher not only, but of any reasonable adult person should be allowed full moral weight with the child, which in this way only will learn the laws becoming its age.

With equal certainty we may assume, that since feeling and affections precede mental capacity, the age of boyhood and girlhood is the season for moral and religious training much rather than for scientific instruction, even of the simplest kind. The grown-up child should be taught to love God and fellow-men, to restrain anger, to be supremely truthful, and to show mercy and kindness, even before it so much as hears of an A B C.

In the subsequent season of mental culture, objective knowledge should for years treasure the fresh memory of adolescence before speculative thought is allowed to fascinate the mind. Let our youth learn to know the physical world around them, stones, plants, and animals, geography, and even the heavenly map, and no effort be spared to draw lessons therefrom to strengthen their moral rectitude, built on the foundation of responsibility to an all-seeing God. Let them be trained to *enjoy* beauty and art in nature, to guard against expensive tastes; let personal cleanliness and neatness, frugality and self-sacrifice, be taught as laws of human happiness, and their neglect be reprobated as crime; let recitations and examinations be daily held in moral actions and feelings, and every subterfuge and erroneous principle be laid bare; let modesty, humility, zeal for good, good temper, peacefulness, loving kindness, and forbearance be entitled to reward and praise, and *success not sought*, but only acknowledged as unmerited favor from God to tune the heart to gratitude and cheerfulness; let the mind study how to guard the heart and assign reasons for doing good and hating evil; this will be a mental culture adapted to the season of intellectual spring, on which alone a well-poised character can be built up, if indeed our educational efforts are to help forward the solu-

tion of the great problem—the reformation of the world!

The next epoch, which may be comprised between the ages of thirteen and twenty, having due regard to out-spoken individual tendencies flowing from their respective organizations, our youth should be directed to employ in concentrating mental effort in the direction of their probable livelihood. In a new country, like ours, it is true, an unexpected chance may open new avenues of life even for men in advanced age, and give a new turn to old activities. But as a general rule, he who has not chosen his profession—learned or otherwise—in the morning of life, will ever continue a play-ball of circumstances. Let this season, then, be conscientiously employed for acquiring a thorough theoretical understanding of that branch of business we have concluded our youths are fit for; let them feel it morally just to make an honest living, and employ special God-given abilities in advancing certain human industries. This will sustain them under the fatigues of study, and give the growing tree time to become sturdy while preparing for fruit.

UNSEASONABLENESS TO BE DISCOURAGED.

I have dwelt with some minuteness on the season of childhood and youth, on the right employment of which alone rests the hope of a thorough amendment of our race. Time forbids to follow the subject further up, nor would it be easy to subdivide life into distinct compartments and point out exactly the limits of every season for its appropriate activities, seeing that every one of its periods imperceptibly fuses with the preceding and following, so as to preclude correct demarkation. What is intended is merely to invite attention to the fact that human life, as well as any other growth, has its seasons, and should not be expected, much less trained, to produce but what is befitting it. And were we to examine ourselves *habitually* as to fitness of age and station to particular actions we would soon acquire a proper sense of what is suitable or not, and be shocked at the many aberrations and inconsistencies in this respect of which society is guilty, and which are at the bottom of a load of human misery. Were our tastes well practiced in that direction, it would not appear more absurd to sow in the winter or plow in harvest-time, than to see "the child behave himself proudly against the ancient, and the base erect his head against the honorable," and we would be shocked at hearing an old man swear and curse, just as we are amazed on being told he married a maiden of sixteen. Contrast and incongruence are as striking in the one as in the other, only that the common sense of society is not yet trained to intuitive perception of moral as it is for that of physical disproportion, and it would therefore be doing good service to humanity in every age and condition of life to discourage what is out of season, and on the other hand to establish a habit of self-examination as to the relation of duty to age.

THE STARS TO BE FOR SIGNS.

It is in this view alone that we can fully comprehend the otherwise obscure phrase: "and for signs." What are we to understand hereby? Are we to look up to the stars with astrological superstition? Certainly not. (Deut. xviii. 10.) The stars are our servants, they are to be for lights and for the measurement of time, and not at all objects of veneration, or omens for good or evil. (Jer. x. 2.) No countenance is given by revelation or science either to the heathenish practice of inferring human fate from any combination of the heavenly bodies, all moving according to fixed laws.

We readily admit that, as testified in sacred history, the heavenly bodies often served to verify that the God of heaven rules also on earth. (Josh. x. 12, Is. xxxviii. 8.) The rain-

bow in its loveliness, off-spring of the sun and the cloud, will always continue a token of a covenant between God and his creatures here. (Gen. ix. 9.) The Star of Bethlehem was a mark in the sky crowning with radiance the spot underneath where the infant Saviour first touched the earth, and the promised sign of "the son of man" (Matt. xxiv. 30) to appear in heaven, and we may presume it will again range among the celestial bodies. In so far the stars literally were and will again be "for signs."

The polar and other stars serve as guides to lonely travelers in the woods and in the desert and become way-marks to the mariner on the trackless ocean, and no doubt they may also have been included in the scope of the service assigned to the stars.

When from the bright azure vault, by day or night, the upper luminaries smile down on any human gathering or festive procession, we usually take it as a favorable mark of Providence. Let a golden ray of the sun, suddenly breaking through the surrounding gloom, beam on a saintly face in its last gasp, or in its funeral bier, few would doubt but it was a smile sent down from Heaven expressing complacency with the departed and sympathy with the bereaved. To believe in such signs can hardly be charged to superstition.

But still more completely will the meaning of the phrase, "and let them be for signs," be exhausted, and the whole addition also best suit the context if we take it as a direct appointment of the stars to be signs to us in our moral and religious life. Sunrise and sunset make each a notch in time, which none with open eyes will not acknowledge as a sign reminding us of the rapid flight of time. Each marks a measured portion of existence irrevocably gone. Day after day the same phenomena occur, but we heed them not. Yet sun, moon, and stars have a divine charter, which says, "and let them be for signs." God ordained the stars to cut time up into measured portions, and to draw our attention to it, daily, monthly, and yearly, and be unto us a standing exhortation for its careful employment. As the sun rises to run his daily course, so should we with each morning gird ourselves to renewed moral and religious effort, and his setting should be the sign to calm reflection on the past day's work. The new moon is another interpunctuary stop in the longer annual period, and should be heeded and suitably marked. And were it not for our too utilitarian education, utterly forgetful of what is *above* the earth, our bright-eyed children could easily be taught to look up and make acquaintance, at least, with the zodiacal groups, and recognize the various constellations the sun traverses in his annual course, so that the very fixed stars would be unto us a sign, warning us, like the more familiar new sun and new moon, against heedlessly rushing by the divinely measured subdivisions of time without examining into the manner of our employing them severally. Ah, how can we lift up our eyes unto heaven in the face of that cloud of witnesses warning and telling us: "The morning cometh, and also the night; if ye will inquire, inquire ye," (Is. xxi. 12) and not solemnly determine that every period of our life should bring forth fruit corresponding with its season!

Come, then, friends and readers of whatever age we be, let us at the beginning of this year resolve, there shall be no "snow in the summer nor rain in the harvest" of our life, but that our youth be an uninterrupted course of warm-hearted and full-souled activity, and then in the evening of our day we shall gather in our sheaves with rejoicing, till ourselves shall be gathered to our fathers, and thus there will be evening and morning, according to God's ordinance, one day, every hour spent to its purpose, to God's glory, our own and others' good.

GYMNASTIC CHARGE.

POPULAR GYMNASTICS.

PHYSICAL exercise of some kind is absolutely necessary to the maintenance of substantial health of mind and of body, but it is important that such exercise should be natural—that is, adapted to man's peculiar organization. It is sufficient that we exercise just enough to keep ourselves in good condition, preserving a healthy balance between brain and body. To do this requires much care and attention, much more than most persons are aware of. Many of our eminent physicians are strongly opposed to gymnastics, as conducted in our public gymnasia, on the ground mainly that in those places of youthful resort there is too much of that spirit of emulation which leads young men to attempt to outvie each other in the performance of difficult feats, in the course of which, oftentimes, an external or internal injury of a serious character is sustained. Even under the eye of a careful leader, in a place where apparatus is put up of such a nature that the simplest attempt to use it requires the exertion of great strength, a youth will sometimes imperceptibly overdo or strain himself severely. Although immoderate exercise of any sort is injurious, and therefore to be carefully avoided, yet simple muscular movements and attitudinizing, if carefully practiced, are productive of much benefit to those whose employments are such as preclude them from out-of-door activity. Much can be said, and much has been said, adversely to the popular gymnasia because of their introducing artificial and extraordinary movements totally unnecessary to the maintenance of health. A few indiscreet persons there are who enter our public gymnasia for healthful objects, who take their simple exercise daily, and do not attempt any of the "airy flights" and "lofty tumbling"

of the ambitious. These few are really improved in health and spirits for the very reason that their exercises have been natural and simple.

Man, as is evident from his physiological conformation, was made to walk upright, with his head

—"erectus ad sidera,"

and not designed to imitate the gyrations of the elastic monkey or the agile cat. To hang with the head downward, suspended by one leg or foot; to stand on the head, turn double somersaults, or bend backward until the head touches the ground, are distortions of and gross insults to the human frame. Even those persons who visit circus performances and gymnastic exhibitions go away deprecating the violence of the muscular efforts and strange contortions of the acrobats as necessarily dangerous to health or limb. "What a fine monkey that man has made of himself!" we overheard a person remark to a friend as they were leaving Niblo's Garden, one afternoon after the conclusion of a *matinée* by the Ravel family. Yes, such is the fact; men by carrying the matter of physical exercise to an unnatural limit deteriorate the *human* in them and enhance the *animal*. It is notorious that circus actors and contortionists are not long-lived, and we have known private individuals who excelled as gymnasts complain bitterly of rheumatism and other affections of the muscles and nerves.

What exercise is taken should be had in the open air or in a well-ventilated apartment. Those artisan employments which require men to work out of doors a great part of their time are the most conducive to health. We remember reading of a young man who came, by the death of a wealthy relative, into the possession of a large fortune. So prodigal was he in expenditure, so lavish of costly favors on friend and

acquaintance, that in the course of a few years he reduced himself from affluence to poverty. Finding it necessary to do something for his support, he applied for a clerkship to the merchants and store-keepers of his native place. They knew of his late dissipated career, and refused peremptorily to employ one whose reputation was anything but commendable. Almost despairing, he rushed from the town to a part of the country where he was not known, and meeting with a gang of laborers breaking stone on the road, he applied to their overseer, who gave him a place among them. Some time afterward, a party of gentlemen returning from a pleasure excursion encountered a man on the road, with his hat off and hair streaming in the breeze, industriously applying a heavy hammer to the large pieces of stone which had been brought thither for the improvement of the turnpike. They recognized him immediately, sunburnt and dirty though he was, as the young man, formerly so wealthy, at whose table they were wont to make themselves comfortable and hilarious, and stopping, offered him money and assistance, urging him to throw down the toilsome hammer and accompany them to the city, where they would find some more respectable occupation for him. The inducement was strong, but after a moment's silence he resumed his stone-breaking with the reply, "I am obliged to you, gentlemen, for your kind offers, but I feel that I will be happier in remaining where I am. I get enough wages for my comfortable support, and when I go home at night, my supper tastes good, and I sleep soundly until morning, and never awake with a headache or a feeling of dullness. I fear should I go with you that my former wakeful nights and morning headaches would return, and I should then be miserable indeed. I now know what it is to be healthy

and happy—let me remain so." He no doubt had by stress of fortune, or "ill luck," as many would say, fallen into an occupation which well accorded with his physical organization, and appreciating its beneficial results was loth to leave it lest he might suffer in health by the change. But we would not advise all those who find their vocations ill adapted to the wants of their physical natures to go to breaking stone or wielding the blacksmith's hammer, for many of them have not the constitution or the large frame required for the successful prosecution of a severe manual employment. Such should take moderate exercises during the day. But those who need the most urging on this subject are the females, old and young, of our larger towns and cities. Many complain of their ignorance of the subject and the want of proper instruction. Many from diffidence shrink from the riding academy or the gymnasium. We are glad to know that for two or three years past physical culture in connection with mental training has received considerable attention from many of our public educators. Some schools have been established where the body as well as the brain is instructed and developed. The success with which these schools have been attended is surprising, and most happily in keeping with the views of the health reformers. Books, too, are not wanting, in which carefully prescribed modes of exercise are given. One of the best we have seen is "Watson's Manual of Calisthenics,"* which is adapted to the use of both sexes, old and young.

It contains an extended and varied course of physical exercises, *without apparatus*. The Introduction embraces all needful directions, rules, and explanations for instructors and pupils, with sections on phonetics and respiration. Throughout the book the exercises are arranged in accordance with well-known principles of anatomy, physiology, and hygiene. These exercises, practiced habitually and energetically, can not fail to yield to youth grace, agility, suppleness, a ready hand, as well as a robust health, solid strength, and power of endurance. Almost any school-room or parlor will suffice for the exercises. For those who wish to use the piano to enliven the exercises, there are several pieces of music prepared by the best masters.

The book is profusely and richly illustrated from original designs. It is printed on superior tinted paper, and is bound in the best style. A reviewer writes: "The work has evidently been prepared by one who is conversant of the requirements of the learner, and has studied the most effectual way of meeting and supplying them. To those in authority, whose influence would be effectual in promoting the circulation of this book, it becomes a positive duty so to do by every means in their power. All who have the physical welfare of the human race at heart, and understand how powerless the intellect is to contend against the burden of a feeble and emaciated frame, are equally interested in its teachings, and answerable, each in his own sphere, however small it be, for the consequences of neglecting them."

Our illustration, "A Gymnastic Charge," is taken from this work, and were it not that the dumb-bells held forward so menacingly by the joyous boys are represented to be of wood, instead of heavy iron, we would be led to fear some serious results from their gallant assault.

* This truly valuable work can be obtained from us, price \$2 25. We can also supply gymnastic apparatus, such as Indian clubs and dumb-bells of various weights, wooden rings, etc.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—*Spurzheim*.

THE ABORIGINAL GRAPHIC SYSTEMS OF AMERICA.

BY E. G. SQUIER, M.A.

THE object of the following observations is to illustrate the true character of a portion of the so-called "Mexican Manuscripts" or paintings, which have been sent to Europe, at different periods, since the Spanish conquest of America, and which, falling into the hands of superficial investigators, have given rise to much erroneous speculation, and led to many absurd conclusions. I refer to a class of manuscripts and paintings, sometimes executed on prepared skins or paper of the *marquey*, but often on cloth and paper of European manufacture, which are the work of the early Spanish missionaries, or of natives employed by them, and originally designed to convey doctrinal instruction, the legends of the Church, and the mysteries of the Christian religion, to the minds of the Indians, through the medium of a system of representation already in existence, and with which the Indians were acquainted. In other words, the early missionaries made use of the Mexican hieroglyphical system, if I may adopt the term, for purposes of their own, in their communications with the Indians; and there is little doubt that considerably more than half of what are called Mexican Manuscripts now known had their origin in this practice. The well-informed student, therefore, will not be surprised to find in them those confirmations of Christian doctrine, and the Hebrew Scriptures, which so impressed the mind of Lord Kingsborough, and which are constantly adduced, in unscientific books, as illustrations of the various hypotheses of the unity of human origins, descent of the American aborigines from Asiatic tribes, a universal primitive religion, etc., etc. It is only requisite that the history and true character of this class of alleged Mexican MSS. shall be understood, to prevent future errors of this kind, and to put a stop to the unprofitable speculations of zealous but uncritical writers, who seek to support a system of religion and morals which needs no prop, by supposed confirmations, loosely drawn from the traditions and complicated systems of barbarous or but partially civilized nations, imperfectly recorded and imperfectly understood.

It is easier to advance from ignorance to knowledge than from error to truth; and hence it is, that American archæology, which, as a science, is just emerging from the chaos of idle speculation, fantastic hypothesis, and dogmatic assertions, has really to contend less with natural than with artificial difficulties. It has, at the outset, to grapple with prejudices and pre-occupations, and many of the minds which it addresses are less concerned to know if its

results be true, than if they confirm or oppose a favorite hypothesis or a foregone conclusion. For instance, the notion of the early colonization of America from the northwest, by Behring's Straits or the Aleutian Islands, and the origin of Central American and Mexican civilization from that direction, has been almost universally accepted; yet it had its foundation only in the presumed necessity of deriving the American nations from the Old World, and on the supposition that it was here that the migration could be most easily effected. It was not suggested, nor is it supported by a single well-authenticated tradition, by a single painted record, nor by a solitary architectural or other monument. But once accepted, on other grounds, the priests and monks were not slow to suppress and distort traditions, interpolate and misinterpret manuscripts, and altogether divert facts from their true significance to sustain an hypothesis which should, in turn, support their ideas of human origins, founded on the dogmas of the Church, and on their interpretation of Scripture. As a consequence, the manuscript which records the migration of the Aztecs from lake Michoacan to the valley of Anahuac, a distance of less than 400 miles, was not only interpreted as recording a migration from the plain of Shinar, but it was subjected to such emendations as should make it conform more exactly to the popular hypothesis. Traditions which referred to events or incidents, as occurring south and east, were altered with equal facility to refer to the north or northwest. The figure of *Cinteotl*, the goddess of abundance, the Mexican Venus, was as easily altered, in the ritual calendar, into that of the Virgin Mary, and the symbolical serpent of the benign *Quetzalcoatl* converted into the scaly tempter of the garden of Eden!

Thus, in addition to that large class of Mexican Manuscripts, so-called, which owe their origin to a period subsequent to the Conquest, we find a certain number of authentic Mexican Manuscripts, changed in copies, or altered in the originals which further embarrass investigation, and which require a special examination. Such an examination, however, is foreign to my present purpose, which is only, as I have already said, to direct attention to these manuscripts or paintings composed by the early priests and monks for the purpose of teaching the Christian doctrine, through the aid of the Mexican system of representation.

It is well known that among the semi-civilized of Mexico and Central America, previous to the discovery of America, there existed a system of representation by some called hieroglyphical, and by others denominated "picture writing." Careful investigations have convinced me that no single terms can adequately characterize this system, or rather systems, for there was more than one, and satisfied me also, that among the nations which had their principal seat around Na-chan or Palenque there existed a pure hieroglyphical system, while among the nations around Mexico, in the valley of Anahuac, a less perfect or mixed system prevailed,

which was composed of condensed pictures, an arbitrary or derivative representation of things, having a hieroglyphical approach, and a clear phonetic value. The capacity even of this imperfect or mixed system was considerable. By means of it the Mexicans compendiously recorded their history, composed their rituals and civil and religious almanacs, recorded titles to property, the judgments of courts, assessed taxes, defined genealogies, etc. When Cortez landed, full accounts of him, his equipment, men, and so far as he indicated them by word or action, of his purposes, were thus recorded and sent to Montezuma. The Spaniards were not a little surprised at the accuracy attained under a system obviously so imperfect; and the ecclesiastics who followed in the train of the conquering armies, animated by a zeal not surpassed, if equaled by the martial spirit of the military chiefs, readily conceived the purpose of using this system among nations whom it would have been a hopeless task to instruct in the Spanish language and alphabet, as a means of communicating and disseminating their doctrines. A very considerable, in fact, all the influential part of the native population, the officers and sacerdotal body, were thoroughly instructed in their hieroglyphical system, and the Catholic priests rightly valued the influence which their faith would have, if it could be conveyed to the Indians in what might be called a native garb. They therefore used their utmost exertions to acquaint themselves with this system and adapt it to their purposes.

The first attempt toward this adaptation, or perhaps the first use of pictorial representations in teaching the Indians, out of which this adaptation gradually grew, was within eight or nine years after the capture of Mexico, by Testera of Bayonne, brother of the chamberlain of Francis I. According to Torquemada, "Not being able to learn the language of the Indians so quickly as he wished, and impatient of delay, he took a new mode of preaching, by means of an interpreter, taking with him the mysteries of the faith, painted on a cloth, which the interpreter explained to the Indians as instructed by the servant of the Lord, and thus he converted numbers, availing himself greatly of the representations of pictures which he carried with him."

Testera became afterward commissary-general of the Indies, and his followers, the celebrated Sahagun, Motolinia, Peter of Ghent, and all the Franciscans, adopted his example of using pictures in their teachings. They extended the application of these paintings (which were doubtless originally simple exaggerations of those which to this day fill the churches of Italy, Spain, and Mexico) and incorporated with them many of the native figures. And as Testera went all over New Spain, through Central America and Yucatan, and even to Peru, it is not improbable that many traces or remains of his paintings may still exist in all those countries, where, according to Gonzaga, "the memory of Testera was long preserved,"

and where in the time of Barezzo Barezzi, the Indians every year celebrated a feast "in honor of their holy and glorious friend."

In the provinces near Mexico, as soon as the Franciscans commenced this adaptation, the interpreters and a great number of natives employed as missionaries, lent themselves zealously to promote it. Motolinia, in his MSS., informs us that he was literally overwhelmed with Indians, who presented themselves with their confessions in figures. From this time the adaptation advanced, and Valdez, in 1579, and Torquemada, nearly a century after the Conquest, received similar confessions. In their time, indeed, this system was preferred to alphabetical writing by Indians, who were perfectly versed in the latter.

There still exist, in the museum of Mexico and elsewhere, several kinds of catechetical compositions, under a more or less advanced adaptation of the native system, some of them approaching so nearly to absolute native originals, dating beyond the Conquest, as only to be distinguished from them by the material upon which they are painted. They exist of all dates, from the arrival of Testera in 1529 until 1600, the time when the industrious J. Baptista, still making use of the paintings, wrote his work, entitled "Hieroglyphics of Conversation, in which, by Means of Prints and Figures, the Natives are Taught to desire Heaven." These Christian paintings seem to have been of three kinds:

First: Those of Testera and the first Franciscans, which were simple paintings, more or less adapted to Indian conventionalisms, in their style of execution.

Second: Those of a mixed kind, in which some simple paintings were preserved, largely illustrated by Indian arbitrary and other figures, which, for lack of a better term, might be called hieroglyphics.

Third: Those in phonetic characters, in which there was a complete adoption of the Mexican system.

The mixed MSS. were only Testeran MSS. touched up by the natives, with proper and other names in phonetic *rebus*, and sometimes with a sign illustrating the action represented in the painting. The proper manner in which these paintings should be made, led to innumerable quarrels among the monastic orders, and, in Peru, ended in a battle, in which the Jesuits, on their side, had more than four hundred of their number slain.

In Mexico it required the energetic interposition of the secular arm to prevent them from coming to blows.

The third class of Christian, or post-Mexican, paintings phonetic in character are described as follows by Torquemada, who, Ixtlilxochitl assures us, was the first who succeeded in interpreting the pictures and poems of the Indians. After speaking of the mode in which some Indians learned the *Pater Noster*, he adds: "Others translated the Latin into words in their own language, which resembled them in sound, representing them, not by letters, but

by the things themselves signified—for they had no letters besides pictures, and it was by these that they understood each other. This will be more clear by an example. The word most nearly representing *Pater* being *Pantli*, the name of a sort of small flag, which served to express the number twenty, they put this small flag for *pater*. In place of *noster*, a word resembling their *nochtli*, they paint a tuna (*cactus*), fig, the name of which, *nochtli*, recalls the Latin *noster*, and so they proceed to the end of the prayer. By a similar process and similar characters they wrote down what they wished to learn by heart. This was during the first period of their conversion, for now (between 1592 and 1614) they no longer require to use these ancient characters."

This passage, which gives the true key to the Mexican writing, confirms what Torquemada elsewhere says of the real letters or hieroglyphics in use in his time. He speaks of the existence of a class of Totonac monks who were employed to compose, "to put in good style, and to write in figures the discourses which the pontiffs pronounced in public." Sahagun also assures us, as well as other authors, that there were school-books "containing poems in ancient characters."

Of course Testera's ignorance of the native languages precluded anything like *phoneticism* from his first compositions. On the other hand, they were too unconnected to deserve the name of *ideographic*. As I have said, they were only rude paintings, without any special significance in themselves, but simply expressive as illustrations of verbal discourse. It was practically these awkward exaggerations or Scriptural caricatures which led to the controversy between the Dominicans, to which order Testera belonged, and their rivals the Franciscans, for when the last, improving on the paintings of Testera, assimilated theirs more and more to the native paintings or records, the Dominicans attempted to appropriate the improvements to themselves. Now, although the friars became very expert in their use of the native systems, there were many things they could not express; either for want of a knowledge of the system or in consequence of its own defects. The more abstract ideas connected with their doctrines defied their ingenuity to render them, and in these cases it will be seen from the following passage from Acosta, they were compelled to resort to foreign, European, Greek or other characters, most likely, from their pedantry, or, in order to preserve stricter exactitude, Greek or Hebrew characters. In rendering any portions of the Bible, it is almost certain the characters last-named would be used.

The language of Acosta is as follows:

"One of our Jesuit fathers, an experienced and skillful man, assembled the old men of Tezcuco, Tula, and Mexico, and conferred much with them (in reference to the paintings). They showed him their libraries, their histories, their calendars, and other things worthy to be seen. They had figures and hieroglyphics which were thus employed in their paintings; things which

had a figure were represented by their own effigy, those which had not were rendered by other significant characters, and by this means they expressed all they desired. For dates they had complete signs, etc. But as their figures and characters were not so copious and efficient as our letters and writing, they could not so accurately render the words, but only the substance of the ideas. And as they still recite the harangues and discourses of their ancient orators and rhetoricians, and many poetical chants which it was impossible to learn by means of these hieroglyphics and characters, we must infer that the children were taught these by heart.

"Nevertheless, they wrote the same discourses by images and characters; and in order to convince myself of it, I have examined the prayers of Pater Noster, Ave Maria, Credo, etc., written in the same mode with the Indians, and they may well astonish whoever sees them. For, in order to express these words 'I confess myself,' they paint an Indian confessing on his knees at the feet of a monk; then, for the words 'to God Almighty,' they paint three heads crowned, to represent the Trinity; for 'to the glorious Virgin Mary,' they paint the face and bust of our Lady with a child; for St. Peter and St. Paul, two heads surrounded by a halo, with keys and a sword; and in this way the whole Confiteor is written in figures. Where figures are wanting," continues Acosta, "they put characters, as for 'which I have sinned.'"

Acosta has not told us what kind of characters he means, and they are variously supposed to have been European, Greek, or Hebrew, and ideographic. De Brosse, in his treatise on the Mechanical Formation of Languages (c. 7, s. 14), translates the chapter of Acosta from which I have quoted, and throughout understands Acosta to mean by "caracteres," Mexican characters. But when he comes to the passage in question, he suddenly translates the word "characters in our letters," and proceeds to say that the figured writing of the Mexicans never advanced as far as Acosta pretends, and that it failed the moment it became necessary to express some intellectual or moral idea, or anything relative or abstract. But De Brosse evidently underrates the capacity of the Mexican system, for if they were obliged to resort, as often as he pretends, to foreign alphabets, the accurate and scrupulous Acosta would have qualified his assertions and mentioned the fact.

Nevertheless there are paintings composed partly of figures, and partly of alphabetical writing, such as De Brosse meant. Such were the confessions which Torquemada mentions, in which the nonfigurative part is in European characters, well formed and perfectly legible.

Monastic Christianity is not always the same with ours, and sometimes is not over-scrupulous. For, in some of their painted prayers, etc., the monks took great liberties; St. Francis is interpolated by the Franciscans, after St. Peter and St. Paul, in the Confiteor. Instead of "in thought, word, or action," they said or painted "in eating, drinking, etc.," in figures not wholly decent. In some, Jesus Christ does not die on the cross, but has a battle with Herod, cuts in pieces his army, and then ascends into heaven. In others, he is delivered from the Jews by the Spaniards, by force of

arms. As late as 1853 I saw a sacred drama or representation at Soyopango, Central America, on Good Friday, in which the Spaniards were represented as interposing in behalf of Christ in the same manner. This explains the reproach of Remesal, "that the Indians never knew of the passion or death of Christ, because it had not been taught to them, the reason of which was that the Spaniards giving themselves out to be immortal, did not wish to admit that their God could die."

My friend M. Aubin, of Paris, has five of these Christian books, more or less in the Mexican figures, some of them having Spanish text interposed, others Otomi and Mexican text, in European characters. They have nearly the same figures, chiefly Testeran, and are evidently of Franciscan origin. But they differ from those purely Testeran, inasmuch as the immediately abstract terms, or those which have no proper image, are sometimes represented by phonetic characters of undoubted Indian origin. The best book of this kind in the museum of Mexico is in the Nahuatl or true Mexican language. In this two altars, or rather the figures of them, stand for *daily bread*, in the Lord's Prayer. Now, *daily bread* rendered literally in Nahuatl is *momoztli*, while an altar in the same language is *momoztli*. In other paintings of this prayer, the same phrase or term is represented by the figure of a roll of bread and that of the sun—a sun under the tropics being equivalent to a day. We even find Spanish phoneticism in paintings of this kind in the native languages. Thus in the title of the *Ave Maria* we observe a bird, *Ave* in Spanish standing for its first part.

The phonetic signs were sometimes sustained through whole prayers, without the slightest resort to ideography, and this fact gives us some idea of the capabilities of the pure Mexican system. Such is the case with a Pater Noster preserved in the museum of Mexico. It throws great light upon the Mexican paintings, and is a very good example of them. The manner in which the title *Pater Noster* is rendered, may serve to illustrate the whole:

Pa-te-noch-te.

Pa-tell-noch-tell.

First is the figure of a little flag, or *pan*, the root of which is *pan* or *pa*; second, the sign of stone, *tell*, root *te*, thus making, syllabically, *pate* for *Pater*, the *r* being wanting in Mexican. Next we have the sign of the fruit of the cactus, *nochtli* (root *noch*), and stone, *tell* (root *te*), as before making *noste*—the *r*, for the reason already given, being wanting. The whole is therefore the nearest possible approach to the Latin, represented by Mexican figures, of exact and unmistakable phonetic value.

A general comparison of the ancient and positively Mexican paintings leaves no doubt that this mode of representation, by syllabic phonetics, in which the roots of words only were to be understood by the figures, or sounded in

reading, was the mode universally accepted, more or less mixed up with ideographic signs and simple pictures.

And here I may observe, that although all the painted historical records, and civil and ritual calendars, on skins or paper of the *maguery*, which have been brought from Mexico and Central America, are loosely called Mexican, yet there is a wide distinction to be drawn between those found in Mexico and those obtained from Central America. Of those from the country last named, unfortunately but few examples are known to exist. The so-called Dresden MS., published by Lord Kingsborough, is perhaps the only perfect manuscript of this kind in Europe. But happily at Palenque and Copan, and those other Palmyras hidden among the tropical forests of America, we have left to us a great number of sculptured tablets and other monuments, bearing inscriptions, which equally illustrate the graphic system of Central America, as distinguished from all others, and which will ultimately reward the perseverance of the student with authentic revelations of the history and religion of the people who carved them in the stone. The elements of this Central American system seem to be few, and very exact in their application, not admitting of that variation which would naturally result from the caprice or varying individual conceptions or tastes of the persons employing the Mexican system. We discover in it no proper representations of things, except as pictures illustrative of what may be called the text of the manuscript; or in miniature in the text, when employed as signs or characters, having a fixed and constant value, or modified only by the addition of arbitrary signs, like the points in Oriental writings. Such, at least, is the hypothesis I have been led to form of the graphic system of Central America. And believing that the existing aboriginal population of that country is chiefly composed of the descendants of the authors of this system, the builders of the monuments to which I have adverted, and consequently speaking the same language which they spoke, or one but slightly modified from it, I conceive that as the hieroglyphics of Egypt could only be interpreted through the Coptic, so those of Central America can only be understood through that language of which the Maya, Kachiquel, Quichi, etc., are but dialects. Until these are carefully studied, and grammars and dictionaries of them obtained, I believe no real advance can be made toward the reading of the Central American inscriptions and manuscripts. Individually, therefore, I have confined my exertions to procuring accurate copies of the inscriptions, and such information respecting the languages referred to, as shall serve, in military phrase, as a basis of operations. Those interested in the subject may be gratified to know, that through my own exertions and the zeal of friends, I have been able to procure, besides many detached vocabularies and grammatical notices, complete grammars of the

Quiché and Kachiquel dialects, and also a dictionary of the Maya, of 27,000 words, and one of the Kachiquel of 16,000. Of the Maya, grammars are in existence and in print.

After these somewhat desultory references to two of the graphic systems of America, that of Mexico and that of Central America, I may perhaps be indulged in saying a word on that ruder system practiced by those Indian tribes occupying an intermediate position between the absolute barbarism of the Esquimaux and the Root Diggers of California, and the relative civilization of Mexico, and which more exactly than any other answers to the description of "picture writing."

The scope of this system, and the extent to which it was applied, have not been generally understood nor fully recognized. Without, however, going into an analysis of its principles and elements—an inquiry of much interest—it may be claimed, upon an array of evidence which will admit of no dispute, that under it the Indians were not only able to communicate events and transmit intelligence, but also to record chants and songs, often containing abstract ideas—allusions to the origin of things, the powers of nature, and to the elements of their religion. "The Indians," says Heckewelder, "have no alphabet, nor any mode of representing words to the eye, yet they have certain hieroglyphics by which they describe facts in so plain a manner, that those who are conversant with their marks, can understand them with the greatest ease—as easily, indeed, as they can understand a piece of writing." This author also asserts that the simple principles of the system are so well recognized, and of so general application, that the members of different tribes could interpret with the greatest facility the drawings of other and remote tribes.

Loskiel has recorded his testimony to the same effect. He says: "The Delawares use hieroglyphics on wood, trees, and stones, to give caution, for communication, to commemorate events, and preserve records. Every Indian understands their meaning, etc." It has also been observed of the Ojibways, that "every path hath its blazed and figured tree, conveying intelligence to all that pass, for all can understand these signs, which are taught to the young as carefully as our alphabet." Testimony might be accumulated upon this point, to an indefinite extent, were it necessary to to my purpose.

Most of the signs used in this system are representations of things; some, however, were derivative, others symbolical, and a few arbitrary. They, however, were not capable of doing more than to suggest classes of ideas, which would not be expressed in precisely the same words by different individuals. They were taught in connection with certain forms of expression, by which means they are made essentially *mnemonic*—a simple or compound sign serving to recall to mind an entire sentence, or a series of them. A single figure, with its adjuncts, would stand for the verse of

a song, or for a circumstance which it would require several sentences to explain.

Thus the famous *Metai song* of the Chipeways, presented by Mr. Catlin, although embracing but about thirty signs, occupied, in the slow, monotonous chant of the Indians, with their numerous repetitions, nearly an hour in its delivery. James observes, respecting the recorded Indian songs, "They are usually carved on a flat piece of wood, and the figures suggest to the minds of those who have learned the songs, the ideas and the order of their succession. The words are not variable, but must be taught; otherwise, though from an inspection of the figure the idea might be comprehended, no one would know how to sing." Most of the Indians lore being in the hands of the priests or medicine-men, the teaching of these songs was almost entirely monopolized by them. They taught them only to such as had distinguished themselves in war and the chase, and then only upon the payment of large prices. Tanner states that he was occupied more than a year in learning the great song for "medicine hunting," and then obtained his knowledge only at the expense of many beaver skins. After the introduction of Christianity, among some of the Western tribes, prayers were inscribed on pieces of wood, in mnemonic symbols, in the making and teaching of which to their followers some of the Christian chiefs obtained a profitable monopoly.

Admitting then, as we must do upon this evidence, that the American Indians had the means of imperfectly recording their traditions, songs, etc., we can readily understand how these might be taught by father to son, and perpetuated in great purity through a succession of priests—the sages of the aboriginal races. The fact that they were recorded, even in the rude way here indicated, would give them a degree of fixedness, and entitle them to a consideration which they would not possess if handed down in a simple oral form; and in this sense, the importance of preserving these "singing boards," as they were sometimes called, in connection with the songs of which they furnished the key, can not be over-estimated. For however much we may differ as to their historical value, yet they must always have the highest interest as illustrating a rude system of representation, which may be taken as the first advance beyond a simple oral transmission of ideas, and from which we may trace upward the course of human invention to its highest and noblest achievement, in the present perfected form of written language.

WORTH OF A HOME.

BETTER than gold is a peaceful home
Where all the fireside charities come;
The shrine of love, the heaven of life,
Hallowed by mother, or sister, or wife.
However humble the home may be,
Or tried with sorrow by Heaven's decree,
The blessings that never were bought or sold,
And center there, are better than gold.

EDINBURGH PHRENOLOGICAL ASSOCIATION.

—Through the polite attention of Mr. J. C. Smith, of Dundee, Scotland, we received the following account, copied from the *Daily Review* of Edinburgh:

This Association held its annual social meeting in the Phrenological Museum, Surgeon Square, on Monday evening (being the seventy-eighth anniversary of the birth of the late Mr. George Combe)—the President, Mr. A. Reid, in the chair. Among those present were Mr. J. W. Jackson, Glasgow; Mr. Wm. Brodie, R. S. A.; Mr. W. Neilson, W. S.; Messrs. Ferguson, Vernon, Laing, etc. After an excellent service, the secretary read letters of apology from Dr. W. A. F. Browne, Commissioner in Lunacy; Francis Farquharson, Esq., of Finzean; A. Trevelyan, Esq., etc. The President delivered an address, in which he gave an account of Mr. Combe's phrenological works, and the important influence they had exercised on the progress of society, concluding with some remarks on the proceedings of the Association during the past year, and the establishment, by the trustees, of the late Mr. W. R. Henderson, of a valuable lending library of works on mental and social science. Mr. George Dowie delivered an address on "The Influence of Language in the Development of Character," followed by Mr. J. W. Jackson, who spoke on "The Importance of Phrenology in Anthropological Investigations," in which he reviewed the whole of the controversy regarding the relationship of man and the lower animals asserting that the Huxley-Owen controversy was totally devoid of interest unless the combatants associated with the examination of the cranial structure an inquiry into the functions of that organ. Phrenology, he stated, was the instrument which showed the wild chasm between man and the lower animals. The audience, which completely filled the museum, were entertained at intervals with a number of songs by a select party of amateur vocalists. The meeting closed with votes of thanks to the speakers and singers.

DOTTINGS AND PERSONALITIES.

DR. B. H. WASHINGTON, of Augusta, Ga., has sent us copies of his recent articles on "Phrenological Hypothesis concerning Consciousness and Mental Action." His views are in some respects new, and well worth the attentive perusal of all who are interested in mental philosophy. We purpose to publish them *seriatim*.

MR. J. WOOD DAVIDSON, a good theoretical phrenologist and a versatile writer, is on the eve of his departure for Europe. He will remain in Paris during the great Exposition, acting as correspondent for prominent Northern and Southern newspapers.

OUR recent pupil, Mr. J. W. String, has made a very successful début before the Chicago public. The press report favorably of him.

AMONG the many elegant and appropriate gift-books for the holidays, Professor Longfellow's "Evangeline," illustrated by F. O. C. Darley; Mr. Whittier's "Maud Muller," illustrated by Mr. Hennessy; and Mr. Lowell's "Sir Launfal," illustrated by Mr. Eytzinger, are well calculated to win popular favor, because of the neat style of their bindings, the artistic finish of their engravings, and, above all, the reasonableness of their prices.

REV. HENRY WARD BEECHER has been announced a contributor to *The Methodist*. That paper will publish fortnightly a fresh sermon of the undoctored celebrity.

REV. CHAUNCEY GILES, for some time pastor of the New Jerusalem Church in this city, will deliver a course of six lectures on the Theological Writings of Emanuel Swedenborg, in the church, 35th Street, between Fourth and Lexington avenues. This is a good opportunity for those who would know something of the great Swedish seer, and the church which he founded.

NEW YORK, JANUARY, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Rue.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 20 cents. Please address, Messrs. FOWLER AND WELLS, 389 Broadway, New York.

SALUTATORY.

HAPPY NEW YEAR, dear readers, one and all. May this volume—FORTY-FIVE—of our PHRENOLOGICAL JOURNAL open as auspiciously to your approval as the *best* volume of past years. The future—the ever glorious future is before us. Hope, with bright wings and rosy smile, beckons us on in the course we have chosen. Causality and Comparison bid us to cull from the stores which Individuality and Eventuality have been industriously gathering, from far and near, such material as will best illustrate the subjects we have to portray. Mirthfulness suggests that it is well, now and then, to be witty and facetious; that it is the most direct way to some hearts by an excitement of their risibles; that to make our adversary laugh is a point gained. Ideality and Sublimity urge the introduction of metaphor and figure, the use of our rhetorical acquirements, and an occasional sally in the "grandiloquent." Fine language, say they, is potential with those who are skilled in the "accomplishments" of society, and of course the Editor is not wanting in the refinements of the *beau monde*. Agreeableness indorses the counsels of these inspirers of the imagination, and suggests the propriety of a careful observance of the delicate prescriptions of etiquette. Cautiousness whispers, "Be careful that you do not get yourself into trouble by the too bold assertion of principles and facts which may be adverse to public sentiment." "Yes," chimes in Approbativeness, "keep as much as possible on the popular side, for you know that is the speediest route to applause and distinction; besides, you know, 'Custom's the world's great idol we adore.'" Self-Esteem insists, "Say what you think is

best for the occasion, and do not permit prejudice or favor to influence you; count your experience and opinions of the first importance, and announce them with the air of assured confidence in their superior worth." Staid Conscientiousness advises us to "be sure that we are right, and then go ahead," not sparing evil in whatsoever place we find it; giving and asking no quarter. Firmness blurts out, "Stick to what you say, right or wrong; don't budge an inch, and the world will be the more obsequious." Continuity would bolster up Firmness by urging us to "sift everything to the bottom; make sure work of finishing it before giving attention to anything else; and do not allow yourself to be drawn hither and thither by contending influences." Veneration enjoins respect for things old and things sacred, and would have us acknowledge a superintending Providence, and inculcate the requirements of piety. Faith gently murmurs, "Trust in the Lord, and he will do thee good. All things are possible to them that believe." Benevolence offers her most cordial sympathy, and thinks it consonant with true nobility of soul to be generous and kind in our comments, that "the gentle word quelleth the storm," and that it is best, if we err at all, to err on the side of mercy. Destructiveness forcibly prompts us to "act with vigor and effectiveness, to strike hard while the iron's hot, and not be sparing of our blows. If there be any opposition, rip it through, annihilate it, and don't stop to pick up the pieces." Combaticiveness says, "Be courageous, be bold, be irrepressible, and you will wrest the victory from the enemy in the midst of his camp." "Ah! hush," whispers Secretiveness, "a word in your ear—don't be caught napping, be shrewd and cunning if you would be successful. Bait your hook wisely. Ply your lines skillfully, and you will soon have enough fish in your basket." Acquisitiveness would have us consider pecuniary results, and puts the question, "Will it pay?" urging that we should set a good price on our wares, and make the "end and aim" of our business identical with those of the world—the acquisition of wealth." Constructiveness kindly offers to plan out any little undertaking we may have in hand. Friendship, Philoprogenitiveness, and Amativeness urge the necessity

of giving attention to the home and social circles if we would enjoy much of real happiness in this terrestrial sphere. They also have to suggest many good things in the way of the improvement of society, which good things we will request them to present through our columns as occasion may offer. Tune sings in our ear of the delights of music, and entreats us to say a word in her favor, so that joy, gratitude, and pleasure may find their fitting expression through her appropriate measures. Language owns the important part she has to bear in the realms of discussion and instruction, and offers her valuable instrumentalities in communicating our thoughts to world. Our little friends Time, Form, Size, Weight, Color, Order, and Number kindly offer us the privilege of calling on them for information in their respective lines whenever we need it.

What a host of assistants we have here, and how grateful we should be for their proffered aid! We will make them available, each, if we can, in his or her proper department, and as many simultaneously as the nature of the occasion or the subject demands. There is a possibility that one or more of these valuable coadjutors may now and then exercise too much influence in our considerations, overawing and preventing others from giving full expression to their views, and so forcing a verdict to a greater or less extent *ex parte*, and not in strict accordance with equity and candor. This possibility we must seek to avoid, at all times insisting that Benevolence, Causality, and Conscientiousness shall have the precedence in the debate. No knowledge is useless to the editor. The more he knows of *all* things, the better he can do any *one* thing. This axiom we have frequent occasion to appreciate. Persons write us from different sections of the country asking all sorts of questions, and had we the fabled wisdom of Apollo we would sometimes be at a loss to answer an inquiry. It is a very simple matter to *ask* questions—quite another to *answer* them.

What important events have taken place during the past year! The brief but weighty contest between Austria and Prussia has necessitated a considerable change in the map of continental Europe. Prussia has taken an advanced

position among the world's monarchies; Austria, hitherto recognized as a superior power, has receded into comparative insignificance; while poor, misguided, down-trodden Italy has emerged from the meanness and obscurity of centuries and taken a respectable stand among the nations. Glorious Garibaldi! But the most significant and the most important event of all, an event which looms up in the horizon of 1866 like some vast meteor of surpassing brilliancy, is the successful laying of the Atlantic cable. A pure triumph of science, and a marked advance in the measures of civilization. This new and magnetic bond of union between the Old and New Worlds will not be without its beneficial effects upon both. It will tend to maintain the identity of human nature on both sides of the Atlantic. The doctrine of "equal rights," as upheld in America, will through the agency of the telegraphic wire electrify the "men" of Europe, and prompt them to an assertion and maintenance of their rights as men, and so aid in bringing about that amelioration for which the lower classes there are sighing. The great Papal hierarchy, which for ages has issued its imperial mandates from the hills of the "Eternal City," seems unsteady and falling. The once proud disposer of thrones and principalities now holds the ancient seat by the sufferance of a single monarch. Whatever inferences may be drawn from prophecy with respect to this remarkable religious phenomenon we leave to the theologian, venturing no hypothesis on our own account, but feeling that the "just God, who presides over the destinies of nations," will make "all things work together for good."

In America we have had political thunder-storms which threatened serious results, but which passed by without damage, save to those who stood in the way of justice and progress. If bad men have been elevated to high places, they must themselves come up to the high plane demanded by the office, or they will be cast aside as so much useless lumber. If they were simply perverted, they may, nay, *must*, reform. Education, morality, religion, temperance, liberty, and progress will triumph. Enterprises are going forward; railways from the Atlantic to the Pacific are being pushed through; wild lands are being subdued and put

under cultivation; miners are bringing down from the mountains gold, silver, copper, and iron; farmers are flourishing; manufacturers are making money; and all classes of the temperate and industrious are thrifty and prosperous.

We now begin a new year and a new volume. May that beneficent Providence, who has cheered and prospered us in the past, graciously vouchsafe His direction and counsel in the future, that we, and all who help, may be enabled the more efficiently to perform the great work assigned us of promoting the physical, mental, and moral well-being of others.

YOU HAVE COME AGAIN.

It was painful for us to say "farewell," and to think of parting company with our old readers, which we did in the concluding number of the last volume—December, 1866. Our "good-bye" to former subscribers was uttered in a low mental whisper, and in sorrow at parting. We had come to feel a nearness to those with whom we had exchanged thoughts, and whose familiar names were on our books and constantly in our minds. Frequent mental interviews had begotten a feeling of sympathy and support. We should have claimed each, on meeting, as a friend, and felt "perfectly at home" in his or her presence.

But the parting word was said, and we turned again to our work, feeling grateful that we had met, and hopeful that we should meet again. How quickly have our hopes been realized! The "good-bye" was but for a day. Again we are greeted with those cheering and welcome words, "How do you do?" "Here we are again!" "Put us on your book for life." "I am in for the campaign." "The JOURNAL just suits me." "We can not keep house without it." "Make it weekly." "It does not come often enough." "How I regret I did not know of it sooner!" "We read it aloud in the family." "It is instructive and entertaining." "As good as preaching." "Will the EDITOR please give us his likeness in the JOURNAL?" [He would, but wife objects; fears others may fall in love with it—as she did—at first sight! What a whopper! Then how could she avoid being jealous? Wait awhile, till he gets a little gray and less fascinating, then it may be safe to put his picture in the JOURNAL.] Portraits of the great, the good, and the weak, and the bad will continue to appear—as formerly. Questions will be answered, as usual, by our oracle, who always has several dictionaries and encyclopedias in his head, having graduated in several schools, on sea and land. New books will be described, inventions noticed, and everything new and useful in our department of science and philosophy placed before our readers. It shall not be our fault, then, if the JOURNAL be not a welcome visitor in every family. We repeat to all former subscribers a hearty welcome, thrice welcome to a place in our new subscription books, and to our hearts. Toward new comers we feel like parents who have welcome additions to the family; while loving the first-born, we have no less affection for the last; and all who feel an interest in the cause we

advocate, and who are with us in thought, spirit, and sentiment, we extend the hand of welcome. We greet you, we grasp you, we welcome you. And may our frequent interviews during the year 1867 prove alike to all most "pleasant and profitable."

THE GREAT RAILROAD EXCURSION TOWARD THE ROCKY MOUNTAINS.

THE EDITOR is preparing for an early number of the PHRENOLOGICAL JOURNAL an account of the recent great railroad excursion to the one hundredth meridian of longitude, 250 miles west from Omaha, Nebraska, in which he was a most happy participant. Portraits of the leading railroad men, and of the members of Congress who formed part of the two hundred or more invited guests, are now being engraved. When ready, we shall try to "show up" this, one of the greatest of modern events in its true colors.

We of the East, with all our book knowledge of geography, do not comprehend the vast magnitude of the West! With our best conceptions, our view of the country may be likened to our looking at the great globe through a keyhole. We shall try to describe just a little of what we lately saw on the road to the Rocky Mountains.

PAWNEE INDIAN SKULLS.—To the Hon. J. E. Kelly—member of the Legislature of Nebraska, and president of the Columbus (Nebraska) Phrenological Society, the first one established between the Missouri River and the Rocky Mountains—the Editor is indebted for polite attentions when on his recent excursion to celebrate the opening of the Union Pacific Railroad, and for a fine specimen of a Pawnee Indian skull; also to Mr. Smith, postmaster of Omaha, for similar attentions, and for another skull of the same tribe, both of which now form a part of the large collection at 389 Broadway, New York. The Editor would also make his grateful acknowledgments to the American Express Company, for kindly franking to his address the package containing the skulls.

PROF. AGASSIZ IN NEW YORK.—The *New York Association for the Advancement of Science and Art*, which has for the past two years been industriously engaged in bringing before the public numerous subjects of interest, is now making preparations for a course of popular lectures by the distinguished naturalist, Prof. LOTIS AGASSIZ, whose recent thorough investigation and study of the geographical, botanical, zoological, aquatic, and ethnological character of Brazil has furnished him with an amount of material for the purpose unequalled by that of any other individual. The course is to consist of six lectures, which will afford the learned gentleman an opportunity to illustrate, in his peculiarly happy and attractive style, a large variety of interesting topics. The size of the audience will be limited to the seating accommodations of the Lecture Hall of the Cooper Institute, and those who may be so fortunate as to secure tickets for the course will be treated to a very rare and profitable entertainment. The lectures will be delivered some time in the month of February.

SING AWAY YOUR GRIEF.

WE can sing our cares away easier than we can reason them away. Sing in the morning. The birds are the earliest to sing, the birds are more without care than anything else that I know of. Sing at evening. Singing is the last thing that robins do. When they have done their daily work; when they have flown their last flight, and picked up their last morsel of food, and cleaned their bill on a napkin of a bough, then, on a topmost twig, they sing one song of praise. I know they sleep sweeter for it. They dream music; for sometimes in the night they break forth in singing, and stop suddenly after the first note, startled by their own voice. O that we might sing evening and morning, and let song touch song all the way through!

As I was returning from the country the other evening, between six and seven o'clock, bearing a basket of flowers, I met a man that was apparently the tender of a mason. He looked brick and mortar all over! He had worked the entire day, and he had the appearance of a man that would not be afraid of work. He was walking with a lithe step, and singing to himself as he passed down the street, though he had been working the whole day, and nearly the whole week. Were it not that my good thoughts always come too late, I should have given him a large allotment of my flowers. If he had not been out of sight when the idea occurred to me, I should have hailed him, and said, "Have you worked all day?" "Of course I have," he would have said. "And are you singing?" "Of course I am." "Then take these flowers home, and give them to your wife, and tell her what a blessing she has in you."

O that we could put songs under our burdens! O that we could extract the sense of sorrow by song! Then these things would not poison so much. Sing in the house. Teach your children to sing. When troubles come, go at them with songs. When griefs rise up, sing them down. Lift the voice of song against cares. Praise God by singing; that will lift you above trials of every sort. Attempt it. They sing in heaven; and among God's people upon earth song is the appropriate language of Christian feeling. BEECHER.

[Sensible. Do we not sing the restless baby to sleep? Do we not sing "Hail, Columbia," to express our love of country, and sacred songs to express our gratitude to God? So we may drive away melancholy, and divert the mind from painful subjects, by the aid of music. We vote for music, morning, noon, and night. Should a mad man attack us, we might try to sing him down, as did the fiddler when chased by a wild bull.

"Music hath charms to soothe the savage breast.")

BRavery.—"Now, then, my hearties," said a gallant captain, "you have a tough battle before you. Fight like heroes till your powder's gone; then—run! I'm a little lame, and I'll start now."

PORTRAIT OF ELIZA COOK.

AUTHOR OF "THE OLD ARM CHAIR."

ELIZA COOK, well known as a metrical and prose writer, author of "The Old Arm-Chair," was born in London about the year 1818. At the age of fifteen she lost her mother, a woman of culture and refinement, much above her social condition. Her own disposition and tastes being of an elevated character, she thereafter found little in her domestic associations in sympathy with those feelings. Actuated by the desire to emancipate herself from the uncongenial circumstances by which she was surrounded, she attempted the expression of her feelings in poetry, and was successful, meeting with a cordial reception. Subsequently she became the editress of "Eliza Cook's Journal," a weekly publication, and achieved fortune and reputation with her vigorous pen. She now contributes, both in prose and verse, to several British periodicals.

In Eliza Cook we have a happy illustration of a full vital temperament associated with authorship, which is quite in contravention of the generally received idea of "spare and lean writers." She is, however, truly English. The head is evidently much larger than the average of woman, especially in the regions of Ideality, Sublimity, and Mirthfulness. She should be known for imagination and sprightliness conjoined to a strong vein of the mirthful and humorous. The emotional and reflective organs predominate over the perceptive and merely passional; still, the base-of-brain is large enough to render her hold on life and society tenacious. Hope is also strong, which renders life attractive in its many phases. Buoyancy, elasticity, and exhilaration should be characteristics of her disposition, and impart their inspiration to her pen. That is a jovial, happy face, almost rollicking. Good-humor and good health are clearly expressed in this full-formed English woman.

STERNE says, "The grand error of life is, we look too far; we scale the heavens; we dig down to the center of the earth for systems; and we forget ourselves. Truth lies before us; it is in the highway path, and the plowman treads on it with clouted shoes."

* From our Illustrated Annual of Phrenology and Physiognomy for 1867. Sent post-paid for 30 cents.

TWO CAREERS OF WOMANHOOD.
ILLUSTRATED.

IN our January number of the PHRENOLOGICAL JOURNAL we published an article entitled "The Two Paths," or, a portraiture of the lives of two boys reared under different auspices, the one terminating happily and successfully, the other making a total wreck of life. That article excited considerable attention, and was favorably commented upon by the press at large. We now present our readers with a brief description of female life in its two most marked phases. Our hypothesis is as follows: Figures 1 and 2 represent two little girls just in the dawn of life, fresh, joyous, and pure in their childish simplicity. Yet we must mark a difference in their infantile faces, and the source of that difference can be traced in their parentage, birth, and surroundings. The parents of the first are plain, retired people, possessing strong religious principles and considerable intellectual culture. Their child is the object of tender solicitude. Her playmates are carefully selected for her, and the utmost regard is paid to her moral and mental training. Surrounded by the best influences, she becomes a quiet, unobtrusive, sweet-tempered girl. The parents of the second, although on the same plane in society with those of the first, are more worldly people. They are free and easy in their mode of life, fond of company and indulgent, allowing their child the utmost latitude. She "runs the streets," picking up any one she fancies as a playmate, in fact, associating promiscuously. She becomes dashing, pert, pleases the adult visitors at her parents' house, to say nothing of the inward satisfaction which her parents feel, by her smart "speeches, forwardness, and so cunning" ways.

Time passes on—eighteen years have gone by, and No. 1 has grown up into the sweet modest maiden. She is simple and unaffected in her manner. Her mind, though not overtasked with study, under judicious culture, is well stored with such information as is necessary to the performance of the duties appertenant to woman. She is quiet and unostentatious, with enough of dignity to prevent insolent familiarity. To be sure, she knows, personally, little about vice and crime as it exists in the world; but she has been taught its nature, and her high moral tone renders sin a matter of the deepest abhorrence to her. The spiritual instruction of her parents and teachers, and the precepts of the sacred Word of God, are kept as the most valuable of her treasures. At home, among her friends—at school, among her associates, she is loved and respected. Her health having been well cared for, nick-nacks, confections, and the whole host of poisonous sweets which, unfortunately, so many children are allowed to riot in, having been excluded from her dietary, she is well fortified by a substantial constitution against the common ailments of life. Happy are her prospects!

Meanwhile, No. 2 has grown up in her own way, according to her own devices. She is now a wild, fly-away "young lady." Her associations, which her parents allowed her to choose, or rather to "pick up," have brought her in contact with sin. Look in her countenance (fig. 4), and behold those voluptuous indications which are distinctive marks of the young woman of pleasure. There is no mistaking that face. And yet so young! Yes! She chases the gaudy bauble of pleasure as the only joy of earth. Permitted in her youth to have her own way, self-willed and capricious, without those high and holy influences which would have tended to draw her up and beyond temptation's snare, her propensities have attained the ascendancy over her moral nature, and she only finds delight now in what she terms the joys of life. Excitement, the giddy throng, the swell of passion, seductive musics, and the mazy whirl of the dance are her delights. We pause, and gaze upon her face, pityingly, when we meet her in the crowded thoroughfare. We can not but experience a pang of sorrow, for her countenance tells unmistakably of her downward course.

Many years have passed by, and we find her, whom we last considered as an amiable and intelligent girl of eighteen, now become a fully matured woman (fig. 5). She is married, and that discreetly; for, considering the careful culture of her youth, and the kind suggestions which she has doubtless received on so important a subject as marriage from interested friends, and the earnest thought which she herself has bestowed upon it, she could not hastily make a choice of her life's partner; but, deliberately considering the consequences, she has given her hand with her heart to him whom she could honor as well as love. It is probable that she has not been without her share of life's trials and disappointments. Perhaps bereavement has visited her bright home; but being sustained by a strong faith in that Saviour whom she was early taught to love and confide in, she can be resigned yet cheerful under the severest affliction. Her house is a place of quiet domestic enjoyment; her children, trained up carefully, do not annoy visitors by their rudeness; but all

who visit her desire to go again. Her husband while with her finds the cares of his business grow lighter, and his spirits rise under the

FIG. 1.

FIG. 2.

influence of his wife's cheerful voice and sweet inspiring smile. She does not seem to grow old; the girl is, in fact, impressed upon that

FIG. 3.

FIG. 4.

fresh countenance, and imparts buoyancy and dignity to the woman. In fig. 6 we see the reckless, cold-hearted, miserable woman; surviv-

FIG. 5.

FIG. 6.

ing the exciting and pernicious course of her early years, she has become a gloomy, indifferent, and apparently heartless woman, caring

FIG. 7.

FIG. 8.

nothing for others, and thinking that others care nothing for her. She has had her fill of worldly pleasure. But how unsatisfactory it has all

been! How painful its consequence! She regards the world as mean, sordid, and corrupt. Her days of youth and happiness are past, for her manner of life has rendered her prematurely old. The fiery draught is now her only friend, for in its intoxicating depths she can temporarily forget the maddening recollection of her shame. Perhaps she, too, has been married. But what man, except he be as abandoned as herself, could live with her? In the street she is regarded with loathing and contempt by the passers-by. "Friends she has none!" There is no kind word of sympathy expressed for her! She has lost all friends, and misery, only misery, seems to be her inevitable portion, for she lives obstinately and willfully, without repentance and without grace! We see no encouragement in that half-frenzied face, and we turn from it with a sigh of relief and of sadness.

In the midst of her home, among the many friends whom her kindness and ready sympathy have closely attached to her, No. 1 grows old indeed "gracefully." The silver threads, which passing years have imperceptibly interwoven one by one with her shining tresses, announce her advanced age. How beautiful she appears, the aged Christian, the admired, the revered center of an extensive circle! Her presence is ever welcome, and her counsel gratefully received; and when the sun of her earthly existence shall set, in what a halo of glory it will take place! What sweet memories will linger on earth to console those in whose hearts she was held so dear! Her life, while she lives, is the life of faith, and her death, when she dies, will be a joyful transition to a blissful immortality.

But how different is the picture presented by No. 2, in the closing scene of her career, supposing that she has been suffered to live and grow old! She is probably the inmate of some poor-house, prison, hospital, or asylum, a tax upon the state, an object of cure to those who will not regret her decease. She will go down to the grave uncared-for and unmourned. If not under the care of the civil authorities, she worries through the remnant of her days in some lonely, squalid, out-of-the-way garret, among wretches almost as miserable as herself. She is an object

of aversion to her neighbors, and of dread to their dirty children; for now and then, alcohol and her unbridled passions drive her to the extremities of delirium, and in one of those paroxysms of madness, death comes, either by her own hand, or her diseased and broken-down body finally succumbs to its natural destiny, and her staring eyes are fixed until the last trump shall awaken her to judgment. Sad, fearful end! the inevitable result of a life of sin! Reader, ponder well these two sketches, and gather therefrom the instruction we have sought to impart. Choose Wisdom's ways, for "her ways are ways of pleasantness, and all her paths are peace."

RATIONALISM.*

RATIONALISM, strictly speaking, signifies what is conformable to reason; that which possesses the attributes and methods of reason. It is that method of thought which in matters of religion not only allows the use of reason, but considers it indispensable. The term has now, however, acquired a wider meaning, and stands in opposition to *supernaturalism*, or the belief in the miracles recorded in the Bible, the genuineness and accuracy of which it questions. It proceeds farther, and denies the presence of any element other than human in the Bible, or that there is any satisfactory evidence of the truth of its alleged supernaturalism; and the word Rationalism has now become synonymous with or a species of infidelity. This system of interpretation upon the principles of human reason has become famous in the present day by the opposition in which it stands to Protestantism; but to comprehend rightly the struggle between Rationalism and Protestantism, we must look at it from a historical point of view.

Much has been written on this subject, and the most recent defense of it is by Mr. Lecky, following closely in the steps of Mr. Buckle in his "History of Civilization." According to Lecky, human reason is the only factor of history; the agency of God is ignored; elaborate creeds and liturgical services are a barrier to the mind's progress, because they shackle the intellect by impure traditions; and Rationalism is the only relief of these later times; and he totally disclaims the agency of the Holy Spirit in giving inspired truth to the world or in educating the Church, etc.

That such views should be repudiated and their influence counteracted was a matter of necessity, and Mr. Hurst, in his late volume on the "History of Rationalism," and which has called our attention to the subject, has come boldly forward to the self-imposed task in repelling the invasion of such skepticism.

Mr. Hurst bases his discussion on the present theme on three great principles, namely: 1. That infidelity presents a systematic and harmonious history. 2. A history of a mischievous tendency is the very best method for its refutation and ex-

tirpation. 3. Of Rationalism it may be affirmed, as of all the phases of infidelity, that it is not in its results an unmixed evil, since God overrules its work for the purification and progress of His Church.

Upon these principles Mr. Hurst lays the foundation of his "History." To do justice to the excellent work which Mr. Hurst presents would require too much of our very limited space, and we must therefore content ourselves with presenting to our readers but a brief synopsis of those interesting chapters which relate chiefly to our own land and to Great Britain.

RATIONALISM NOT AN UNMIXED EVIL.

The third great principle underlying Mr. Hurst's work, namely, "Of Rationalism it may be affirmed, as of all the phases of infidelity, that it is not in its results an unmixed evil, since God overrules its work for the purification and progress of His Church," is thus substantiated by him when he says: "A nation is never so pure as when emerging from the seven-fold heated furnace. . . . The whole history of religious error shows that the Church is cold, formal, and controversial before the visitation of skepticism. When every power is in full exercise, infidelity stands aloof. God has so provided for his people that he has even caused the delusion by which they have suffered to contribute great benefits but little anticipated by the deluded or the deluders themselves. The intellectual labors of the German Rationalists have already shed an incalculable degree of light on the sacred books, and upon most every branch in theology. But thus has God ever caused the wrath of man to praise Him. . . . Church history was crude and ill-written before the Rationalists expended their toil and learning upon it. They investigated the fountains; made the storm-beaten monuments, old coins, and medals disclose their long-kept secrets; and threaded the labyrinths of secular history, written in almost every European language, in order that nothing serviceable to their cause might be lost."

After defining the meaning of the word Rationalism as accepted by other writers, Mr. Hurst proceeds to investigate the causes and results of the success of Rationalism. He says that it must be confessed that the German Protestant Church, both the Lutheran and Reformed, called loudly for reinvigoration. But it was faith; and not reason, that could furnish the remedy; and had Pietism, with all its extravagances, been fostered by the intellect of the pulpits and universities, it would have accomplished the same work for Germany in the seventeenth century that the Wesleys and Whitfield wrought in England in the eighteenth century. The influence of Rationalistic doctrines in Germany at that time is seen now even among the humblest peasants, who stepping on our shores at Castle Garden, will stare in wonder as you speak of the final judgment, the immortality of the soul, and the authenticity of the Scriptures. Thus has Rationalism corrupted a land for several generations. "But," continues the author, "the Church has proved herself able to depose many corruptions of her faith; yet this attack upon her faith she has still to vanquish thoroughly. . . . Our task is simply to lift the finger of warning against the increas-

ing influx of Rationalistic tendencies from France and England; which lands had first received them from Germany. One of our great dangers lies in permitting reason to take our premises and build her own conclusions upon them."

ENGLISH RATIONALISM.

The religious lesson taught by the condition of England during the eighteenth century is the inevitable moral prostration to which skepticism reduces a nation, and the utter incapacity of literature to afford relief. Mr. Hurst, after having faithfully sketched the rise and progress of Rationalism in Germany, Holland, France, and Switzerland, and the declination of those powers during their periods of religious skepticism, to which he devotes fifteen chapters, then proceeds to discuss the present position of Rationalism in England, and to show how the soil was prepared for its introduction by the Deists, who were ever steady in the pursuit of anything which would help to maintain their cause. Another great influence in promulgating skepticism is found in the literature of that day, of which he says: "The literature of England during the most of the last century presents a picture of literary ostentation. The Deists had toiled to build up a system of natural religion which would not only be a monument to their genius, but serve as an impassable barrier to all such claims as were urged by the zealous and loud-spoken Puritans. But early Deism lacked an indispensable element of strength—the power of adapting itself to the people. Its best priests could not leave the tripod, though many of the oracular responses were heard some distance from the temple doors. In time, there arose a group of essayists and poets, who, with a similar coterie of novelists, dictated religion, morals, politics, and literature to the country. Their influence was so great, that when they flattered the heads of government, the latter were equally assiduous in playing the Mæcenas to them." . . . Still other influences were at work. French society, French literature, French fashions, and French infidelity pervaded the whole land, mainly through the agency of the aristocracy. "The attempt," says Mr. Hurst, "to rear a Paris on English soil was an immense success. The young were delighted with the result; the aged had been too ill-taught in early life to raise the voice of remonstrance. With the exception of the Puritan opposition, the gratification was universal; and that took place in religion and literature which, had it occurred in warfare, would have kindled a flame of national indignation in every breast; England fell powerless, contented, and doomed into the arms of France."

Mr. Hurst then criticises the attacks of Hume and Gibbon on the divine origin of Christianity, whose mischievous influence imparted he classes with the elder school of Deists and French infidelity, of which he says: "The Church had not the moral power or purity to assert her own authority. She had lost the respect of the world because she had no respect for herself. She was therefore enervated at a time when all her power was needed to resist the skeptical and immoral tendencies of the day. But a new religious power, from an unexpected source, began to influence the public mind."

This was the movement inaugurated by Wesley and Whitfield, the influence of which is to be seen even at the present day; the rise and progress of which Mr. Hurst describes in a very lucid and eloquent manner. He then proceeds to criticise the philosophical and literary Rationalism of Coleridge and Carlyle; the critical Rationalism

* History of Rationalism, embracing a Survey of the Present State of Protestant Theology, with an Appendix on Literature. By the Rev. John F. Hurst, A.M., D.D. Second edition, revised. New York: Carlton & Porter and Charles Scribner & Co. Svo, pp. 633. Price \$3 50.

of Jowett; the Essays and Reviews, and Bishop Colenso, and continues with a survey of the existing church parties, and concludes his chapters on the English Church with the following exhortation: "The Protestant Church of Great Britain has no time for idleness, and can not afford to waste any truth power while so many enemies are assailing its walls. When the crisis shall have passed, it will be seen that not a superfluous hand was lifted in the combat. What British and American Protestantism needs to-day is not a class of discoverers of new truth, but that the defenders of the old truth, availing themselves of every new step of science and criticism, be chivalric in opposing their adversaries and watchful of the interests which God has placed in their keeping."

RATIONALISM IN AMERICA.

The author then turns his attention to our own country. He says: "What, then, has been the reception in America of that system of skepticism which has produced ravages on the Continent and now forebodes evil in our English mother-land? Is Rationalism likely to run its destructive cycle in the United States? Has the American Church no antidote for the great theological errors of the present age?" These are questions of vital importance to the prosperity of American Protestantism, to which Mr. Hurst devotes a lengthy discussion. He considers it a matter of surprise that French infidelity has not acquired a greater influence over our people. But it was not wholly without power, and the first twenty-five years of the history of the Church witnessed greater religious disasters than have appeared at any subsequent time. Still, it may be said that skepticism has not yet gained a permanent foothold here. He urges the necessity of the American Church making efforts against the inroads of this tendency. He warns them that the last effort of Rationalism may address itself to the American Church. "The Church in this country has partaken of the pride awakened by our unexampled national prosperity; and many of her noblest sons had well-nigh come to the conclusion, before the outbreak of the late civil war, that she must inevitably prosper, simply because of the remarkable temporal blessings which God had lavishly given. But without faith nothing can be accomplished, and three decades may be sufficient to so change the whole aspect of our religious life that the Church may become thoroughly Rationalistic. . . . Our civilization is undergoing a complete revolution. The field is newly plowed by the events of the last few years, and it becomes the Church to scatter the seeds of truth with an unsparing hand. If this land is to be blessed with pure faith, as in past years, a faith strong enough to repel every blow of skepticism, to the Church as an instrument, and not to our natural growth, shall be attributed this popular prosperity. If we would secure for future years an uncorrupted faith, the enactment of pure laws, the introduction of the Gospel into every social class, an increased enthusiasm in missionary labors, the intense union of all parts of our country, and the united progress of piety and theological science, the duty of the present hour must be discharged."

In conclusion, Mr. Hurst takes a very hopeful view of the future of the Protestant Church, regarding the most important successes of man as born of his severest trials; "the wrath of man being made to praise Him."

For a clear, concise, and truthful history of the rise, progress, and consequences of Rationalism, and its influence upon civilization, written in a clear and strong yet fascinating style, and from a purely orthodox stand-point, we refer our readers to Mr. Hurst's work. We have endeavored to give an idea of what the author aims at in presenting his history to the world.

Justice can not be done to a work of this description unless it be thoroughly studied, as it is necessary that the circumstances which attended its inception and subsequent movement, its origin, character, effects, and apostles, should be understood.

ALEXANDER POPE.

An intense mental temperament, a keenly susceptible and sensitive organization, and a bodily constitution weak and delicate from his birth, were the most prominent features of Pope's make-up. The appearance of the face is that of ill health and depressed spirits. The ungainly cap or turban rather adds to the sadness of the expression. The prominence of the eyebrows indicates power of perception and a keen appreciation of material things. Imitation, Ideality, and Language were largely developed, imparting the ability to copy the models he admired, to cull from the world of fancy choice flowers, and to express his burning thoughts in suitable language. He was evidently courageous, though very sensitive to criticism, and his courage imparted boldness in the execution of his ambitious projects. His sympathy appears to have been strong and his affection tender and impulsive. Vitativeness was influential, and the basilar organs generally well indicated, giving him much tenacity of life and an appreciation of those things which are conducive to existence; so that, notwithstanding deformity and a naturally delicate constitution, he attained to the age of fifty-six.

Alexander Pope, the author of the "Essay on Man"—an installment of which we present to our readers in the present number of the JOURNAL—was born in London, May 21, 1688. His father was a wealthy linen-merchant of London, and his mother was of a "good Yorkshire family." The former died in 1717, and young Pope went with his mother to reside at Twickenham, on the banks of the Thames.

Pope had not the advantages of a thorough education, but acquired a good knowledge of Latin, and some Greek, French, and Italian. He was a poet almost from infancy; he "lisp'd in numbers," and when a mere youth he surpassed all his cotemporaries in metrical harmony and correctness. Several pastorals and translations of his appeared in 1709, but were written three or four years earlier. These were followed by the "Essay on Criticism," 1711; "Rape of the Lock," 1712-1714; "Windsor Forest," 1713; "Temple of Fame," 1715; "Epistle of Eloisa," and "Elegy on an Unfortunate Lady," in 1716, 1717, two poems inimi-

table for pathetic beauty and finished versification. From 1715 till 1726 he was chiefly engaged on his translations of the "Iliad" and "Odyssey," which realized to him the sum of \$40,000.

He next edited an edition of Shakspeare, which proved unworthy of his reputation. In 1728, 1729 he published a satire called "The Dunciad," an attack on some persons against whom the sensitive poet had conceived an enmity. In 1737 he gave to the world a volume of "Literary Correspondence." Between the years 1731 and 1739 he issued a series of poetical essays, moral and philosophical, with satires and imitations of Horace, all admired for their sense, wit, spirit, and brilliancy. Of those delightful productions, the most celebrated is the "Essay on Man," the first epistle of which appeared, anonymously, in 1733. A general revision of his earlier works closed the poet's literary cares and toils. He died on the 30th of May, 1744, and was buried in the church at Twickenham.

Pope was of very diminutive stature, and deformed from birth. His physical infirmity, susceptible temperament, and incessant study rendered his life "one long disease." He was irritable, offended by trifles, never forgetting or forgiving them; yet, when no literary vanity or rivalry intervened, he was generous and affectionate, and showed a manly and independent spirit. As a literary artist, and brilliant declaimer, satirist, and moralizer in verse, Pope stands unsurpassed.

EUGENIE'S RELIQUARY.—*La France*, in its obituary notice of Count Baciocchi, who died in Paris recently, says that the Empress "sent to him, as an act of unexampled favor, to keep in his room, so long as his illness should last, as she had kept it in hers at the moment of the birth of the Prince Imperial, a jewel which is assuredly the most precious of the crown of France. This is a reliquary, the skillful work of Froment Meurice, in which is seen a shred of the swaddling clothes of Jesus Christ, a bit of the Virgin's veil, a strip of St. John the Baptist's winding sheet, and in the middle, suspended in the manner of a pendulum, Charlemagne's talisman—given by the magistrates of Aix-la-Chapelle to the first Napoleon—about the dimensions of a crown-piece, and formed of an *aqua marina*, within which is seen, crossed, two fragments of the true cross. This rare medley of powerful relics is reinforced by a splinter of the bone of Charlemagne's own right arm." Nevertheless death was too powerful for the Empress' famous reliquary.

[Is this indicative of civilization and royal intelligence? Comment is needless.]

"SAMMY, Sammy, my son, don't stand there scratching your head—stir your stumps, or you will make no progress in life." "Why, father," replied the hopeful, "I've often heard you say that the only way to get on in this world was to scratch a head!"

DO YOUR WORK WELL.—Training the hand and eye to do work well, leads individuals to form correct habits in other respects, and a good workman is, in most cases, a good citizen. No one need hope to rise above his present situation who suffers small things to pass by unimproved, or who neglects, metaphorically speaking, to pick up a cent because it is not a dollar.

IMPORTANT TO ALL.

Two dollars in greenbacks will pay for a single copy of the *PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED* a year, or from January, 1867, to January, 1868. Our club rates are as follows: Five copies, \$9; Ten copies, \$15; Twenty copies, \$30, and, for premium, a copy of "New Physiognomy," value \$5; Thirty copies, \$45, and a Student's Set, value \$10; Forty copies, \$60, and a Student's Set with "New Physiognomy," value \$15; Fifty copies, \$75, and \$20 dollars worth of our own publications as a premium; One Hundred copies, \$150, and \$50 in our publications as a premium.

CLUBS may be made up at one or a hundred different post-offices, but should be sent in before, or as near the 1st of January as possible, up to which date these terms will hold good.

Premiums will be sent as per order, by post or express, at the cost of the receiver. The postage on "New Physiognomy," when prepaid, is 50 cents. The larger premiums, including books or busts, must go by express or as freight. We are now ready to record new names or re-enter present subscribers on our new books for 1867. Let clubs be made up at once.

ADDITIONAL PREMIUMS.

For One Thousand Dollars, we will send Five Hundred copies of the *JOURNAL* to Five Hundred new subscribers a year, and one of STEINWAY AND SONS' best Rosewood Seven Octave Pianos—manufacturers' price, \$625.

For Four Hundred Dollars, Two Hundred *JOURNALS* to new subscribers, and one of GROVERSTEIN & CO.'s best \$350 pianos.

For Two Hundred Dollars, One Hundred copies of the *JOURNAL* to new subscribers, and one of MARON AND HAMLIN'S Fine Octave Cabinet Organs—price \$130.

For One Hundred and Fifty Dollars, One Hundred copies of the *JOURNAL*, and a set of Forty Portraits, intended for Lecturers on Phrenology—value \$30.

For Eighty Dollars, Forty *JOURNALS* a year, and one of HOWARD'S New Breech-Loading Rifles, called the Thunderbolt. The best sporting gun ever made—value \$28.

For Seventy Dollars, Thirty-five *JOURNALS* to new subscribers, and either Wheeler and Wilson's, Weed's, Wilcox and Gibbs', or the Empire Sewing Machine, or Dalton's Knitting Machine, as may be preferred—\$55.

For Forty Dollars, Twenty *JOURNALS* a year, and one of Doty's Washing Machines—value \$15; or, if preferred, one of the best Clothes Wringers—price the same. Every house ought to be furnished with one of these labor-saving machines.

It is scarcely necessary for us to describe at length the merits of the premiums we offer. Suffice it, the Pianos and Melodeons are among the best; the Sewing Machines have a world-wide reputation; the New Sporting Rifle is the best gun we ever saw; the Washing Machine and the Clothes Wringer are the best of their kind.

Failing to obtain the full number of subscribers to make up a club for either of the premiums, we will accept the amount and number of names sent at the same rates, and receive cash to balance. In such cases no effort, though but partially successful, will be lost. We wish the agent to be liberally remunerated for his services; though many will work *gratis* for the good they may do.

Our object is to induce our friends to place a copy of the *JOURNAL* in the hands of every family. May God bless the efforts of ALL who work in the interest of humanity.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indulging either the opinions or the alleged facts set forth.

A PLEA FOR THE FINE ARTS.

In glancing over the columns of an old magazine, my eyes fell upon an article of rare merit, the production of an old poet-friend, who, rather than struggle with poverty in the pursuance of his choice, had abandoned the life of a poet for that of a physician. And who is not aware that through the ages of the past, genius has often walked hand in hand with want? It has become proverbial, that "poets are always poor," and too often, alas! has the fear of such calamity diverted the young aspirant from the paths of superior usefulness and eminence to the ordinary walks of life.

But this is a progressive age. The shadows that have hung so darkly over the centuries gone are folding their wings and hiding themselves away. Many are the facilities of the present day for the spread of knowledge and the development of genius which the past never knew. Institutions of learning, reared upon a permanent and noble basis, are being rapidly multiplied, while every year large endowments are made to augment their numerical strength and usefulness. Every department of science has been duly regarded; the modern scholar is fully prepared to drink at the fountain of pristine lore and hold communion with the sages of ancient Greece or Rome.

But though the temple of knowledge is rapidly attaining proud dimensions, and casts its welcome shadow over our land, the admiring beholder must perceive with regret that its embellishment has been for the most part disregarded, and that the fine arts have hitherto received far less attention than their importance demands. It is true, Art has had many admirers; but seldom has it shared that substantial support which has been so freely bestowed upon the ordinary academic course. And thus it is, that while many are enabled to bow at learning's shrine, artistic genius, one of the purest gifts of Heaven, is often permitted to be trampled in the dust. But not until it shall receive among us its just desert, may America hope to boast of a Milton, a Mozart, a Raphael, or a Canova.

But why delay? Why may there not be from among the millions that are dropping so freely from the hand of philanthropic wealth, a fund appropriated that shall nobly meet the present need, and prepare the way for the most ample results in the future—a fund that will not merely enable the needy pupil to acquire a knowledge of the principles of his favorite art, but will bear him along upon its beneficent tide until he shall have become somewhat established in his peculiar sphere?

Oh, ye of noble heart and willing hand! ye heirs alike of fortune and of taste! within whose homes, on ornamented shelf, stands many a gilded volume inspired by the poetic muse, whose walls are decked with rare productions of the painter's pencil or the sculptor's chisel, amid whose halls the harp's sweet murmur or the organ's grand swell awakes in the soul deep melody, to you I speak!

Amid the hills and vales of our own loved land, in many a cottage home, dwells the germ of future greatness! Nature hath planted her choicest gifts within our mental soil, hope hath watered them, and all that is needed are the means to facilitate their free development and insure their highest success.

Thus may the child of genius, so often of humble birth, be permitted to take his appropriate position amid the ranks of men! This would be placed a new gem in the crown of our nation's glory, which, illumined by the light of truth, might shed its effulgent beams far over the realms of earth!

DEAR JOURNAL: You have asked for our best thoughts, and most surely our best thoughts are those on God; "Our Father which art in heaven," who is the same just, merciful Being yesterday, to-day, forever, on him who in infinite love did provide for sinful man a way to escape the condemnation he so justly deserved, surely on such a Being should our best thoughts dwell.

The same hand which can create can also destroy, and if we are reserved for brighter scenes, it is all through infinite love. The love which placed man in Eden, the love which gave sinful man a way to escape from death

eternal, the love with which Jesus forgave his murderers, and which gave blessing for cursing—aye! the love which now says, "He that cometh unto me I will in no wise cast out," this love should have our first, best thoughts, and our heartfelt gratitude. And what do we do to return this boundless love? Alas! the best do but little, comparatively. Alas! there are nine out of ten, if not more, who receive the blessings of God in great abundance, and yet never so much as think of thanking the Giver, and whose sole aim seems to be to get rich, to hoard up the almighty dollar, regardless both of body and soul. Well might Jesus ask of the leper, "Where are the nine?" Ten had received alike a great blessing, but one only gave God the glory.

Well may the world cry, "Miserable sinners!" (that mock expression, too often), for, indeed, all are sinners; yet far greater are they who toil day by day, year by year, till life is forfeited, eternal life, for the sake of gold.

Surely our thoughts should be centered on Him, for our thoughts should be pure; and who can make them pure but He whose life and daily walk was purity itself? "The pure in heart shall see God," is as true now as it was eighteen hundred years ago. We wish, many do, to see Him in our future existence, and yet can we expect to if our thoughts are evil? Never; they of evil thoughts must take their lot with the fallen. Let us all be pure—pure in mind, pure in heart, pure as we can be with God's help in all things; and especially should the young cultivate purity, for if their thoughts are pure while they are young, they will very likely be pure when older. "Can grapes come of thorns?" Nay, good deeds spring alone from a pure heart, and a pure heart comes alone from God. Our best thoughts are our pure thoughts.

DERFLA.

WHAT MAKES A MAN.

A TRUTHFUL soul, a loving mind,
Full of affection for its kind;
A spirit firm, erect, and free,
That never basely bends the knee;
That will not bear a feather's weight
Of slavery's chain for small or great;
That truly speaks from God within;
That never makes a lie go with sin;
That snaps the fetters of our makes,
And loves the truth for its own sake;
That worships God, and Him alone,
And bows no more than at his throne;
And trembles at no tyrant's nod;
A soul that fears no one but God,
And thus can smile at ease or ban;
This is the soul that makes a man.

EX.

FRIENDSHIP.

How often we speak of friends as though they might be found on every hand; and yet how little real friendship we find in this busy world! A true friend is one who will cling to you in adversity, sympathize with you in sorrow, and rejoice with you in prosperity. He is a being who feels, who thinks, who acts from the purest motives. Friendship is one of the noblest feelings—one of the grandest privileges of humanity; it can only be found in connection with noble souls, of merit and virtue united. In fact, to possess true friends, you need the most complete and nicest power of discrimination in selecting them, a natural gift to cherish them, with the most unselfishness.

Young ladies, young men, and all, be generous; be kind to those around you, especially to those who are the least attractive, and who are often the least noticed. Try to merit the real name of friend; it will fill you with a deeper joy than you have ever experienced; it will cause you to be beloved and esteemed by all around you. Practice self-denial, and you will feel its ennobling influence; it brings the happy consciousness of having given pleasure to others, which is of itself ample remuneration for all the inconvenience you could have suffered by so doing.

Life indeed is sad and drear,
When friendship's voice we never hear;
On rank and wealth what joys attend?
They ne'er can buy a faithful friend.

N. P. T.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

THE AVERTED EYE.—Why is it that we meet persons who will not look us squarely in the eye while conversing? Is it a depressed or uncultivated state of Conscientiousness?

Ans. There are various reasons for averting the eye. One is diffidence arising from small Self-Esteem, small Combative-ness, moderate Hope, large Veneration, and large Cautiousness. Sometimes it arises from large Secretiveness, or excessive Approbateness, and a consciousness of inferior culture or position, and sometimes from a guilty and base condition of the mind and character.

DEBATING SOCIETY.—The following will serve for profitable consideration:

1. The encouragement of freedom of speech among younger members, by repressing criticism, ridicule, uncharitable reflection, and the avoiding of attempts, on the part of the older and more experienced members, to overawe or intimidate the younger.

2. The promotion of good fellowship by discouraging reserve, coldness, and pomposity.

3. The promotion of temperance, sobriety, and good habits generally, not disregarding the excellent rule of "early to bed."

4. The discussion of questions of material interest to all connected with the society. Many of these questions will naturally suggest themselves.

RELIGION.—Why are there so many different sects of religion when there is but one true God? and which religion is considered the best, and why?

Ans. The opinions of men differ with respect to the simplest known facts, and why should they not with respect to religious subjects? The mental organization in one man differs more or less from that in all other men, consequently his rational view of matters religious and secular differs more or less from that of others. In regard to your second question, we can not take it upon ourselves to rate any one orthodox sect as superior and pre-eminent above all others. We are advised by St. Paul, in the Epistle to the Ephesians, very clearly as to our duty and privileges as Christians; read that Epistle, and follow its teachings, and we will not be asked again to indicate a "best" sect or religion.

CULTIVATION OF ORGANS.—Can Self-Esteem and Continuity be cultivated? and how?

Ans. Yes. It is one of the prominent doctrines of Phrenology that organs are enlarged and their faculties strengthened by proper exercise. Not less than six times a year the JOURNAL announces and reiterates this statement in answer to inquiries. We are surprised to have such questions propounded by persons who have had an examination of the head, with the "Self-Instructor" marked as a chart. That work sets forth how all the faculties and propensities may be increased or decreased, cultivated or restrained. To all who would

learn how to improve the weak and repress the strong qualities of their mental nature, we recommend the perusal of that work. It will be sent by mail for 75 cents. Those who have it, will find in it answers to many of their questions.

CROSS-EYED.—Would you be good enough to inform one of your readers what is the cause and cure of strabismus, or squinting? Is it true that it is cured in a minute or two by oculists? If so, is the operation in any way injurious to the eye? Have you ever heard that the patient will be benefited or cured if he use only one eye, the other being kept entirely closed from the light? Do you think there would be any advantage in his doing so?

Ans. Go to an oculist, and he will take out the kink quickly, and that, too, without injury. There is no truth in the statement, that a patient would be benefited by using only one eye.

SOUL AND SPIRIT.—See article "Man-Triplicate," in the November JOURNAL of 1866, for a clear explanation of this subject.

SKIN DISEASE.—You may have inherited the conditions which induce skin disease. The best remedy in addition to general good habits is a full warm bath three times a week in a warm room so as to promote vigorous circulation in the capillaries and to some extent produce perspiration.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE SOLDIER'S ORPHANS. By Mrs. Ann S. Stephens, author of "Fashion and Famine," "The Old Homestead," "Mary Derwent," "The Heiress," "The Gold Brick," "Silent Struggles," "Rejected Wife," "Wife's Secret," etc., etc. Cloth. Price \$2.

No one can deny that Mrs. Stephens possesses the power of producing a most absorbing novel. "The Soldier's Orphans" is not unnatural, but is a tale of the children of a volunteer—a simple story which probably actually has occurred a score of times within the past five years. The scene of her story is laid in our very midst, and possesses much interest from dealing in facts still fresh in the public mind, and which have not yet lost their power to stir the enthusiasm of patriotism. In fact, the book is one of the better kind of novels, and worth the reading.

STORY OF A STOMACH: an Egotism. By a Reformed Dyspeptic. 75 cents. Fowler and Wells, New York.

The chief merit of this elegantly printed brochure is its basis of fact. In a marvelously small space it develops a complete theory of hygiene, adapted to civilized life, founded on the personal experiences of the author, and illustrated by incidents in his history.

While agreeing, in many essential respects, with the principles advocated in this JOURNAL, the "story" differs boldly from others, and strikes out on a line of reasoning adverse to many of our conclusions. We do not like it the less for this, and should be glad if all our readers could examine and judge of the arguments for themselves. And if the author sometimes deals a blow at the hydropathic practice, it is consolatory to know that he hits the allopathists much more severely.

If he is right in his belief, health is an easy and inexpensive luxury, quite within the reach of the mass of sedentary people

who now suffer from the afflictions of dyspepsia. His remedies cost nothing, being simply an improvement upon our usual habits, and they are certainly incapable of producing harm. As the book can be read in an hour by any one interested in its subject, and is published at a trifling cost, we abstain from any quotations or abstract of its contents.

AFLOAT IN THE FOREST; OR, A Voyage among the Tree-Tops. By Captain Mayne Reid. With illustrations. Boston: Ticknor & Fields. 1867. \$1 50.

"Afloat in the Forest" is an account of the marvelous adventures and hair-breadth escapes incident to a voyage down the Amazon, and will be eagerly read by "the boys" of a romantic turn of mind. Captain Mayne Reid, however, does not forget to give instruction with entertainment. The scenery, the various and innumerable curiosities of natural history and vegetable life, etc., as seen in the tropics of South America, are interestingly described.

STORIES OF MANY LANDS. By Grace Greenwood, author of "History of My Pets," "Merrie England," etc. Boston: Ticknor & Fields. Price \$1 25.

Grace Greenwood's juvenile story books are always interesting and diverting. In this new collection she gives pleasing tales having reference to England, Scotland, Ireland, France, Switzerland, Italy, and Home; here and there sprinkling a short poem, a rebus, or a charade. There are also several neat illustrations, which add materially to the attractiveness of the book.

FLOWER-DE-LUCE. By Henry Wadsworth Longfellow. With illustrations. Boston: Ticknor & Fields. 12mo. Cloth, gilt. Price \$2 50.

Not only Flower-de-Luce, but twelve other charming little poems of our loved poet. Always happy, gushing, and tender, remarkable both for his metrical variety and power of metrical adaptation, Professor Longfellow never sends anything out to the world that is not well considered and warmly welcomed. The twelve other poems are—Palingenesis, The Bridge of Cloud, Hawthorne, Christmas Bells, Kambalu, The Wind over the Chimney, The Bells of Lynn, Killed at the Ford, Giotto's Tower, To-morrow, Divina Commedia, Noël. The neat illustrations are in excellent keeping with the sentiment.

SARATOGA, an Indian Tale of Frontier Life. A true story of 1787. Philadelphia: T. B. Peterson & Brothers, 306 Chestnut Street. Cloth. Price \$1 50.

This is an interesting love story woven in with incidents of frontier life. The book has found a ready sale in previous editions, and its republication will probably receive considerable patronage from the novel-reading class.

THE JUBILATE: a collection of Sacred Music for Choirs, Singing-Schools, Musical Conventions, etc. By L. O. Emerson, author of the "Harp of Judah," "Golden Wreath," etc. Boston: Oliver Ditson & Co. Price \$1 38; per dozen, \$12.

We rather like this new collection of Sacred Music. It departs from the old method which has been practiced by most musical editors of collating and arranging under metrical heads the same tunes without much in the way of novelty. It presents us with an array of new airs, many of them beautiful, but does not omit altogether those fine old tunes which never lose their inspirational power by repetition, such as Palermo, Arlington, Hebron, Duke Street, Olmutz, etc.

MAUD MULLER. By John G. Whittier. With illustrations by W. J. Henney. Boston: Ticknor & Fields. Large 8vo. Fancy cloth, gilt. \$3 50.

A handsomely gotten-up presentation of this charming pastoral by our loved Quaker poet. The engravings, of which each page has one, are admirable wood-cuts. Does any one meditate giving a neat and pleasing holiday present, which will cost but little, "Maud Muller" in this new dress would serve his purpose.

HOW TO GET RICH; OR, A Key to Honest Wealth. Being a Practical Guide to Business Success. Applicable to all Trades and Professions. By Ascher L. Smith and J. W. Parkhurst. New York. Cloth. Price \$1.

This book is a compilation of business axioms, with excellent reflections thereon by the authors. Some of its best features are extracts from well-known works on practical economies, among which is included "The Way to Wealth," by "Poor Richard," which alone is worth the price of the book.

Some extracts from the publications of Fowler and Wells appear at good advantage in the book, but what work is alluded to on the 124th page we are at a loss to conjecture.

THE NATIONAL COOK BOOK.

By a Lady of Philadelphia, a practical housewife, and author of the "Family Save-All." Containing 578 New Receipts, never before published, for preparing all sorts of dishes. Philadelphia: T. B. Peterson & Brothers. Cloth. Price \$2.

As we are not epicures in the usual sense of the term, and have no desire to be, the "proof of the pudding" in the way of a practical test of the merits of this new Cook Book must be dispensed with on our part. The brevity and definiteness of the recipes are commendable; and with the space allotted to fruits and simple preparations of the farinacea we are pleased; yet the odors of lard and steaming butter in imagination assail our olfactory powerfully, and our liver involuntarily grows torpid while we think of the billows of grease that are here prescribed as irresistibly tempting to the palate of the fastidious.

ÆSOP'S FABLES. Illustrated. The People's Edition. New York: Fowler and Wells, Publishers, 389 Broadway. 1867. Octavo Edition. Cloth, richly gilt. Price \$1.

This beautiful edition of the sayings of the slave of Athens is the publication in a collected form of the Fables published in the PHRENOLOGICAL JOURNAL during 1866. The volume is complete, containing over two hundred Fables and upward of fifty fine-lined wood engravings, printed on tinted paper. The book is a cheap one, and well calculated for a popular gift-book to old and young.

Books intended for notice or review may be sent direct to the office, 389 Broadway, or left with Messrs. Lee & Shepard, 149 Washington Street, Boston; John L. Capen, 722 Chestnut Street, Philadelphia; Mr. J. Burns, No. 1 Wellington Road, Camberwell, London; or with Mr. William Tweedie, 337 Strand, London, who will forward the same to this office. Newspapers, magazines, music, pictures, and pamphlets may be sent direct by post.

NEW MUSIC.—Mr. C. M. Tremaine, the successor of Horace Waters, 481 Broadway, has sent us the following choice pieces: "Do Not Heed Her Warning," reply to the Gipsies' Warning, music by Henry Tucker, price 30 cents; "Near and Dearest," by W. C. Baker and J. R. Thomas, 50 cents; "The Bonnie Brown Cottage," by W. C. Baker, price 40 cents.

THE GREAT UNION PACIFIC RAILROAD Excursion to the One Hundredth Meridian, October, 1886. Photographed and Published by John Carbutt, 134 Lake Street, Chicago, Illinois.

List of Stereoscopic Views: Landing of the U. P. R. R. Excursionists at Omaha (1); Do. No. 2; Steamers Denver and Colorado, U. P. R. R.; Group of Excursionists at Camp No. 1, Columbus, Nebraska; Camp of Pawnee Indians on the Platte Valley; Group of Mounted Pawnee Warriors; Group of Pawnee Warriors, and Palate Cars of U. P. R. R.; The Excursion Train going West; Excursion Party 275 miles west of Omaha, October 24, 1886 (1) and (2); Westward the Monarch Capital makes its way; Laying the Rails of U. P. R. R.—two miles a day; The Elkhorn Club on the banks of the Platte; the Platte River opposite Platte City; The Platte River and Kingley's Brigade; Commissioners and Directors of the U. P. R. R.; View of Camp No. 2 from Prospect Hill; Headquarters, Platte City, October 25th, 1886; Representatives of the Press, with the Excursion; The Boys that made us Comfortable, All-Hall; The Train at the One Hundredth Meridian, returning from the West; The Directors of the U. P. R. R. at the One Hundredth Meridian; Group of Distinguished Guests of U. P. R. R. at One Hundredth Meridian (1) and (2); Burnettizing Works of the U. P. R. R. at Omaha (1) and (2); T. C. Durant, Esq., and Heads of Departments, U. P. R. R. Engine-house and Workshops of U. P. R. R. at Omaha; South end east front U. P. R. Works at Omaha; North end east front U. P. R. Works at Omaha; U. P. R. Works and Depot, Omaha; North and west front U. P. R. Works, Omaha; View of Omaha, N. T., from Capitol Hill (1) and (2); Horn-don House, Omaha, N. T.; Construction Train of the U. P. R. R.

Dr. T. C. Durant, superintendent of the road, expressed his entire satisfaction of the views. The set of thirty-seven will be sent on receipt of ten dollars, post free.

OUR THREE ANNUALS, FOR 1886-6-7.—The best books for beginners, through which to get an outline of the first principles of Phrenology and Physiognomy, are these Illustrated Annuals for the three years 1885-6-7. They contain the gist of ponderous volumes, with more than 50 engraved illustrations. The three will be sent by return post on receipt of 40 cents. Address this office.

OUR SCHOOLDAY VISITOR.—ENLARGEMENT.—That very popular young people's magazine, "Clark's School Visitor," has been enlarged to double its former size, and otherwise materially improved. "Our Schoolday Visitor," now entering upon the eleventh year of its publication, richly merits the very liberal patronage it will everywhere receive. Terms, \$1 25 a year. To clubs \$1, with handsome premiums. Specimen numbers, ten cents. Address J. W. DAVIDSON, Publisher, 1808 Chestnut Street, Philadelphia, Pa.

THE METRIC SYSTEM. Published for the use of schools, and authorized by the Board of Public Instruction. Price 50 cents.

MESSRS. HURD & HOUGHTON, of 459 Broome Street, have announced a new magazine to be issued monthly under the name of "The Riverside Magazine for Young People." According to the terms of the prospectus this juvenile monthly will abound in reading intended to interest, amuse, and improve the youthful

mind. We trust the stories published will possess that sincere impressive character and that pure Christian sentiment which shall sow the seeds of piety and truth in tender hearts.

We have received from D. Appleton & Co. "The Children of the Frontier," a story of Western life for the "young folks." It is full of varied incident, told in a sprightly and attractive manner. Indeed, *adulthood* can find much pleasure in reading this graphic story of the joys and trials of two children in the "far West." It is illustrated from designs by the author, and issued in the Appletons' usually neat style of binding, etc.

We have received the following magazines for December: *The Atlantic Monthly*, *Hunt's Merchant's Magazine* and *Commercial Review*, *Hours at Home*, *Beadle's Monthly*, *American Educational Monthly*, *Dental Cosmos*, *Arthur's Home Magazine*, *Our Young Folks*, *Catholic World*. We would also acknowledge the receipt of *The Quarterly* of the Young Men's Christian Associations of America, *Journal de Médecine Mentale*, of Paris, for October, *Nashville Journal of Medicine and Surgery* for November.

THE NEW ANNUAL OF PHRENOLOGY AND PHYSIOGNOMY for 1887 is having a very extensive sale. Agents are doing well with it. We have already printed four large editions, and the demand is increasing. Every family should have a copy. Sent post-paid for 30 cents. The article on *BASELINESS—Its Causes and Cure*—is alone worth ten times its cost.

CHAMBERS' ENCYCLOPEDIA, a Dictionary of Universal Knowledge for the People, is drawing toward completion. We have received parts 111 and 112. In the latter the elaborate article on "Telegraph" is well presented, both with respect to matter and illustration. No library in any well-ordered household should be without a copy of this most interesting and instructive compilation of the Brothers Chambers.

New Books.

[Among the late issues of the *press* not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

ARABIAN (THE) NIGHTS' ENTERTAINMENTS. A New Edition, revised, with Notes, by Rev. G. F. Townsend. With Sixteen Illustrations. Cr. 8vo, pp. 583. Cloth, \$2 25.

HISTORY OF THE UNITED STATES from the Discovery of the American Continent. By George Bancroft. Volume IX. (The American Revolution, Volume III.) 8vo, pp. 506. Cloth, \$2 25.

THE PRACTICE OF THE SUPERIOR COURTS OF INDIANA IN CRIMINAL CASES. By George A. Ricknell, LL.D., author of "Indiana Civil Practice." 8vo, pp. vii., 518. \$5 50.

A WALK TO THE COMMUNION TABLE. By Rev. J. R. Boyd. Sq. 18mo, pp. 122. Cloth, \$1 15.

CURIOUS QUESTIONS. By Rev. Henry A. Brown, D.D. 18mo, pp. 292. Cloth, \$3 25.

MAKING THE BEST OF IT; or, Charley's Disappointment. By Mrs. Carey Brock. 18mo, pp. 80. Cloth, 60 cts.

MORE WAYS THAN ONE; OR, The Little Missionary. By Mrs. Carey Brock. 18mo, pp. 74. Cloth, 60 cts.

Third American from the Seventh English Edition, with the Notes and References to the Previous American Editions by W. H. Rawle, and Additional Notes and References by James T. Mitchell. 8vo, pp. 409. \$5 50.

THE CHURCH CENTENARY MEMORIAL or Exhibition Book. By Daniel Wise, D.D. 18mo, pp. 117. Cloth, 70 cts.

Publishers' Department.

ADVERTISERS cram our pages, inside and out, with their announcements. The *Evening Post* repeats its demand for "free soil," "free speech," "free labor," "free men," and "free trade." In its proper—not party—sense, this JOURNAL has always been thoroughly democratic. Its prospectus states what are its aims, objects, and ends.

HARPER'S WEEKLY claims to give a "complete pictorial History of the Times," and says of the Monthly, that "it is the foremost magazine of the day." With capital, talent, and enterprise, there is no good reason why these claims should not be made good. The Messrs. Harper ride no hobbies, project no new schemes, start no reforms, but simply manufacture newspapers, magazines, and books as others manufacture boots, shoes, and hats: turpentine, tar, and tobacco—or as farmers grow "hog and hominy"—simply to sell.

THE GALAXY is pushing for popular favor, and gets it. Published twice a month, its interest never cools, and keeps alive that once awakened. Its prospectus speaks for it.

THE LITTLE CORPORAL.—Mr. Sewell's Western juvenile surpasses, both in real merit and in circulation, any similar attempt, East or West. His success excites the cupidity of others, and we now have a swarm of juvenile journals launched on the uncertain sea of experiment. While we wish well to all good endeavors, we must award the credit to the *Little Corporal* of leading the van.

THE CHRISTIAN INTELLIGENCER speaks moderately and modestly of its mission. It purports to be "A Religious Family Newspaper," with the venerable E. S. Porter, D.D., as its editor. It must continue to be in the future what it has been in the past, conservative of the true and the good, and radical in uprooting and removing the false and the bad. As the long-established organ of the Reformed Dutch Church, it will command the respect of all who read it.

THE METHODIST blends, happily, the religious and the secular in one large and handsomely printed double sheet, and serves up weekly enough of the true and the useful to save a nation—if a nation would but follow its counsels. Nor is it so exclusively a "Methodist" as to obtain its substance or confine its teachings to this sect, but it draws inspiration from every source; even our Brooklyn Heights thunderer, Henry Ward Beecher, is permitted to transmit his intellectual lightning through its pages. Of course the paper will live and flourish.

THE AMERICAN BAPTIST is, perhaps, the most thoroughly radical of all our religious journals. It favors no compromise with error, no conditions but repentance and reform for wicked sinners. There is a large head in its editorial chair, and he deals in thoughts and principles, evincing a purpose.

DOLBEAR'S COMMERCIAL INSTRUCTIONS.—Who has not heard of these famous writing masters? What young thick-thumbed bungler in penmanship has not looked at their "specimens," hung up in the doorway, with wonder and admiration? Reader, do you not almost envy the man who can perform such astonishing feats with pen and ink? The Dolbears—father and sons—have schools in several cities, and have probably taught more private pupils than any other half dozen men in America. See their advertisement.

PAPER FASTENER AND BINDER.—A most useful and convenient invention is advertised under the above title in our present number. We have used them for several years, and find them well-nigh indispensable. All our written descriptions of character are fastened with this little metallic patent.

THE LORD'S PRAYER PICTURE.—Mr. L. Cowles, No. 58 Fulton St., New York, has brought out a very fine picture, in which the Lord's Prayer, the Last Supper, and the heads of the Twelve Apostles are given. There is a vast amount of work in the picture, and the effect is both striking and impressive. The effect of the picture would tend to awaken a devotional feeling even among children, and we cheerfully commend it to the heads of families, teachers, and others.

OUR AGENTS ABROAD.—In London, our publications may be had of Mr. James Burns, No. 1 Wellington Road, Camberwell, S., and of Mr. Wm. Tweedie,

387 Strand, and other booksellers. In Leipzig, F. A. Brockhaus; Amsterdam, Frederic Muller; Paris, Gustave Bossange & Co., 25 Quai Voltaire; Brussels, Charles Muquardt; Naples, Albert Detken; Madrid, Henry Lemming, 9 Calle de la Paz; South America, George N. Davis, 119 Rua Direita; Rio de Janeiro, Brazil, California, and the Pacific Coast, A. Roman, San Francisco, Cal.; West Indies, Stephens & Co., 10 Calle Mercaderes, Habana.

INSTRUCTION IN READING AND ORATORY.—Mrs. Leadenier is giving instruction to classes of ladies and gentlemen in New York, in these interesting subjects. She also lectures before literary and other societies, always with acceptance. She may be addressed at this office.

HON. CALEB LYON, of Lyondale, ex-Governor of Idaho, will accept invitations to lecture on "the resources of the Pacific Slope." We have evidence to warrant us in stating that the scientific observations made by Mr. Lyon in the Rocky Mountains will enable him to impart a vast fund of valuable information to those who may be fortunate enough to hear him. He is thoroughly posted as to the minerals and the men of the West.

A VERY GOOD PEN.—Stimpson's scientific steel pen, with ink-retaining-holders, is really a great improvement on the common sort. For \$2 we can send by post a few dozen with holder—enough, with good usage, to last a year or more. Try it.

POPE'S ESSAY ON MAN.—We give the first installment of this grand old poem in our present number. It will be continued, with illustrations, in future issues. Coming to the reader in this way, it will be read by all.

THE TWO PATHS IN THE LIFE OF WOMAN is an impressive lesson, and must tend to warn the weak and fortify all in well doing. Would the young lady reader be comely?—she must be good. Would she be beautiful?—she must be healthy and virtuous. The illustrations enforce the truth of our statement.

OUR PHRENOLOGICAL CLASS is now full. Students will be in attendance at the appointed time, namely, the second Monday in January, which is the 7th. Whether or not a second class may be formed will depend on the number of applicants not admitted to the first.

THAT NEW RIFLE.—The THUNDERBOLT is proving itself to be all, and even more than the inventors predicted for it. Reports reach us from all quarters to the effect that it carries off the prizes at the shooting matches, and that it brings down the game at long or short range. Such improvements have been made in the gun as to compel an advance of \$3 on each, i. e., from \$25 to \$28. At this price it is still the cheapest sporting rifle in the market. It is the intention of the manufacturers to add such ornaments, in gold and silver, as will make it more attractive to the eye, and suitable for a present. For these the prices will range from \$40 to \$50. But those of our subscribers who secure the rifle as a *premium* will get one of the best for use.

BOUND VOLUMES.—Copies of the PHRENOLOGICAL JOURNAL for 1865 and for 1866, nicely bound and lettered on the back, may be had post-paid at \$3 50 per copy. There is matter enough in each

year's numbers to make a common-sized 12mo. volume of rich reading matter of more than a thousand pages, and it is worth saving.

WE MUST DO IT.—Until further notice the subscription price of the PHRENOLOGICAL JOURNAL will be only \$3 a year. But—ah, those dreadful "buts!" We must make such improvements in the JOURNAL as will involve the outlay of more money than our present profits will admit. We must make the JOURNAL better than it has been, in order to be "up with the times" and "keep the lead."

We can winter horses, cattle, and sheep in cold latitudes on dry husks and straw, but they will come out poor in the spring. If fed on rich hay, grain, and roots, they will thrive and shine.

We can keep the JOURNAL alive at the present price; but we will do more than this with the extra dollar we intend to ask for: we will make it fat and comely—good looking—well filled and well dressed. It shall be open to all knowledge the tendency of which shall be onward and upward, attuned to the music of the faculties, responsive to the demands of the useful and the beautiful.

Greenbacks are good, but gold is better. Give us \$3 in greenbacks, or \$2 in gold, and we will make a good JOURNAL, such a work as shall be creditable to the cause, and not unprofitable to ourselves.

Our readers are generous as well as just. They would not have us publish at a loss, nor diminish the matter. They will appreciate improvements. It is easy to fill cheap periodicals with cheap twaddle; cheap teachers fail to call out the faculties of their pupils; cheap preachers can not obtain books and other materials with which to make rich sermons; cheap mortar will not make strong walls; cheap sugar is dirty; cheap jewelry is tawdry; and cheap JOURNALS are no benefit to a community. We go on the principle that the best periodicals, the best teachers, preachers, mortar, sugar, and jewelry are what every one should have. Indeed, we will be satisfied with nothing less. Good food makes good blood; poor food, poor blood. Good thoughts, paper, ink, types, engravings, presses, and so forth, make good JOURNALS; books, and newspapers.

We want to serve up something respectable; something weighty, yet lively; something soon. At \$3 a year for single subscriptions, and at \$2 in clubs of ten or more, we could realize our own wishes, give our readers something even more sound and sensible in the way of journalism than they have had before.

The new terms will probably be announced to take effect at the beginning of the next volume, in July of the present year. Those who subscribe previous to that date will, of course, be supplied at present rates.

THE MOON PHOTOGRAPHED.—We recently had the pleasure of receiving from Mr. Wakely one of those fine photographs of the moon which rank among the curiosities of science. It is marvelous how accurately the telescopic appearance of the "goddess of night," with her hills and vales and other superficial irregularities, has been transferred to the paper. Every one who takes any interest in astronomy should have one of these fine pictures of silvery Luna.

We have received valuable favors from time to time from Mr. Timothy C. Smith, United States Consul at Odessa, and would now take the opportunity to

acknowledge them. The particulars relating to the *personae* of Thomas Aldridge, the celebrated negro tragedian, which we published a few months back, were procured for us by Mr. Smith.

AN APPROPRIATE PRESENT.—A correspondent says:

I was presented with your "New Physiognomy" a few days ago, by J. G. F., of C., and think it the finest present I ever received.

Should any reader be yet undetermined as to a suitable Christmas or New Year's present for his or her "best friend," we may name "New Physiognomy" as every way appropriate. Prices range as follows: nicely bound in muslin, \$5; in heavy calf, \$8; in rich Turkey morocco, full gilt, \$10. May be sent by return post.

General Items.

PHRENOLOGY IN PHILADELPHIA.—Mr. John L. Capen, phrenologist, has removed from South Street to 723 Chestnut Street, in the building with Messrs. Lee & Walker, music publishers. In this, the main public thoroughfare, we doubt not Mr. Capen's services will be more largely sought by the good people of the Quaker City.

A POCKET LANTERN.—One of the most ingenious, convenient, and useful little lanterns we ever saw—recently invented—is now manufactured by Julius Ives & Co., 40 Maiden Lane, New York, and sells for a dollar. Circulars describing the same will, no doubt, be sent on application.

DEPARTED.—Our esteemed young friend Mr. Charles V. Segar, of Providence, R. I., for some time phonographic reporter in our employ, afterward in the Treasury department at Washington, as private secretary to Mr. Chase, and recently in the banking-house of Jay Cooke & Co., where his services were highly appreciated. The Providence Journal says, "So far as human judgment could decide, Mr. Segar had a bright future before him, with every prospect of acquiring fortune and distinction. He had been suffering from intermittent fever, but had so far recovered that he left Washington for home; but at Westerly, where he stopped on his way, he was seized with a relapse, and died suddenly. Mr. Segar was 31 years of age, and unmarried."

ACADEMY OF PHYSICAL CULTURE.—Mrs. L. R. Plumb has opened a new hall, No. 82 Fifth Avenue, for the reception and training of pupils in light gymnastics. Her classes meet on Mondays and Tuesdays, at 3.30 p.m. Mrs. Plumb also gives instruction in ladies' seminaries, public schools, etc., and private lessons when not engaged with classes. We wish the lady the best success, believing her mission to be most useful, not only to the youth of our city, but to adults as well.

INCOME AND EXPENDITURES.—A recent writer in discussing the proper portion of one's revenue which ought to be allotted to the table, says: "In old times, one third part of one's whole income was always allotted to the table. Since women have grown so extravagant of money on their dress, perhaps one may be excused if he allows only one fourth part of his revenue to the table, but no man with the least self-respect will consent to reduce the table allowance one farthing less than this share of his income."

Business

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 25 cents a line.]

TURKISH BATHS. — No. 63 COLUMBIA STREET, BROOKLYN HEIGHTS.

Encouraged by the favor with which the TURKISH BATH has been received, the undersigned is now prepared to make it still more efficient and attractive, by the introduction of various improvements suggested by an examination of similar baths in London, Constantinople, and elsewhere, during a visit lately made to Europe for that purpose.

Pleasant rooms, with board, can be furnished to a limited number of persons, who may desire to avail themselves of the Bath in connection with other hygienic agencies. CHAS. H. SHEPARD, M.D.

HOURS.—For Ladies from 9 to 12 A.M. For Gentlemen, from 2 to 3 P.M.

MRS. E. DE LA VERGNE, M.D., 149 CARLTON AVENUE, BROOKLYN.

THE HYGIENIC HOME. — At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT - CURE. — Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 38th Street, New York City.

SWARTWOUT'S PATENT METALLIC PAPER FASTENER AND BINDER, for fastening Law Papers, Specifications, Patent Papers, Cloth Samples, Manuscripts of every description; and for binding Magazines, Sheet Music, Newspapers, Periodicals, Pamphlets, etc., etc., of all kinds. Combining Security and Durability with Rapidity and Economy.

This article is designed for fastening papers of all kinds, temporarily or permanently, as may be desired.

The advantages which this mode of fastening presents over all others are as follows:

First—It binds the papers firmly and securely, without fear of their coming apart or tearing out, as in the case with eyelets, ribbon, etc.

Second—It gives additional strength and support to the papers.

Third—It is easily applied, and as easily removed, without injury to the papers.

Fourth—It will bind from one to two hundred pages; by the aid of the Binding Strips, it can be made to bind one thousand.

Fifth—Ribbon and seal can be used with all the sizes, when required; the No. 1 size is, however, especially adapted for it.

Sixth—It presents a neat and ornamental appearance, and is so compact as not to interfere with the smooth folding of the papers.

Simple Cutting Tool and Hammers used on Lever Press, for applying. Sold by all stationers.

(See illustrated book.)

W. R. SWARTWOUT, 100 Liberty St., New York.

IMPORTANT ANNOUNCEMENT.—Rev. Henry Ward Beecher will furnish Regular Contributions to the columns of

THE METHODIST

during the present year, consisting of Fortnightly Sermons, and "Lecture-Room Talks," reported expressly for *The Methodist*, revised by Mr. Beecher, and protected by Copyright. Also a series of valuable and instructive Sermons, by the most eminent Pulpit Orators of the Methodist and other Churches.

THE METHODIST

is an eight-page Weekly Newspaper, in its eighth volume. It is Religious and Literary, Independent, Fraternal, Loyal, and Progressive.

As a Family Paper it is unsurpassed, and is largely patronized by Christians of every name. It is edited by

REV. GEORGE R. CROOKS, D.D.,

Assisted by the following able Editorial Contributors:

REV. ABEL STEVENS, LL.D.,

REV. JOHN MCCLINTOCK, D.D. LL.D.,

REV. B. H. NADAL, D.D., and

PROF. A. J. SCHEM.

It has a valuable Correspondence, both Domestic and Foreign; a fresh story every week for the Children, a Financial, Commercial, Mercantile, and Agricultural Department, a valuable Religious and Secular News Summary, brought up to the hour of going to press.

TERMS, \$3 50 per year, payable in advance.

Twenty cents must be added by Subscribers in the British Provinces, to prepay postage.

LIBERAL PREMIUMS are allowed to those forming Clubs of Subscribers.

1t

Address THE METHODIST, 114 Nassau Street, New York.

THE FARMER'S RECORD AND ACCOUNT BOOK, WITH APPROPRIATE READINGS AND RULINGS. For Recording Business Transactions, Embracing Family and Farm Expenses, General Accounts, Date of Bills Receivable and Payable, Names of Employees, when their Services Began, when Finished, Price Agreed on per Year, Month, or Day, and Entire Amount, etc. Also, the Number of Acres of each Growing Crop, the Quantity Raised, the Amount Sold, Price per Bushel, Pound, etc., and the Entire Amount of each.

The whole so classified, arranged, and consolidated as to present the result of each year's business transactions in the smallest possible compass, and also so simple that the balance sheet can be easily and correctly adjusted.

Together with Valuable Information for Farmers, Tables of Weights and Measures, Rules, and the Annual Report of Income Required to be made to the Assessor of Internal Revenue.

THE CHRISTIAN INTELLIGENCER—is published every Thursday at No. 103 Fulton Street, New York. Rev. E. S. PORTER, D.D., editor.

The Christian Intelligencer is what it purports to be—*A Religious Family Newspaper*. As such, it bestows its chief attention upon topics connected with the faith and the practice of citizens of the Divine Kingdom, believing these to be of more importance than any transient and secular interests. Yet while presenting Christian truth in its doctrinal and ethical phases, it does not and can not decline to point out what applications of the principles of Christianity should be made to all matters pertaining to the welfare of persons, society, and the state. In its character of Religious Instructor, it conscientiously aims to set forth and commend the doctrines, precepts, and spirit of the imperishable Word. It gives every week a report of the Fulton Street Prayer Meeting. As a newspaper, it endeavors to make a faithful report in its every issue of noteworthy events, without regard to party, sect, or place.

It is neither conservative nor radical, according to the common import of these terms, while it is both, if regard be had to their true signification. It is conservative, in that it aims to defend what is orderly and wholesome and good, and radical in its desire to aid in the eradication from the habits of society and the policies of states of whatever worketh an abomination or maketh a lie. Being in no sense a political organ, and allied to no faction, it is free to ensure what may seem to be wrong, and to approve what it judges to be good, un-influenced by the passions of mere partisanship, which ebb and flow with the changing tide.

The next volume will commence with the first issue of January, 1867, but subscriptions may begin with any number.

Terms of subscription, \$3 a year by mail, \$3 50 by carrier, in advance.
11 CHARLES VAN WYCK, Publisher.

NEW MUSIC BOOK FOR GRAMMAR SCHOOLS.—The Grammar School Chorus, containing Wilhem's Method of Teaching Vocal Music, adapted to schools by John Hullah; also, selections for Devotional Exercises, Exhibitions, and Festival occasions. Adapted and arranged in One, Two, and Three Parts, by J. B. Sharland, Teacher of Music in the Boston Grammar Schools. \$1. Sent post-paid.

OLIVER DITSON & CO., Publishers, Boston. 1t

LADIES' FREEMASONRY.—Manual of the Order of the Eastern Star, containing Symbols, Scriptural Illustrations, Lectures, etc., adapted to the American system of Adoptive Masonry. By ROBERT MACOT, National Grand Secretary. Beautifully Illustrated. Gilt Edges and Illuminated Cover.

This is the authorized Manual of the American Adoptive rite, the possession of which is a necessity to a clear and proper understanding of the beautiful system of Female Freemasonry. The theory of the Order of the Eastern Star is founded upon the Holy Writings. Five prominent female characters, illustrating as many Masonic virtues, are selected, adopted, and placed under Masonic protection. The Rules for the government of the Order are herein plainly set forth, with complete directions for the elucidation of the several degrees. Price \$1. Sent free of postage, except the Territories. Illustrated Descriptive Catalogues sent on application. Address: **MASONIC PUB. AND MANUFACTURING CO.**, 438 Broome St., New York.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 25 cents a line, or \$25 a column.]

THE NATIONAL TEMPERANCE ADVOCATE.—THE NATIONAL TEMPERANCE SOCIETY AND PUBLICATION HOUSE publish a new Monthly Temperance Paper, the object of which is to promote the interests of the Cause of Temperance, by disseminating light from every quarter upon its moral, social, financial, and scientific bearing. The best talent in the land will be secured for its editors and contributors, and it will be conducted in an earnest, broad, and catholic spirit, becoming the representative of Churches and Temperance Organizations. It is the intention of the Society to make it such a source of information and such an advocate of the Cause as shall render it not only a welcome visitor in the family, but indispensably necessary to every true friend of Temperance.

TERMS, IN ADVANCE:
Single copy, for one year, in advance \$1 00
Ten copies, to one address, in advance 9 00
Twenty copies, to one address, in advance 16 00
All over twenty copies at the rate of 80 cents per copy.

THE YOUTH'S TEMPERANCE BANNER.

THE NATIONAL TEMPERANCE SOCIETY AND PUBLICATION HOUSE also publish a new Monthly Temperance Paper, especially adapted to Children and Youth, Sunday Schools and Juvenile Temperance Organizations. It will be ably edited, each number beautifully illustrated, and contain a piece of choice music, and no pains spared to make it a first-class paper for the children of America.

The following are among the editors and contributors: Rev. T. L. CUTLER, Rev. JAMES B. DUNN, Dr. CHARLES JEWETT, Prof. A. B. PALMER, Rev. W. M. THAYER, Dr. ASA D. SMITH, R. G. PARDEE, J. N. STEARNS, Rev. PETER STRYKER, Mrs. F. D. GAGE, Mrs. M. J. HARPER, Mrs. J. E. McCONAUGHY, etc., etc.

TERMS, IN ADVANCE:
Single copy, for one year, in advance \$0 30
Ten copies, to one address, in advance 2 00
Fifty copies, to one address, in advance 8 00
One hundred copies, to one address, in advance 15 00
J. N. STEARNS, Publishing Agent, 172 William Street, New York.

\$2.—Tools and instructions complete for soldering all materials. A valuable art which any one may learn. For particulars address A. P. BROWN, Syracuse, N. Y. 4t

BOARDING IN NEW YORK.—Persons visiting the city, either for business or pleasure, can obtain board at the Turkish Bath establishment, Nos. 13 and 15 Light Street. We have good rooms, wholesome diet, and are located near street cars that will take you to any part of the city.

TURKISH BATHS, Vapor Baths, Electric Baths, Water Cure, and Swedish Movement Cure applied to those needing such. MILLER, WOOD & CO., Proprietors.

LANSLEY'S VERMONT COMMERCIAL COLLEGE.—Course of Study more complete, and Charges less than at any other college. Send six cents for specimens of Penmanship. A full Corps of Teachers. Circulars free. Phonography, Music, Mathematics, Painting, Telegraphing, French, English Branches, Classics, and a Teacher's Course in PENMANSHIP, instruction one year.

A BOARDING DEPARTMENT connected with the College, so that Students may remain from three months to three years, and prepare for College, Business, or Teaching. Board washing, lights, fuel, furnished rooms cared for by servants, and tuition in common English, per term of thirteen weeks.

Spring and Fall, each \$65 00
Winter Term 70 00

Winter Term opens December 6.
Tuition—Commercial Course till Graduation \$35, in Advance.
Telegraphing, \$15; Piano, \$10; Phonography, \$10; Ornamentals, each \$10. Our specimens of Penmanship have taken the First Premium at all the Fairs where they have been exhibited this season, among others at the Vermont State and New England Fair, at Brattleboro, Vermont, held October 4th, 5th, 6th, and 7th, 1866.

SPECIMENS SENT TO ANY ADDRESS ON RECEIPT OF TEN CENTS AND STAMP.
Students received at any time, either as boarders or otherwise.
Address J. H. LANSLEY, Poultney, Vermont.

MERRY'S MUSEUM.—The Children's Old Favorite. THE JANUARY NUMBER for 1867 commences the Twenty-seventh Year of this popular favorite of the young folks everywhere, and is filled with the choicest Stories, Pictures, and Puzzles. In addition to its present unequalled list of writers for that class in America, a number of others have been secured, and no pains will be spared to make it worthy of its reputation of being the best magazine for Young People in the land. Its moral tone will be unexceptionable, and the literary matter interesting and instructive. Valuable Premiums given for obtaining new subscribers. Terms, \$1 50 a year in advance. Single copies, 15 cents. Send for it.
Address E. H. FALES, Publisher, 172 William Street, New York.

DR. S. B. SMITH'S ELECTRO-MAGNETIC MACHINES.—The only ones where a true *unmixed* Direct Current with strong intensity and strong magnetic power is developed. Send for a circular wherein is exposed the trick of the "Six current" contrivance, and where it is shown that there is *but one current* in electricity, and but one important modification in that current; as well as the falsity that the so-called "Six current" machine has nearly double magnetic power." The book I allude to will be found interesting and instructive. No charge, and sent postage prepaid.

N.B. The Magnetic power of my *intended Direct Current* raises nine pounds.
"The arrangement in Smith's apparatus gives a much stronger physiological effect than I have seen from any other apparatus."
"B. STILLMAN, Jr., Yale College."
Price, with single cup battery, \$18; double cup, \$30.
Address DR. S. B. SMITH, 309 Broadway, New York. 1t

"AMERICAN SCHOOL INSTITUTE," AN EDUCATIONAL BUREAU. FOUNDED 1855.

(1.) To aid all who seek well-qualified Teachers, Principals, School Officers, and Heads of Families should send full particulars of what Teachers they want, and ask for the "Teachers' Bulletin."

(2.) To represent Educated Teachers who desire positions. The demand for experienced Teachers is good, especially for those who teach Classics, Military Tactics, and Music. Professors of Music and superior Female Music Teachers are always in demand. All Teachers should have the "Application Form."

(3.) To give parents information of good Schools. Facts concerning Schools are properly classified and are promptly submitted to those who seek Schools for their children and wards.

The *reliability* of the "American School Institute" is amply vouched for by well-known Educators and business men in all sections of the country. The testimony will be sent when desired.

J. W. SCHERMERHORN, A.M., Actuary, 430 Broome Street, New York.
Branch Offices in Philadelphia, Chicago, and Savannah. 3t

CHICKERING & SONS. Established 1823. Manufacturers of Grand, Square, and Upright Pianofortes. Warehouses, 652 Broadway, New York. Messrs. C. & Sons have been awarded fifty-five Medals for the superiority of their Instruments over all competitors, fourteen of which were awarded in the months of September and October, 1865.

FOR 1865, 1866, AND 1867.—THE THREE ILLUSTRATED ANNUALS OF PHRENOLOGY AND PHYSIOGONOMY, Nos. 1, 2, and 3, for these three years, contain a mass of interesting scientific matter. With more than 150 engraved illustrations. Price for the three, post-paid, only 40 cents. Address POWELL AND WELLS, 389 Broadway, New York.

GREY HAIR.—How to Restore it to its ORIGINAL COLOR.

ALDRICH'S IMPERIAL POMADE WILL CERTAINLY DO IT.

Composed of purely vegetable ingredients. The *quickest*, most efficacious, and *certain* in its effects of any article ever manufactured. Every Bottle Warranted.

Cures Dandruff, prevents the hair from falling out, and allays itching of the scalp.

For sale by GARABAND & MARSH, 678 Broadway, CASWELL & MACK, Fifth Avenue Hotel, HELMHOLD, 591 Broadway, HEGEMAN & Co., Broadway, KNAPP, 393 Hudson Street, and Druggists generally.

Wholesale Agents, F. C. WELLS & CO., 115 Franklin Street, New York.

S. A. CLARK, Proprietors, Woonsocket, R.I.

GOTHIC FURNACES.—STRATFORD, CONN. Alex. M. Lealey, 605 Sixth Avenue, New York: DEAR SIR—We have had two of your No. 10 Gothic furnaces in use in Christ Church in this place, one for two years, and one the year past. We have no hesitation in saying that they give perfect satisfaction, and for economy, durability, simplicity of construction and operation are not surpassed by any furnace now in use. We have not as yet found it necessary to make any repairs to either of them. Yours truly, Jerome Dutcher, Robert H. Russell, Committee; Lewis H. Russell, Elbert Wells, Wardens.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODEONS, AND CABINET ORGANS, the best manufactured, to Let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargain, from \$60 to \$225. Old Pianos taken in exchange. Liberal discount to teachers and clergymen. Cash paid for second-hand pianos. Pianos tuned and repaired. New 7-octave Pianos for \$275 and upward. Warehouses, No. 481 Broadway, New York.

HORACE WATERS.

DR. JEROME KIDDER'S Highest Premium Electro-Medical Apparatus. New improvements patented in the United States, England, and France.
Address DR. JEROME KIDDER, 430 Broadway, New York. 1t

New Music.

NINE-PINS QUADRILLE.—The set is formed the same as a plain Clonnet, with an extra gentleman, the "Nine-Pin," in the centre. Complete figures and music 35 cts.

GUARDS WALTZ, by D. Godfrey 35 cts.

MABLE WALTZ, by D. Godfrey 15 cts.

TWILIGHT DREAMS WALTZ, by that celebrated composer, Chas. D'Albert 15 cts.

FOR VIOLIN: piano 35 cts.

THESE CLOCK GALOP, easy, elegant, and *danceable*. 15 cts. for violin: piano 35 cts.

ABRAHAM-POGUE MARCH. 15 cts. for violin: piano 35 cts.

WEARIN' O' THE GREEN. 15 cts. for violin: piano 30 cts.

I HAVE HEARD SWEET MUSIC STRAINE—Song and Chorus. 15 cts. for violin: piano 30 cts.

THE HAUNTING THOUGHT, by Alexander Reichardt, composer of "Thou Art So Near and Yet So Far," with German and English words 40 cts.

"SHE SLEEPS, THOUGH NOT A STAR." 30 cts. guitar: piano 35 cts.

IT WAS MY MOTHER'S VOICE. 30 cts. guitar: piano 35 cts.

EXCELSIOR MUSIC for Flute, Violin, Fife, or Cornet. The most Popular Melodies of the day—in 16 books—price 15 cts. each number. Seven numbers, \$1. Music and Books sent to any address, post-paid, on receipt of the price.

FREDERICK BLUM, 208 Bowery, New York.

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[LOOKED at from a phrenological stand-point, this Poem exhibits rare beauties not seen, or, rather, not fully appreciated, by other eyes. Rightly interpreted, no objection can rest against its scientific or theological bearings. Skeptics and bigots are alike narrow-minded, and quarrel with that which they do not, or will not, comprehend. It is an easy matter for poets and philosophers to furnish *ideas*, but not so easy to furnish brains with minds to understand them. The following must serve as our preface.]

It may be proper to observe, that some passages in the Essay on Man having been unjustly suspected of a tendency toward fate and naturalism, the author composed the following prayer as the sum of all, to show that his system was founded in free-will, and terminated in piety; that the First Cause was as well the Lord and Governor of the universe as the Creator of it; and that by submission to his will (the great principle enforced throughout the Essay) was not meant the suffering ourselves to be carried along by a blind determination, but a resting in a religious acquiescence, and confidence full of hope and immortality. To give all this the greater weight, the poet chose for his model the Lord's Prayer, which of all others best deserves the title prefixed to this paraphrase.

A UNIVERSAL PRAYER.

Father of all! in every age,
In every clime adored,
By saint, by savage, and by sage,
Jehovah, Jove, or Lord!

Thou Great First Cause, least understood,
Who all my sense confined
To know but this, that Thou art good,
And that myself am blind;

Yet gave me, in this dark estate,
To see the good from ill,
And binding Nature fast in Fate,
Left free the human will;

What conscience dictates to be done,
Or warns me not to do,
This, teach me more than hell to shun,
That, more than heaven pursue.

What blessings thy free bounty gives,
Let me not cast away;
For God is paid when man receives;
To enjoy is to obey.

Yet not to earth's contracted span
Thy goodness let me bound,
Or think thee Lord alone of man,
When thousand worlds are 'round.

Let not this weak, unknowing hand
Presume thy bolts to throw,
And deal damnation round the land
On each I judge thy foe.

If I am right, thy grace impart
Still in the right to stay;
If I am wrong, O teach my heart
To find that better way.

Save me alike from foolish pride,
Or impious discontent,
At aught thy wisdom has denied,
Or aught thy goodness lent.

Teach me to feel another's woe,
To hide the fault I see;
That mercy I to others show,
That mercy show to me.

Mean though I am, not wholly so,
Since quicken'd by thy breath;
O lead me, wheresoe'er I go,
Through this day's life or death.

This day, be bread and peace my lot;
All else beneath the sun,
Thou know'st if best bestow'd or not,
And let THY will be done.

To thee, whose temple is all space,
Whose altar, earth, sea, skies!
One chorus let all beings raise!
All nature's incense rise!

AN ESSAY ON MAN.

EPISTLE I.—OF THE NATURE AND STATE OF MAN WITH RESPECT TO THE UNIVERSE. — Of Man, in the abstract. That we can judge only with regard to our own system, being ignorant of the relations of systems and things. That man is not to be deemed imperfect—as he came from the hand of the Creator—but a being suited to his place and rank in the creation, agreeable to the general order of things, and conformable to ends and relations to him unknown. That it is partly upon his ignorance of future events, and partly upon the hope of a future state, that all his happiness in the present depends. The pride of aiming at more knowledge, and pretending to more perfection, the cause of man's error and misery. The impiety of putting himself in the place of God, and judging of the fitness or unfitness, perfection or imperfection, justice or injustice, of his dispensations. The absurdity of conceiving himself the final cause of the creation, or expecting that perfection in the moral world which is not in the natural. The unreasonableness of his complaints against Providence, while on the one hand he demands the perfections of the angels, on the other the bodily qualifications of the brutes. That to possess any of the sensitive faculties in a higher degree would render him miserable. That throughout the whole visible world a universal order and gradation in the sensual and mental faculties is observed, which causes a subordination of creature to creature, and of all creatures to man. The gradations of sense, instinct, thought, reflection, reason; that reason alone countervails all the other faculties—save the spiritual. How much farther this order and subordination of living creatures may extend above and below us; were any part of which broken, not that part only, but the whole connected creation must be destroyed. The extravagance, madness, and pride of such a desire. The consequence of all, the absolute submission due to Providence, both as to our present and future state.

AWAKE, my ST. JOHN! leave all meaner things
To low ambition and the pride of kings;
Let us (since life can little more supply
Than just to look about us and to die)
Expatriate free o'er all this scene of man,
A mighty maze! but not without a plan;
A wild, where weeds and flowers promiscuous shoot;
Or garden, tempting with forbidden fruit;
Together let us beat this ample field,
Try what the open, what the covert yield;
The latent tracts, the giddy heights, explore,
Of all who blindly creep or sightless soar;
Eye nature's walks, shoot folly as it flies,
And catch the manners living as they rise;
Laugh where we must, be candid where we can,
But vindicate the ways of God to man.*

I. Say first, of God above, or man below,
What can we reason but from what we know?
Of man, what see we but his station here,
From which to reason, or to which refer?
Thro' worlds unnumber'd though the God be known,
'Tis ours to trace him only in our own.

* That is, to put man in right relations with the laws of life, health, and happiness. See Spurzheim's "Natural Laws of Man" for an elaboration of this thought.

He who through vast immensity can pierce,
See worlds on worlds compose one universe,
Observe how system into system runs,
What other planets circle other suns,

What varied being peoples every star,
May tell why Heaven has made us as we are.
But of this frame, the bearings and the ties,
The strong connections, nice dependencies,
Gradations just, has thy pervading soul
Look'd through? Or can a part contain the whole?

Is the great chain that draws all to agree,
And drawn supports, upheld by God, or thee?

II. Presumptuous man! the reason wouldst thou find,
Why form'd so weak, so little, and so blind?
First, if thou canst, the harder reason guess,
Why form'd no weaker, blinder, and no less?
Ask of thy mother earth, why oaks are made
Taller or stronger than the weeds they shade?
Or ask of yonder argent fields above,
Why Jove's satellites are less than Jove.

Of systems possible, if 'tis confest,
That wisdom infinite must form the best,
Where all must fall or not coherent be,
And all that rises, rise in due degree;
Then, in the scale of reasoning life 'tis plain,
There must be, somewhere, such a rank as man;
And all the question (wrangle e'er so long)
Is only this, if God has placed him wrong?
Respecting man, whatever wrong we call,
May, must be right, as relative to all.*
In human works, though labored on with pain,
A thousand movements scarce one purpose gain;
In God's, one single can its end produce,
Yet serves to second, too, some other use.
So man, who here seems principal alone,
Perhaps acts second to some sphere unknown,
Touches some wheel or verges to some goal;
'Tis but a part we see, and not a whole.

When the proud steed shall know why man restrains
His fiery course, or drives him o'er the plains;
When the dull ox, why now he breaks the clod,
Now wears a garland, an Egyptian god;
Then shall man's pride and dullness comprehend
His actions', passions', being's use and end;†

* In other words, man was made to fill a certain sphere on earth—was made just as God intended him to be, with all the faculties and functions necessary for his use in perpetuating his race. But man has "fallen," become "perverted," has violated the laws of his being, and, by dissipation, crime, and disease, is not permitted to "live out half his days." God made him man. He becomes, by his own perversity, what he most assuredly is, a miserable sinner in more ways than one.

† We are told in the inspired Word that worldly wisdom is but foolishness with

Why doing, suffering, check'd, impell'd; and why
This hour a slave, the next a deity.

Then say not man's imperfect, Heav'n in fault;
Say rather, man's as perfect as he ought;
His knowledge measur'd to his state and place,
His time a moment, and a point his space.
If to be perfect in a certain sphere,
What matter, soon or late, or here or there?
The blest to-day is as completely so,
As who began a thousand years ago.*

III. Heav'n from all creatures hides the book of fate,
All but the page prescrib'd, their present state;
From brutes what men, from men what spirits know;
Or who could suffer being here below?
The lamb thy riot dooms to bleed to-day,
Had he thy reason would he skip and play?
Pleas'd to the last he crops the flowery food,
And licks the hand just rais'd to shed his blood.
O blindness to the future! kindly given,
That each may fill the circle mark'd by Heaven,
Who sees with equal eye, as God of all,
A hero perish, or a sparrow fall,
Atoms or systems into ruin hurl'd,
And now a bubble burst, and now a world.
Hope humbly then; with trembling pinions soar
Wait the great teacher, Death; and God adore:
What future bliss, he gives not thee to know,
But gives that hope to be thy blessing now.
Hope springs eternal in the human breast;
Man never is, but always to be blest:
The soul, uneasy, and confined from home,
Rests and expatiates on a life to come.†

Lo, the poor Indian! whose untutor'd mind
Sees God in clouds or hears him in the wind;
His soul, proud science never taught to stray
Far as the solar walk or milky way;

Yet simple nature to his hope has given
Behind the cloud-topp'd hill an humbler heaven,
Some safer world, in depth of woods embrac'd,
Some happier island in the watery waste,
Where slaves once more their native land behold,
No fiends torment, no Christians thirst for gold.

[TO BE CONTINUED.]

God. Those who would understand their natures, the relations which they bear to the world around them, must be willing to commence with the minutest objects about them; must bring a simple, humble mind yearning for information to the task, not the pride and willfulness of lordly assumption. They are most learned who in their appreciation of the infinitude of universal intelligence meekly acknowledge their ignorance.

* The good man, the true man, finds a heaven here below, but the perverted finds only torment.

† Let the desponding try to cultivate the sentiment of Hope, or at least the spirit of acquiescence in the will of God. Let him learn to say, and to feel, "Thy will be done," and his troubles will depart and his happiness begin.

THE GREAT SEA-SERPENT.

SNAKES.

FROM time immemorial, or at least since the day that our first parents sinned in Paradise, the serpent has been an object of abhorrence to the most of mankind. Especially is this the case with the refined and educated classes of civilized society. Should one speak of "snakes," when in company, there will be immediately manifested expressions of dread or strong aversion. Whether or not the account of the "fall of man" from his first estate through the machination of the evil one in the form of a serpent gave rise to this general detestation of the ophidian race, we would not presume to say, but certain it is, that the dislike we entertain toward snakes is essentially different from the fear we have for any of the savage beasts which haunt the wilderness.

Snakes, however, are not without some interesting features, and naturalists who have been to considerable trouble in studying the habits and peculiarities of the serpent tribe, have felt themselves amply rewarded by the information obtained. Probably the most interesting subject for inquiry is that singular power possessed by some snakes to charm or fascinate their prey. Many are the instances of this charming property recorded in books of travel. Nearly every school-boy knows by heart the little poem about "The Boy and the Snake," which has a place in almost every "reader." This boy was so fascinated by a gray snake, that every morning, until the spell was broken, he took his breakfast of bread and milk out back of his father's barn, and divided it with the reptile. A gentleman residing in one of the Western States tells the following story of a recent experience in this line. He was walking across an unowed field near his house, when his ear suddenly caught the sharp, clinking sound of a rattlesnake. On looking to the left he saw, not over twenty feet distant, a large rattlesnake, with its head erect, and brilliant eyes. As it made no other movement

than a gentle oscillation of its glistening neck, the man paused in his walk and looked at it. "Hardly," he says, "had I bent my eyes upon the snake, when I became conscious of the most singular sensations. The rattle seemed to subside into music of the softest and most thrilling nature. As I continued to gaze at the serpent, it seemed to change into the most brilliant hues, while feelings the most exquisite flowed over my soul. How long I stood there looking at the thing I can not say, but all at once a sudden movement on the part of the rattlesnake, perhaps to spring, awakened me to some realization of my situation, and by a great effort I sprang from the spot and rushed away. The effect on my nervous system was such, that for a long time afterward the slightest noise would shock me, and any sudden occurrence induce strong mental excitement." In some of the Eastern countries the natives exercise astonishing control over the most poisonous serpents. The snake-charmers of Hindostan have a world-wide reputation. Lulled by their music, rude as it is at the best, serpents will crawl from their hiding-places and submit to be handled *ad libitum* by the charmer.

THE BOA-CONSTRICTOR.

Our large engraving above is taken from "Beadle's Monthly," and is intended to represent that great monster of the briny deep which, some maintain, has a veritable existence. The writer of the article descriptive of the "serpent" in said monthly is a gentleman whose statements are entitled to credit; but whether his graphic portraiture is or is not the product of a vivid imagination we will not assert. Many years ago, when the stirring

pages of the "Mariner's Chronicle" were our delight, the thrilling account of the sea-serpent commanded our wonder, but we can not give our indorsement to the story as yet. The appearances of the monster have been so infrequent, and the accounts of these appearances have been so garnished with romance, that the practical reader is inclined to consider the whole thing a fabrication. The most satisfactory version of the sea-serpent is that given by Capt. Kidd. He says that which has been supposed to be a veritable reptile, was nothing more nor less than a school of porpoises following each other rapidly in Indian file, each coming frequently to the surface at short and regular distances, thus exhibiting the appearance of the coils of a single object, twenty or more porpoises extending from one hundred to three hundred feet. We ourselves have frequently seen this sort of sea-serpent, but nothing like that figured at the head of this article. The gigantic boa-constrictor of South America may have his ocean complement, and we have little doubt of it; but when it is said that an immense ophidian exists in the sea some hundreds of feet long, it certainly is a "fish story" on a grand scale; and we would have a specimen in some accessible museum to refer to, so that the rising sneer, when allusion is made to a "sea-serpent," may be effectually suppressed. The most beautiful and the most poisonous varieties of snakes are found in the countries bordering on the equator. The rattlesnake is found in nearly all parts of America, though probably a native of a warm climate. The small illustration represents a rattlesnake prepared to spring or bite. Wild hogs are said to hold the rattlesnake in the utmost contempt, pursuing and tearing the reptile to pieces wherever found, and apparently without harm to themselves. In clearing new land in the West or South, pigs have been found valuable coadjutors in exterminating the dangerous rattlesnake tribe.

SKULLS OF BIRDS.—Mr. J. F. Le Baron, of Ipswich, Mass., kindly proposes to send us a collection of the skulls of birds for exhibition in our cabinet. Mr. Le Baron is engaged in ornithological researches, and is a taxidermist, from whom we hope to perfect our collection in this respect.

THE
PHRENOLOGICAL JOURNAL,

S. R. WELLS, EDITOR,

Is devoted to The Science of Man, in all its branches, including Purgology, Physiology, Physiognomy, Psychology, Ethnology, Sociology, etc. It furnishes a guide in Choosing a Pursuit, in selecting a Wife or a Husband, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

TERMS.—A New Volume, the 45th, commences with January (1867). Published monthly, \$3 a year in advance. Sample numbers, 20 cents. Clubs of ten or more, \$1.50 each. Supplied by Bookellers and Newsmen everywhere. Address, MESSRS. FOWLER AND WELLS, 239 Broadway, N. Y. U. S. A.

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

THE CZAREWITCH AND PRINCESS DAGMAR.

IN Scottish parlance we should say, "Here is a handsome laddie with a handsome lassie." The combination and blending of the robust Russian and the beautiful Dane must prove every way satisfactory. Of course, being so young, they have developed but little in character; and nothing more can be said of them than that they come of good stock—nay, the best; that they are sound, healthy, vigorous, sensible, and temperate; they have been well brought up; educated in the best schools

of their countries; and they would pass anywhere for "nice young persons."

The Czarewitch has a broad, high head and a comely face, with an intelligent expression, an amply developed forehead, mouth, lips, chin, etc., indicating a strongly social, and we may say a slightly voluptuous, nature.

The Princess Dagmar is meek, modest, refined, and sensitive. She has such an expression as would win one and all. Indeed, she is a sweet-looking girl—very much like some American girls whom we know; and is something like our Mary, our Emma, our Lizzie, and our Sarah. Then, she dresses her hair so sensibly, without those great, pendant what-you-call-ems. Those are pretty eyes, sweet lips, a handsome chin, and a loving mouth. We think she has kindness, integrity, and

devotion, also well developed Tune, Time, Ideality, Imitation, and a strong imagination. We repeat, she is a nice young lady, and will, no doubt, make the young man an agreeable companion, a good wife, and a loving mother.

We shall doubtless hear more of them in time to come. We shall now venture the prediction, that the Czarewitch will improve on further acquaintance—that he is reformatory, enterprising, liberal, and progressive.

We can not withhold our best wishes for the future usefulness and happiness of this truly handsome young couple who start in wedded life under auspices so favorable.

BIOGRAPHY.

His Imperial Highness the Czarewitch, the hereditary Grand Duke Alexander—Alexandrowitch—the future monarch of all the Russias, has as yet obtained but little reputation beyond his own country; all that is known of him as a public character is, that he has commanded a regiment of dragoons. He was born on March 10th (February 26th, old style), 1845, and is consequently upwards of twenty-one years of age. He is the second but eldest surviving son of Alexander II., the reigning emperor, and of the Empress Maria, a princess of the Grand Ducal family of Hesse. His elder brother, the late Czarewitch, Nicholas Alexandrowitch, died at Nice last year.

Princess Maria Sophia Frederica Dagmar, late of Denmark, whose title is now the Grand Duchess Maria Fedorowna of Russia, is the fourth child but second daughter of the King and Queen of Denmark. She was born November 26th, 1847, and has thus completed her nineteenth birthday. Though still young, the Princess has not been without severe bereavement. She was to have occupied the same position to the late Czarewitch Nicholas Alexandrowitch that she now does to his younger brother. The ceremony of betrothal had taken place, and the time for the marriage was all but fixed, when death claimed the expectant bridegroom. She was then affianced to his younger brother, her present husband; but the recollection of her former love, it is said, still lingers, and though her hand belongs to the Czarewitch Alexander, her heart still beats for her lost love, the Czarewitch Nicholas, as the following story attests:

On the day of her confirmation at St. Petersburg, the Princess, in passing along one of the salons of the Winter Palace, accompanied by the Grand Duke Alexander, her future husband, found herself all at once in the presence of the portrait of the Prince to whom she had been first betrothed. Happy remembrances, nearly forgotten in her present enjoyment, were immediately brought to mind, and she could not refrain from weeping. "You are right," said the Grand Duke Alexander, "for he loved you dearly. We will weep for him together, and we will often talk about him." Their marriage took place on the 9th of November, 1866, at St. Petersburg, amid great festivities and rejoicings.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

BY BEVERLY H. WASHINGTON A.M., M.D.

METAPHYSICIANS have handed out to us from the temple of science a vast number of charts to guide us in our investigations into the nature of that "fearfully and wonderfully made" creature, Man; but they are so defective, confused, contradictory, and incomprehensible, we have concluded to reject them altogether, and travel by a chart we have picked up by the wayside. Lieutenant Maury says that whenever, in his investigations into the secrets of the ocean or the air, he could find any hint in the Bible on the subject, he always felt confident that he was in the right course, for all previous investigations had shown that all its allusions were in perfect harmony with the truths of natural science. A remarkable harmony of the Bible with phrenological revelations will be found wherever there are any allusions to the nature of man, and we may therefore feel the same confidence that we are in the right course, which Lieutenant Maury does, when we find the Bible holding out the finger-board to mark our course in phrenological investigations, for the Lord of truth is the author of both, and the truths of one can never be found to conflict with the other.

The first hint from the Bible in relation to man's organization which we shall examine is found in Romans viii. 7: "Because the carnal mind [Gr., *minding of the flesh*] is enmity against God; for it is not subject to the law of God, neither indeed can be." We shall not stop to examine any exposition of this passage by metaphysico-theological expositors, but will proceed to say that this passage presents no difficulty to one acquainted with phrenological revelations, which harmonize most admirably with it, and receive from it a strong confirmation. The organ of Tune takes cognizance of tune alone, and can not possibly attend to mathematical calculations, nor can calculation take cognizance of the form of any object; that is left to the organ of Form alone. Neither can the organ of Benevolence note the color of any object, nor the organ of Color appreciate any feelings of sympathy for distress; and so on through the whole catalogue, each organ is confined to its own appropriate sphere. Bearing this in mind, let us examine the passage again. It is said "the carnal mind is not subject to the law of God, neither indeed can be." This is clear enough, for the organs of the animal group have to attend to their own appropriate functions, and can not possibly take cognizance of anything out of their own sphere, and of course can not comprehend anything addressed to man's spiritual nature. For instance, the organ of Amistiveness can never apprehend or comprehend anything addressed to Conscientiousness; that is an organ of the spiritual group of faculties, and can alone induce one to desire to do right. Nor can Combaticiveness feel inspired by any glorious hope of heaven; nor can Destructiveness be softened at the

sight of a praying saint; Benevolence steps in and drops the tear of sympathy; nor will Alimentiveness cause any "watering of the mouth" where prayer is talked of. Those are objects included in the range of the faculties of the spiritual group. The spiritual group of organs, or "the spiritual man," and the animal group of organs, or "the animal man," are confined to their own appropriate spheres by the fiat of the Creator. Hence it is absolutely impossible for the carnal mind to become subject to the law of God, for those faculties can not comprehend anything intended for the spiritual faculties, but must remain within their own sphere. But because one of the attributes or natures of man is so organized in the wisdom of the Creator that it can not apprehend or comprehend spiritual truths, that portion of man which the Creator designed for the special purpose is not by any means debarred from apprehending or comprehending spiritual truths, thereby enabling man to become obedient to the law of God.

So much for that nature or attribute of man which can not become subject to the law of God; now let us turn to that portion which can become subject to the law. In the 17th chapter of Acts we have Paul's address to the Athenians, and it is said that "certain men clave unto him and believed," having heard Paul speak.

1st. It is a fact which will admit of no dispute, that the Athenians were greatly addicted to religious worship. This establishes the point, then, that they possessed some disposition, desire, or faculty which, anterior to Paul's address, impelled them to worship the gods.

2d. It is evident that they possessed some disposition, desire, or faculty which induced them to believe in gods and goddesses, and in an existence after death.

3d. It is evident that they deemed it right to build splendid temples and offer costly sacrifices to their gods. The essays concerning right and wrong which have descended from that age down to the present time, show that they possessed some disposition, desire, or faculty which impelled them to try to do right.

4th. It is evident from the traditions concerning the delights of the Elysian fields, that they had some disposition, desire, or faculty which led them to hope for something beyond the grave.

There can be no dispute, then, that these faculties of Veneration, Marvelousness or faith, Conscientiousness and Hope were possessed by the Athenians anterior to Paul's advent, and of course that those faculties were not conferred on them by any extraordinary operation of the Holy Spirit. Paul was well aware that they possessed those faculties, and addressed himself directly to the task of showing them how they should be guided, and without any circumlocution made known to them the character and attributes of the true God; and when they, through their intellects, became acquainted with his character, they abandoned the worship of Bacchus, Venus, Mars, etc., and worshiped the true

God; and had not their minds been enlightened, they never would have abandoned the worship of the gods and goddesses.

Thus we find the organ of Veneration which impelled them to worship idols, guided by the intellect to the worship of the true God; and we shall also find, what Phrenology does not indicate, that the God of heaven has himself furnished the proper guide for each one of those faculties in his own infallible Word.

Let us now take the faculty of Marvelousness, Spirituality, or more properly faith, which yearns for something to believe in, especially in regard to the spiritual and supernatural, and we find Paul providing for this faculty of the spiritual man by enlightening the minds of the Athenians in regard to what they should believe. Again in Romans he writes: "How shall they call on him in whom they have not believed, and how shall they hear without a preacher? * * So, then, faith cometh by hearing, and hearing by the word of God." Thus the Bible proves Phrenology to be true, when it asserts that the faculty which yearns for something to believe in must be guided by the intellect, and in addition it goes one step farther, and informs us that the hearing which is to enlighten the mind must come "by the word of God."

Paul also reached the faculty of Hope in the Athenians. Previous to his advent they hoped for the delights of the Elysian fields; subsequently, when their minds were enlightened, they hoped to obtain the bliss of heaven through the Saviour. Paul also writes in Ephesians: "The eyes of your understanding being enlightened, that ye may know what is the hope of his calling, and what the riches of the glory of his inheritance among the saints." Thus we find that the Creator has provided for the faculty of Hope through the intellect.

In regard to Conscientiousness, there is a passage in Isaiah which shows clearly that knowledge is necessary for its guidance: "For before the child shall know to refuse the evil and to choose the good." This, therefore, proves the phrenological proposition, that conscientiousness is a blind desire which must be guided by the intellect.

Of Conscientiousness, our Saviour has given the best definition which has ever been given, and it confirms the phrenological. He says: "Blessed are they who hunger and thirst after righteousness;" as in the physical system hunger and thirst impel a man to suitable actions to gratify them, so hungering and thirsting after righteousness impel a man to action; but the faculty of Conscientiousness can not tell any more than the stomach what is not suitable. Paul's Conscientiousness led him to persecute the Christians; the Lord appeared to him by the way, and having enlightened his understanding, that same conscientiousness, or hungering and thirsting after righteousness, impelled him to suffer stripes, imprisonment, and finally death itself, for the sake of that cause which he had formerly opposed; in both cases his conscientiousness was blind, but impelled him to that course of action which his intellect decided was right.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless lonely nights;
Lovely, but solemn it arose,
Unfolding what no more might close.—Mrs. Hemans.

THE SUM OF LIFE.

BY J. O. ROCKWELL.

SEARCHER of Gold, whose days and nights
All waste away in anxious care—
Estranged from all of life's delights,
Unlearned in all that is most fair—
Who sailest, not with easy glide,
But delvest in the depths of tide,
And strugglest in the foam—
Oh! come and view this land of graves—
Death's northern sea of frozen waves—
And mark thee out thy home.

Lover of Woman, whose sad heart
Wastes like a fountain in the sun,
Clings most where most its pain doth start,
Dies by the light it lives upon—
Come to the land of graves; for here
Are beauty's smile and beauty's tear,
Gathered in holy trust;
Here slumber forms as fair as those
Whose cheeks, now living, shame the rose—
Their glory turned to dust.

Lover of Fame, whose foolish thought
Steals onward from the waves of time—
Tell me, what goodness hath it brought,
Atoning for that restless crime?
The spirit mansion desolate,
And open to the storms of fate,
The absent soul in fear—
Bring home thy thoughts, and come with me,
And see where all thy pride must be:
Searcher of Fame, look here!

And Warrior, thou with snowy plume,
That goest to the bugle's call—
Come and look down—this lonely tomb
Shall hold thee and thy glories all;
The haughty brow—the manly frame—
The darling deeds—the sounding fame—
Are trophies but for death!
And millions who have toiled like thee
Are stayed, and there they sleep; and see,
Does glory lend them breath?

MIND IN MAN AND ANIMALS.

BY CHARLES E. TOWNSEND.

[ALTHOUGH the writer does not add much, substantially, to the general stock of information relating to the mind, yet as his views of animal intelligence are somewhat novel, especially in the manner of their presentation, we offer them to our thoughtful readers. The style of reasoning reminds one of Edgar A. Poe's Sleep-walker.—EDITOR A. P. J.]

The animal body has no power in the absence of mind, therefore mind, like electricity, has force, has power to move ponderable matter, and, like electricity, its action is instantaneous; so, too, mind and electricity are both something. As anything and everything are something, all things are, necessarily, material; the converse of which is nothing, a void, a vacuum, the absence of materiality, which is inoperative, without power; hence immateriality can no more represent mental force, than such vacuum can represent electric force.

MIND AND ITS MATERIAL CONNECTIONS.

As there exists a material connection between mind and inert matter, through the brain and the nerves, by which we obtain all our knowledge of creation, outside of our individual selves, it follows as a necessary sequence, in the chain of operations, that mind, too, must be material, though of a high degree of subtilty, possessing a comparatively infinite expansion, pervasion, transmission, and power, as there can be no possible connection between something and nothing, existence and non-existence of an abstract spirit-mind. If mind was simply a function or quality of brain matter (as some claim), it could possess no force of action, as all forces imply something in motion, i. e. material translation or evolution; whereas as an active, subtle, and refined material, it possesses an undefined but marvelous force, as well as a capacity, far transcending, in its sphere, that important subtle element Electricity, which permeates space with its power of attracting and repelling all atoms and compound bodies, holding great worlds in its embrace; as well as in the construction, maintenance, and dissolution of their material compounds, including all animate and inanimate combinations. As such is the wondrous power of subtle electric matter, who can set bounds to the capacities of a still more ethereal matter, to the end of realizing all the powers of human intellectual capacity, and yet infinitely more, by and through the instrumentality of material minds?

All parts of observed creation, outside of mind, are known to be material, and as there is every grade of materiality, from that which we vulgarly conceive to be the most gross, to almost inconceivable subtilty, so refined and pure, and yet unceasingly operative, as Electricity and Gravitation, of which we can conceive no grossness, associated, or termination of its existence, or force of action, it thence follows, that viewing mind as material, it may be so infinitely more subtle than Electricity, that it partakes of what we vaguely call spirit, which is but the essence of refined materiality, that, therefore, there can be no derogation in conceiving the Infinite, as well as the finite mind, to be partakers of His wholly material Universe.

EFFECT OF MIND ON MATTER.

With such conception, we can comprehend the operation of mind upon inert matter, and conversely of such matter upon mind, thus harmoniously connected, as well as we can understand the effect of Electricity, in its dual character of attraction and repulsion, both in construction and dissolution, which we know it is eternally effecting. I say, eternally, because we know that all matter, of which Electricity is an essential ingredient, though subject to change in combination or place, can not by possibility cease to exist; and so, too, of material minds, ever capable of refining, and always to be perpetuated. With such prospective considerations of mind, it retrospectively follows, that incipient mind must have been less subtle, less refined, i. e., more gross, and

that education, which is experience and knowledge, virtue and aspirations, which are the true, and therefore the designed uses of education, are both mentally refining and etherealizing; hence minds expand with a healthy growth of brain, as in knowledge, having more brain to connect with, encompassing a large area; and more powerful, because more ethereally operative (all elements increasing in power with their increase in ethereality) as we advance in the grasp of observation and aspiration of thought, until the mind becomes, by absolute growth or expansion, as metaphorically expressed, a giant intellect.

As greater grossness and imbecility exist in the infant than in the matured mind, it is inconceivable that the same capacity for observation and thought is present in each; and as we know that brain grows and nerve connections become larger and more sensitive as we increase in knowledge, it is but rational to assume a corresponding growth, increase, and etherealizing of mind, to enable it to encompass and control the larger brain, and thus the greater sensitiveness of connection with material creation, as well as a necessity for expanding in abstract thought, through the greater compass of the mind.

THE INFLUENCE OF BRAIN UPON MIND

would seem sufficient to prove that the latter is, also, material; while thought is manifestly a material operation, since it is the product of activity or movement of the mind, involving motion and combustion in the brain, its immediate material connection; which has to be replaced, in the bodily organization, by new deposits of blood, to keep the animal machine in working order—though in the mere act of thought no muscular power is required, yet the brain moves when the mind only thinks—hence such movement, wear, and consumption of brain-material must be by mental material concussion or friction, which, like Electricity, is itself not consumed, but by the rapidity of its movement changes, more or less, that with which it comes in contact.

If the sentient principle of creation be a subtle material infusion, emanating from the self-animating First Cause of all wisdom, the Eternal God and Creator, as I believe, then such infused principle, as partaking of its Author, can never cease to exist, but through progress, only, changes its bodily connections. As this sentient principle educates itself, through bodily organization, it becomes adapted to a higher, i.e., more sensitive, bodily organization, furnished it through transition, by death, from the present body, thus to connect it by progress or advancement, in time, with a finer comprehension of unlimited variety in creation, to the end of approaching the sublimity of Eternal Beauty and Truth.

MIND NOT A MERE FUNCTION OF THE BRAIN.

"Mind is claimed by Atheists to be a mere function of the brain, and as such necessarily dies with it." Mind ~~may~~ be ostensibly a function of the brain, in so much that it is

dependent upon those organs to connect it cognizantly with material things; but that does not define that mind is a part of and dies with the brain, or that it may not connect with other brain organizations elsewhere, in endless succession. Mind may be, more philosophically, claimed as an independent subtle materiality, and like all materiality changes in combination and place, but is never annihilated. Mind and its connection with brain can not be strictly solved by science, and therefore the theory of Atheists, who claim annihilation of mind, while they must admit the eternity of brain matter, in some form and place, is necessarily a gratuitous and absurd assumption.

Animal organs, by nerve connections, are double in their actions and their functions, as well as causes of action, are, doubtless, due to magnetic or electric force, which is constant so long as appropriate food and air are supplied, and a healthy nervous action is maintained for their dissemination. These functions, as digestion, secretions, excretions, inhalation, exhalation, circulation, etc., are carried on, thus mechanically, without our volition. The function of the magnetic battery of the brain is to receive or centralize electric impressions, from its dual nervous connections with the outward senses, and by the action of the mind to convey reflex action, through nerve and muscle, by electro-magnetic force to produce muscular action. Mind and brain, in their mutual action thus upon each other, serve to deceive the human reason into considering itself as only a function of the brain, living and dying with it; whereas the functions of the brain are only to receive impressions for the use of, and convey the reflex behests of a self-existing mind, dependent upon brain organization only for its material connections, through the animal senses, with the outer world, whereby it is instructed, and when thus educated is capable of independent action in thought and reason—thus proving that mind is not a mere function of the brain.

To claim that mind is a function of the brain, is to say that mere brain matter is capable of thinking and reasoning, which is too palpably absurd to deserve refutation, as we know to the contrary, for thinking ceases to manifest itself at death, although brain matter still remains intact; then such claim must be reduced to the peculiar organism, rather than to the matter; and here the refutation is again complete, since instantaneous death may not in the least disturb that organism, and yet, the master worker having left, thinking has ceased to manifest itself through that still perfect brain. Hence, then, we must look to an independent cause which has animated that brain, *the mind*, which therefore can not be a function of the brain; but the brain is only the medium of operation for the mind, by communication with the senses and muscles, consequently of manifestation to other minds, or with the outward world; and as the tool can not be the master, therefore the mind can not be a function of the brain.

MIND AND SENSATION.

All machines work without fatigue, and so of that portion of the animal machine which works without our volition, as breathing, digestion, circulation, etc., whereas constant mental stimulus is requisite for locomotion and general muscular action, which reacting upon the mind, together produce mental exhaustion. It is impossible to conceive of a bodily organization endowed with feeling, unless connected with mind. As the body has no sensation independent of the mind, therefore all sensations belong exclusively to the mind; hence fatigue is a mental sensation, and by continuing muscular action when the full stimulus of mind is not adequately supplied to the muscles, for their healthy action, they become injured by further use. The nerves convey impressions from the five senses to the brain, the seat of sensation, where the connecting mind alone feels the effects, be it from external motion fatigue, disease, or wounds. Thus the mind only is made to feel the effects of over-exertion or injury to the bodily organs, thereby clearly proving that the mind is not a function of the brain, or part of the animal machine, but the independent master-worker of it, like an engineer furnishing to his engine the appropriate material, the stimulus for exertion, the motive principle of its operations; therefore the mind, like the engineer, has a separate existence, a vital self, an individuality, capable of infusing its behests into the body, as the machine, its mechanical organization and tool of operation.

Science arrogates most unwarrantably, for the human being, the exclusive possession of an immortal soul and reasoning powers, based simply on the size, weight, and peculiar convolutions of his brain, as compared with the brain organization of all other animals. In fact, we know little of the precise governing connection between mind and brain, though Electricity is doubtless the medium; still less of the necessity for peculiar form, size, or weight of brain, as infallibly corresponding to mental development and capacity, since insanity may ensue without any apparent change in either form, size, or weight of brain; and certainly we know but vaguely of the capacity for thought, consciousness of responsibility, and mental destiny, involving immortality, with other animals, as compared to man's similar characteristics, as to thus deny to animals what we know so little of for ourselves.

A noted anatomist, examining a fossil human skull, said (in allusion to its size), "It might have belonged to a philosopher, or a thoughtless savage;" so truly may a small brain, nervously sensitive, and of finer quality, be superior to a large brain, without a sensitive nerve organization. As Phrenology is an established science, so it should be understood that the highest development of mind is in a great measure dependent upon the quality of brain matter, as the activity of the nerves, concentrating in the brain, alone constitutes its quality; hence such force develops the indica-

tive configuration of the brain, which science locates, and so successfully manipulates in determining character.

Notwithstanding the boasted advantages of the human brain over all other brain organizations, there is far more difference in mental developments with individuals of mankind, at various stages of growth, from the infant to the matured mind; and in the different capacities of the human intellect in adults, from its highest manifestations in the Caucasian type, to the lowest in the Hottentot, than exists between the intelligence of an ordinary man and that of some animals. Hence we are not warranted in drawing conclusions adverse to mental capacity and future progress in other animals, as compared with our own, simply on the basis of comparative brain organization, seeing that the human mental capacity admits of all the variation which is claimed to separate man from the lower animals.

DESTINY OF MIND.

Again, it is claimed by some that there can be no similar destiny or equality for animals, or idiot man, as for his intellectual, but temporarily favored, brother. If it is admitted that mind, like matter, once created, can never be annihilated, though both are subject to change in combination and place, then we will readily comprehend that all, from the highest to the lowest mental organization, may progressively develop in time, and ultimately reach the same high destiny.

Viewing all minds as immortal, the temporary advantages of an earlier perfected organization of brain, in this short life, is but of small consequence in the lapse of eternity, and all our attainments in this world weigh but lightly on the results of progressive advancement to be continued through all eternity; which is, doubtless, equally applicable, as the grand feature of progress in creation, to the lowest as well as the highest mental organization; and to existing imperfections in individuals or species, as in the case of decease of infants with immatured minds.

Mundane attainments in knowledge and virtue are but the initiatory steps in the progress of future schooling, which thus earlier prepares us for advancement hereafter. So that well-applied hours here are so much gain there; while all deficiencies here must be rudimentally overcome there. As progress is marked by intellectual and moral attainment, both here and hereafter, the earlier the advance, the more rapid the progress in knowledge and happiness, the main objects of creation.

The future advancement of all sentient beings is doubtless continued and perpetuated by new bodily organizations, having some analogy to those now furnished with organs of sense, there as here, to enable our minds, through these organs, to connect with and appreciate the mighty works of God everywhere, as well as thus to continue our usefulness, throughout all time, by aiding to improve, as co-workers in the arts and sciences, the useful and ornamental adaptability of creation everywhere.

Such usefulness, through all time, connects us intelligibly and intelligently with a boundless creation; and with His universal pervading beneficence associates all His sentient creatures, each in their attained sphere of development, with every prepared bounty, both here and hereafter, which improving virtue and growing intelligence are capable of appreciating.

Such rational conclusions and charitable considerations should teach mankind humility, as being ourselves but individuals in the vast multiplicity of a wide-spread sentient creation, and admonish us to acts of kindness toward other members of innumerable forms and characteristics, whose equal claims to consideration, in their sphere, man can not decide.

Nor limit future bliss to man,
Since all life has God's care;
And His free love with equal span,
Insures to each a share.

THE CYNIC.

THE cynic is one who never sees a good quality in a man, and never fails to see a bad one. He is the human owl, vigilant in darkness and blind in light, mousing for vermin and never seeing noble game. The cynic puts all human actions in two classes, openly bad and secretly bad. All virtue and generosity and disinterestedness are merely the appearance of good, but selfish at the bottom. He holds that no man does a thing except for profit. The effect of his conversation upon your feelings is to chill and sear them, to send you away sour and morose. His criticisms and innuendoes fall indiscriminately upon every lovely thing, like frost upon flowers. If a man is said to be pure and chaste, he answers: Yes, in the daytime. If a woman is pronounced virtuous, he will reply: Yes, as yet. Mr. A. is religious: Yes, on Sundays. Mr. B. has just joined the church: Certainly, the elections are coming on. The minister of the gospel is called an example of diligence: It is his trade. Such a man is generous: Of other men's money. That man is obliging: To lull suspicion and cheat you. This man is upright: Because he is green. Thus his eye strains out every good quality, and takes in only the bad—as the vulture, when in the highest heaven, will sail by living flocks and herds, but comes like an arrow down upon the smallest carcass. To him religion is hypocrisy, honesty a preparation for fraud, virtue only a want of opportunity, and undeniable purity, asceticism. The live-long day he will coolly sit with sneering lip, uttering sharp speeches in the quietest manner, and in polished phrase transfixing every character which is presented; "His words are softer than oil, yet they are drawn swords."—Ps. v. 21. All this to the young seems a wonderful knowledge of human nature; they honor a man who appears to have found out mankind. They begin to indulge themselves in flippant sneers; and with supercilious brow, and impudent tongue wagging to an empty brain, call to naught the wise, the long-tried, and the venerable.—H. W. Beecher.

The phrenology and physiology of the cynic are in themselves a study. He is of the nervous-bilious temperament; is extremely sensitive, and very intense. His nerves are bathed with bile and steeped in bitterness. He never feels well unless he feels badly. He craves to be carried against the grain, is never more happy than

when very unhappy, for then he has an excuse to pick at somebody, and find fault with "society." His brain, like his nerves, fed on bile, instead of generous blood, causes his faculties to pervert and distort all that is good and gracious in others, and to magnify all that is mean and unworthy. His Self-Esteem is not only large but perverted, and he looks with contempt on all who differ from himself. His Approbativeness is strong, but it gives him a mean jealousy of every excellence in others. His Combativeness is not of the kind to inspire manly courage, but is bitter, cutting, and vexatious in its action. His Destructiveness, instead of giving steady strength and executiveness to his character and language, imparts a biting sarcasm and a relish for all that is pungent, cutting, and cruel. His wit, instead of being a plaything and a joy, is made a scorpion lash to scourge innocent ignorance and purity, or becomes a kind of turkey-buzzard groping for purulent spots in the body politic, and delights to gorge its greediness in moral gangrene. His social organs take on a jealous and querulous action, and his unfortunate friends have a tough time with him. His criticisms are as plentiful as the quills of the porcupine, and quite as sharp. His Conscientiousness has but one eye, and that magnifies the faults of others, and with large and active Secretiveness he doubts and mistrusts every good thing people do. The cynic is generally a dyspeptic, and all his functions of body are warped, and all the emotions of his mental life are depraved.

In short, it is the result of the perverted action of all the organs of the brain and all the functions of the body. God pity and cure him. Reader, do you know anybody who could fitly sit for such a picture?

FREEDOM.

I DREAMED of a spirit free,
Released from mortal coils—
Free as the light and as the air,
From all earth's cares and toils!

A spirit that through endless space
Shall waft its onward way;
No earthsome dusks, no drear shadows
Shall end the light and day.

Oh, heart! take courage! pine not now!
These clogs will lose their hold,
And thou shalt float, a spirit fair,
Into yon blissful fold.

There countless years their chimes shall sing
'Round thy aspiring breath,
But to the mines of knowledge there,
The golden key is death.

Then come, oh, death! and make me free;
Ope now my prison doors!
The bolts fly back, the hinges creak—
Upward my spirit soars!"

So fond is an American actor in Mobile of his profession, that he has actually bequeathed his head to the theater, to serve, when he has shuffled off this mortal coil, as a "Yorick's skull." "Alas, poor Yorick!"

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one life
Their hearts, their fortunes, and their beings blend.—*Thomson.*

WHIP HIM FOR HIS MOTHER.

Let me whip him for his mother,
He's such a naughty boy;
He baby tried to smother,
And he's broken Emma's toy.
Of the doll I gave to Ellen,
He has melted off the nose,
And there really is no telling
To what length his mischief goes.

Last night he put a cracker
'Neath his Aunt Jemima's chair,
And he told me such a whacker
When I asked how it came there.
Then when poor old Mrs. Toodles
Was just starting off by rail,
He tied her two fat poodles
Fast together by the tail!

It really is quite shocking
How one's nerves he daily jars;
He puts pins into one's stockings,
And Cayenne in one's cigars.
You may guess that many another
Boyish trick he's daily at,
So I'll whip him for his mother,
As a tiresome little brat.

TRAVEL AND TRAVELERS.

BY MRS. GEORGE WASHINGTON WYLLIE.

Don't tell us about labor being a hardship. That is entirely a misapprehension, as we know very well by experience. We maintain that there is nothing on earth harder to do than to keep still. Didn't we make that discovery long before we were put into our first ruffled apron, and haven't we kept on enlarging our experience ever since? And can not we prove by the data of silent observation and diligent investigation, during all our succeeding years, that other people have very much the same failing, if failing it may be called? Those vagabond old people that we read about in the Bible, who were forever pulling up their tents, and packing up their goods, and trudging round the country—whose nomadic life was a perpetual First of May—were stay-at-home and peaceable folk in comparison to this restless-souled generation of ours! We live in one place, eat our dinners in another, transact our business in a third, and buy our shoe-strings and paper collars in a fourth, putting a girdle around the earth in a way that old William Shakspeare never dreamed of. Half our existence is passed in railroad depôts, or on the promenade-decks of steamboats. We make no more of a fifty-miles journey by steam than our ancestors used to make of "going out to tea," and not half so much as they did of the weekly journey to church, when the shaggy brown horses were harnessed, and the wagon-

wheels washed, and the faded buffalo-robos brought out of their corner in the barn. Who wants to go back into a slow, dreamy existence of those last century days? No one; and yet what a relief it is, sometimes, to close our eyes an instant on the rush and whirl and perpetual tumult of to-day, and remember the tranquil lives of which no trace remains save a row of graves in far-away country churchyards. Peace to their ashes! But we do things after a different fashion. There is nothing of the stand-still in our elements. And you would be astonished yourself, reader, were you seriously to compute how much of your time is spent in railroad cars, steamboats, ferries, and stages! Little worlds of humanity plow our waters and thunder over the iron paths that thread our country villages. We button up our overcoats, and tie our bonnet strings, and say, "Well, I think I'll take the one-o'clock train to New York," with a coolness that would have furnished our ancestors with strong collateral evidence for putting us into a lunatic asylum! What do we care for the miles of river and the acres of woodland that may separate us from the modern Babel? Perhaps a century hence our grandchildren may talk of taking the two-o'clock express to Palestine, and price oranges for dinner along the banks of the Niger! What slow old characters they will think us! well, let 'em; it will make very little difference to us, one way or the other, that's an all-sufficient consolation.

There is no atmosphere in which one can study human nature to better advantage than that of travel. People develop their true characters with marvelous rapidity when they enter a public conveyance. There is no necessity for subjecting our fellow-creatures to the ordeal of the "Palace of Truth" as long as railroad cars are patronized as fully and freely as at present.

"Manners *is* manners," says the old lady of traditionary lore; but people who travel appear to be impressed with the idea that manners *isn't* manners, as far as they, personally, are concerned; why, we have seen more wild beasts in the course of half an hour's journey on a railroad, than Van Amburgh has got in his whole menagerie! And, what makes the matter more serious, they travel without any keeper to repress their strong brute instincts.

First, there is the Hyena; generally, we regret to say, of the feminine gender, who comes in with baskets and bundles and boxes innumerable, which she puts on the vacant seat beside her, and then sits eying the passers-by, as if she would say, "I'd like to see any one presume to take that seat!" To be sure, she has only paid for one seat, and she is occupying two, while some one else is obliged to stand; but then she is a Hyena, and it takes more moral courage than most people possess to dislodge a human Hyena from her fastnesses.

Then there is the Bear, usually a fat man with caloric to spare, and overcoats, scarfs, and fur wrappings enough for three ordinary mortals, who comes in with a heavy step and

immediately opens all the windows within reach of his bear-y paw. Fresh air is a fine thing, especially for bears who have long fur and plenty of vitality; but the Bear's neighbor, in a thin shawl, with a consumptive cough and chattering teeth, may possibly entertain a different opinion.

"I suppose there are plenty of other seats in the car, if you don't like it, me'arn," says the Bear; "I believe in sufficient ventilation."

So the Bear shows his teeth and reads his newspaper, and nobody else ventures upon a word of remonstrance, however they may disapprove of his theory.

Moreover, we frequently travel with an Elephant, clumsy of foot and ponderous of gait, who treads on your dress until the gathers "crack, crack" in a manner to make your hair stand on end, and hits his elbow against your bonnet, and pushes his elephantine way onward without the little courtesy of "I beg your pardon," that sweetens so many a feminine cup of bitterness. We suppose he is decently polite at home—if not, we feel sincerely sorry for his wife and sisters; but he is an aboriginal savage, all but the scalp-lock and tomahawk.

Then there is the selfish man, who crowds past you at the ticket office, and thrusts his arm over your shoulder, "One, to New York." Yes, just *one*—the great, paramount, all-important one, to whose unity everybody and everything else must be content to become secondary. So long as One gets his ticket in time, and secures the nicest place, at just the costliest distance from the fire, all the other eight digits can shift for themselves. No matter how inconvenient and disagreeable he makes it to others, One must be promptly served and duly accommodated. Now, two minutes make no particular difference, and if One had stood back, and allowed the shrinking widow, and the little girl standing on tip-toe, with her pennies wrapped in her postage currency, and the shy young ladies and the feeble old woman to be served first, wherein would One have been permanently the worse? And then he rushes off with his hands in his pockets, and answers the timid inquiry of the country people on the platform, "Does this train go to such a place?" with a crusty, "Don't know anything about it." No, he *don't* know, and he don't mean ever to know anything that does not directly concern Number One.

To go to the opposite extreme, there are the travelers, male and female, who settle down socially beside you, and take it for granted that you are in a friendly mood, and talk—talk—talk until you would welcome any interruption short of an apoplectic fit or a railroad accident, with the utmost delight! And there are the people somewhere in the middle of the car who are discussing domestic affairs in voices pitched considerably above high C, and who unconsciously enlighten all the other passengers with various items concerning Martha's wedding, Johnny's base-ball exploits, and Jotham's narrow escape from the small-pox, until naps become impossible, newspaper

reading impracticable; and nothing but resignation remains to the victims. Mrs. Smith and Mr. Brown would be horrified at the idea of speaking so loudly in a private house; but a railroad car is quite a different matter, you know.

Then there is the—Beast (it is difficult to class him exactly), who chews tobacco and blindly expectorates right and left; heedless of ladies' dresses or gentleman's boots—the creature one degree less respectable than a decent quadruped, and two degrees more intolerable than all the other nuisances put together. Why is he allowed to disgrace humanity by walking about, like any other biped? Why isn't he compelled to ride in the freight cars, with the other swinish multitudes? Isn't there a smoking-car specially provided for those who are not decent enough to travel without the Virginia-weed appendage? And why don't the animal betake himself thereto? We beg pardon of the *Ménagerie* for reducing them to such a level of comparison; but this last specimen of the traveling community really does not deserve the title Human.

We feel ourselves getting out of temper very rapidly, and we remember a maxim often repeated to us in childish days, "Never *speaks* when you are angry!" So for the present we hold our peace; but don't imagine, Mr. and Mrs. Public, that the subject of travel is exhausted. There is plenty to be said yet, in due time.

JOHN HENRY BENEDICT, SENIOR.

BY A. A. G.

JOHN HENRY BENEDICT came home again a few nights ago, not "from a foreign shore," where it would be well for his family if he would go and stay for the next fifty years, but from his own little world, his office, No. 28 Liberty Row, a kind of heaven below, where he is at liberty to be pleasant or cross, sweet or sour, angelic or human, just as he pleases; a kind of earthly paradise, where he may not only do a great amount of business, and earn a great amount of money, but take a great amount of comfort in sitting with his heels on the highest elbow of the stove-pipe, dreaming blissful dreams about unmarried life, which was his before he doubled himself in Mrs. John Henry Benedict, and tripled himself in John Henry Benedict, Junior.

Well, as has been said, he came home a few nights ago—poor man, he has to come home every night—in a shadier mood than usual, and with a firmer determination to have "that little nervous fly-about" keep still and not interfere with shin-toasting or newspaper-reading. Fortunately for John Henry Benedict, Junior, it was a pleasant evening, and he was out-doors.

Out-doors! Surely it was made on purpose for children. To them houses are too often Dismal Swamps, black holes, prisons, for there the John Henry Benedicts of the world cast their long, dark shadows; but there are no

such terrors out-doors. Blessed forever be out-doors!

Out-doors! pouring into the ears of children the song of the birds, and filling their laps with flowers, and giving them what they never can have in the house, plenty of room—room to play marbles, room to play horse, room to play hide-and-go-seek, room to ride horseback, room—room for everything.

John Henry Benedict, Junior, was out-doors, and out of sight too, as his solemn-faced sire passed into the house, saying to himself: "I'll send the child into the nursery if he is making his usual racket; for I've got a touch of the nervous headache."

You never need to do that, sir, when "John Henry" is out-doors, for out-doors never objects to a racket. Out-doors can stand any amount of noise, and help to make it too, for he is continually stirring up his robins and orioles and wrens, and even his unmusical squirrels and crows. He lets all creation sing and shout. He has no nerves.

John Henry Benedict, Senior, was not aware of the fact, that John Henry Benedict, Junior, was playing in the large, pleasant nursery of out-doors, or he wouldn't have gone in with any nervous thought of sending him into the small, sunless nursery of the house, but rather with a thankful thought of the great blessing of out-doors. He would even have paused a moment and raised his Ebenezer on the steps, and yet his mercies were not so many nor so great as might at first be supposed.

He shut out the voices of nature, it's true, when he shut the door. No child's or bird's song could reach his ears; but he had no sooner taken his seat in the house than a wild Irish song was heard from the direction of the kitchen. Biddy had entirely forgotten that John Henry Benedict, Senior, was a nervous man, but he had not forgotten it. He never forgets that he has nerves, and that they need constant looking after.

He forgets to pick up what he drops on the floor; he forgets to thank Mrs. John Henry Benedict for doing it for him; he forgets to take her out for a ride when she needs it; he forgets to give her a smile when it would cost him nothing but a little good-nature; he forgets to humor her by using the scraper before he comes in; he forgets to say good-night to his child; he forgets to say good-morning to him; he forgets that home is the place where a man ought to make himself agreeable; he forgets that the world is a place where a man ought to show himself kind; he forgets the poor; he forgets the sick. Ah! and he forgets his God, but he never forgets his nerves! He thinks there is nothing so good for nerves as everlasting silence, and if he had the ordering of things, the whole universe would be made to hold its tongue. He would give all children, at the moment of their entrance into life, the lockjaw, and would have them so framed as not to be able to skip, hop, or jump, but only to walk. He would have all birds born without the talent or the desire for sing-

ing, for they wake him up mornings. He would have all that exist in the world he lives in, to say nothing about the existences of other worlds, carrying on their intercourse by signs. He would have blessed, unbroken stillness from pole to pole, for it is so good for his nerves!

What can be done for John Henry Benedict's nerves? Stuffed birds, wax flowers, coral, shells, and a thousand other things can be protected by a glass covering and kept secure from injury, but where can he find a covering for the nerves in question? What is there that will not convey sound, and in which Mr. John Henry Benedict may encase his nerves and find rest? Nothing—nothing. Sound travels everywhere, and travels fast. It makes a lightning passage for itself through everything, and is very fond of going to Mr. John Henry Benedict's ears. What can be done for him?

All creation is growing noisier and noisier. The birds, instead of getting tired of their own music—Mr. John Henry Benedict wonders they don't—are daily composing something new, and devoting themselves almost entirely to music. And children are refusing more stoutly than ever to be proper, well-behaved children, and sit in delicious silence. Their hearts are fuller of music, and their throats are fuller of sound. They give their lungs and their voices less and less rest. They vie with each other, as never before, in making a noise; and how can Mr. John Henry Benedict hope that the time will come when not only wars, but noise will cease in all the earth? He does not hope. Noise is so on the increase, especially under his own roof, that his "bump" of Hope has fallen in. Everywhere, everything that hath breath is full of noise, and Mr. John Henry Benedict's nerves are, therefore, full of pain and unrest, and his "bump" of Hope going fast to decay. Could he only be transplanted at once to the land where, it is hoped—nervous people hope so—children are developed rapidly into men and women, and become superior to the folly of making a noise, and where there are no more children to be born, as in this earthly sphere, it would be the best thing that could happen to him. But this will probably not be at present. There are, it is true, sudden changes and sudden deaths, but Mr. John Henry Benedict, Senior, is remarkably well preserved. There is not a bone in his body that is not nicely rounded over with fat. Beef and beer have been so assimilated that no one would suspect him of having an osseous system. But there are the nerves! They "continue as they were from the beginning," and Mr. John Henry Benedict is a most wretched man, and the people who live with him are most wretched people. John Henry Benedict, Junior, should, however, be excepted. Although he has to endure the sorrows of those who may not make a noise in the house, he rejoices more and more in the consciousness that he has all out-doors to himself, and can, at any time, get at a delightful distance

from John Henry Benedict, Senior. He has so long been called "little torment," "little plague," "little nuisance," "little scamp," and so many switches—not quite so little—have been broken over him, that he has become used both to hard names and switches, as eels get used to the process of skinning, or as soldiers get used to powder and shot. And more than this, he loves his mother, and she loves him, and they both love *out-doors*, and fit each other exactly, so that nothing need be done for the boy. But what shall be done for the man? What shall be done for John Henry Benedict, Senior?

He might take all the quack medicines that have ever enriched newspapers, but not one of them would help him. And whatever he takes, the cure would doubtless be slow, he has so long had *nerves*.

But we would recommend to him to begin immediately to put himself in the way of a cure. We would advise him to try, for one hour, to enjoy other people's liberty as well as his own, and it may be that while he is trying, he'll find he can.

Just try this, Mr. John Henry Benedict. Compel yourself to tolerate pleasantly, if you can not positively enjoy, what others enjoy.

Drive forever out of your head the notion that all of the race who come in contact with you, or who live in daily contact with you, must humor your taste for silence, and ever bear in mind that you have *nerves*.

Get a larger heart as soon as possible, and you will find that that is doing much to strengthen and fortify your *nerves* for the noise that must inevitably be made in this world.

Cultivate in your heart the love of children, especially the love of John Henry Benedict, Junior, and you'll presently find that love makes all things pleasant, even a *noise*!

LITTLE GOOD-FOR-NOTHING.

WHAT are you good for, my brave little man?

Answer that question for me if you can—

You, with your fingers as white as a nun,
You, with your ringlets as bright as the sun.
All the day long with your busy contriving,
Into all mischief and fun you are driving;
See if your wise little noddle can tell
What you are good for—now ponder it well.

Over the carpet the dear little feet
Came with a patter to climb on my seat;
Two merry eyes, full of frolic and glee,
Under their lashes looked up unto me;
Two little hands pressing soft on my face,
Drew me down close in a loving embrace;
Two rosy lips gave the answer so true—
"Good to love you, mamma; good to love you."

A SCHOOLMASTER, who had an inveterate habit of talking to himself when alone, was asked what motive he could have in talking to himself. Jonathan replied that he had two good substantial reasons: In the first place, he liked to talk to a sensible man; and, in the next place, he liked to hear a man of sense talk.

PORTRAIT OF CAPTAIN E. B. WARD.

REPRESENTATIVE MEN OF MICHIGAN.

BY GEORGE W. BUNGAT.

CAPTAIN E. B. WARD.

A WELL-ORGANIZED human being, one who has a sane mind in a sound body, will be more or less educated by the events of his life, and sculptured into symmetry and fitness by his surroundings. The mountains have ever been the fortresses of freedom, and the thrones on which liberty has been crowned with honor. Those who were born and cradled on the hills are pretty sure to have a taste for the picturesque and sublime, and massive ideas are as natural to mountain scenery as its giant shadows are when the unclouded sun is in the heavens.

Prairie and lake views, like the water-scene of the ocean, have a natural tendency to broaden human nature whenever it is susceptible of expansion. Narrow notions of commerce, of culture, of religion, of progress, and of human development generally, are not normal to the West. Nature has widened the lakes to the dimensions of inland seas, and you might drop some of the New England States into them without causing their waters to overflow; the vast prairies, walled by the blue horizon, suggest unmeasured territory beyond, and the iron horse hastening over the iron road seems forever approaching yet never reaching the hill country in the distance.

These great pages constantly spread before an active intellect, can not fail to broaden the nature of a well-organized man or woman, hence we find that the true man of the West is an Eastern man expanded—or a native to the manor born enlarged by his relationship to the broad meadows and waters about him.

At the West we find farms whose boundaries embrace entire townships; floating-palaces that can carry a whole parish of passengers;

iron-works, the tall chimneys of which, plumed with smoke, might fire the ambition of Vulcan could he emerge from the mythology of the past and be a part of the living present.

It is not a matter of surprise that such surroundings have developed men who have been able to shape the material world within their reach to their own profit; making it yield to the pressure of their strength and skill, and getting from it wealth, and the ease, elegance, and independence which wealth can purchase; making the "wilderness blossom like the rose;" supplanting the log-house with the palace, and placing within their grasp the instruments of labor, of instruction, and of refinement.

Among those representative men of the West who have been able to create events, and then shape them to their own use, so as to secure thrift, and then win wealth and distinction, Captain Eben B. Ward is conspicuous.

When Michigan was considered the far West, and Detroit was in its infancy, Captain Ward, then a very young man, began his career as a seaman on Lake Michigan. As master of a humble craft he pursued his perilous adventures, year after year toughening his stout frame into healthy endurance and iron strength by hardship and exposure, and educating his natural courage by danger and shipwreck, and the incidents of "life upon the waves," so that he had the pluck to take hold of any new enterprise that promised a good reward for risk and labor. When the great railroad, that epic of iron with its couplet of bars, touched the shores of the lake, he saw at a glance that water communication with the great West beyond would inevitably be a source of immediate profit, and the men of capital, who knew of his seamanship and his trustworthiness, gave him all the material help he needed to start the enterprise. His energy, courtesy, and correct business habits won for him a large number of friends, and laid the foundation of the great fortune he has gained.

With that vision and foresight which is so marked in some of our enterprising men of trade, he saw that the iron and the timber of Michigan must eventually be in great demand, that these treasures of nature were designed to build up great towns and cities at the West; and he might have used the language of the poet, and have said:

"The trees are teachers that I love;
Their leafy book I oft have read;
Their boughs point to the world above;
Their roots point to the world that's dead.

O quickening thought, the wood so lone
In winter, and in spring so fair,
Holds in its trunks for the unborn,
Cities and ships and coffins there."

With his rapidly increasing fortune, he purchased immense tracts of land and beds of

iron-ore, both of which he turned to the best account. His immense iron-works at Wyandotte, at Chicago, at Milwaukee, attest his enterprise. In these establishments he has invested immense sums of money, and in them he employs hundreds of men. From the period of his young manhood up to the present time, the radius of his business has been constantly widening, and it is a cause of astonishment, even to men deeply engaged in commerce and finance, that he can transact his vast business, with its complicated relations, and yet remain self-poised at his desk; always ready and willing to receive and entertain those who call upon him, turning abruptly from columns of figures and packages of business letters and bank accounts to the discussion of the topics of the times, proving himself thoroughly posted on local, State, and national affairs.

This Ajax of the Western business men bears upon his shoulders a weight of responsibility that would utterly crush a common man, but he bears the burden without loss of temper or of sleep or appetite, and his smoothly-shaved and full-orbed face indicates an easy conscience and good digestion. The lines upon his mathematical forehead show that he is a practical thinker, and that his thoughts run in a connected channel, and his emphatic utterances show him to be a brave and earnest man. It is evident that he is an absolute and hearty hater of shams and hypocrisy; indeed, his outspoken style of conversation must be startling to timid men, and offensive to those who are mean and given to dissimulation. His half-shut eyes seem to be condensed lens, through which he looks into the future; and he sees more with these mere slits of light under his lashes, than most men do who look with open-eyed wonder at the world. His finely-cut mouth and chin are guarantees of that good taste which he has shown in the erection of his house, the planning and planting of his grounds, and the excellent collection of books in his library, all of which, save the books of reference, he has read. He is physically a massive man, weighing at least two hundred pounds, broad-shouldered and symmetrical, with a large head covered with abundant hair, now tinged with silver. His forehead is prominent, and marked with lines of thought; his eyes are half closed, as though they would concentrate the light of the brain in order to look into that which is distant, and see through the darkness of the present.

He is fifty-five years of age, with a strong and vigorous body, and I have no doubt there are thirty years of good life in him yet. He does not belong to that class of men who feather their nest, and crow in luxurious indolence over their neighbors. He continues the active pursuits of life because it is his duty to work; wealth is no excuse for idleness, be-

PORTRAIT OF JACOB M. HOWARD.

cause at least a thousand men are dependent on him for their daily wages and for their daily work; because he does not consider that the plans of his life are crystallized into completeness. Captain Ward has a good share of that uncommon attribute common sense, allied to shrewdness and quickness of perception and untiring energy, and I may add courage. No disaster can conquer such a man. You may strip him of his possessions, but he will not yield—he will rub his hands and take a fresh hold. Should he fall and fracture a rib, he will be thankful that his neck is not broken. What a grand commissary of subsistence he would have made! He could feed and move armies as easily as he can kindle forges and push steamboats and locomotives about him. He has the enterprise of Vanderbilt, with more vigor and a larger brain—a brain cultivated by reading the best books in the language. In general intelligence, the fast old gentleman of New York would suffer if placed in contrast with our Western sailor. With his powerful physique and indomitable will, he would have risen to distinction in any useful vocation. Captain Ward is a millionaire. His fortune is the fruit of industry and enterprise. His steamboats have been commercial shuttles on the Western waters, weaving the warp of the East with the woof of the West. No man of the West has done more to develop the resources of this State and to promote its commercial welfare than Capt. Ward. No man is more widely known at the West, and I therefore present him to the reader as a representative man. At the great show-case of the world, the Exhibition at Paris, there will be a specimen of his skill—a piece of railroad iron encased in steel, an invention which will revolutionize the system of building railroads. Rails constructed on his new plan will wear much longer and be far less liable to break than those now in use.

JACOB M. HOWARD.

I have spoken of the influence of mountain scenery on the mind and character of man. The subject of this sketch was born and educated in Vermont, and afterward expanded into greatness at the West, where he has been crowned with the highest honors the State of his adoption could bestow upon him. He, with Mr. Z. Chandler, represents Michigan in the Senate of the United States, and the State never had an abler representative. He has the culture of Cass, with a broader and more liberal intellect, and a more generous nature. Indeed, it is not extravagant praise to say that, as an orator, he is a head and shoulders taller than the shrewd diplomatist was in the prime of his life. Cass was a statesman of the school the students of which were cunning politicians, and he devoted to his own pecuniary interests and political advancement the energies he should have given to the country. By accepting office he entered into a contract to labor for the welfare of the nation, but he never lost sight of the golden opportunities which promised him personal emolument; hence he died rich in money, but left only a small legacy of political capital to his party.

Howard is a good statesman, but a poor financier—his own interests seem to be lost in the all-absorbing interests of the State and the nation. He represents Michigan, and not himself, at the Capitol.

General Cass, who had many excellent traits, could have used the language of Lord Erskine to Lord Eldon, who held high office for many years, when he said, "*Seals afford a good living.*" Howard is in statesmanship what Ward is in business—a leader—a head man—one who will be driver, and will not be horse. His opinions are sure to be sound, and he can express them with great power and eloquence. He has the vital, the emotional, and the intellectual force, and the flow of speech which the speaker must have in order to be truly eloquent. Cold words may be correctly spoken and elegant, but if there be no heart-pulse in them, they fall like flakes of snow from a statue of ice. I do not over-praise the prototype of this pen-and-ink type when I say that he has a Websterian mind. He has enlarged and lofty views of political economy and constitutional government, and looks beyond and above mere local issues further and higher than the district which embraces his residence and the bank where he keeps his deposits. Without neglecting the interests of his constituents, he considers the needs of the entire nation, and when he speaks in the Senate, he has a nation for an audience, and his judgment is considered authority at home and abroad. He may be called a solid man—a man of weight; his words move the scale in which they fall, and they palpitate with thought and feeling. He is a scholarly man, has been a most industrious student of books, and has gleaned a great deal of useful learning, which he turns to good account in his public efforts.

In speaking, he usually begins slowly and

deliberately, as though he would caress his lips into quicker life and feeling. When he has measured his auditors, and fairly launched his voice, the blood hastens to the vital organs and the brain, and he warms with the subject of discussion, every syllable coming clean cut and fervid from his tongue, while his large eyes glow with magnetic fire, his whole face lighting up with gleams of emotion. There is no haste in his utterance, and no hesitation; it flows on like the "Pontiac wave," gathering volume and power as it proceeds, sweeping before it the sophistry and even the argument of his opponent, as the waves do the weeds of the sea. His efforts are not of the spread-eagle style; there are no rhetorical displays of language; no sophomorical lugging of figures into his argument for the purpose of ornamentation. What he says is pertinent, and in the plainest and most effective English. A few extracts from one of his best efforts will give the reader an idea of his style.

Mr. Howard's funeral oration in memory of our late President, Abraham Lincoln, is fully equal to the effort of Mr. Bancroft on the same subject:

"Often during our country's yet unfinished trials we have seen in our streets the slow funeral procession with its gloomy hearse and sable trappings, and listened with sad hearts to the muffled drum as the remains of some hero lately fallen in our defense passed to the long rest of the grave. Martyrs to the holy cause in which we were forced to take up arms, our Richardson, Fairbanks, Roberts, Broadhead, Williams, Whittlesey, Speed, Buhl, and many—alas how many others! noble, brave, and generous—have been returned to us from the battle-field lifeless, but proud and enduring proofs both of the obstinacy of the conflict and the unconquerable spirit of freemen engaged in a righteous cause; and every town and hamlet in the land has witnessed the like pageants of sorrow, as the chances of war have enabled the friends of our slaughtered soldiers, fallen under the blows of the enemy, to reclaim their remains, and entomb them where a mother or a sister's, father's or a brother's tears could moisten their grave. The hero dust lends sacredness to the spot, and often, aye, for ages to come, shall the hand of friendship plant and nourish there the amaranth of undying love and gratitude.

"Compared, however, with the multitudes who have succumbed on the field of battle, and in the midst of the crash and clamor of the conflict, and have been lost sight of, those who are thus snatched from among the undistinguished dead are few indeed. The memories of all alike are dear to our hearts; and the land has mourned, and still mourns as never nation mourned, for these her martyred children, whether in life they were high or low, rich or poor. And everywhere, whether in the costly mansion of wealth, or in the humble cottage of poverty, wherever the great grief has penetrated, the spirit of a just and sympathizing country has been present to whisper consolation to the mourner, and to bind up the wounds of private sorrow. Yes, we have a right to assert, and do here assert, a great and striking truth, that the passions aroused and put into activity by four years of war, the bloodiest of the century, have not in any perceptible degree hardened the sensibilities of the American people to scenes of private grief; but, thanks to the sound, pervading moral and religious instruction which underlies our civilization, those sensibilities, of which the love

of liberty is the greatest element, are as fresh, as kindly as ever."

"The sun had set upon the wide-spread joy and the shades of night had closed over the land; but the flags of our gladness still fluttered along every street, and from millions of homes throughout the continent, from the Atlantic to the Pacific seas. The man in public employment had for a moment dismissed the anxieties of his position; the minister of God was on his knees, praying for his country, his people and his race; labor had laid aside the implements of toil and was smiling joyfully in the bosom of home and family; fireside circles were jubilant over the achievement of so many and such glorious triumphs, and the pale cheek of bereavement that had saddened over the death of heroic husbands and sons smiled from beneath its weeds, and in the general joy began to feel the relents of forgiveness for their slayers; patriot fathers at countless hearths were returning fervent thanks to God for the salvation of their country and the sweets of peace, under whose smiles their sons were about to be restored to their arms. All was buoyancy of spirit, gladness, and hope. A nation retiring to rest was blessing Abraham Lincoln for the part he had acted in securing this almost heavenly contentment and joy. Fatigued with the heavy cares of state he had as a means of relaxation—for which he had a fondness—repaired with his wife and only one attendant to the theater, where, in his box, he was quietly witnessing the play. Doubtless his active and benevolent mind, filled with the common gladness and enjoying in anticipation the glory of leadership in the great work of pacification, was at this supreme moment revolving the means fitted for that end, and his soul reaching anxiously forward to grasp the highest prize to which humanity can aspire. He saw the wounds of a bleeding country staunch; he saw prosperity restored; the hand of industry again tilling the field. It should reap; commerce again enlivening the land and the sea; labor and skill hiding from view the furrows of war; the masses of the people of the North and of the South again united in the sacred bond of friendship, protecting and protected by each other, both clinging to the principles and government bequeathed us by a common ancestry; and he saw—glorious vision!—transcendent evidence of his greatness and goodness!—the blessings of LIBERTY given to every child of humanity, without reference to the color of his skin, throughout the broad possessions of the Republic; calmly the great and good man sits, the center of a nation's love and gratitude—the hope, the only sure hope even of his enemies; when suddenly, without warning, without the means of defense, and without even a moment to prepare for the Hereafter, he sinks under the blow of the malignant assassin."

"Mr. Lincoln was a great man—not great by culture or study, for the necessities of his early condition deprived him of the means of education, but great in his moral nature and in the native powers of his mind. Cradled in honest poverty, he was literally one of the toiling millions. No family opulence came to his aid. Left motherless in his infancy, the father who reared him was too poor to give him instruction in any art but that of earning his bread by the sweat of his brow. He labored with his own hands at the hard and rugged tasks of the early pioneer in the forest. The woods rang with the axe of Abraham Lincoln, and the strong division fence between neighbors was the work of his hands. The wants, the tastes, the habits, the amusements of the hard-working settler—he was familiar with them all, because he had participated in them all.

His character was molded by them; his sympathies were with them; and though by his own almost unaided efforts he obtained an education that lifted him above them and placed him in the legal profession, he never felt above them. The life of the pioneer is the school from which are drawn the true lessons of 'liberty, equality, and fraternity;' and no one drank more deeply of this fountain of instruction than he. It was the source of that perpetual flow of laughter-moving anecdotes, quaint comparisons, and piquant illustrations which filled his speeches, writings, and conversations, and furnished alimant for that singular love of the ridiculous and the comic which distinguished him, and which often showed itself in the most solemn transactions. His temperament was buoyant and hopeful, and his feelings remained placid and unruffled under the most perplexing and irritating circumstances. He was resolute and courageous, but these qualities were modified by cautiousness that often looked like wariness, and even timidity, for he was ambitious of success, and well knew the uncertainty of events. No man was more patient and circumspect in weighing the considerations on both sides of a question and coming to a just conclusion; and when his purpose was finally taken, he adhered to it with manly tenacity. His word was that of a man of honor and honesty, and he scorned to shrink from the responsibility it imposed. He resorted to no artifice or arrangements to avoid or evade it; and consequently he never allowed himself to make hasty or ill-considered promises. Although slow in adopting a conclusion in matters of grave importance, his faculties were active and quick in their movements. His power of generalization was most vigorous and rapid, showing a keenness and justness of observation, a quickness and force of analysis, and a clearness of reasoning that fall to the lot of very few. This, united to the habit of unceasing industry and attention to the minutest details as well as the general effect of his plans, made him a most prominent counselor as well as actor. His self reliance was great because his sagacity was great; and those err egregiously who suppose that the leading features of his policy were merely the suggestions of other minds. This trait of his character was especially displayed during the first two years of the war in his retention in command of Generals so violently opposed to his political views as in the opinion of the great mass of his party greatly to weaken the military efforts of the Government. And it must be said in his praise, that in this his object and intention were to unite all loyal men, whatever might be their mere party divisions, in one grand and cordial effort to crush the rebellion. I have formed the opinion that the qualities of his mind were eminently those essential to the profession of arms. He was courageous without rashness, bold but wary, of a quick perception of the nature of his own position and that of his adversary, and of a mind fruitful in resources, filled with a profound knowledge of human nature. With proper education and experience he would have made a distinguished commander, for he had all the true elements of military genius, and he was not without some confidence in his ability to direct the operations of armies, as the history of his labors during the first three years of the war abundantly show; though they also prove that his interference arose rather from his anxiety for the immediate suppression of the rebellion than from the conviction of his own fitness to guide our military movements. With all his affability and simplicity of manners he was gifted by nature with the spirit of command. You had but to look upon that deep eye, that calm, contem-

plative brow and tall, stately person, to feel that you were in the presence of one endowed by nature with superior qualities, with a will, a purpose of his own, fitted for some great leadership among men; though the plainness of his manners, and that native modesty which he wore as a garment, relieved you at once of all sensation of awe or uneasiness. A child of the people, a worshiper, himself, of liberty, that regulated liberty to which under God he owed all that he was, all the fame he had won, or could win, his soul yearned with but one ambition, the preservation of that people and their benign institutions, and the extension of that liberty to all the sons of men.

"Look at him in his true light—the penniless boy laboring for bread in the coarse life of the settler, eking out by his own hard toil, without the compassionate aid of a friend, the scanty means of personal subsistence; rising at length to what was to him the raptures of a moderate education, won by the same means; then taking rank with the foremost of his State in a laborious, learned profession; then shining as the most brilliant light in the discussion of the greatest question in which the liberties of this country were ever involved; then elevated to the chief magistracy by an unprecedented majority of his countrymen; and then, after four years of civil war of the greatest magnitude, and domestic dissensions of the most frightful type, again and by a far more numerous vote elevated to the same high trust, look, citizens of the Republic! look, ye judges of human character all over the world! and tell me, Was this man a tyrant? To bring such a charge is to accuse a whole people of hypocrisy when they say they love liberty and hate tyranny; it is to pronounce them liberticides while they are pouring out their blood like water in the holy cause of their own freedom and that of their children. It is an absurdity so great that human instincts, unaided by reasoning, rise up and rebuke it.

"Mr. Lincoln's moral character was without stain or suspicion. He loved justice, and was honest. I think no man can say that in the most difficult circumstances or in the most obstinate disputations he ever showed a want of frankness. He loved truth because its whiteness and purity were akin to his own nature. He was an utter stranger to what are called the *arts* of statesmanship. He loved simplicity of equipage and simplicity of living, for his condition had once been lowly, and he carried into public life the economical tastes which grew up with him; and his head was too sound to be made dizzy by the elevation. Temperate and abstemious in his habits, blessed with vigorous health and a physical frame capable of great endurance, the morning light found him devoted to his great task; and no hour of the day found or left him unemployed in the service of his country. Plain but courteous in his intercourse and manners, retaining much of the honesty, simplicity, and familiarity of demeanor of his early life, his good sense and good taste never so far lost their control of him as to permit him to attempt to copy the manners of others. The humblest as well as the highest found himself "at home" in his presence, and his ear and his heart were open to both alike.

"He loved his country. She first, she last, she ever, was the object of his care and his love. She was to him a revered mother, every pang of whose struggling heart found a response in his own. How did he weep over her slain children, his own brothers, his own flesh and blood; and when that mother, wringing her hands in agony, though not in despair, called upon him with her resistless voice to make further efforts to save her honor and her life, with what heroic, what almost superhuman fortitude did he obey her commands! With

his hopes centred in the JUSTICE OF HER CAUSE, and his heart resting upon the undoubted favor of God, he executed her repeated mandates; and with that confiding, weeping mother following him through clouds and darkness and seas of blood, he held his onward way till, arriving at the light of complete triumph over her foes, assured peace and doubly assured liberty, his Heavenly Father recalled him home and left us to mourn him and to pay these sad honors to his memory.

"Noble spirit!—he has finished his course—he has kept the faith; he has done his duty to his beloved country, and therefore the land mourns him. Farewell, hero of liberty, friend of the race! go to the companionship of Washington, Warren, and the great of other days! Prophet of the New Era! ascend to the rewards of a martyrdom hardly less dear to mankind than those which crowned the throng which came up out of much tribulation, and washed their robes white in the blood of the Lamb. Take thy seat in the midst of the great and good, whom in all ages the tears of grateful humanity have followed to the tomb. Thou art their peer!

"Thy dust needs no stately mausoleum to remind posterity of thy deeds or thy character. Thy enduring monument is in the hearts of the friends of their country and of liberty. Well fulfilled is thy mission. A thousand years shall pass and the name of Abraham Lincoln shall be as familiar to the inhabitants of this broad continent as are the names of Numa Pompilius in Roman, Alfred in British, or Washington in American story. Yes, gentle but heroic chief! we dismiss thee from the mighty task thou has performed, to the rewards which await good deeds in a better world, and to a fame as immortal as the love of liberty!"

If any American has given the world a purer and better utterance than this, I should like to read it.

Mr. Howard is about fifty-five years of age, and above the ordinary size and stature. His Atlantean shoulders are surmounted with a large and well-balanced head. His hair is brown and mixed with gray, and his face, which is broad and ruddy, is lighted with large dark eyes. The eagle nose and compressed lips show power, firmness, and the love of command. The symmetry of the face indicates evenness of temper, self-control, and steadiness which would not yield to an assault from the opposite side of the House. He is a most formidable opponent, and when he strikes, his blows fall like the thunder of Thor.

PROOFS OF PHRENOLOGY, DRAWN FROM PATHOLOGICAL DATA.

WITHIN the past five years French and English medical men have observed a number of cases of a very peculiar disease, consisting of the deprivation of the faculty of expressing *certain* ideas by the appropriate words. This has been called Aphasia; and it may suspend or destroy the capacity of the subject to command either or all of the four classes of signs by means of which man signifies his ideas—i. e., speech, gesture, writing, and drawing. The peculiarity of it is, that this disturbance (for in some instances it is only temporary) is a direct though unanticipated proof of Phrenology.

The subject was recently discussed in the

French Academy of Medicine, on the occasion of the reading of a memoir, upon the coincidence of the derangement of speech with lesions of the left hemisphere of the brain. If any one doubts that these cases furnished a proof, and an indisputable one, of Phrenology, let him find settled conviction thereof in the declaration of M. Sulet, a prominent member of the Academy, who said "the inferences of the author from his numerous cases would lead to phrenological conclusions, and that as his mind was long since made up as to the fallacy of these, he declined to discuss the paper." In short, since his mind was made up, M. Sulet refused to be bothered with the facts collected by M. Dox, the author of the memoir.

We all remember how the first, and as far as we know the only, book pretending to be of scientific character, yet written in recantation of Phrenology, was by a Frenchman, and yet here are facts which the French Academy can not dispose of without admitting the principles of Phrenology, that there is a special location in the hemisphere of the brain for the different faculties, though there is the alternative that, like M. Sulet, the Academy may refuse to debate or consider them, because "they lead to phrenological conclusions," as he declares.

But fortunately for the cause of science (and Phrenology can only stand or fall with that), other members of the Academy refused to accept this dictum, and insisted that the "memoir" of facts should be discussed.

This memoir, so far as we observe, consisted wholly of facts. In the discussion, M. Bouilland, who for the last forty years has advocated the localization of the faculty of articulate language in the anterior lobes, while he did not (at the time) "contend for the truth of craniology," maintained that Phrenology, properly so-called, really possessed a scientific foundation.

M. Trousseau, the greatest of French medical men, in a remarkable discourse prolonged over two meetings, entered into a complete exposition of the disturbances of articulated language called Aphasia. He cited numerous instances from his abundant clinical resources exhibiting this general or partial deprivation of the means of communicating ideas. Essential differences he showed exist between this condition and the impediment of articulation consequent on paralysis. At first sight, the asserted localization of a function in one side of an organ so apparently symmetrical as the brain, seems highly improbable; "but singular as it may seem, it must be accepted," M. Trousseau said.

Taking the general statement of M. Bouilland and Dox, that the anterior lobes are those in which the faculty of language is seated, M. Trousseau is able to adduce eighteen cases favoring this view. It may therefore be left undoubted, so far as this class of proofs is concerned (and this is the *highest* class), that the localization of the faculty of language is certain, for if not, any independent research but pathology itself, seen from the standpoint of medical men, presents facts which can be understood on no other ground than the admission of Phrenology in its proper and truest sense; and we may say that no better proof is possible to establish any doctrine in science.

If we are still uncertain, or would remain so, with M. Sulet, of the French Academy, we have only, as an *alternative*, to make up our minds, first, as to the "fallacy" of "phrenological conclusions," because the "facts" lead to them, or, second, refuse to make up our minds about the facts, because they lead to *phrenological* conclusions. R. K. BROWN, M.D.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Cuvier*.

My people are destroyed for lack of knowledge.—*Isaiah* iv. 6.

HEALTH AT HOME; OR, HYGIENE IN ITS PERSONAL AND HOUSE- HOLD RELATIONS.—No. II.

BY JOHN H. GRISCOM, M.D.

OUR previous number concluded with a brief announcement of the principal purposes for which the air surrounding the globe is carried into the interior of the body. The first object, if we may be allowed to speak of either one as second, where all are so important, is to *convert the Food into Blood*. The particular part performed by the atmosphere in this operation, we will endeavor to make clear in a few words.

Every one is at least aware of the pleasure of eating and drinking, of the gratification experienced in the act of appeasing hunger, that mysterious *feeling* which apparently has its seat in the stomach, but which that organ has no more particular interest in than any other part of the body. The *sensation* of hunger is manifested in the stomach merely as an indication that it is through that organ the wants of the whole body are to be supplied; just as the sensation of sleepiness is manifested in the eyelids, as an indication that they must be closed to shut out the light from the eyes, in order that the whole body may obtain uninterrupted rest. In that case it is not the eyelids only, but the entire system which demands repose, as it requires a fresh supply of food when hunger is felt.

It is a popular supposition that the digestion of the food is confined to, and completed by, the operations carried on in the stomach. This idea has doubtless grown out of the fact, that by taking food into the stomach, hunger is appeased. It is certain that no further sensation is experienced in the process of digestion after hunger is relieved by eating, except the stomach be overloaded with food, producing temporary inconvenience, or when its power of performing its duty is impaired by disease, producing dyspepsia. The work of supplying the whole body with nourishment is at that moment *apparently*, so far as all sensation is concerned, completed. But the reception of food into the stomach, and the action of that organ upon it, preparing it for other stages of the process, is in fact only the first step in a long and complicated chemico-physiological operation. It is not designed here to go into a description of the various parts of the process, interesting as they are to the student of anatomy and physiology, and might be to many readers; it is intended in this connection, merely to call attention to the part which the atmosphere plays in the process, for it is literally true, strange as it may appear to those who have not thought upon the subject, that *Respiration is a part and the last act of Digestion*. Without

the admission of air into the lungs, and its contact and mixture there with the food, the most nutritious articles of diet, though carried through every other stage of the digestive process, would be as useless as so much sand or sawdust. It is, indeed, the vitalizing influence of the atmosphere which gives the food its power of nutrition, and enables it to impart its growing and strengthening properties to the body.

The atmosphere, as every student of chemistry knows, is an agent of the most powerful character in many operations, both upon animate and inanimate matter. Its action is most strikingly illustrated in the phenomena of combustion. A piece of wood or charcoal, or the oil and candles used in illumination, when brought into certain relations with the atmosphere, are totally changed in character, and in the process of change give out great volumes of heat and light. This process of combustion, or the conversion of wood, coal, and oil into other and different combinations, is analogous to the conversion of food into the living tissue of the body. When the food, in a crude and bulky state, is admitted into the stomach, it is there, with the assistance of the liver, the spleen, the intestines, etc., prepared by a certain mode of refinement and distillation, to be brought finally into contact with the atmosphere for its *sanguification*—in other words, its *conversion into blood*.

This process may be compared to that by which gas is prepared for illuminating our houses. The raw material, oil or coal or resin, dug out of the bowels of the earth or gathered from the trees, is put through a process of distillation, or digestion, in crucibles and retorts, by which the useless dross is separated from the finer parts, and thus there is derived from it the invisible substance called Gas, which is collected in reservoirs and held in readiness to be conveyed to our houses for instant use when needed. It is plain to every one that without contact with the atmosphere, under such circumstances as will enable them to unite chemically, the gas thus separated would be quite useless; but when thus united, a volume of light and heat is the consequence. So it is with the food of the body; introduced in its crude form into the stomach, digestion, as it is commonly understood, is but a preparation of it by the separation of the finer from the grosser parts—the available from the unavailable—the rejection of the latter out “into the draught”—and the transmission of the former, refined and pure, to be united with the vitalizing property of the air, whence come life, and warmth, and strength.

Pure air consists of two distinct parts or gases, viz.: *Nitrogen*, composing about four fifths, and *Oxygen*, the remaining one fifth, of its volume. The latter, Oxygen, is the sole vitalizing power of the air, and possesses the most surprising properties. It is called, technically, a *supporter of combustion*, as it is one of a small class of substances possessing that property; but it is in fact itself the cause of com-

bustion, in the way in which that action is generally understood. The combustion of a body in the air is nothing more or less than the union of the burning body with the oxygen of the air, whereby the oxygen disappears from the air, and its place is occupied by the resulting compound gases, the chief of which is carbonic acid gas, formed by the union of the oxygen with the carbon of the burning substance. In open-air-combustion there are other products, according to the nature of the burning body, such as light, heat, aqueous vapor, carbonic oxide, etc. The rusting of iron by its exposure to the air is also one form of combustion, i. e., a union of oxygen with the iron. In this the heat and light, if any are produced, are imperceptible, because of the slowness of the process.

The nitrogen in the atmosphere seems to have no other part to perform in the function of respiration than to distribute the oxygen and dilute its activity, which otherwise would be too great for the safety of the vital tissues with which it comes in contact, and through which it operates.

The action of the oxygen of the air in the living body is chemically analogous to that of combustion out of the body, and within certain limits has the same results. That part of the food which has been properly prepared in the stomach and other lower organs, is transmitted upward to be mingled with the current of blood already in the body, and is sent to the lungs where it is immediately oxidized, and receives its living properties.

The anatomist can trace the movements of the food, as it passes from the mouth, where it is masticated and insalivated, through the stomach, where the gastric juice dissolves it, into the duodenum or second stomach, where the bile acts upon it, into the small intestines lined with the mouths of innumerable little ducts (lacteals), which absorb the refined and useful, separating it from the dross and useless portion and convey it to a common duct, through which, in the form of a white creamy fluid, it is emptied directly in the current of venous blood, to be distributed through the lungs for the direct action upon it of the oxygen of the air.

In the form in which the food is mingled with the current of blood it is called *Chyle*, and this is the analogue of the illuminating gas, in the comparison we have drawn. It is carried by the blood-current directly into contact with the oxygen, when, like the gas in our houses, it is *burned* by union with it.

This phrase, “being burned,” is not inapplicable, as it may appear to some in this connection, but is strictly correct as applied to the action of the oxygen upon the food. The only differences between the two operations of burning gas in the open air, and the oxidation of the food in the lungs, relate to the mode and the apparatus in which they are conducted, while the *principle* of the two actions is the same.

At the same time that the oxygen is impart-

ing its vitalizing properties to the new material in the great life-current, the old blood, which in the round of its circulation has parted with a large portion of its life-sustaining properties and absorbed much old and effete material, is at the same time and in the same place also subjected to the oxygenizing influence of the atmosphere. In fact, a large proportion of the impurity which it has taken up and brings to the lungs to be got rid of is carbon, identical in character with the carbon of wood, or gas, or coal.

This carbon, when in contact with the oxygen in the air-cells of the lungs, unites with it to form carbonic acid, precisely of the same nature as that produced by the combustion of gas or charcoal. A simple experiment which any one can perform will demonstrate this. Take a vial full of common lime water, and insert to the bottom of it a pipe stem, or any other kind of tube (a stiff straw will answer), and blow the breath through it. In a few minutes the pellucid lime water will become cloudy and opaque, and if the operation is continued long enough, the whole of the liquid will assume a milky appearance. When allowed to stand still after this, the liquid will again become clear by the precipitation to the bottom of a fine powder, which is the carbonate of lime, formed by the combination of the lime of the lime water with the carbonic acid of the breath.

We thus prove that there is carbonic acid in the air exhaled from the lungs, and this can only be derived from the union of the carbon of the venous blood with the oxygen of the air.

It has already been stated that carbonic acid is one of the direct products of combustion, and we have therefore in this simple experiment a proof of the combustion or burning of the carbon of the blood. But, some one may ask, where are the other products of combustion, the heat and light? We recall the statement about the rusting or oxidation of iron, to show that in a very slow combustion the visible results differ from those of a rapid combustion; and the combustion of the carbon of the blood is a much slower process than that of gas or wood in the open air, and can not therefore yield the same degree of results. Nevertheless, one of these products does ensue, viz., *Heat*, and it is by this means that the animal temperature is maintained above that of surrounding inanimate bodies.

Thus are demonstrated the three physiological truths with which we set out, viz.: 1st. That the air serves to convert the food into blood; 2d. To keep the blood pure by removing its carbon and some other elements; and 3d. That by it the elevated temperature of the body is maintained;—three operations essential every moment to the life of the individual.

This view of the use of the atmosphere in digestion demonstrates the need of its purity and abundance, and also that any diminution of either must proportionately impair the usefulness of our food, and consequently the nutrition and strength of the body.

ATHLETIC SPORTS.

THE Rev. Henry Ward Beecher says that amusements should always be selected that promote health, vigor, and skill. They should not be simple, aimless wanderings after mere pleasure. It is the true doctrine of amusement, that it should be such as to contribute to the well-being of the body. It is, therefore, important, especially in cities, that great provision should be made for athletic sports of every kind. Boating is good. Riding and driving are good. Gymnastics are good. Various games of ball are good. Bowling and billiards are good. And it is desirable that they should be put within the reach of those that live by the taxation of the brain. The vast multitude of professional men—lawyers, physicians, teachers, and, above all, ministers of the Gospel—ought to have an opportunity for cheerful, exciting, physical exercise.

It is said that these things tend to bring men into bad society. It is not necessarily so. It is true that a man may join a yacht-club whose convivial habits are such that he will be in danger perpetually; but he ought not to join such a club. It is in the fact, not that yachting is bad, but that the man makes a bad choice. A man may go to the Astor House or the St. Nicholas; and if he goes to a disreputable house it is his own fault. He ought to go to a reputable one. It is the joining a bad club, and not the joining a club, that is dangerous. And there ought to be so many clubs under moral and Christian influences that it shall be the fault of every young man if he joins a bad one.

And that is true of almost all athletic games, of all gymnastic associations, of all clubs for ball-playing, of bowling alleys. And the time has come when if a man goes to a bad place, it is because he chooses to associate with bad company. He may, if he chooses, go to places that are not bad. For there are some places where a man may go and play billiards, and not lose his reputation. The time has come when gentlemen will have this and other amusements as a part of household economy, so that they shall not be obliged to go among professional gamblers to find healthful recreation.

In cities, particularly, these athletic sports furnish almost the only exercise; and more men break down and die for want of some such relaxation, than are corrupted by them even in their worst estates.

All athletic sports that turn mainly on skill and exhilaration, and afford opportunities for social enjoyment, are, as a general thing, beneficial, and should be so provided that a young man can choose them without choosing with them degrading company. And, further than that, if in any special instance it is found that a man is tempted into wrong and injured by them, then he should abstain from indulging in them.

NERVE TELEGRAPH.

HELMHOLTZ and Du Bois Raymond have recently investigated and accurately ascertained the rate of propagation of the nerve-force. The latter first demonstrated that there really was something passing along the nerve; this something is to be conceived merely as a "pulse" through the nerve.

Du Bois Raymond has illustrated the way in which this pulse is transmitted.

A number of double magnetic needles are suspended in a long row within a glass case, so that the end of each needle was in a line with and close to, but not touching, the needle

in front. Pushing the initial needle obliquely aside, the attraction it exercised in its new position obliquely displaced the next adjoining needle in a contrary direction.

This displaced the next, and that in its turn the next, and thus a zigzag motion ran along the row of needles to the far end, where the movements of the terminal one rang an electric bell.

To show the actual transmission of the nervous agent, the Professor took a frog, and from the hind legs of this frog dissected a muscle with its attached nerve; stimulating the free end of the nerve by a feeble electric current, the muscle announced the reception of this stimulant by a violent contraction, rendered visible to the audience by the lifting of a colored disk. The nerve was now tied in the needle and again stimulated; this, time no contraction of the muscle ensued, for the ligature had prevented its passage.

This proves that the agent is quite different from electricity, for that force would not have been hindered in its transit by the mere tying of the conducting nerve.

The next problem was, how to determine the rate at which this change proceeds along the nerve. A few years ago the solution of this problem was deemed impossible on account of experimental difficulties. Yet it has been accurately done by a method first suggested by M. Poréellet for measuring the velocity of its projectiles.

When a current of electricity of very short duration is passed through a galvanometer, the deflection is proportionate to the duration, and hence the time taken by any transient phenomenon may be easily ascertained, provided its beginning and its end can be made coincident with the beginning and end of an electric current.

This coincidence in time M. Poréellet accomplished by a most ingenious experiment. This method has been successfully applied to measure the comparative duration of the passage of the nervous agent.

The result of these investigations on the velocity of the nerve-force is one which at first sight seems impossible, for as compared with light and electricity the propagation is very slow. The velocity of light is about 190,000 miles per second, and of electricity even more; but the velocity of nerve-force is only 90 feet per second, $\frac{1}{25}$ the velocity of a cannon-ball, about $\frac{1}{10}$ the velocity of sound in air, and not exceeding, but equal to the speed of an express train.

A very interesting fact connected with nerve transmission was mentioned by the experimenter.

This was the effect of temperature on the velocity of the nerve-force. When the nerve was warm, the curves drawn by another mode of measurement, identical in its results with that we have described, were close together; but when ice-cold water was flowed over the nerve, the curves were widely separated from each other, showing that in the latter case the nervous force had traveled at a slower rate than in the former.

Besides the time, however, required for the transmission of a stimulus through the nerve, the consciousness requires a certain time to appreciate the stimulus or impression.

Thus the passage of a rifle bullet through the brain would not occupy more than the 1-1000 of a second; a stroke of lightning would pass through the body in inconceivably less time; and thus a person killed by either of these means would die without consciousness having time to be produced. The placid aspect of those who have thus died, and the testimony of those who have recovered from a lightning stroke, is now explained.

Religious Department.

"The man is thought a knave or fool,
Or blasphe' plotting crime,
Who, for the advancement of his kind,
Is wiser than his time.
For him the hemlock shall distill;
For him the ax be lured;
For him the gibbet shall be built;
For him the stake prepared;
Him shall the scorn and wrath of men
Pursue with deadly aim;
And malice, envy, spite, and lies
Shall desecrate his name.
But truth shall conquer at the last,
For round and round we run,
And ever the right comes uppermost,
And ever to justice done."

YOUR LIKENESS.

A SERMON PREACHED BY REV. S. H. WESTON,
D.D., OF NEW YORK.

Nevertheless I have somewhat against thee, because thou hast left thy first love.—*Rev. II. 4.*

AN Italian artist meeting a child of exquisite beauty, wished to preserve its features, for fear he should never see such loveliness again. So he painted the charming face upon canvas and hung it upon the walls of his studio. In his somberest hours, that sweet, gentle countenance was like an angel of light to him. Its presence filled his soul with the purest aspirations. "If ever I find," he said, "a perfect contrast to this beautiful face, I will paint that also, and hang them side by side as an ideal of heaven and hell!"

Long years passed away. At length, in a distant land, he saw, in a prison he visited, the most hideous object he ever gazed upon—a fierce, haggard fiend with glaring eyes, and cheeks deeply furrowed with lust and crime. The artist remembered his vow, and immediately painted a picture of this loathsome form to hang beside the portrait of the lovely boy. The contrast was perfect. His dream was realized. The two poles of the moral universe were before him. But what was the surprise of the artist, when on inquiring into the history of this wretch, to find that he was that once lovely little boy he had painted years before. Both of these pictures, the angel and the demon of the same soul, now hang side by side in a Tuscan gallery. Such is the alchemy of vice—such the transforming power of sin; a contrast which no mortal hand could transfer to canvas, but which the "archangel ruined" may have furnished to celestial eyes. In his innocence the mighty seraph; with visage resplendent with all the glory of heaven; in his fall a face darkened by immortal hate, with revenge and despair throned on his "thunder-blasted brow." But we need not go to the deathless pictures of a Milton or to the gallery of the Italian artist for examples of the deforming, brutalizing power of vice. Alas! such instances are but too common in our very midst. In all coarser transgressions, soul and body sympathize.

Sin, however concealed, writes his autograph on his victim with a bold, legible hand that all recognize. The eyes are the windows of the soul, and where once an angel smiled on you,

now a frowning fiend may look forth with a Gorgon stare. The pollutions of the heart are at last engraved in the face, and that image of God transformed into the likeness of Satan. Look on that bloated form, that frenzied look, that haggard brow! Could even a fond father's eye detect in those disgusting lineaments the noble boy that once climbed his knees the envied kiss to share? Behold that shameless creature that nightly prowls the street for her prey! Could the fond mother in that incarnation of impurity recognize her angel girl whose little hands she once held in prayer? But this sad transformation in the face of that beautiful boy was not wrought in a day. Time is a tardy painter, and works slowly but industriously. Had some prophetic hand drawn the curtain of the future, and shown this child his portrait in the ripeness of manhood, how would he have been startled and shocked at the revelation! But had a faithful likeness been painted each day of his life and hung side by side, in the almost imperceptible changes could have been traced the slow but sure decline, showing every shade of color, from the noon-day of purity to the midnight of depravity.

There is an eloquent sermon in those two portraits in yon Tuscan gallery, and this is the lesson. That advance in iniquity is always gradual; it may not appear so, and the seeming saint may change at once into the incorrigible sinner, like Satan in Eden under the touch of Ithuriel's spear. But the hidden fires of guilt, like a slumbering volcano, had long been burning within, until gathering force no longer to be repressed, they suddenly burst forth.

The approach will be gradual. Satan is too wary an adversary to tempt us by glaring sins that would shock and disgust us. He will bide his time, and sometimes retreat, but only like the hungry wave, to make a new advance. Even a lifetime is not too long to secure his captive if he can enslave him forever. It was an aphorism of the heathen, that no one suddenly becomes very base. No one becomes an inebriate, or a profane swearer, a Sabbath-breaker, a thief, or a voluptuary at once. The germ is in the heart, but it does not, like Jonah's gourd, grow up in a single night. The century plant is of slow growth, but it blooms at the end of a hundred years. We are not treading on fairy ground.

There are young men and young women to-day who may need this lesson. Perchance away from their natural guardians, their fond parents, dismissed from the Eden of home with many tears and prayers, they are environed by temptation—the young man mailed in honor, and strong in his integrity; the maiden guarded by the memory of a mother's virtue, and lovely in her stainless purity. But they may have already insensibly given the artist his first sitting for the second portrait. Let them be warned, lest in the end they furnish the revolting contrast of our story. Young woman, be warned! you may be parleying with what at last will bite like a serpent and sting like an adder. Young man, beware! "Her feet

go down to death, and her steps take hold on hell!"

Fleshly sins deform body and soul, but spiritual sins may deface only the soul, and the latter may be the more dangerous, because they are less obvious to us and the world, and we wish to make use of our subject to illustrate the deterioration that may take place in the spiritual likeness of Christians. This is a more subtle change, because the world will not be likely to observe it; and even we ourselves, through neglect of self-examination, may be unconscious that the finer lineaments of the soul are gradually growing coarse and unseemly. A look into the mirror, or the caution of a friend, might warn the inebriate that the clear, manly outlines of the youthful face were being blotted out. Men look oftener into their mirror than in their own hearts. Let us then scrutinize our inner life, and see if our moral portrait still retains the delicacy and symmetry of earlier years. Let us be honest with ourselves in probing the heart, and as we would wish our physician to be when probing a dangerous wound.

Look back, then, to the period when you first awoke to your responsibilities as Christian men and women. With many (it ought to be so with all) this will be the morning of life—while the baptismal dews yet sparkled on your brow—while the confirmation vows were yet fresh on the lips—when in that solemn era of your life you partook of your first communion. With others, this responsibility will be at a maturer age, when convicted of sin, through the influence of the Holy Spirit, they gave their hearts to God. Has there not with some been a spiritual degeneracy? Could photographs of the heart, taken then and now, be hung side by side, would not the contrast startle and alarm them, and make them tremble for the last impression that the Searcher of hearts will reserve to confront them at the last day?

A friend after a long separation discovers how much we have altered in our personal appearance since the last meeting, and even we sometimes have the truth brought suddenly and powerfully home to us when we glance into our faithful mirrors. We are admonished that we are advancing in age. There are tokens that do not deceive—the silvering hair, the scarcely perceptible furrow on the brow, the bowing of the strong frame. Let us bring the soul to the mirror of self-examination and see if we have grown in grace as in years. Let conscience paint us as we are, concealing no blemish, hiding no defect. That stern moralist is an artist that never flatters; and if the freshness and purity of our moral image has been soiled and dimmed, the impartial painter will faithfully delineate the change and show us our deformity. In some, the second portrait may be almost a counterpart of the first—the tender purity and grace hardly obscured; in others, it may exceed the loveliness of the first; while in others, more essential features of true holiness may be effaced, and we, be scarcely able to recognize ourselves; and what are some

of the tests by which we try ourselves and hold the mirror up to nature?

First. One of the well-defined features in the first portrait is that we were often earnest in prayer and the reading of God's Word. We realize that prayer was God's appointed medium of intercourse with Him—by which we confessed our sins and sought their pardon, made known our wants, and returned our thanks; that the study of the Holy Scriptures made us wise unto salvation. Is it so now? or have we become indifferent in our private devotions? Do we shorten them on the slightest excuse? Do we sometimes omit them altogether? Are we wearied by the exercises, and glad when they are concluded? Do we read the Bible as a mere form, from habit, because conscience would upbraid us if omitted? Do we make the lesson as brief as possible? Have we less reverence for its teachings? Do we begin even to question some of its declarations and turn from it with alacrity to devour greedily the more fascinating pages of fiction? If so, then have we cause to fear! The spiritual lineaments of early days are wavering, unsettling, and growing faint, and repulsive features are being impressed on the moral canvas of the soul.

Or a *second* test in your public religious duties, in church attendance and church ordinances. In your "first love," when the image of Christ was stamped fresh on your heart, how highly did you prize these inestimable privileges! You then realized the truth of the inspired declaration—"Thy way, O God, is in the sanctuary!" "How amiable are thy tabernacles!" "I was glad when they said unto me, Let us go into the house of the Lord;" and when there, with what eagerness did you listen to the preached word, no matter how plain and simple the garb in which it was clothed! With what awe and solemn joy did you approach the table of your Lord! You looked forward to the sacred season with a holy impatience, and yearned for it as the hungry man does for the expected feast; you were not content to forego a single opportunity, and with what emotion did you kneel at that altar and partake of the consecrated elements! You listened to the preacher, not with critical ears, but with humility, regarding him, however plain in speech, as an ambassador of Christ, and one in Christ's heart entreating sinners to be reconciled to God; and you allowed no ordinary obstacle to keep you from the sanctuary. Is it so now? "Look on this picture, and then on that." Do you sometimes make the most idle excuses for absenting yourself from public worship all day? Do you often attend but half the day, pleading in palliation of your absence ill health or indisposition that is not allowed to interfere with your ordinary secular duties?

In the ordinance of preaching, once satisfied with the plain, simple truth, that without ornament or eloquence which showed you how you could be saved, have you, with itching ears, become fastidious, exacting? Do you demand oratorical powers? prize rhetoric more than truth?

poetical embellishments more than sound doctrine? Do you seek the gratification of your taste more than the edification of your soul? Do you put preaching above praying? Is the sermon "unto you as a very lovely song, of one that hath a very pleasant voice and can play well on an instrument?" We might instance many other tests, but will give only one or two more. One of the most ardent feelings of a sound, healthy Christian is a desire to disseminate the Gospel. He wishes others to enjoy the same privileges he is enjoying; his sympathy with humanity, gratitude for his own unspeakable blessings, and his apprehension for the impenitent make him liberal in his gifts and active in his efforts to diffuse Christianity among those "ready to perish."

Now, have you become comparatively indifferent to the propagation of the Gospel? Do you give with a less liberal hand, or while giving, as usual, is it done "grudgingly?" Do you regard sin with the same abhorrence you once felt? Do you draw the line of demarcation between you and the world with the same strictness as in former days? Do you guard your thoughts with the same jealous care, or do you find that deeds which once shocked your moral sensibilities can now be regarded with complacency, and you conclude that you were once too exacting and over-strict in your estimate of careless, worldly people? Do you admit idle, impure thoughts that were once rigidly excluded? If so, these are sure tokens that the delicate bloom of early piety—in the cold, uncongenial atmosphere of the world—is withering away like "fern in the frost."

You will observe we are not supposing the case of the utterly reprobate or of the open-avowed apostate or backslider, but of those who appear to others, and even to themselves, to have held fast to their Christian integrity, and who may still be active in works of charity and liberal in their alms-giving. They may be doing all to satisfy their consciences, or maintain their reputation for Christian liberality. An individual once remarked, while gazing on the painted image of one long dead: "Blessed be the art that can immortalize." This is the reality—we are the shadows; this remains intact—the original is dust and ashes. We are all limning the portraits of our souls, and they will wear the color and lineaments of the last touch of our pencil when we are in our graves. We may make them those of an angel or a fiend. "In a long time, but for a long time," exclaimed a great master when reproached for the tardiness of his work. Life is our time—to complete the soul's features it must wear through eternity. We are sketching and coloring by repeated touches every day. You may have mended or marred the likeness during the past week; you may add a trait of beauty and an expression of holy purity to-morrow. Let there then be no delay, oh, artist! for you paint for eternity! Work industriously, wisely, and well. Be ye perfect, even as your Father in heaven is perfect. Seek to be conformed to

the image of His Son. Take Christ for your model, young artists; take the masters for your model; and then as we have borne the image of the earthly, we shall also bear the image of the heavenly; and if we have been planted in the likeness of His death, we shall also be in the likeness of His resurrection. In a few years the spiritual portrait of all here will be completed, and we shall go to our long sleep; but when we awake in His likeness, we shall be satisfied.

A DAY'S MARCH.

BY EMILY S. TANNER.

THE night bends slowly down her somber face,
The thousand clamors of the day grow dim;
The thousand silences, low-breathing through the skies,
Seem muffled echoes of some angel's hymn.

Through morning-purple mists, through noontide glare,
Until the sunset fires were low,
And each broad ember slow was quenched
Within December's skies of snow,

Have pressed my feet along the Great Highway,
Waiting the stars to hold their nightly trust;
And now I lay my pilgrim staff aside,
And from my sandals shake the dust.

Oh, languid feet, what met ye on the road?
Oh, drooping eyes, what visions seen to-day?
Oh, drowsy ears, what voices have ye heard
Along the dusty Great Highway?

I only met a few worn travelers;
I only saw the light and shade of day;
I heard one voice that sang this solemn song,
Along the dusty Great Highway:

"Thou art a day's march farther, farther from
Time's slippery and narrow strand;
Thou hast one less watch upon the shore to keep—
A few less footsteps in the sand.

"Farther from strong, sweet ties of earthly love,
From haunting griefs, from sin's deep goad;
And old bereavements hide their funeral robes
A day's march backward, on the road.

"Farther from many a rough and heavy cross,
Carried with tears through weary hours,
And at each step embalméd and sprinkled with
The blood and dew of passion-flowers.

"Farther from fields of wild, unequal strife,
Farther from exile in a homesick land,
Yet nearer, nearer to the gates of peace—
A day's march nearer Fatherland!

"A day's march nearer, nearer to the sea,
The sea of Infinite mystery,
Whose pulses beat the phantom shoals of Time,
And thrill the borders of Eternity.

"Nearer the place beside thy sleeping loves,
Where Earth, above thy low-laid head,
Shall drop her perfumed flowers, and gently draw
Her emerald curtains round thy bed.

"A day's march nearer, too, oh, pilgrim feet,
Where through the dusks of even,
On the far slopes of the celestial hills,
Spread the white tents of heaven!

"Nearer, where each deep hunger of the heart shall by
Immortal manna be supplied,
Where each long-baffled aspiration, high,
Shall fold its pinions, satisfied."

This was the voice amid the dust and damps
That on the march sang sad and solemnly.
And yet I felt no Presence near me stand—
There was no face or form revealed to me.

But when the song died to a holy hush,
Through the deep silence of the evening sky,
I heard the faintest rush of silver wings,
And knew an angel passed me by.

OUR EMINENT DIVINES. BIOGRAPHICAL SKETCHES WITH PORTRAITS.

METHODISM may justly be called the pioneer religion, and is most strongly characterized by its intense missionary spirit. It goes with the advancing army of civilization into the new States and Territories, and holds forth on the border, along the water-courses, in the mountains, where the more fastidious and delicate worshippers have not reached. It takes hold of the rougher elements of humanity—mollifies and improves them. It appeals warmly to the feelings and emotions, while Unitarianism appeals to the colder reason, Episcopalianism to the ideal, the grand, Universalism to benevolent sympathies, Presbyterianism to a sterner and rigid justice, and some others appeal to blind belief—to images and gods of wood and stone. The Methodist considers the useful rather than the beautiful, and almost ignores mere ornamentation. In this he is almost Quaker-like in simplicity, regarding display in dress, in architecture, etc., as mere vanity. His representative house of worship is a plain edifice—without steeple or stained-glass windows; and he is a most emphatic and zealous worker in the vineyard of the Lord. His head is high, long, and narrow rather than broad, and he has much more Benevolence, Veneration, and social affection than Ideality or Sublimity. Benevolence in him excites benevolence in another, and it is through this feeling that immense contributions for church and charitable objects are obtained. It has been ironically stated, that wherever as many as three Methodists happen to meet, a collection is taken up. There is no Protestant denomination in a more thrifty condition at present than the Methodists. May all their good efforts be blessed with the best success!

REV. EDMUND STONER JAMES, D.D., a Bishop of the Methodist Episcopal Church, was born in Sheffield, Berkshire County, Massachusetts, April 27, 1807. At seventeen years of age he commenced to teach, and employed his leisure time in the study of law. He subsequently formed an engagement to practice that profession, but the sudden death of his intended partner interrupted his plan and changed his purpose. From this time he resolved to preach the Gospel, and in April, 1830, he started for his appointment in the Philadelphia Conference. After studying of theology six years, and while engaged in the active duties of his pastoral work, he took up the study of medicine, though with no intention of becoming a practicing physician. In 1833 he was ordained a deacon, and in 1834 an elder. In May, 1840, he was elected financial secretary of the American Bible Society, and continued in that office until he was elected Bishop, in 1844. Bishop James has visited the California churches and the Methodist missions in Europe, and is one of the most efficient and laborious ministers in the Methodist Episcopal Church.

Unless Physiognomy be easily at fault, we discern in the features of Bishop James those qualities which would most likely secure for their possessor precedence in whatever calling he might adopt. The characteristic of command is crystallized upon his countenance; yet there is a softness and delicacy permeating through the whole facial composition which renders it attractive. The intellectual faculties are of superior size and quality; and these co-operating with other large organs, impart force, acuteness, and efficient activity to his operations. He has that mental organization which would have rendered him prominent in commercial life as a financier or general business man. His large Benevolence indicates no inconsiderable supply of the milk of human kindness. Suavity of manner, ease and aptness of expression, cordiality, and fervor without affectation are among the more striking of his qualities. His head is large, but is sustained by an ample vital power. He can labor assiduously, and labor long without suffering much from mental or physical depression. At all events, he has far more endurance than the average of clergymen.

REV. MATTHEW SIMPSON, D.D., a Bishop of the Methodist Episcopal Church, is a native of Cadiz, Ohio, and was born June 21, 1810. His parents were members of the Methodist Episcopal Church, and their house was the home and preaching place of traveling

ministers, a frequent occurrence which had much to do with his subsequent religious tendencies. His intellectual training commenced very early. When but eight years of age he commenced the study of the German language; and Latin, Greek, and French were studied by him when but four years older. He entered Madison College as a student in 1827, and shortly after received an appointment as tutor. In 1839 he united with the Methodist Episcopal Church, and immediately engaged in active religious duties as a teacher and class-leader. His health failing, however, he turned his attention to the study of medicine, and was licensed as a physician in 1833, but never practiced, feeling it to be his duty to preach the Gospel. His first circuit was West Wheeling, and he was subsequently stationed at Pittsburg and Monongahela City. In 1835 he was ordained deacon, and in 1837 elder. He then accepted the professorship of natural sciences and the vice-presidency of Alleghany College, and 1839 was elected president of the Indiana Asbury University, which became under his auspices one of the strongest literary institutions of American Methodism. In 1848 he was elected editor of the *Western Christian Advocate*. Shortly after his election he was tendered, by the faculty of Dickinson College, the presidency of that institution, but declined it. The presidency of the Wesleyan University was subsequently offered him. Dr. Simpson received the title of A.M. from Alleghany College in 1835, and that of D.D. from the Wesleyan University in 1843; and was ordained Bishop in 1852. He is now the president of the Garrett Biblical Institute, Evanston, Illinois. Dr. Simpson is one of the most powerful preachers in his Church. His sermons abound in happy and brilliant illustrations; his voice is peculiar and monotonous, but his vigorous intellect and vivid sensibility give his sermons irresistible power.

There is genuine masculine vigor in this powerful Motive temperament. The dense, compact, and vigorous frame, the deep chest and ample digestive organs contribute abundantly to the maintenance of the large brain. There is an openness and directness of manifestation which unequivocally evince both moral and physical courage. Prompted by his sense of right, there would be no retreat; no fear of failure on his part when advocating a matter, either religious or secular. The prominent forehead, and very large perceptive faculties, nose, mouth, and chin, are in keeping with the character of the man. There is something of the Roman in that face. The penetrating eye evinces the desire to know for himself, to appreciate the realities of things. The organs which impart activity, executive power, and power to mental manifestation are large. He would not only be earnest in the performance of the duties of his calling, but he would also be efficient in the assertion of personal and social rights. He would be direct, matter-of-fact, and when his feelings are interested, a warm speaker. Clearness and aptness should be leading features in his oratory. His perception of actual things, his appreciation of the practical and the mechanical, and his acute discrimination make him pointed, positive, and successful as a preacher of practical truth.

REV. THOMAS A. MORRIS, D.D., of Ohio, Bishop of the Methodist Episcopal Church, was born in Kanawha County, Virginia, April 28, 1794. His early advantages were few and his education mostly self-acquired; yet he has, by his practical common sense, a natural and easy diction, and by methodical and persistent effort, won an honorable position in his Church. He became a member of the Church in 1813, and was soon after made a class-leader and exhorter. In 1814 he was licensed to preach, and was received as a traveling preacher into the Ohio Conference in 1816. He was subsequently ordained deacon by Bishop George, and elder by Bishop Roberts; and pursued his itinerancy in Ohio, Kentucky, and Tennessee until 1836, when he was elected editor of the *Western Christian Advocate*, at Cincinnati—he being its first editor—whence position he filled with great credit for three years. In 1836 he was elected Bishop of the Methodist Episcopal Church by the General Conference; and in 1841 the degree of D.D. was conferred upon him by McKendree College, Illinois. He is now the president of the Missionary Society of the Methodist Episcopal Church. Few men have traveled more extensively in

the United States and Territories in the service of the Church than Bishop Morris. Though naturally diffident when a youth, he is now warm and companionable in his social life, but not loquacious. He is an able, prudent, and exemplary member of his Church; extremely laconic in speech, brief, pointed, yet entertaining. As a presiding officer he is regarded as a patriarch rather than a prelate; while in the council he is firm, yet courteous and obliging.

The snowy hair of the venerable Bishop attests his age rather than the full habit, and the general freshness is hardly in keeping with his seventy-three years. He is a man of large experience, one who has mingled much with all classes and characters of men. His head is large and somewhat wider than is usual. All the parietal organs are well developed. The basilar organs are large, indicating that the brain and body stand intimately related, the excellent sanitary condition of one supplementing the activity and strength of the other. The forehead is wide, the reflective organs being well indicated, especially Human Nature and Comparison. Mirthfulness is prominently shown. In his discourses there would be a strong coloring of humor. He appreciates keenly the incongruous and ludicrous. He believes in a steady adherence to fact as fact, and to truth as truth. What he firmly believes he earnestly indorses. He prefers the utilitarian and the direct to the fanciful and merely ornamental. The actual use and practical features of things he can appreciate. That which actually promotes the welfare of society he would be among the foremost to adopt. It is a goodly expression, and he doubtless resembles most his mother.

REV. EDWARD RAYMOND AMES, D.D., Bishop of the Methodist Episcopal Church, was born at Athens, Ohio, in 1806. He received his education in the Ohio University, and was subsequently for three years instructor in a college in Illinois. He was licensed to preach in 1830 by the Illinois Conference, and was soon after assigned to the Indiana Conference. In 1840 he took part in the General Conference of the Methodists held in Baltimore. In 1843 he officiated as chaplain to a council of Choctaws, being the first chaplain ever elected by an assembly of Indians. From 1844 until 1853, when he was made a Bishop, he traveled as presiding elder through various districts of Indiana. His personal appearance commands respect, and he is noted for his devotion and sagacity in the affairs of his denomination.

Strength, vigor, and indomitable resolution would characterize this head. The closely-set lips, the prominent nose, and the practical intellect indicate the earnestness, directness, and thoroughness of the man. He would be no time-server, no worshiper of forms and ceremonials. He would not respect the dogmas of antiquity, nor tread the paths of his forefathers if they had nothing in them of virtue other than their age. But he would be straight forward, bluff, and hearty in the performance of what he deems his duty and the requirements of his office. His head and body are symmetrical and built for power and endurance. He would carry his point by heavy blows; he would make thorough work of his mission. There would be no dillying, no kid-glove proceeding on his part. Were the whole fabric of error adjusted so as to fairly receive his assault, it would be thoroughly demolished. He would not leave one stone upon another. He would not consider the destruction complete until the fragments had been literally ground to powder, scattered to the four winds so as to be utterly irrecoverable. He has a strong and hardy constitution—the very man for a pioneer life. He thinks, not perhaps as rapidly as some, but there is power and depth in his thought. He understands men, and views matters in general from the stand-point of experience.

REV. EDWARD THOMSON, D.D., LL.D., a Bishop of the Methodist Episcopal Church, was born at Portsea, England, in 1810, of highly respectable parents. In 1818 they, with young Edward, emigrated to America, where he subsequently attended medical lectures in Philadelphia and Cincinnati, and entered upon the practice of his profession in 1839. In 1838, however, he abandoned his profession, and entered the ministry of the Methodist Episcopal Church, and was stationed successively at Norwalk, Sandusky, Cincinnati, Wooster, and Detroit. In 1853 he was chosen president of

Norwalk Seminary, which position he occupied for six years. He was then elected professor of mental and moral philosophy in the University of Michigan, but never entered upon his duties there, as at the time he expected to do so he was elected editor of the *Ladies' Repository*. Subsequently he was called to the position of president of the Ohio Wesleyan University. At the General Conference in 1860 he was elected editor of the *Christian Advocate and Journal*. He was made a Bishop in 1864. Dr. Thomson belongs to the progressive school, ecclesiastically and politically, and is an ardent advocate for general education and universal emancipation. He is a polished writer and speaker, and is greatly esteemed.

This eminent Methodist dignity has a head strikingly high, rather broad at the top, less than the average in width, and decidedly long, with an exquisite mental temperament. The moral sentiments predominate; Veneration, Benevolence, Conscientiousness, and perhaps Firmness, are large or very large. He is not without ambition; Self-Esteem is fairly represented; precedence is acceptable to him, and he feels able to meet the requirements of position. He would be likely to press the claims of duty and moral rectitude with earnestness, and would feel the force of moral obligation. His hope is not so much grounded upon development of the organ as upon his spiritual discernment of revealed truth. The gospel which he preaches furnishes the basis of his hope, and therefore he would be rather serene, mild, and resigned. The countenance is clear and expressive; the forehead prominent; the nose shapely; the lips firm; the mouth well cut; the chin prominent; the eyes steady—all of which pronounce him a quiet, unassuming, and graceful man; one whose movements would be characterized by evenness and directness rather than by spasmodic effort.

REV. JOHN MCCLINTOCK, D.D., was born in Philadelphia in 1814; he graduated at the University of Pennsylvania in 1835; entered the Methodist ministry, and became a member of the New Jersey Conference. He was then elected professor of mathematics in Dickinson College, Pennsylvania, and in 1839 was transferred to the chair of ancient languages. In 1848 he was elected editor of the *Methodist Quarterly Review*. In 1856 he was appointed by the General Conference, in connection with Bishop Simpson, a delegate to represent the American M. E. Church in the English, Irish, French, and German Conferences. He was also sent as a delegate to the World's Convention, held in Berlin, during the same year. In 1857 he was elected president of the Troy University. In the interim of the college classes he was pastor of St. Paul's Church, New York. In June, 1860, he called for Paris, to take charge of the American Chapel there, under the auspices of the American and Foreign Christian Union. During his residence at Carlele he translated, in company with Professor Blumenthal, Neander's "Life of Christ," and a number of Latin and Greek text-books. For several years past, in connection with Dr. Strong, of the Troy University, he has been preparing a "Biblical and Theological Dictionary." He has also published "Analysis of Watson's Theological Institutes," "Temporal Power of the Pope," and "Sketches of Eminent Methodist Ministers."

The first inference drawn by the physiognomist with reference to this gentleman is that his appreciation of the delicate, the refined, the artistic, in fact the whole realm of esthetics, is keen and influential, permeating his entire organization, giving direction to the whole, and rendering him attractive and agreeable in society. As a speaker he should be known for his observance of the proprieties of language and his tendency to clothe his expressions with metaphor and polished phrase. He appreciates the requirements of social position. He aims to perform his part in life acceptably to others. He has a warm heart, strong love of home and domestic life. He has a fervent, sympathetic nature; is inclined to cordially respond to the requisitions of sympathy and humanity. He recognizes configuration and form; he remembers appearances well; can imitate or copy with more than average ability, and would not be so much known for originality or the tendency to individualize his actions and expressions as for imparting a superior finish to what he might derive from other sources.

REV. JOHN P. DURBIN, D.D., was born in October, 1800. His parents were in moderate circumstances, and resided in Bourbon County, Ky. The Bible, Scott's First Lessons, and an old English History are said to have composed his father's library. In 1818 he became a member of the Western Conference as a pioneer preacher in Ohio and Indiana, a fortnight after his admission to church membership, and in 1819 he was appointed to the northwestern corner of Ohio by the Conference. He soon felt the disadvantages of his poor education, and commenced to study English grammar, and in a few years took up Greek and Latin, which he pursued advantageously at the Miami University. He completed his collegiate course at Cincinnati College, and received the degree of A.M. He was then elected professor of ancient languages in Augusta College, Kentucky. In 1831 he was elected chaplain of the Senate of the United States, after being defeated in 1829 by one vote. In 1832 he was appointed professor of natural sciences in the Wesleyan University. In 1833 he was elected editor of the *Christian Advocate and Journal*, and in 1834 was called to the presidency of Dickinson College. In 1845 he resigned that position and removed to Philadelphia, having been appointed presiding elder of the churches in that city. In 1850 he was unanimously elected corresponding secretary of the Missionary Society of the Methodist Episcopal Church, which responsible position he still occupies. Dr. Durbin's name stands as one of the most powerful and controlling in the Methodist Episcopal Church. He is an eloquent and popular pulpit orator.

Dr. Durbin possesses a temperament essentially mental. His portrait evinces acute sensibilities, a quick and warm appreciation of the sympathetic and devotional; that which appeals to the sympathies of man meets with a fervent response from him. He has a strong imagination, but it is an imagination through which pervades all the more striking elements of social life. As a missionary he would feel the object of his mission, and present it with fervor and effect. There is a good deal of the poetic in his organization; the sentimental takes deep hold upon his feelings. He appreciates the gravity and importance of religious truth, and the necessity of extending a helping hand to aid men in the way of salvation. True to the claims of his denomination and the spirit of orthodox theology, he would depict in vivid colors the happiness of the blessed or the misery of the lost. The activity of this life has been such that the vitality furnished by the nourishing organs has been exhausted as rapidly as made, consequently he does not appear to possess excellent health.

REV. ABEL STEVENS, D.D., LL.D., was born in Philadelphia, Jan. 19, 1815. His parents dying when he was quite young, he was thrown upon his own resources, and much of his later success is probably due to this fact. In his sixteenth year he commenced to study for the ministry at Wilbraham Academy, Massachusetts, and subsequently graduated from Middletown University, Connecticut. In 1834 he left the University and preached in Boston for three or four years, purining his studies in the mean time. In 1837 he traveled extensively in Europe, and after his return was stationed at Providence, Rhode Island, where he attracted crowded audiences. In the same year he received the degree of A.M. In 1840 he again removed to Boston, where he took charge of *Zion's Herald*, and was well known as a strong opponent of slavery and a staunch free-soiler. In 1852 he was appointed editor of the *National Magazine* in New York; and in 1856, after a brief visit to Europe, was elected editor of the *Christian Advocate and Journal*, which position he still occupies. Dr. Stevens is one of the most prolific authors of his Church. Besides his editorials and frequent articles for the Methodist reviews and magazines for the last twenty-five years, he has published the following volumes: "Memorials of the Introduction of Methodism into New England;" "Memorials of the Progress of Methodism in the Eastern States;" "Church Polity;" "The Preaching Required by the Times;" two volumes entitled "Sketches and Incidents;" a volume of "Sketches by an Itinerant;" a prize essay, called the "Great Reform, or Systematic Beneficence;" "A Complete History of Methodism from the Beginning," in three volumes; "Victory of the Methodist Episcopal Church," in two volumes; "The Women

of Methodism;" "Centenary of Methodism;" "Life and Times of Dr. Bangs," etc. Dr. Stevens is considered a "progressionist" by his Church; an advocate of lay representation, and of other improvements in church government. He is one of the most eminent thinkers and writers in his denomination.

Dr. Stevens has a fine quality of organization. His head is decidedly high and long rather than broad, and his temperament indicates mental vigor and sprightliness. He is disposed to rise; considers position desirable, and the accomplishment of something which would command the respectful attention of others, one of the true purposes of life. Conscientiousness is influential, giving him the disposition to maintain the right with persistent fortitude. Language is large, which enables him to be fluent as a writer and speaker. Those organs which give the appreciation of the beautiful are well marked, while his strong Spirituality leads him to love that which is new or derived from psychological sources. Intellectually considered, he appreciates principles, facts, and details; and has power to apply his knowledge. He has vivid imagination, a brilliant fancy, a kind of poetical, expansive spirit which gives enthusiasm. As a speaker or writer, his style would be clear, copious, and vigorous, abounding in argument, metaphor, and illustration.

REV. WILLIAM NAST, D.D., "the Father of German Methodism," he being the first German missionary of the M. E. Church, was born June 15, 1807, in Stuttgart, the capital of the kingdom of Wurtemberg. He was educated at the University of Tübingen, with the view to entering the Lutheran Church, but after completing a philosophical course devoted himself to literature. When twenty-one years of age he came to America, where he was for a time tutor in a wealthy Methodist family, and next held the position of teacher of the German language at West Point Military Academy; subsequently he received a call to a professorship in Kenyon College, Ohio. In 1836 he joined the Methodist Episcopal Church, and was soon afterward licensed to preach; and at the Conference of the same year was appointed pioneer German missionary in Cincinnati, Ohio, where he was successful in establishing a German mission, which has been the nucleus of a large number of German Methodist Episcopal Churches established in the United States and in various parts of Germany and Scandinavia. In 1838 he was appointed editor of the *Christian Apologist*, which has steadily increased in circulation and power under his charge to the present day. In 1844 the German mission work of the Methodist Episcopal Church had grown to such proportions and assumed such an importance, that Dr. Nast was ordered by the General Conference to proceed to Germany to commence the missionary work of Methodism in Germany, which has since become such a wonderful field for Methodism. Dr. Nast has translated a large number of Methodist books into German, besides writing several in that language. In 1853 he was commissioned by the General Conference to prepare a German commentary on the New Testament, which has since been translated into English, and has received the highest commendation. Dr. Nast is distinguished as a fine scholar and a brilliant writer and pulpit orator. He has led an active and even toilsome life; indefatigable industry and unreserved devotion to his great work have been needed to carry him through it. At present he is the president of the German Wallace College, Berea, Ohio.

Dr. Nast has that class of countenance which pleases at first sight. We would judge him to be obliging, urbane, and liberal-minded. No vain conceits worry "his anxious soul," but he is one disposed to keep on the even tenor of his way, not allowing this or that circumstance to influence or to draw his attention aside from the duty in hand. He possesses a good deal of natural dignity. The patient scholar is crystallized in the features, and the theologian of keen penetration looks out through the steady eyes. The mouth indicates strength of will and firmness of purpose. The prominent nose indicates development. In society he would be known for courtesy and refinement; at home, for his warm interest in all that belongs to domestic association. As a writer he should be polished, presenting his ideas with clearness and freedom from tautology.

REV. DANIEL DENISON WHEDON, D.D., editor of the *Methodist Quarterly Review*, was born in Onondaga, New York, March 20, 1806. He was graduated at Hamilton College, New York, in 1823, and afterward studied law at Rochester. In 1831 he was appointed tutor in Hamilton College. In 1832 he was elected professor of ancient languages and literature in the Wesleyan University, Middletown, Connecticut, which office he held till 1843. In 1836 he was ordained as a minister of the Methodist Episcopal Church. In 1845 he was elected professor of rhetoric, logic, and history in the University of Michigan, which post he filled for eight years. In 1856 he was elected by the General Conference editor of the *Methodist Quarterly Review*, and general editor of the Methodist Book Concern, a position which he still occupies. Dr. Whedon has published a volume of "Public Addresses, Colleague and Popular," and a "Commentary on the Gospels," besides numerous articles in the *Methodist Quarterly*, "*Bibliotheca Sacra*," and other religious reviews and periodicals. He is considered the metaphysician of his Church.

Dr. Whedon possesses a considerable stock of nervous susceptibility. His perception is keen and accurate. The reasoning intellect is well-developed and strongly marked, especially Comparison, which adapts him for the employment of the analyst or literary critic. The countenance bears the impress of deep thought; not carefree or occasional meditation, but a continuous and steady application of the mental powers to the evolution of ideas. The nervous temperament is strikingly predominant. The emotional or sensitive nature is also strong. He can enjoy ideas; he can with real zest live much in the realm of philosophy, faith, and imagination. He is a careful man, not inclined to attempt things which would be likely to embarrass or confuse him. He would see his way clearly in the outset of an enterprise, neither would he be inclined to overreach himself or others. The large and mobile mouth readily responds to the requisitions of the intellect for expression. The full eye evinces lingual ability. With good health his memory would be retentive. His memory of thoughts, experiences, and objects is excellent. He should be ingenious in construction, and show power to plan and organize, as well as to execute. His forte would be in the line of philosophy and psychology.

REV. CHARLES ELLIOTT, D.D., was born in Killbegg, Donegal, Ireland, May 16, 1792. In his youth he became a member of the Wesleyan Methodist Society, and began a course of study preparatory for the ministry. In 1816 he applied to Dublin University for admission, but was refused because he could not conscientiously submit to the established test. He then emigrated to America, and proceeded to Ohio, where he was received into the travelling connection of the Ohio Conference in 1818, and traveled in his circuit for four years. In 1822 he was appointed superintendent of the mission among the Wyandot Indians at Upper Sandusky; and was subsequently for five years presiding elder of the Ohio district. In 1827 he was elected professor of languages in Madison College, Uniontown, Pennsylvania, where he remained four years. In 1831 he was stationed at Pittsburg, and was subsequently presiding elder of that district. He was afterward elected editor of the *Pittsburg Conference Journal*, and was subsequently transferred to the editorship of the *Western Christian Advocate* at Cincinnati, and was re-elected to that position in 1852, which office he filled until 1856, making in all about fifteen years of editorial service. He has written a "Treatise on Baptism;" "Life of Bishop Roberts;" "Delineation of Roman Catholicism," and "History of the Great Secession from the Methodist Episcopal Church." Dr. Elliott is now president of the Iowa Wesleyan University.

Our inferior portrait of Dr. Elliott fails to convey an adequate impression of his character. The Motive and Mental temperaments are manifested, however, and furnish their stimuli to his mental manifestations, rendering him vigorous, earnest, and powerful. The *loud ensemble* indicates a close student, the man who has sought both in reading and in writing the evidences of what he would believe. He is not the man to dissemble or evade, but would be free in the utterance of opinion rather than show policy or cunning in the announcement of his sentiments. We do not mean that he would be

open to all comers, that he could be read and known of all men, but that what he considers valuable in doctrine and practice should be imparted to others and not kept as the special property of any one.

REV. ERASTUS OTIS HAVEN, D.D., president of the University of Michigan, was born in Boston, November 1, 1830. He graduated at the Wesleyan University of Middletown, Ct., with high honor, in 1842, and soon after opened a private high school at Sudbury. He was then called to teach natural science in a large seminary at Amenia, N. Y., of which he was elected principal in 1845. A few years afterward he entered the ministry of the Methodist Episcopal Church in the city of New York. In 1833 he was elected professor of Latin, and afterward professor of History and English Literature in the University of Michigan. While here he published a book entitled "The Young Man Advised, or Confirmations of the Bible from History and Philosophy," and received the title of D.D. from Union College, in Schenectady, New York. In 1856 he was elected editor of *Zion's Herald*, published in Boston, and soon after took up his residence in Malden, where he served on the School Committee. In 1858 he was appointed, by Gov. N. P. Banks, a member of the Massachusetts Board of Education for six years. In 1860 he was elected member of the General Conference from New England. In 1862 he was elected a member of the Massachusetts Senate, and was re-elected in 1863. In 1863 he received the degree of LL.D. from Ohio Wesleyan University, and in the same year was elected president of the University of Michigan. He has since published a work entitled "The Pillars of Truth—a Series of Discourses on the Decalogue." Dr. Haven is a preacher of more than ordinary power—remarkably clear and methodical in the presentation of his subject, which he follows up calmly and persistently with Scripture and argument, to the universal conviction of his auditors.

Dr. Haven has a happiness of expression which indicates peace within and without, a mind settled and tranquil, a disposition kind, forbearing, and perhaps indulgent. The prominence of the perceptive faculties, the keenness of the eye, and the general sharpness of the features indicate the man of activity and enterprise. He believes in the motions of the spirit, and that those motions are energetic and quick. He is the opposite of a languid, dull man. The activity and sprightliness of his mentality finds food for thought in all things. He does not believe in a long-faced or cadaverous Christianity. The sympathetic, the genial, and the humorous are alike appreciated by him. He has resolution, and considerable back-bone in the prosecution of those enterprises which he deems important. Large Language and a keen appreciation of the ludicrous, combined with an acute criticism, impart vitality, sprightliness, humor, and clearness to his expressions. In the presentation of religious truth he would exhibit both peripatetic and method, perceiving the practical bearings of his theme. He would not be dogmatic or merely assertatory, but by apt illustration substantiate his claim.

DOCTRINAL FEATURES.

Methodism, viewed as an outgrowth from Episcopalianism, at a period when lukewarmness and infidelity characterized the Church of England, rests upon the same sound basis so far as doctrinal essentials are concerned. The infidelity and intellectual coldness of Oxford in the early part of the eighteenth century found no sympathy in the earnest natures of men like Whitefield and the Wesleys, but drove them to seek in the pages of Inspiration the spiritual warmth and energy they longed for. It was not novelty of opinion which separated Methodism from the Anglican Church, but rather the earnestness and zeal which its pioneers evinced in declaring the standard doctrines of the Church, that earnestness and zeal provoking opposition and censure instead

of support. Susanna Wesley, the mother of John and Charles, was a woman of fervent piety, and with earnest solicitude instructed her sons in religious matters. The early impressions thus received by the Wesleys developed in them an evangelical zeal which in time established the Arminian branch of the Methodist Church. John Wesley may be regarded its chief apostle and organizer, while Charles Wesley was one of its ablest preachers and the author of its psalmody. Wesleyan Methodism is the Methodism predominant in the United States. Its tenets, or articles of faith are fairly set forth in the "Articles of Religion" prepared by Wesley from the "Thirty-nine Articles" of the Church of England, and they convey no tenet which is not received by that Church. Without quoting from these, we present, in the words of Dr. Stevens, author of "The Centenary of American Methodism," a condensed statement of the *animus* of the denomination. "Methodism has been described as 'a revival church in its spirit, a missionary church in its organization,' a resuscitation of the spiritual life and practical aims of primitive Christianity. This is its genuine stand-point, the only one from which its history and its theological and practical systems can be interpreted." The government of the Methodist Church is representative and episcopal. The legislative authority resides in the General Conference, which is composed of delegates from the several Annual Conferences. The General Conference meets once in four years. The territory of an Annual Conference may constitute an entire State or more, according to the population, and is divided into presiding elders' districts; and these districts are divided into circuits and stations. At the Annual Conference, which is presided over by a bishop, the main business transacted is the admission and ordination of preachers, the appointment of local and itinerant ministers, and a review of the condition and general interests of the Church work. Besides bishops, elders, and preachers, there are stewards and class-leaders, who are required to take a prominent part, under the preacher, in the religious conduct of the particular congregation with which they are connected.

The latest reports furnish the following statistics with reference to the growth of Methodism in the United States and Canada: 1,972,770 communicants, 13,650 travelling preachers, 15,000 local preachers, nearly 300 colleges and academies, and more than 30 periodical publications. In these statements we have included the minor branches of the Methodist persuasion, the Methodist Protestant Church, the American Wesleyan Methodists, the African Methodist Episcopal Church, and others—the total membership of which does not exceed 265,000.

"THE work of a thousand men for four years" is the inscription upon the immense railroad bridge which has just been erected across the Susquehanna River at Havre de Grace, Md.

NEW YORK.

FEBRUARY, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron bands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Pte.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$2 a year in advance; single numbers, 20 cents. Please address, Messrs. FOWLER AND WELLS, 339 Broadway, New York.

SELF-GOVERNMENT.

UNDER most monarchies, where a few privileged persons rule the great mass of the people, who have little or no voice in the government, and where free schools do not exist, there is little thought of self-government. In such countries it is the duty of the police, who are everywhere visible, to regulate the ignorant populace. How absurd to suppose that twenty millions of uneducated, landless paupers, who have nothing at stake—no chance or hope for culture, promotion, or advancement—will try to regulate themselves or to voluntarily maintain a government that holds them in subjection! If it be aristocracy that withhold those rights and privileges from the people which would fit them for self-government, then aristocracy is wrong. If it be the priests, then *they* are wrong. No matter who it is, it is the duty of those in authority to enable the people to regulate themselves, to fit them for self-government. In the sight of God, each individual is *personally* accountable to *Him* rather than to men.

The best government on earth is that which governs least, and that which comes nearest to be a perfect government is that of a self-regulating Republic.

The place to begin to fit persons to govern themselves is in the family and in the public school. We have advocated this doctrine for many years, and just now begin to see the fruits of our teachings. Here is a statement from the *Evening Post*, which shows the working of the system. It will be introduced into other schools, and finally become the system throughout the world.

It is a singular fact, that scarcely one

of the admirers of self-government has thought of applying it in schools. An account of an experiment in one of our city schools may not be out of place.

One morning, during a recitation, the boys of a certain school were asked: "What is the government of our country?" "A republic." "What is the government of our school?" "A republic." "No." "What is it then, sir?" "A limited monarchy." "Why! we are not your subjects, sir!" "Yes, you are," replied the teacher; "your parents have delegated to me certain powers, and you must obey my orders as long as they see fit to leave you here." "Well, sir, but we don't like to be any one's subjects; we prefer to be republicans." "Do you think yourselves capable of self-government?" "Yes, sir." "Well," said the teacher, "I have no objection to trying you; but we must go by degrees. I will try you at first for one hour." "What, sir, won't you mark us at all for anything we do?" "No; always provided that you do not disturb the business of the school, for that must go on." "Very well, sir."

It was tried for an hour, then for two hours, then for a day, then for a week. At the end of the week the boys were told, writes the teacher, "that I was much gratified with their power of self-government, and proposed as a reward that we should go on Tuesday afternoon to visit a large book-printing establishment; but, alas! on Monday they received two warnings, and were told that a third disturbance would cause the downfall of their republic. The warning was not heeded; a third came—crash went the republic, and the old monarchy was restored upon its ruins. The contrast was disagreeable. The free republican of a moment ago, who had been 'a law unto himself,' was a subject 'cabin'd, cribb'd, confin'd,' his incomings and his outgoings noted, and all his shortcomings certainly marked.

"One bright, open-faced youngster soon came up, however, and said: 'It isn't fair to expect so much of us on Monday, because it comes right after Saturday and Sunday, and it takes us some time to get into the school ways again.' 'Then you are not to be considered as capable of self-government unless you can resist the influences of Monday as well as all the other days?' 'Yes, sir.' We tried again. They succeeded in governing themselves for the rest of the week and the Monday following. We went to the printing establishment and enjoyed it. Then, however, graver questions arose.

"If the boys were to govern themselves entirely, they must decide about everything; yet the lessons must be learned and recited, order must be kept, and the school work must go on. To

satisfy these different ideas it was agreed that the teacher should be just as absolute as before; that the boys should be marked for conduct and lessons as before; prompt obedience should be required, and no discussions allowed during school-time; but at recess or after school, any boy might appeal from any one of the teachers' decisions to a jury of three boys, one chosen by himself, one by the teacher, and a third by these two; and from the decision of the jury there should be no appeal." The teacher writes:

"This seemed a hazardous experiment, and it was so. Their virtue was not strong enough at first to resist the temptation. The troublesome boys appealed to have their conduct marks canceled, and the lazy boys to have their recitation marks increased. Their comrades on the juries obeyed their fellow-feeling rather than their sense of justice. I protested against many of the decisions as outrageously unjust, and warned them that continued injustice would necessarily cause the downfall of their republic.

"I submitted, however, to all the decisions of the juries, waiting patiently for the tide to turn; and it did so. I had previously prepared their minds for this state of things by conversations, the drift of which they had not perceived. Their own consciences whispered to them of their own injustice to one who submitted while he protested, and the industrious boys began to see that the lazy fellows were getting just as high marks as they were, without the trouble of working for them. All these causes combined to turn the tide. My patient submission to unjust decisions was rewarded.

"When the culprits grumbled at the jurymen who decided against them, I could say to them with unction, 'Protest if you choose, but you must submit as I did.'

"Our experiment succeeded, and for seven years our school has been thus governed. There is an appeal from every teacher to the principal, and an appeal from him to three jurymen, or judges, as they are more commonly called.

"It has proved an admirable method of training boys' judgments, and in all cases where partiality is charged it has proved a specific, for when a boy is condemned by his comrades also, all such charges fall to the ground. Some very droll scenes have occurred at these trials, and some curious developments of character have been made.

"On one occasion six boys were on trial for having detained another boy by force in the play-room. Our play-room is large enough to play base ball in, and several boys were playing after school. Four o'clock came, and one of the boys said he had orders to go home at that

time. His side had just been 'caught out,' and the other side declared that he must stay, and let them have their 'innings.' He resisted and they insisted, but finally let him go. Next morning my housekeeper told me that there had been a disturbance in the play-room; that some of the boys had been keeping another there against his will, and that he had been crying a good deal. She did not know his name, but pointed him out to me. I asked him if he had any complaint to make against any one? He said no, and of course I did not press the matter. After prayers, I asked those who had forcibly detained William — to step forward. Six of them immediately did so. I gave all parties notice to appear before me at two o'clock. The case was regularly tried, and my decision was, that the six young gentlemen in question were in the wrong, and must be excluded from the play-room for one week.

"They were dissatisfied, and appealed. One of the judges chosen was a chunky, plucky fellow, Gardiner S—, one of the best boys in the school. I happened to be standing behind the judges, as they took their seats opposite the criminals, and was quite amused at hearing Gardiner say, laughingly, to a brother judge: 'Harry, do you think we can "lick" those fellows over there if we decide against them?' They did decide against them, and confirmed in all respects the decision of 'the lower court.'"

The correspondent from whose letter we have taken this account, writes: "The results of our system, now tried for seven years, have been nothing but good, and I can cordially recommend this method of school government to all who care to try it, cautioning them at the same time that very careful handling is requisite to insure success."

[The first condition necessary to the carrying out of a plan of this sort is, the perfect self-government of the teacher. He must have patience, kindness, justice, authority, dignity, and intelligence to command the respect of his pupils. With all these properly exercised, he can teach children that most important lesson, namely, "self-government."]

Among the topics chosen for an early number is that of Flogging in Families, Schools, and elsewhere. The subject will be examined from a phrenological and physiological stand-point. Another is that inexhaustible theme "Female Suffrage." A member of Congress promises us an elaborate article showing up the subject, "*pro and con*," from every point of view. We may reach them in our next number.

A WOMAN'S COMPLAINT.

"A PLACE for everything, and everything in its place." Yes, it is very easy to talk—so easy that we have not unfrequently seen words absorb deeds entirely. Mr. Green quotes the old proverb at you with appalling distinctness when you have committed the error of putting his slippers under the wrong corner of the sofa; but when you are turning the whole house upside down after the book that he has lost, you would imagine there wasn't such a thing as a proverb in the created world!

Now, that is hardly even-handed justice. Fair play is only reasonable, even if you do happen to be a woman! Why should Mr. Green think himself privileged to grumble at the disorder of the room where you have amused cross children, cut down big trowsers into little ones, patched, mended, and darned all day long, and then look surprised and persecuted because you object to his tossing his newspaper into one corner, and his hat into another, and his bootjack into a third. No—it is *not* fair! "There is a time for all things." That's what Mr. Green says when you hint that you would like a little relaxation in the way of theater, opera, or concert—or when you ask him, meekly, when he is going to put a drop of oil on the creaking hinges of the parlor door, or sharpen the dull carving-knife. Is there? Well, then, when is the time coming for that jaunt to the Catskills that has been promised you ever since you can remember? When is the time coming for the reading aloud of newspapers and interesting extracts from spicy books? When is the time coming for him to set plants and shrubs in the deserted little back garden, instead of smoking an evening cigar on the front balcony with his heels considerably higher than his head?

"Silks and satins put out the kitchen fire." Mr. Green thinks you can make the old gray poplin answer very well for a year or two longer. It's old fashioned and shabby, and Mr. Green wonders "why his wife can't look a little more like other people." It is inappropriate to wear on many occasions, and the impracticable Green "don't see why you're not ready to go out with him when he asks you. Women never *are* ready!" If silks and satins put out the kitchen fire, what is the relative effect of broadcloth and cassimere, patent leather boots and diamond rings?

"Take care of the cents, and the dollars will take care of themselves." "Be a little more economical in your shopping, my dear. Twenty-two cents a yard for calico, when I saw very decent on the Bowery for eighteen. I call that extravagant. Four cents a yard is worth saving." And if you were to try until doomsday, you could not persuade my lord satocrat that twenty-two cent calico is actually cheaper for little frocks and sleeved aprons than the elegant article he saw on the Bowery. But as for wearing anything less than the highest-priced hats, or denying himself two pair of kid gloves per month—"My dear, you don't

understand these things. A man *must* go well dressed down town!"

Now, you see, you can't say anything in self-defense, because Mr. Green says "a contentious woman is like a continual dropping on a very rainy day." You can only shut your mouth and crowd back the rebellious answers, and wish in your secret heart that all the proverbs your husband has so ready at his tongue's end were not so very applicable to one side of the question. What are all the antique old word-desiccations good for if they won't work both ways? You never had a nice little plan yet, but Mr. Green cut its tender head off with one of these merciless packages of wisdom; and you are almost tempted to wish that Poor Richard had never been born, and that Solomon had died before he went into the Proverb business.

It is hard to endure; but then, after all, it's rather a consolation to be able to tell your troubles in print. You wonder what Green will say when he reads this article? Of course, though, he will never suspect it is *he*. Men never know themselves in such a very faithful looking-glass—more's the pity! *

A NEW WORK ON PHONOGRAPHY AND REPORTING.*

THE demand for shorthand writers is increasing with every year; and increasing even more rapidly than the supply. Ten years ago some half dozen stenographers were able to do all the shorthand reporting that was required in the city of New York; and they were employed but a small portion of the time at that. Now the number of regular professional reporters in the city is probably not far from thirty, and most of these find constant work. In the future, however, reporters will find their widest and best field in the large towns and cities of the interior of the country, as they are there just beginning to understand, and consequently to appreciate, the benefits of verbatim reporting, in recording the proceedings of courts, conventions, legislatures, political meetings, etc.

Stenography is also used for many other purposes than mere reporting. Almost all our leading public officials who have much writing to do, many business correspondents for large houses, besides newspaper editors and literary writers, etc., now have their shorthand amanuenses to relieve them from the drudgery of the pen.

The origin, growth, and development of the stenographic art is a very curious and instructive subject for study; and it is one in which we have always taken a great interest. Hence we have been pleased whenever any new work on the subject has appeared that was an improvement upon its predecessors. We do not

* The Complete Phonographer: being an Inductive Exposition of Phonography, with its application to all Branches of Reporting, and affording the fullest instruction to those who have not the assistance of an Oral Teacher. By JAMES E. MCNISON, Official Stenographer to the Surrogate's Court. New York: Fowler and Wells. Price, post-paid, \$3 25.

hesitate to say that the publication of "The Complete Phonographer" marks an important epoch in the history of that art. While Phonography has always been, since its invention, by far the best system of stenography in use, yet it can not be denied that in its details it has become so complicated with anomalies and exceptional expedients, that the labor of learning it is very much increased, and, when acquired, its usefulness very seriously impaired. This fact, as well as the object of the book, is well stated in the following extract from the preface:

"The leading features of Phonography are the result of the labors of Mr. Isaac Pitman of England, who for nearly thirty years has devoted much of his time to its development and propagation; but the high degree of perfection to which it has been brought, is owing in great measure to the suggestions of thousands of practical phonographers, both in England and the United States. This mode of development has its merits and demerits. Coming as it has from the brains of such a vast number and variety of people, Phonography possesses a richness of material which could hardly have been obtained in any other way; but, on the other hand, this kind of growth has had a tendency to render the system less uniform and consistent in matters of detail than it would have been had it emanated from a single mind. Now, my first aim has been to restore, as far as possible, simplicity and harmony, by adhering to general principles and discarding all unnecessary expedients; and my second, to more completely adapt the system to the requirements of the reporter."

Mr. Munson, we believe, is the first writer on the subject of Phonography who has had the boldness to seriously attempt, or the perseverance to carry through, a reformation of the system in this respect. But he has done his work successfully and well. Indeed, he has so simplified the system, that we believe it will not require over half or two thirds the time now to learn it that has been heretofore necessary; and the number of those who commence the study, but afterward give it up and fall out by the wayside, will certainly be greatly reduced.

Our space will not permit us to do more than allude to some of the leading features of the work. The rules are very full and clear, and fully illustrated. The arrangement of the lessons is nearly if not quite perfect, they being presented in the order that a good teacher would naturally adopt, thus making the book an excellent self-instructor. All the old anomalous exceptions to general rules, such as turning over *F*, *V*, *TH*, and *DH*, and shading *M*, to put on the *r*-hook; halving some stems, and not others, to add *t* or *d*; lengthening some of the curves to add certain sounds, and other curves to add other sounds, etc., are entirely obviated. The chapter on Phonographic Analysis will be of great assistance to beginners. The chapters on preparing copy, proof-reading, and reporting are novel, though very appropriate, features in a work of this kind, and they will render the book highly useful to any reporter, whatever system he may write. The mechanical execution of the book, especially as regards the engraved illustrations and exercises, the binding, etc., is superior to that of any previous work of the kind.

SMALL POTATOES; OR, THE STORY OF A MAN.

BY A. A. G.

THERE was once a man who told this story of himself—of himself as he was when a boy. He did not tell it, so far as I know, until he became a man, so I call it "the story of a man," although it might be better called the story of a boy.

"When I was between the ages of ten and fifteen," he said, "I didn't bid fair to make a very smart man. My taste didn't run in the direction of books, but wound its way up in the air with the kites I used to fly, and down into the water after the fish I used to catch. It drew me to the circus, and to the juggler's performances, and to shows of all kinds.

"One or all of these diversions would have been well enough if I could have enjoyed them in moderation, but I didn't. I gave myself, body and soul, to them, and felt whenever I sat down with a book in my hand that I was losing just so much of life. And instead of studying, I was thinking of the man that pulled yards and yards of ribbon out of his mouth, and tore up fine pocket-handkerchiefs and handed them back to the owners in the audience *whole*. I was thinking how I'd like to learn the strange art myself, and make heaps of money by surprising people with curious tricks. Or I was thinking of the next circus that was to come along in a week or two, and wishing I could ride tip-toe on a fast horse, and be a smart circus actor. If I didn't happen to be thinking of being a juggler or circus actor, I was thinking of the royal fun I'd have the next time that Charles Jenkins and Ben Wyles and I went a fishing.

"In consequence of all this, I became celebrated as a 'booby.' Indeed, it was so common for me to disgrace myself at my recitations, that I was often called 'Booby Powell,' instead of Harry. To be so nicknamed sometimes started my 'dander,' but one of my rich and various amusements soon made me forget the contemptuous epithet, and I would think no more about it until I heard it again, when up would start my 'dander,' but from all these persecutions, as I called them, I sought relief in the things that pleased me most, and had what I always wanted, a good time, with scarcely a disturbing thought about the years of manhood.

"But a change came over me at last. I had been called 'Booby Powell,' and 'Goose Powell,' and 'Know-nothing Powell,' but the crowning title, and to me the most irritating one, was not reached until I was called 'Small Potatoes.' That had a sound that was a little beyond my powers of endurance. What made it still worse was, that it had its origin in the teacher himself. Mr. Crowley was very kindly disposed toward all the scholars, not excepting even me; but he told one of the school committee, in my hearing, although he didn't intend I should hear it, that he had

'given me up for small potatoes.' This happened to be overheard by another boy, too, Jim Stokes, a boy I particularly disliked. I had a suspicion that he heard it, but didn't know it until the next morning, when, as I was on my way to school, he sung out from the opposite side of the street, 'Oh, potatoes, they grow small over there!' 'Over there,' he repeated, in a slow, melancholy tone, rolling his eyes across the street at me and putting his tongue in the corner of his mouth, as if he would say, 'The secret's out. I heard what Mr. Crowley said about you.' This lighted a great fire in my blood at once, and before I was half way to school it was a raging fire. I felt as if I would have killed that boy, if I had only been on the same side of the street and had had the proper tools. This fire, instead of going down, grew worse and worse. It grew down to the tips of my toes and up to the top of my brains. It wrapped me all around. It scorched me—it burned me.

"Oh, potatoes, they grow small over there!" I repeated to myself. 'We'll see about that. I'll make Jim Stokes change his tune, and the words, too.' That night, when darkness covered me, and all under my father's roof were asleep, I lay awake, gnashing my teeth at that boy who had had the impudence to turn me into derision. 'Small potatoes!' I said. 'He'll see, before he's much older, that small potatoes can grow large. I'll get ahead of him, if I never fly another kite, or catch another fish, or see another circus-actor ride tip-toe on a fast horse.' My feelings toward Jim Stokes were far from being good and noble, but I had had a very healthy stirring up, and the next morning I went to school determined to work at myself, just as people work at 'small potatoes' when they want 'em to grow. 'And how do they work?' I asked myself. 'Hoe, hoe, hoe till they sweat.' I began the work without any delay—began it with all my aversion for books, an aversion I carried even so far as the art of printing. I had often called it the meanest of the arts, and wished that it had never been discovered, because it had introduced the fashion of books. I hadn't really changed my mind at the time. I vowed to pose over them and bone down to them and dig into them; but I had set my face toward one thing, and that was making small potatoes grow large. I did it, too. I reached the highest standard of scholarship in the school—reached it, it's true, as some people reach heaven, 'through much tribulation'; but then I reached it, and had the satisfaction not only of knowing that I was a good scholar, but of knowing, too, that I had forever closed Jim Stokes' mouth, and that he had sung for the last time: 'Oh, potatoes, they grow small over there!'"

It is better to be the founder of a great name than its unworthy survivor. When a marshal of France was reminded by others of the obscurity of his birth, he proudly replied, "I am my own ancestor."

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE.—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHERNOLOGY, and ANTHROPOLOGY, or the GENERAL SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

BOGUS PRIZE CERTIFICATES.

—Inclosed you will find a prize certificate for a seven-shooter silver-plated revolver, valued at \$25, which Messrs. M. & Co., of your city, promised to send on the receipt of \$3 50. I wish you to let the subscribers of your JOURNAL know if any such house exists in New York, and what is the character of said house.

Ans. We have repeatedly spoken of the character of these so-called prize lotteries. The firm you mention, like all of their class, are base swindlers. We again advise our friends not to have anything to do with such firms. When you need a silver-plated revolver, buy one through us, or others, at the regular market rate, and thus make sure of getting your money's worth.

ANGELS.—Is there anything in man's nature which proves the existence of angels?

Ans. Yes, fallen angels. From anything we know of man, there would not seem to be any hint of beings called angels; and it is only through Divine revelation that any such idea is derived. Woman is poetically, and by lovers, called angelic, but she generally has so much of the father's blood, that she is angelic chiefly in looks.

NERVOUSNESS.—How shall I cure nervousness and trembling?

Ans. We have not the space to give all the symptoms and treatment which such a case requires. And it were better for persons to consult some responsible physician in their own neighborhood who knows their habits of life, and who could talk with them and give them extended advice. Three quarters of the nervousness originates in bad habits and bad living, and it is impossible, without knowing a man's habits, to undertake to prescribe. Avoid stimulants, sleep plentifully, and live much in the open air. Avoid exciting novels and social dissipation. If you are nervous you had better not study phonography.

OBSTINACY.—What organs does a very obstinate person have largely developed?

Ans. Firmness with little intellect, or an uncultivated mind. Ignorance and obstinacy usually go together.

LABORERS WANTED.

EDITOR AMERICAN PHRENOLOGICAL JOURNAL: Not knowing whom to address for desired information, I write to you. I wish to know if there is any chance of getting twelve or fifteen men to labor on a farm in this county. I want sober, honest, industrious men, and care not for their politics, their religion, nor their nationality. I will pay liberal wages per month, or will give one half of all the crops made, each party paying half the expenses of growing the same. Union men are as safe here as in New York. The only danger is that a radical Congress may legislate adversely to their interest. Yours respectfully, J. B. C. Woodville, Wilkinson Co., Mississippi.

Ans. We have no fears that Congress will legislate adversely to the true interests of North or South. Noley, blatant demagogues will strut, swell, and swear, to call attention to themselves, making mischief and stirring up strife rather than "minding their business," and thus keep the sections in a broil. Northern men, capitalists, laborers, and mechanics will go South when they feel safe and welcome. But with a "great West" open to them, where "labor is respected, and where person and property are secure," men will run no considerable risks by venturing on inhospitable ground in the sunny South. Settle your political disputes, come under the Stars and Stripes, and declare for the Union of these United States, and the North will go South as well as West, and the whole country be improved.

GRAY HAIR.—What is the cause of people's hair turning gray? I have heard say it is caused by trouble, and I have heard of two or three men's hair turning gray in one night. Also, what is the cause of baldness?

Ans. When the hair is not sufficiently nourished at the roots, it becomes weak, and disposed to fall out or turn gray. See JOURNAL for 1866, for further remarks on the same subject.

LEAVES, AND OTHER GREEN THINGS.—Why do leaves change their color and fall off in autumn when house-plants do not? Is the sun the cause of the beautiful color of ripe fruits?

Ans. This brace of questions we insert to show what questions intelligent adult persons ask us. Without attempting a scientific solution, let us think a moment. Do the leaves fall in autumn from all trees that grow in a climate which has a winter? The pine, the cedar, the fir, the hemlock, and the laurel are exceptions. Then it must be according to the nature of some trees to ripen and cast their leaves in autumn. The color of some leaves is gorgeous because of certain chemical qualities which they possess, and in decay these colors appear. Other trees in the same forest have leaves which quietly turn brown in the midst of maples and oaks which have such richly colored leaves. House-plants cast their leaves when they are ripened, but not all at once in autumn, like outdoor plants, and these are natives of warm climates, hence they must be kept indoors. The sun does not make all fruits of beautiful colors. The color depends on the kind of fruit. The sun is primarily the cause of all vegetable growth, and secondarily of the color of fruits.

What class of women make the best wives for professional men?

Ans. Those who have a good stock of health and common sense. It is not desirable or profitable for their domestic welfare that the wife of a lawyer, clergyman, physician, or editor be a "blue-stocking," but she should have a sufficient education to appreciate literature and the nature of her husband's calling, so as the

better to afford him that true sympathy which will encourage and strengthen him in difficulty. We have known more than one happy alliance where the wife was uncultured but sensible, while the husband was of superior intellectual mold; the former was a good housekeeper, an excellent mother, and an affectionate wife—what man could ask for more?

EYEBROWS, ETC.—1. What is indicated when the hair grows on a lady's nose, between the eyebrows? 2. What is the secret of successful local advertising? 3. Is there anything in the philosophy of proper names to indicate or detect their correct or incorrect orthography?

Ans. 1. It indicates a strongly masculine character, i. e., much will-power and executiveness. It is said by some to indicate irritability of temper. 2. Tact and intelligence. 3. Yes—much; see some good dictionary of proper names.

"A true friend to the cause of health," Brooklyn, did not give us his name. Our January number had been on press ten days before his note reached us.

MAGNETISM.—Are there any beneficial results to be derived from putting in practice the theory of sleeping with the head to the north? Do you believe there is anything in it?

Ans. If a bar of iron by being placed horizontally north and south becomes in a few years polarized by the natural currents of the earth's magnetism, we see no reason why sleeping with the head to the north should not have a favorable effect on the brain.

HEART DISEASE.—What is heart disease, and in how many ways does it manifest itself? What are the influences and results to and on the person having it? Is it curable, and by what means? By answering which, fully, you will very much oblige your subscriber and friend.

Ans. Heart disease exists under a great variety of forms, to explain which "fully" would require many pages of the JOURNAL. The heart is more often diseased functionally than organically. The use of coffee, tobacco, spices, alcoholic liquors, unnatural or excessive sexual excitement are the most common causes of the functional derangement of the heart. Organic disease of the heart exists under many forms, such as ossification, abscess, induration, atrophy or wasting, aneurism, and many others. The treatment we can not enter upon at length, but temperance, healthful exercise, and such treatment as tends to promote general health, are the best that can be recommended. Nine out of ten of those who are troubled with palpitation and spasmodic and rheumatic derangement of the heart would be cured by bathing, exercise, plain food, and the avoidance of coffee, spices, tobacco, and stimulants generally.

COLOR OF THE HAIR.—Are the so-called hair restoratives injurious in their use? composed, as I suppose they all are principally, of sugar of lead and sulphur. If so, in what way are they so? Would you recommend a person forty-five years of age, whose hair has been growing gray for five or six years, and now changing to white, as white as the hair of a person eighty years old, to use any of the so-called restoratives. Some say the use of them causes neuralgia in the face and gradually injures the sight. Is it so? Please answer one who is perplexed.

Ans. Be true to nature—put on no false colors; you will be just as good, and as much loved, with your complexion and the color of hair nature gave you, as with anything art can give. Be kindly, be honest, be loving, be humble, be good, and you will be happy, no matter what may be the color of your hair.

EXERCISE OF BRAIN.—Should the brain be exercised at regular intervals in order to its highest and most healthy development?

Ans. We have no doubt that periodicity is one of nature's laws, applicable alike to brain-culture and culture of muscle. Even plants grow by periods. Rose-bushes and geraniums will shoot up rapidly, and then stop growing at the top and begin growing at the roots. When a new set of roots are developed, the top takes a fresh start, and so on alternately. Health is best promoted if we eat, exercise, and sleep at particular times respectively.

THE TREATISE ON THE ORGANIC LAWS has been out of print for several years. We can obtain three or four copies, at \$1 50 each.

THE SKULL.—Does the internal surface of the skull correspond with the external?

Ans. Yes, generally, except in malformations, this is the case. Greater activity of one organ of the brain sometimes makes the skull thinner in one part than in another, and the reverse. A thick skull is found over a dull and sluggish brain. It is the brain which gives shape to the skull, and not the skull which shapes the brain. As the bark fits the tree, and as the glove fits the hand, so the skull fits the brain.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE NATURAL LAWS OF MAN.

A Philosophical Catechism. By J. G. SPRUELL, M.D., contains answers to the following questions, and a thousand others. One volume, 18mo. Price, in muslin, post-paid, 75 cents. New York: FOWLER AND WELLS.

Many of the questions relating to Phrenology, and its application to the various interests of life, are anticipated and answered in this work. The following are examples: What is the meaning of the word Philosopher? What is understood by Wisdom? What is understood by a Law? What is the signification of the word Nature? What are the characteristics of natural laws as established by the Creator? Are the natural laws conformable to reason? Is the study of man a study of great importance? Is mankind happy? Wherein consists the happiness of man? In what does the misery of man consist? What natural laws of man are vegetative? Does the quality of man's food demand attention? Are the dietetic rules of the Jews of Palestine and of the Egyptians adapted to the nations of the North? What are the laws of marriage? and of hereditary descent? What is Intelligence, or Understanding? What can man know of his own nature? What is Will? How are the intellectual faculties defined? What is Judgment? Is reason a fundamental power of the mind? What is understood by the Passions, and by the Affections? How do sensations become conceptions or ideas? What is actually innate in man? To what extent do extraneous circumstances influence man's actions? What is meant by a universal genius? What are the moral laws of man? What are the advantages of Revelation? Who are Atheists? How far are man's actions free? Is there a natural cause of moral evil? Are there any bad faculties in man? What is man's destiny? Is pleasure good or evil?

Can pleasure be the end or aim of man's existence? How to be happy? What are the Divine Laws? What is Morality? What is man's duty toward his Maker? What effects attend on Celibacy? Is polygamy contrary to moral law? Who should and who should not marry? Is marriage an institution of nature? Is divorce permissible? What are the duties of parents, of children, of husband, and of wife? Is courage in itself either virtue or vice? Has man a right to slay his fellow-men? Is capital punishment admissible in society? Is belief natural to man? Why is man's ignorance so great? Is ignorance despicable? What are the essential requisites for a legislator? Has the phrenologist a right to inquire into religion? What is Religion? What is Polytheism, Monotheism, Atheism? What is the difference between Natural and Revealed Religion? Can God be partial, cruel, jealous, envious, vindictive, or can He contradict himself? Is reason opposed to the belief in Revelation? Should the phrenologist decide about the truth of any religious belief? What is a miracle? What is pure Christianity? and is Phrenology opposed to it? In what does Christian morality exist? What is the "Love of God"? Can any Church become universal and permanent? What should form the groundwork for religion? All these, and a thousand other important questions relative to the natural laws of man, are answered in this excellent work.

THE STORY OF A STOMACH, by a Reformed Dyspeptic. 12mo, paper 50 cents, muslin 75 cents. New York, FOWLER AND WELLS.

A second edition of this work has already been printed. It met at once a welcome audience, among whom we suppose not a few were sufferers from that distressing malady, dyspepsia. The review, almost without exception, noticed it kindly. We give a few extracts. The New York Tribune says:

A piquant contribution to the popular hygienic sciences which is now so much the order of the day is presented in a little treatise entitled "The Story of a Stomach," by a Reformed Dyspeptic. In a vein of dry humor, which seems to have become a second nature with the writer, he gravely relates his experience under the miseries of dyspepsia, and the dietetic methods in which he found relief. He maintains that the duties of the table are of no less sacred importance than those of other human relations, and that they should be embellished by all the appliances of art, so as to be made a source of æsthetic and social delight, instead of ministering to merely sensual gratification. His remarks are founded on the principles of common sense as well as on personal experience, and offer many valuable suggestions, not only to the chronic invalid, to whom daily life is a torture, but to all who wish to find true enjoyment in existence.

The *Christian Intelligencer* says: The author narrates how he abused, then pined, then grew angry at his stomach; how he got the mastery over him, took away his spirits and energy; how he fought with dreadful doses, potions, nostrums, until it almost "quacked;" then how he made friends with it and conquered it by putting confidence in it, and giving it no more mean servile work to do, but treated it as a prudent counselor and a rational companion.

The *New Yorker* says: If its revelation be carefully considered, it holds out assured relief to all sufferers by remedies neither difficult nor disagreeable.

The *Nation* says: Dyspepsia is always among the possibilities, and it may be well enough to read books like this which "a reformed dyspeptic" has written, and learn not only what things are to be done, and what not done, but also see, if possible, how the stomach may be made a source of positive delight to its owner.

The *Cincinnati Daily Gazette* says: The author's record of his experience in curing

his dyspepsia is very well told, and in the main sensible enough for all the afflicted to study and profit by.

The *Christian Advocate* says: This is one of the most sensible treatises upon its subject that we have read. The writer, from his own experience as a self-cured dyspeptic, deduced certain valuable laws of health, following nobody's theory, nor yet framing one. It must be read to be understood.

A SUMMER IN LESLIE GOLD-THWAITE'S LIFE. By Mrs. A. D. T. Whitney, author of "Faith Gartery's Girlhood," "The Gayworthys," etc., with Illustrations by Augustus Hopkin. Boston: Ticknor & Fields. Cloth, \$1 75.

This sprightly volume will prove irresistible to the youthful reader. It relates in just the buoyant style calculated to please, the incidents of a visit to the White Mountains by a young girl fresh from her school-books. The enthusiasm of a thoughtful maiden, for the first time brought in contact with some of the grandest scenes of nature, is portrayed with all the delicacy of a cultivated pen. The book would make an excellent holiday present for any of our girlish friends, although we would by no means advise them to make matrimonial engagements so easily and so early.

HOW NEW YORK CITY IS GOVERNED. By James Parton. 12mo, pp. 48. Price 30 cents. Ticknor & Fields.

A searching review of the *modus operandi* by which this metropolis has been misgoverned and swindled. It would be well for our citizens, one and all, to read this document. Indeed, a fund should be raised by those who wish well to New York to print and place copies in the hands of every citizen. It would beget such a feeling of indignation as would rouse every voter from his apathy and indifference and determine him to do his duty. "How long, O Lord, how long," shall the government of New York be left in the hands and at the mercy of low, bad men? How long must we be subject to the rule of swindlers, thieves, and robbers? Read Mr. Parton's pamphlet, and remain longer passive if you can!

THE BRIDE OF LLEWELLYN. By Mrs. Emma D. E. N. Southworth, author of "Allworth Abbey," "Deserted Wife," "Lost Heiress," etc. Philadelphia: T. B. Peterson & Brothers. Price, \$1 50 in paper; \$3 in cloth.

In light romance Mrs. Southworth has secured a high position. Her narratives are always spirited and vivid, commanding the reader's ready interest from introduction to *finis*. "The Bride of Llewellyn" ranks among the best of the productions of her pen, and unlike most of the wordy novels of the day, it appears to have been written from a good motive, to inculcate a moral. This consideration may serve to compensate for the very apparent exaggeration in some of the incidents portrayed.

AMERICAN LEAVES. Familiar Notes of Thought and Life. By Samuel Osgood, author of "The Heartstone," "Studies in Biography," etc. Harper and Brothers, N. Y. 12mo. Cloth, \$1 75.

These droppings from Dr. Osgood's delicate pen are very pleasant to read and re-read. He writes in no off-hand, sketchy manner, but thoughtfully, earnestly, and what we find in this collection of occasional essays is the product of close observation and reflection. The articles on "American Boys," "American Girls," and "American Nerves" are not considered from a dry, abstract point of view, but from the standpoint of the careful educator and humanitarian. The modifications he would make in the general system of education look to the physical benefit of American youth and

the avoidance of that intellectual precocity in children which is becoming the bane of respectable society. He would have boys be boys and girls be girls, laying up for themselves a good stock of animal vitality which shall sustain them in mature age. We like the views set forth, and it would be well for society did all educated men appreciate the importance of physical stamina to the extent Dr. Osgood appears to appreciate it.

THE DEAD LETTER. An American Romance. By Seelye Regeater. New York: Beadle & Company. Cloth, \$1 50.

A novel, twelve thousand copies of which have been sold in three months, must have some genuine merit in its composition, apart from the gloss which adorns the great mass of modern novels. The new library edition is neatly bound, and illustrated with six full-page engravings, and is cheap in price compared with other 12mo publications. As some testimony of its merit, it may be added that "The Dead Letter" has commanded an extensive sale in England, in a republished form.

THE GIRAFFE HUNTERS. By Captain Mayne Reid, author of "The Deserted Home," "The Ocean Waifs," etc. With Illustrations. Boston: Ticknor & Fields.

Capt. Reid is a most prolific author, and has a department of story-telling quite to himself. His tales of hunting-life are graphic and absorbing. He does not appear to strain his imagination to produce something beyond the real, but writes with the air of "one who has been there," and understands the nature of things. "The Giraffe Hunters" contains a sprightly description of sporting life in Africa, and informs the reader how ivory is obtained there.

THE VOW AT THE BARS, and the Spire that led the Ship Astray. By Rev. Wm. M. Blackburn. New York: National Temperance Society and Publication House. 18mo. Cloth, 50 cts.

This little book, written with all the tenderness of earnest effort to reclaim the inebriate, is a gem in its way. Besides the two life-like narratives specified in the title, there are two others, "The Door in the Heart" and "The Man in the Well," which are sufficiently pathetic to melt even an ice-ribbed heart. Such books as this, judiciously distributed, must avail much toward abating that terrible evil—drunkenness.

THE PROTESTANT EPISCOPAL ALMANAC for the year of our Lord 1867 is a compact statistical record of the Church in the States and Territories. The names of the clergy with their post-office address are given alphabetically, besides statements at length of the condition of the different dioceses. Pp. 104. Price 30 cents.

DAILY COMMUNINGS. WITH GOD. Selected chiefly from the writings of Archbishop Leighton. By Halsted E. C. Cobden, M.A. A book for all Christians. Eighth Edition. Revised and corrected. Fancy cloth, gilt. 16mo. \$1 25.

PETERSON'S PHILADELPHIA COUNTERFEIT DETECTOR is issued on the 1st and 15th of each month. Besides distinctive articles upon forged Treasury Notes and imitations of National Bank Notes, it shows the par value of all notes in every State in the Union, and gives regular lists of all new Counterfeits and Broken Banks. Terms of subscription, for the Monthly issue (per annum), \$1 50; Semi-Monthly (per annum), \$3; single numbers, 15 cents. Terms cash in advance. Peterson & Brothers, Philadelphia, Pa.

AN ILLUSTRATED CHART OF PHYSIOGNOMY, in Map Form, with 57 Engravings. By S. R. Wells. The Chart explaining What is Physiognomy? How to Read the Signs of Character; First Impressions; Temperaments; Faces Classified; Individual Features; Character in Action; General Forms, and What they Mean; Length and Breadth; Broad Heads vs. Narrow Heads; Prominence and Sharpness; Signs of Character in particular Features: the Neck, the Chin, the Jaws, the Mouth, the Ears, the Eyes, the Nose; Physiognomy Practically Applied; Personal Improvement; Matrimonial Hints. With Portraits to illustrate each particular feature. Printed on handsome tinted paper, suitable for framing. Sent post-paid for 25 cents.

OUR SCHOOLDAY VISITOR, a Young People's Magazine of thirty-two large octavo pages, published monthly, at \$1 25 a year, by J. W. Daughaday & Co., Philadelphia, Pa., is one of the most attractive periodicals of the kind, and is certainly one of the cheapest now published. We do not know a better man than the Rev. Mr. Clark, its editor, to cater to the minds of our youth. He has been a practical teacher and an editor from his youth up, thoroughly understands the dispositions of children, anticipates their wants, and supplies them. We advise our readers to send to the publisher, at least for a specimen number of "Our Schoolday Visitor," and judge for themselves of its merits. It is now in its eleventh volume. We give a sample of its contents, under the head of "The Fishes in Convention," in our next number.

SIGNS OF THE TIMES.—There are movements, in the religious world, looking to a union of the Protestant Churches. A new weekly has just been started in Brooklyn, N. Y.—that city of churches—which will represent the new order. We copy the following

BOND OF UNION.

"We, the undersigned, believers in the doctrines of the Holy Scriptures as set forth in the Apostles' and Nicene Creeds, do hereby pledge ourselves to secure, under God, an open communion, and the recognition of one evangelical ministry, by the interchange of pulpits, thus to make visible the unity of the Church.

"And we furthermore solemnly pledge ourselves to stand by each other in securing these ends."

Writers of every denomination, from bishops to laymen, will write for the *Church Union*, which is to be published weekly at \$2 50 per year. Address Publishers Church Union, Brooklyn, N. Y.

THE PROTESTANT CHURCHMAN is a new weekly just commenced in New York in the interest of the Episcopalian. It is a handsome eight-page paper, published at \$4 00 a year, by Messrs. McCalla, Staveland & Co., 633 Broadway, New York.

Sermons by prominent clergymen will be given in the new journal.

THE AMBASSADOR, Universalist, has imbibed the spirit of "progress and improvement," donned a new dress, and secured the best talent of that Church for its editorial chair. The Rev. Dr. E. H. Chapin, the orator and author, will furnish a fresh sermon each week for the *Ambassador*, which will, in itself, give the paper a "lift," and help to place it in the ranks of first-class journals.

THE MASONIC ECLECTIC; OR, Gleanings from the Harvest Field of Masonic Literature and the Kindred Sciences, for January, contains several interesting features in the way of reading matter.

MONTHLIES.—The new juvenile monthly, "The Riverside Magazine," comes out fresh and fair, as might be expected from so well-known a press. The illuminated title page, neat engravings, and simple stories will please young America mightily.

Harper's Monthly Magazine turns over a new leaf for the new year, and for 1867 is well adapted to the general taste.

The Atlantic Monthly for January furnishes a first-class list of writers, and barring the rarity of its theological air, is first-class reading. Jumping from the rare into the dense, we find the *Catholic World*, supported by decidedly superior talent. Its columns are not all given up to religious polemics; but he who dislikes sectarian egotisms will find other matter worthy his consideration therein.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

THE PILGRIM'S PROGRESS FROM THIS WORLD TO THAT WHICH IS TO COME. Delivered under the Similitude of a Dream. By John Bunyan. 12mo, pp. c., 440. Cloth, gilt, \$5 50; morocco, gilt, \$10. (London print.)

THE COTTER'S SATURDAY NIGHT. By Robert Burns. Illustrated by F. A. Chapman. Small 4to, pp. 47. Thick tinted paper. Morocco, full gilt, \$10; cloth, \$5 50.

JENNY JUNE'S AMERICAN COOKERY BOOK, containing upwards of Twelve Hundred choice and carefully tested Receipts. Also, a Chapter for Invalids, for Infants, one on Jewish Cookery, etc. by Mrs. J. C. Croly (Jennie June). 12mo, pp. vii., 343. Cloth, \$3.

UNCLE DOWNIE'S HOME. The Boys and Girls at Donaldton. By Glance Gayford. 18mo, pp. 156. Cloth, 60 cents.

ENGLAND TWO HUNDRED YEARS AGO. By E. H. Gillett. 16mo, pp. 362. Cloth, \$1 50.

EVANGELINE; a Tale of Acadie. By Henry W. Longfellow. With Illustrations by F. O. C. Darley. Sm. 4to, pp. 167. Cloth, gilt, \$3 50.

THE POETICAL WORKS OF H. W. LONGFELLOW. In 4 volumes. 16mo, pp. 318, 268, 251, 373. Cloth, \$11.

THE PROSE WORKS OF H. W. LONGFELLOW. Revised Edition. In 3 volumes. 16mo, pp. 364, 391, 365. Cloth, \$3.

SKETCHES AND TRAVELS IN LONDON, to which are added, Novels by Eminent Hands, and Character Sketches. By W. M. Thackeray. Copyright Edition. Sq. 16mo, pp. 332. Cloth, \$1 50.

Publishers' Department.

THE crowded state of our columns has precluded us from giving to our readers several choice contributed articles which we had intended to serve up for them this month. One, "Visiting the Sick," shall certainly appear in our next issue, and we trust will receive the indorsement it richly merits.

DOUBEAR'S COMMERCIAL INSTITUTIONS.—We regret that a typographical error caused the advertisement of these institutions on the cover of the JOURNAL of last month to read "stiffness, cramping, or tumbling," instead of which it should have been, "stiffness, cramping, or trembling."

Our enterprising friend Mr. Cook, the excursionist and tourist conductor, has recently made extensive arrangements for the transportation of those who intend visiting the great Paris Exposition. He has been authorized by the French Emperor, who has furnished a large block of new building for the purpose, to provide for those who travel with his

tickets, comfortable apartments at a moderate charge during their stay in Paris. Guides will also be furnished to Cook's tourists, who will thus be enabled to see Paris and the fair in an effective and satisfactory manner without extra charge. For further particulars, fares, etc., see Cook's circular, procurable at this office.

MR. GEORGE R. BUNGAY, our frequent contributor, is now making a tour through the States of the great West, and will furnish for our columns sketches of distinguished Western characters as he proceeds. We give two such sketches in our present number.

An esteemed correspondent, residing among the Pine Hills of Georgia, writes us very favorably of the feelings of Georgians toward Northerners who have settled among them, or who propose to settle among them. Georgia, for either agricultural or manufacturing enterprises, is one of the finest States in the South. The climate is mild and equable. We rejoice in this happy state of affairs in Georgia; but we have heard from one or two other Southern States recently, that their social status was not in all respects congenial to the Northern immigrant. We trust that before long all animosity and all bitterness in every portion of the country will give way to mutual friendship and genuine sympathy. The sooner social harmony is established, the sooner will substantial advancement commence in those things which constitute a state's prosperity and happiness.

PREMIUMS.—Many friends write asking us to extend the time for closing up. One says: "Extend the time till April, and I can make up a club of one hundred;" another says: "I can give but a portion of my time to the work, and have not thus far accomplished all I have hoped to do. Give me till March, and I will have a club large enough to secure a piano for my wife." Others ask for more time on account of the difficulty of "getting around" among the neighbors during the frosty and snowy season. In view of all these circumstances, we have concluded to furnish the JOURNAL at the rates named in the January number, including premiums, up to the first of May. A list of *Thirty-five* subscribers at \$5 each, secures to the getter-up of the club a Fifty-dollar Wheeler & Wilson sewing machine. Remittances may be safely made through the express companies, by post-office orders, or by checks payable to the order of Fowler and Wells, or to S. R. Wells, New York.

PLANT TREES.—We would call the attention of readers to the advertisement of Messrs E. G. Evans & Co., York, Pa., relating to fruit and ornamental trees, shrubs, vines, etc., in our present number. Send stamps for catalogue.

GOOD PENS, INK, AND PAPER are necessary for good writing. Poor materials, rusty pens, pale ink, and coarse, slaty paper are unfit for any writing. Letters written in pencil—which we had rather be excused from reading—reflect no credit on the writer, and occasion much delay and vexation. Many errors and losses occur by carelessness in these things. Clear, short, well-written letters, with post-office, county, and State given, properly signed by the writer, are sure to get prompt attention, while the more wordy and indistinctly written epistles lie over. Our correspondents who

have read the hand-books *How to Write, How to Talk, How to Behave, and How to Do Business*, write right; many who have not read them, write wrong, and then find fault with us when they are themselves to blame. "Uncle Sam" miscarries sometimes; gets blocked up by snow-storms, run into rivers, or burned on railways. But proper care will secure to correspondents prompt attention, with the aforesaid extraordinary exceptions.

General Items.

COMMERCE OF THE UNITED STATES.—The annual value of our trade with England and her North American Colonies amounts to something like \$500,000,000 per annum; and if we take the average time of passage between England and America at about fourteen days, we may say that something like \$30,000,000 worth of property are at any given moment afloat between England and America. On an average 9,000,000 cwt. of wheat or wheat flour is exported to England from America, or about 35 per cent. of the whole of the wheat and wheat flour brought into England, while importations of raw cotton used formerly to be 80 per cent., and are now something short of 30 per cent. America is producing materials with which to feed and clothe our Old Country cousins. When our coal, iron, copper, lead, silver, and gold mines shall be fully developed, we can supply the world not only with food and clothing, but with fuel, and the precious metals as well. Isn't it comforting to be an American?

AN IMPOSTOR.—A fellow announcing himself as "Professor," issues a show bill, proposing to lecture on Phrenology, Physiognomy, Mesmerism, Psychology, and Fortune-Telling. He advertises also as a "Practical Physician for healing all kinds of Diseases." Of course he is simply an impostor, totally unworthy of attention.

HOW TO GET UP A MONEY PANIC.—Let all the long-faced, dyspeptic, desponding, tobacco-chewing, whisky-drinking "miserable sinners" who edit low newspapers, start a prediction that everything is going to smash, because they happen to be out of office, and all the silly stupids echo the cry, and lo, the panic comes! We are an excitable, scary people, and our fears are easily worked up by designing knaves.

HOW TO HAVE CLEAN CLOTHES.—In Belgium and Holland linen is prepared beautifully, because the washerwomen use refined borax instead of soda, as a washing powder. One large handful of borax is used to every ten gallons of boiling water, and the saving is said to be one half. For laces and cambrics an extra quantity is used. Borax does not injure the linen, and it softens the hardest water. A teaspoonful of borax added to an ordinary-sized kettle of hard water, in which it is allowed to boil, will effectually soften the water.

NOT READY.—We could not get portraits of all the members of Congress and Railway men, composed our great excursion party to the top of the Rocky Mountains, in time for the present number. A pressure of business prevents one from sitting; modesty prevents another, and so we are kept waiting. If patience and perseverance will secure the end desired, we will have them some time.

"DO THEY MISS ME AT HOME?"—It is gratifying to learn, through kind letters, that the A. P. J. was "missed" in many families, until the "head center" renewed his subscription. We intend to make our monthly visits indispensable to the happiness of all intelligent, reformatory, progressive families—to make it not only a *luxury*, but a *necessity*.

A LECTURER.—The Rev. Dr. Deems, of North Carolina, is now residing in this city, and preaching every Sunday morning to a congregation in the chapel of the University. Lately he was called to lecture in the Capitol in Raleigh, N. C., and from the criticism of the Raleigh *Sentinel* on his effort, we are led to think him a lecturer of no mean order. He is instructive and entertaining, and very likely to gain the favorable support of the intelligent public. We cordially commend his name to associations seeking lecturers.

We have before us the Annual Report of the New York Central R.R. Company for the year ending Sept. 30, 1886, which gives a clear statement of the condition of that extensive concern. The total amount of paid in capital stock is \$34,801,000. Funded debt, \$14,065,804 34. Total length of road, including branch lines, 555.88 miles. Number of locomotive engines, 276; passenger cars, 292; other cars of all kinds, 5,309. Total cost of road and equipment, \$34,183,811 35. Receipts reported for the year, \$14,596,786 68; expenditures, interest, and rent, \$12,557,771 47; net earnings, \$2,039,014 21, equal to 7.83 per cent. (and U. S. tax) on capital stock.

ASSOCIATION FOR THE ADVANCEMENT OF THE ARTS AND SCIENCES.—On the 18th ult., the annual meeting of the Association for the Advancement of the Arts and Sciences was held in their rooms at Cooper Institute. From a report read by Professor L. D. Gale, it was shown that the operations of the Association during the past year had been very successful. The election of officers for 1887 resulted as follows: President, John H. Griscom; Vice-Presidents, E. Hamilton Davis, Alfred W. Craven, Charles P. Kirkland, and S. J. Prime; General Secretary, Leonard D. Gale; Foreign Corresponding Secretary, Robert M. C. Graham; Domestic Corresponding Secretary, C. F. Hartt; Treasurer, Christopher Z. Wemple; Librarian, John Disturnell; Council, J. W. Richards, Lorenzo Sherwood, Henry O'Reilly, E. M. Barnum, R. H. Williams, Andrew H. Green, John Allen, Jos. B. Varnum, Jr., Harvey B. Lane, John Priestley, Charles A. Macy, Matthew Manry, Jeremiah Loder, S. R. Wells, Wm. E. Hagan.

COST OF ENGRAVINGS.—Ordinary portraits, on block, say six inches square, cost for engraving from \$15 to \$25, depending on how fine they are. Stereotyped or electrotyped copies of such engravings may usually be obtained for about one third the first cost. We pay thousands of dollars every year for engravings to illustrate our works, and will sell to other editors copies of any except such as are copy-righted for special uses.

PHONOGRAPHY, OR SHORT-HAND WRITING.—When writing is a necessity, as in this age it has become to all persons of culture and intelligence, it is certainly desirable to possess the best and speediest means of committing thoughts to paper. Phonography, a strictly philologic and legible system of phonetic

shorthand, provides the means of writing words as rapidly as they are spoken. If you would secure the subtle thoughts that flow into your own mind, or that you feel worth preserving while listening to the spoken thoughts of others, learn phonography. If you are a physician, and would preserve a record of your cases, so that from your accumulated experience you may help to evolve the laws of health and disease, learn phonography. If you are a minister, and would save five sixths of the time you at present employ in writing your notes or elaborating your sermons in full, learn phonography. If you are a lawyer, and would secure the fleeting testimony on which may depend the fortune, life, or honor of your client, learn phonography. If you are a student, and would fully benefit by the oral instruction of your professors and teachers, learn phonography. If you are desirous of qualifying yourself for the useful and honorable profession of a reporter—should your education and abilities in other respects warrant such a determination—learn phonography, for it is not only a lucrative calling, but to young men of talent it is one of the most certain stepping-stones to a position of honor and emolument.—*Ben. Pitman.*

[We concur in the above, and add, that the means by which to learn phonography may be found in a circular sent from this office, on receipt of stamp with which to pay return postage.]

LONG LIFE.—Mr. Andrew Loveland and wife, of Otter Creek township, are perhaps the oldest couple in Mercer County, Pa. Mr. Loveland was born in Massachusetts in the year 1771. His wife, now living, is in her ninetieth year. He has been married twice, his first wife having died over half a century ago. He is father of twenty children, eleven of whom are yet living. His oldest son is still alive, and in his seventy-third year. Mr. Loveland and lady live alone, and do their cooking and work. This fall he made over five thousand shingles, and intends to make sufficient to cover his house. He works, not because he has to, but because he prefers to. He has still an excellent memory, reads the news of the day, and has not used glasses for over twenty-five years. He voted for Gen. Washington the second time he was a candidate for President, and has voted every Presidential election since that time. Of course he is a temperance man.

COCK-FIGHTING has its patrons in the country—England—as well as in town. At a petty sessions of Cheshire magistrates, held on Monday in Deane Forest, two dozen officers, squires, and sportsmen of less degree were summoned, at the instance of the Society for the Prevention of Cruelty to Animals, for taking part in a cock-fighting match at the Peel Hall farm, near Tarvin, on the 28th ult. They all pleaded guilty to one of the charges made against them, and were fined sums varying from \$12 to \$25.—*Illustrated London News.*

[Our dignified English cousins who lament the waywardness of their American children, still keep up the custom of cock-fighting, pugilistic exhibitions, horse-racing, and other gentled sports. They charge us with being little better than North American savages, and on the road to swift and certain destruction. While we candidly admit that certain recently imported American citizens are no better than they ought to be, we can not see that the children of Uncle Sam have fallen far below their virtuous transatlantic kin. In some respects, we think the former the more circumspect.]

"ALL."—We would refer our readers to the advertisement of Mr. D., the agent for B. & Co.'s celebrated Ale. Those who wish to recommend ale to their patients will do well to examine the quality of the article offered for sale by Mr. D.—*Chicago Medical Journal for Oct., 1886.*

Tut, tut, tut, Mr. C. M. J. Arn't you off the track? Is this the course to secure the best interests of the medical profession and the public? In California, seven out of ten of the best physicians have died drunkards! How is it in Illinois?

By the recommendation of bitters and other alcoholic stimulants to their patients, physicians are doing irreparable injury to the bodies and souls of men, women, and children. May God open their eyes to the evil they are doing!

AMERICA IN MINIATURE.—A great national park is to be established in Washington. A correspondent says that it is proposed to make the park a "working model" of the United States—"to delineate, if not to reproduce in miniature, the topography of the continent—to set Huron and Ontario in reduced scale upon a living map some two miles long, not in water colors, but in the element itself—to lead a toy Mississippi, from its baby nursery in the Rocky Mountains, of real rock, through a little continent to a small Gulf of Mexico. The St. Lawrence and the Colorado, and all other great rivers, are to be represented by mimic streams; and without intending any allusion to the exclusion of the States lately in rebellion, all the States and Territories are to be represented, preserving their relative position and proportion. It is proposed that museums shall be erected upon each of these little representative tracts, and that the States and citizens shall be invited to contribute to their cabinets specimens of the natural and artificial productions of the States represented."

This is a grand scheme, and will require considerable ingenuity and labor to carry it out. It would be altogether unique, and a great addition to the attractions of the capital.

Let the thing be done. It would assist in teaching the geography of Uncle Samuel's farm. There are few who can spare the time and money to go over the whole ground, but all would like to see it in miniature.

TEMPER AND HOUSES.—Downing says that a person's temper depends a good deal on the kind of house which he occupies. Downing is right. If you wish to find a cross, crabbed, fretful old fellow, call on some gentleman in the country who lives in a leaky house, unprotected by shade trees. We believe that a dwelling is such a perfect counterpart of the tenant that occupies it, that we think we could tell the residence of a small-souled man by just examining his doorway. Such men always build their stoops without seats. Make a memorandum of it, and when you come across an ample porch, with all the conveniences of shade and comfort, just say to yourself—here dwells a generous heart and a fat kitchen. Knock and enter.—*Country Gentlemen.*

Yes! The Indian lives in a rude but not wigwam; the "border ruffian" in a shanty; the low lout in a hovel; and gipsies and Arabs in tents. Cultivated people build fine houses in beautiful situations, and surround them with shrubs, vines, and trees. They make their homes as beautiful and as happy as circumstances will permit. And this is an evidence of their cultivation, refinement, and civilization.

So should we live, that every hour should die, as does a natural flower. A self-reviving thing of power: That every thought and every deed May hold within itself the seed Of future good and future need.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

TRUTHFUL BATHS. — No. 63 COLUMBIA STREET, BROOKLYN HEIGHTS.

Encouraged by the favor with which the TRUTHFUL BATH has been received, the undersigned is now prepared to make it still more efficient and attractive, by the introduction of various improvements suggested by an examination of similar baths in London, Constantinople, and elsewhere, during a visit lately made to Europe for that purpose.

Pleasant rooms, with board, can be furnished to a limited number of persons, who may desire to avail themselves of the Bath in connection with other hygienic agencies.

CHAS. H. SHEPARD, M.D.

HOURS.—For Ladies from 9 to 12 A.M. For Gentlemen, from 2 to 8 P.M.

MRS. E. DE LA VERGNE, M.D.,
149 CARLTON AVENUE, BROOKLYN.

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT-CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 23th Street, New York City.

HIGHLAND WATER-CURE.—H. P. Burdick, M.D. (Laughing Doctor). See PHRENOLOGICAL JOURNAL, December, '58, and Mrs. Mary Bryant Burdick, M.D., Physicians and Proprietors. Send for a circular. Address ALFRED, Allegany Co., N. Y.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODEONS, AND CABINET ORGANS, the best manufactured, to Let, and rent allowed if purchased. Monthly payments received for the same. New 7-octave Pianos for \$275 and upward. Warerooms, No. 481 Broadway, New York.

HORACE WATERS.

NATURAL HISTORY OF NEW YORK.—Printed by authority of the Governor and Senate of the State of New York. A very important work, and not to be found in the market at any price. We can supply the following volumes, got up in good and substantial binding, and in large quarto volumes, embracing the following subjects:

5. Zoology, by James F. DeKay; 2. Botany, by John Torrey; 1. Mineralogy, by Lewis C. Beck; 4. Geology, by Wm. M. Mather, James Hall, and Lardner Vanuxem; 5. Agriculture, by E. Emmons; 2. Palaeontology, by James Hall. All full of costly Plates and Engravings—19 volumes. Price \$100. FOWLER AND WELLS, 389 Broadway, New York.

THE FARMER'S RECORD AND ACCOUNT BOOK, WITH APPROPRIATE READINGS AND RULES. For Recording Business Transactions, Embracing Family and Farm Expenses, General Accounts, Date of Bills Receivable and Payable, Names of Employees, when their Services Began, when Finished, Price Agreed on per Year, Month, or Day, and Entire Amount, etc. Also, the Number of Acres of each Growing Crop, the Quantity Raised, the Amount Sold, Price per Bushel, Pound, etc., and the Entire Amount of each.

The whole so classified, arranged, and consolidated as to present the result of each year's business transactions in the smallest possible compass, and also so simple that the balance sheet can be easily and correctly adjusted.

Together with Valuable Information for Farmers, Tables of Weights and Measures, Rules, and the Annual Report of Income Required to be made to the Assessor of Internal Revenue.

DESIGNED ESPECIALLY FOR THE USE OF PRACTICAL FARMERS.

Two sizes—alike in the forms, differing only in size—sent by mail, prepaid. Prices, \$4 and \$8.

For sale by FOWLER AND WELLS, 389 Broadway, New York.

NEW PHYSIOGNOMY; OR, SIGNS OF CHARACTER—as manifested through Temperament and External Forms, and especially in the Human Face Divine. With more than 1,000 Illustrations. By S. R. WELLS, Editor of the PHRENOLOGICAL JOURNAL. In three styles. Price, in one volume, muslin, handsomely bound, \$5; in heavy calf, marbled edges, \$8; Turkey morocco, full gilt, \$10. A very handsome presentation book. Address

FOWLER AND WELLS,
389 Broadway, New York.

This work systematizes and shows the scientific basis on which each claim rests. The "Signs of Character" are minutely elucidated, and so plainly stated as to render them available. It is in the delineation of individual character that the system finds its most useful application. The various races and nations are described. The Tontoon, Celt, Scandinavian, Greek, Mongolian, Indian, Patagonian, African, etc., has each his representative. Portraits, in groups, of distinguished persons of ancient and modern times, with biographical sketches and delineations of character, render the work of interest to all. DIVINES, ORATORS, STATESMEN, WARRIORS, ARTISTS, POETS, PHILOSOPHERS, INVENTORS, PUGILISTS, SURGEONS, DISCOVERERS, ACTORS, MUSICIANS, etc., are given. It is an ENCYCLOPEDIA of biography, acquainting the reader with the career and character, in brief, of many great men and women of the past 1,000 years, and of the present—such, for instance, as Aristotle, Julius Caesar, Shakespeare, Washington, Napoleon, Franklin, Hancock, Bryant, Longfellow, Barnes, Irving, Rosa Bonheur, Theodosia Burr, Cobden, Bright, Lawrence, Bolivar, Whately, Thackeray, Dow, Knox, Richelleu, Hopper, Buckle, Dickens, Victoria, Wesley, Carlyle, Motley, Mill, Spencer, Guthrie, Thompson, Alexander, etc. Every feature of the book, where practicable, has been illustrated with neat and finely-executed engravings.

AGENTS WANTED.

PREMIUMS FOR HOURS AT HOME.—For Twenty Subscribers (\$80), a Wheeler & Wilson's Sewing-Machine, at cash price of which is \$55.

Lang's Commentary: For fifteen subscribers (\$45), the three volumes of this great Commentary, post-paid. For five subscribers (\$15), either volume.

HURD & HOUGHTON, Publishers,

459 Broome Street, New York.

* The January number is now ready for delivery, and sent to any address, prepaid, on receipt of 20 cents.

SWARTWOUT'S PATENT METALLIC PAPER FASTENER AND BINDER, for fastening Law Papers, Specifications, Patent Papers, Cloth Samples, Manuscripts of every description; and for binding Magazines, Sheet Music, Newspapers, Periodicals, Pamphlets, etc., etc., of all kinds. Combining Security and Durability with Rapidity and Economy.

This article is designed for fastening papers of all kinds, temporarily or permanently, as may be desired.

The advantages which this mode of fastening presents over all others are as follows:

First—It binds the papers firmly and securely, without fear of their coming apart or tearing out, as in the case with eyelets, ribbon, etc.

Second—It gives additional strength and support to the papers.

Third—It is easily applied, and as easily removed, without injury to the papers.

Fourth—It will bind from one to two hundred pages; by the aid of the Binding Strips, it can be made to bind one thousand.

Fifth—Ribbon and seal can be used with all the sizes, when required; the No. 1 size is, however, especially adapted for it.

Sixth—It presents a neat and ornamental appearance, and is so compact as not to interfere with the smooth folding of the papers.

Simple Cutting Tool and Humerus used on Lever Press, for applying. Sold by all stationers.

(See Illustrated book.)

W. H. SWARTWOUT, 100 Liberty St., New York.

THE Maryland Farmer—a monthly periodical, published by S. SANDS, MILLS & CO., No. 24 S. Calvert Street, Baltimore; devoted to Agriculture, Horticulture, Rural Economy, Household Affairs, and Mechanic Arts.

It is a Reliable and Practical Journal, devoted to the different departments of Field Culture, such as growing Field Crops, Orchard and Garden Fruits, Garden Vegetables and Flowers, Flowers for the Lawn and Yard, Trees and Plants, Care of Domestic Animals, etc., together with all subjects of a kindred nature interesting to the Farmer, Horticulturist, and Household.

The *Farmer* contains 48 double-column octavo pages, with a 4-page cover, making in the 12 numbers, 624 pages—printed on fine paper and clear type.

Published on the first of each month, at \$1 50 per year—or 6 copies for \$7 50—or 10 copies for \$10, and a copy to the getter up of the club. Specimen copies furnished gratis.

THE Ambassador, published at 119 Nassau Street, publishes a sermon from Dr. Chapin every week. Terms \$2 50 a year. Address N. VAN NOSTRAND, Publisher, New York.

WARRANTED GARDEN SEEDS.—We offer a large and complete assortment, which we mail, postage free, at our catalogue rates.

All our seeds are thoroughly tested before offered to customers, and if properly treated are warranted to grow.

Descriptive priced catalogues mailed to all applicants.

Address EDWARD J. EVANS & CO., 21* York, Pa.

MANHATTAN LIFE INSURANCE COMPANY, No. 156 and 158 Broadway, New York. H. Stokes, President; C. Y. Wemple, Vice-President; J. L. Halscy, Secretary; H. Y. Wemple, Assistant Secretary; S. N. Stebbins, Actuary.

Annual Income nearly \$2,000,000.

Important new feature in Dividends and modes of Insurance.

Smallest ratio of Mortality.

Expenses less than any Cash Company.

Liberal modes of payment of Premiums.

Insurers receive the largest bonus ever given.

Dividends made annually on all participating Policies.

NO CLAIMS UNPAID.

All kinds of non-forfeiting Life and Endowment Policies issued.

Policies incontestable.

Loans made on Policies.

All Policies after three years non-forfeitable. 3t

A DELICATE SUBJECT DELICATELY TREATED.—Why Not? A Book for every Woman. By Prof. H. R. Storer, M.D. Cloth, \$1; paper, 50 cents.

Sold by all Booksellers, and sent by mail, prepaid, on receipt of price.

LEE & SHEPARD, Publishers, Boston.

Albums, \$2, \$3, \$5, to 10 00

Address FOWLER AND WELLS, 389 Broadway, New York.

THE PLACE TO GET CLOTHING.—Any person in want of Clothing made in style, of the finest materials, constantly on hand, of the most fashionable kind, at extra low prices, would find it to their interest to call at the old established house of THOS. WILEY, Jr., 515 Hudson Street, corner West Tenth, New York.

THE ILLUSTRATED ANNUAL, REGISTER OF RURAL AFFAIRS FOR 1866 and 1867.—Post-paid for 60 cents. They contain over 250 engravings. Address FOWLER AND WELLS, 389 Broadway, New York. 1t

WOOD'S PARLOR GYMNASIUM for developing and strengthening the chest, lungs, etc. Easily put up, requires but little space, and can be graduated to the use of the strongest man or weakest child. Send for illustrated circular to J. WOOD, Gymnastic Academy, No. 6 East 28th Street, New York. 3t*

LADIES' FREEMASONRY.—Manual of the Order of the Eastern Star, containing Symbols, Scriptural Illustrations, Lectures, etc., adapted to the American system of Adoptive Masonry. By ROBERT MACOY, National Grand Secretary. Beautifully Illustrated. Gilt Edges and Illuminated Cover.

This is the authorized Manual of the American Adoptive rite, the possession of which is a necessity to a clear and proper understanding of the beautiful system of Female Freemasonry. The theory of the Order of the Eastern Star is founded upon the Holy Writings. Five prominent female characters, illustrating as many Masonic virtues, are selected, adopted, and placed under Masonic protection. The Rules for the government of the Order are herein plainly set forth, with complete directions for the elucidation of the several degrees. Price \$1. Sent free of postage, except the Territories. Illustrated Descriptive Catalogues sent on application. Address MAISONIC PUB. AND MANUFACTURING CO., 432 Broome St., New York.

THE COMPLETE PHONOGRAPH; being an Inductive Exposition of Phonography, with its application to all branches of Reporting, and affording the fullest instruction to those who have not the assistance of an Oral Teacher; also intended as a School-book. By JAMES E. MUNSON, Official Stenographer to the Surrogate's Court of New York. 1 vol. 12mo. Price, post-paid, \$3 25. Address FOWLER AND WELLS, 389 Broadway, New York.

NOTICES OF THE PRESS.—"This is the best, and, in most respects, by far the best book on Phonography that has yet been published. It fully justifies its comprehensive title."—*N. Y. Daily Times*.—"Mr. Munson, from ample experience of its use, in a responsible official capacity, is well qualified to explain the character of Phonography, and to set forth its advantages; and the volume which he has now given to the public, for its clearness of statement and fullness of detail, will doubtless take the precedence of all previous manuals on the subject."—*N. Y. Tribune*.—"The labor that has been expended on this work can hardly be realized by a casual glance at it; every sentence and almost every word must have been the subject of discussion, inquiry, and reference. But it has been conscientiously performed as a labor of love, and the benefit will be reaped by those who study it to become reporters, as well as by those who read it to obtain some idea of a curious, useful, and beautiful art."—*N. Y. World*.—"Not only is this the best manual of Phonography with which we are acquainted, but there is no other book upon the same subject which will bear comparison with it."—*N. Y. Citizen*.

THE RAPID SALE OF THE JUBILATE enables the publishers, at this early date after its first appearance, to announce the *Thirtieth Edition* of 1000 each. Price \$1 38. Sent by mail, post-paid. \$12 a dozen. Sold by all Music Dealers. OLIVER DITSON & CO., Publishers, 277 Washington Street, Boston. 1t

PHONOGRAPHIC WORKS.—"Get the best." Graham's Hand-Book, \$2; Graham's Standard Phonographic Dictionary, \$5; Pitman's Manual, \$1; Pitman's Reader, 50 cents; Pitman's Companion, \$1 50. Any one interested in the subject of Phonography, by devoting two hours each day in reading and writing it, would in six months attain the proficiency or capacity of writing one hundred words per minute. Orders promptly filled for both Graham's and Pitman's works by FOWLER AND WELLS, 389 Broadway, New York.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$25 a column.]

THE AMERICAN EDUCATIONAL MONTHLY. Devoted to Popular Instruction and Literature.

Contents for January, 1867.

Now is the time to subscribe. Back number as specimen, mailed free, 10 cents. The January and February numbers, with extraordinary attractions and novelties, now ready. 30 cents each, post free.

0

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[CONTINUED FROM JANUARY NUMBER.]

To BE, contents his natural desire;
He asks no angel's wing, no seraph's fire,
But thinks, admitted to that equal sky,
His faithful dog shall bear him company.*

IV. Go, wiser thou! and in thy scale of sense
Weigh thy opinion against Providence;
Call imperfection, what thou fanciest such,
Say, here he gives too little, there too much;
Destroy all creatures for thy sport or gust,
Yet say, if man's unhappy, God's unjust.
If man alone engross not Heaven's high care,
Alone made perfect here, immortal there;
Snatch from his hand the balance and the rod,
Re-judge his justice, be the God of God.
In pride, in reasoning pride, our error lies;
All quit the sphere, and rush into the skies.†
Pride still is aiming at the blest abodes,
Men would be angels, angels would be gods.
Aspiring to be gods, if angels fell,
Aspiring to be angels, men rebel;
And who but wishes to invert the laws
Of order, sins against the eternal cause.‡

V. Ask for what end the heavenly bodies shine?
Earth for whose use? Pride answers, "Tis for mine;
For me kind nature wakes her genial power;
Suckles each herb, and spreads out every flower;
Annual for me, the grape, the rose, renew
The juice nectareous, and the balmy dew;
For me, the mine a thousand treasures brings;
For me, health gushes from a thousand springs
Seas roll to waft me, suns to light me rise;
My footstool earth, my canopy the skies."

But errs not nature from this gracious end,
From burning suns when livid deaths descend,
When earthquakes swallow, or when tempests sweep
Towns to one grave, whole nations to the deep?
"No," 'tis replied, "the first almighty cause
Acts not by partial, but by general laws;
The exceptions few; some change since all began;
And what created perfect?"—Why then man?
If the great end be human happiness,
Then nature deviates; and can man do less?
As much that end a constant course requires
Of show'rs and sunshine, as of man's desires;
As much eternal springs and cloudless skies,
As men forever temperate, calm, and wise.
If plagues or earthquakes break not Heaven's design,
Why then a Borgia or a Catiline?
Who knows, but He whose hand the lightning forms,
Who heaves old ocean, and who wings the storms,

* Without "fire-water," and without the selfish interference of the bad white man, the Indian is comparatively happy. But he will not readily adopt the manners and customs of civilization and conform. He has little Imitation, little Constructiveness or Invention, little Benevolence; but large Firmness, Self-Esteem, Combativeness, and Destructiveness, with large perceptive and moderate reflective faculties. Our North American Indians have been much wronged, and, except the few who become civilized and absorbed in the whites, are likely to soon pass away and become extinct.

† Men of towering intellects and of the highest culture, unless they be softened by Christian grace, are apt to rush into excesses of rationalism. Certainly topics and subjects enough are furnished by the very nature of man's social and physical condition for the investigation of the most acute understanding; and in the investigation of these, true benefit may result to man. But those who ambitiously leave the sphere of material things and soar into the regions of speculation, are apt to lose themselves in the mazes of infinity, and but "wrestle to their own destruction," and the injury of those on whom their superior intelligence exerts a powerful influence. Faith begins where reason ends. As the reflective faculties, which are peculiar to man, are located above the perceptive—instincts—so the moral or spiritual faculties are located above the reflective, or reasoning faculties. Man is not all instinct, all reason, nor all spiritual, but he combines them all, and each should be permitted to exert its due influence.

‡ Has this any application to our political relations?

Pours fierce ambition in a Caesar's mind,
Or turns young Ammon loose to scourge mankind?
From pride, from pride, our very reason springs;
Account for moral as for natural things:
Why charge we Heaven in those, in these acquit?
In both, to reason right, is to submit.

Better for us, perhaps, it might appear,
Were there all harmony, all virtue here;
That never air or ocean felt the wind,
That never passion discompos'd the mind.
But all subsists by elemental strife;
And passions are the elements of life.
The general order, since the whole began,
Is kept in nature, and is kept in man.

VI. What would this man? Now upward will he soar,
And, little less than angel, would be more;
Now looking downward, just as grieved appears
To want the strength of bulls, the fur of bears.
Made for his use all creatures if he call,
Say what their use, had he the powers of all?
Nature to these, without profusion kind,
The proper organs, proper powers assign'd;
Each seeming want compensated of course,
Here with degrees of swiftness, there of force;
All in exact proportion to their state,
Nothing to add, and nothing to abate.
Each beast, each insect, happy in its own:
Is Heaven unkind to man, and man alone?
Shall he alone, whom rational we call,
Be pleased with nothing, if not blest with all?
The bliss of man (could pride that blessing find)
Is not to act or think BEYOND mankind;
No powers of body or of soul to share,
But what his nature and his state can bear.
Why has not man a microscopic eye?
For this plain reason, man is not a fly.
Say what the use, were finer optics given,
To inspect a mite, not comprehend the heaven?
Or touch, if tremblingly alive all o'er,
To smart, and agonize at every pore?
Or quick effluvia darting through the brain,
Die of a rose in aromatic pain?
If nature thunder'd in his opening ears,
And stunn'd him with the music of the spheres,
How would he wish that Heaven had left him still
The whispering zephyr and the purling rill!
Who finds not Providence all good and wise,
Alike in what he gives, and what denies?*

VII. Far as creation's ample range extends,
The scale of sensual, mental powers ascends:
Mark how it mounts to man's imperial race,
From the green myriads in the peopled grass:
What modes of sight, betwixt each wide extreme,
The mole's dim curtain, and the lynx's beam:
Of smell, the headlong lioness between,
A hound sagacious on the tainted green;
Of hearing, from the life that fills the flood,
To that which warbles through the vernal wood!
The spider's touch, how exquisitely fine,
Feels at each thread, and lives along the line:
In the nice bee, what sense so subtly true,
From poisonous herbs extracts the healing dew!

* The poet has been answering certain general questions adduced by the skeptic, and now takes the five senses in order, asking, first, "Why has not man a microscopic eye?" That is, why was not the eye of man formed to examine the minutest objects? The answer is, because "man is not a fly." A fly has a microscopic eye, but can only take in a small portion of space at a time, but that is sufficient for its small purpose. Man has an eye which can take in a large space, and distinguish objects within it sufficiently for his purpose. Were the sense of touch very acute, we would be startled by the slightest motion, and it would be a source of constant agitation and pain to us. Again, were the nerves which appreciate odors exceedingly sensitive, man would experience much suffering in consequence; and again, all other things being the same as now, were the sense of hearing increased indefinitely, he would be overwhelmed by sounds.

How instinct varies in the groveling swine,
Compared, half reasoning elephant, with thine!
Twixt that, and reason, what a nice barrier;
Forever separate, yet forever near!
Remembrance and reflection, how allied;
What thin partitions sense from thought divide!
And middle natures, how they long to join,
Yet never pass the insuperable line!
Without this just gradation, could they be
Subjected, these to those, or all to thee?
The powers of all subdued by thee alone,
Is not thy reason all these powers in one?*

VIII. See, through this air, this ocean, and this earth,
All matter quick, and bursting into birth.
Above, how high progressive life may go!
Around, how wide! how deep extend below!
Vast chain of being! which from God began,
Natures ethereal, human, angel, man,
Beast, bird, fish, insect, what no man can see,
No glass can reach; from infinite to thee;
From thee to nothing.—On superior powers
Were we to press, inferior might on ours;
Or in the full creation leave a void,
Where, one step broken, the great scale's destroyed:
From nature's chain, whatever link you strike,
Tenth, or ten thousandth, breaks the chain alike.
And, if each system in gradation roll,
Alike essential to the amazing whole;
The least confusion but in one, not all
That system only, but the whole, must fall.
Let earth unbalanc'd,* from her orbit fly,
Planets and suns run lawless through the sky;
Let ruling angels from their spheres be hurl'd,
Being on being wreck'd, and world on world;
Heav'n's whole foundations to their center nod,
And nature trembles to the throne of God.
All this dread order break—For whom? For thee?
Vile worm! O madness! pride! impiety!

IX. What if the foot, ordain'd the dust to tread,
Or hand, to toil, aspir'd to be the head?
What if the head, the eye, or ear, repin'd
To serve mere engines to the ruling mind?
Just as absurd, for any part to claim
To be another in this general frame;
Just as absurd, to mourn the task or pains,
The great directing MIND of ALL ordains.

All are but parts of one stupendous whole,
Whose body nature is, and God the soul;
That, chang'd through all, and yet in all the same,
Great in the earth, as in the ethereal frame;
Warms in the sun, refreshes in the breeze,
Glow's in the stars, and blossoms in the trees;
Lives through all life, extends through all extent,
Spreads undivided, operates unspent,
Breathes in our soul, informs our mortal part,
As full, as perfect, in a hair as heart;
As full, as perfect, in vile man that mourns,
As the rapt seraph that adores and burns;
To him, no high, no low, no great, no small;
He fills, he bounds, connects and equals all.

X. Cease then, nor ORDER Imperfection name;
Our proper bliss depends on what we blame.
Know thy own point: This kind, this due degree
Of blindness, weakness, Heaven bestows on thee.

* Phrenology is the only means by which a line may be drawn between instinct and reason. Animals have only the instinct manifested through the perceptive faculties; man has the same, with reason added—the reflective faculties—and in addition to these he has moral sentiments—denied to all animals—which make him a religious being, allied to angels and to God. Man may be said to have a brain like a house three stories high, corresponding with the kitchen, drawing-room, and chambers; while the animal has a brain with but a single story, and that only a basement. See "New Physiognomy" for a comprehensive article on this subject.

Submit.—In this, or any other sphere,
Secure to be as blest as thou canst bear;
Safe in the hand of one disposing power,
Or in the natal, or the mortal hour.
All nature is but art, unknown to thee;
All chance, direction which thou canst not see;
All discord, harmony not understood;
All partial evil, universal good.
And, spite of pride, in erring reason's spite,
One truth is clear, "Whatever is, is right."*

EPISTLE II.

OF THE NATURE AND STATE OF MAN, WITH RESPECT TO HIMSELF AS AN INDIVIDUAL.

The business of man, to study himself. His middle nature; his powers and frailties, and his capacity. The two principles of man, self-love and reason, both necessary; self-love the stronger, and why; their end the same. The passions, and their use. The predominant passion, and its force. Its tendency in directing men to different purposes. Its providential use, in fixing our principle and ascertaining our virtue. Virtue and vice joined in our mixed nature; the limits near, yet the things separate and evident. What is the office of reason. How odious vice in itself, and how we deceive ourselves into it. That, however, the ends of Providence and general good are answered in our passions and imperfections. How usefully they are distributed to all orders of men. How useful they are to society and to individuals in every state, and in every age of life.

I. KNOW then thyself, presume
not God to scan;
The proper study of mankind is
Man.
Placed on this isthmus of a mid-
dle state,
A being darkly wise and rudely
great;
With too much knowledge for the
skeptical side,
With too much weakness for the
Stoic's pride,
He hangs between; in doubt to act
or rest;
In doubt to deem himself a God or
beast;
In doubt, his mind or body to pre-
fer;

Born but to die, and reasoning but to err;
Alike in ignorance, his reason such,
Whether he thinks too little or too much;
Chaos of thought and passion, all confused;
Still by himself abused or disabused;
Created half to rise, and half to fall;
Great lord of all things, yet a prey to all;
Sole judge of truth, in endless error hurl'd;
The glory, jest, and riddle of the world!†

[TO BE CONTINUED.]

* "Whatever is, is right," is true in the abstract, or in relation to the laws by which God governs the universe. War is an evil in itself, but good may grow out of it. Disease is made a warning against dissipation and improper living, and by some is regarded as remedial. Thunder-storms and earthquakes are counted evils, but who can prove that they are not blessings in disguise? If we would not quarrel with Providence, we must accept the statement, that, "Whatever is, is right."
† Referring to man's two-fold nature, "There is a warring of the flesh against the spirit." The animal propensities against the moral sentiments. The passions crave gratification, which the intellect and the moral sense resist. If a man subordinates the propensities to the moral sense, he is master of himself. Phrenology alone solves the "riddle."

KERI-KERI, AN AUSTRALIAN CANNIBAL.

CANNIBAL OF CENTRAL AUSTRALIA.

OUR readers will be interested in the following sketch of a veritable Australian cannibal. What a hideous countenance! and yet in human form! There are even lower types than this, and more savage. Some of our North American Indians have broader heads, and even less intellect. So among the Hottentots there are lower specimens; and also among the Feejee Islanders, and the Caribs. But this is bad enough! Little can be said of his intelligence. The perceptive faculties seem to be immensely large; but the forehead recedes rapidly; and there is in reality less intellect than is indicated in the picture. There is little space between the ear and eye, consequently little room for those faculties which are more largely indicated in the civilized brain. There would be some mechanical skill, and the necessary faculties to enable him entrap game without the higher order of mechanism. Little can be said of the social nature of this specimen; still less of the moral or religious. He is little more than an animal, and yet he has the same number of bones, muscles, faculties, and organs that the best of us have. But there is evidently work here for missionaries. If they can so manage as to escape the gridiron, they may, in time, produce some good effects on the character of these and other cannibals.

Only a few years ago Central Australia was shrouded in mystery. It was then said that the foot of the white man had never trodden its desolate plains in the far interior. The sad fate of the Burke exploring expedition is well known. The subsequent discoveries of McKinlay, in 1862, while searching after Mr. Burke,

have been of vast importance in giving us an insight into that dread interior. McKinlay and his party discovered numerous indications of the white man's presence in these solitudes—tin utensils, cartridges, wearing apparel, horse-hair, and other relics, together with the skeleton remains of white men. But they could not tell to what party these had belonged. They could not have belonged to Burke, as Mr. Howitt had discovered the remains of his expedition previously. The mystery has never been unraveled. Nothing by which to identify the bodies was found, with the exception of a nautical almanac, bearing date 1858. They were, undoubtedly, the remains of a party of pioneers, of whose movements no one has ever heard.

Mr. McKinlay, however, did more than discover the remains of Europeans. He collected indisputable evidences that these Europeans had been massacred, and that the natives of the district were cannibals, they having confessed to the murder of the party, and acknowledged that they had feasted on the remains of their victims.

From the diary of Mr. Hodgkinson, one of McKinlay's party, we extract the account of their meeting with Keri-Keri:

Oct. 22, Kadhi Bieri.—We had just saddled the horses this morning, purposing to ride some three miles beyond Burke Swamp, when our attention was attracted by some natives walking from the north toward the wurlies where I had found the pannican and canteen. They were five in number, a man and four lubras (women), and did not at first perceive our presence on the lake. The flutter of our blankets, which were hanging on the branch of a tree, at length aroused their fears, and away they posted in the direction from which they had come. Mr. McKinlay, Bulingani (a native), and I were after them at full gallop in an instant, but Bulingani, unaccustomed to such rapid motion, parted with his horse, which still continued the pursuit. In about a mile we two riders, with our three horses, collared the dark individual, and certainly a more expressive subject of mingled fear and rage could not be found. With hanging jaw to show his fear, distended nostrils his surprise, and glaring eye his hate, there he stood, covered by my gun, convulsively twitching his waddy, as if meditating to hurl it at one or other. Bulingani coming up, however, somewhat assuaged his fears, and ultimately forced a maniacal laugh from him. With a few shrill cries he let his lubras know no immediate harm was intended, and forth from their place of concealment came these hideous objects of his solicitude. On being questioned as to the white fellows, he led us to an adjacent sandhill, and without hesitation commenced scratching on a spot from which he brought to view a quantity of burnt horse-hair, used for the stuffing of saddles. He was then taken to our camp, fed, and more closely examined. A wound on his knee attracting our attention, he showed how he had been shot, by pointing to my gun, and carried from the spot on another native's back. Besides the wound on his knee, there was another bullet-mark on his chest, reissuing between the shoulders, and four buckshot still protruding from the center of his back. He corroborated all Bulingani had said relative to the massacre and its cannibalistic dénouement, distinctly

stated that four whites were killed, and ultimately departed, leaving his lubras as a hostage, for the purpose of fetching a pistol in the possession of his tribe.

Kadhi Bieri, named by McKinlay's party Massacre Lake, on account of their finding the remains of murdered white men near it, is described as being a small lake, shallow, but with good water, encircled by a ring of thick box and polygonum scrub, and open at its northwest end, whence its feeder courses through a richly-grassed and wide flat.

RENAN'S AND STRAUSS' LIVES OF JESUS.

In his "History of Rationalism," Mr. Hurst thus sums up the influence produced by Renan and Strauss in their Lives of Jesus.

"Taking the past as a present instructor, we fear no permanent evil from the recent popular Lives of Jesus by Renan and Strauss. These men have written for the masses, and their appeal is to the plain mind. They would portray Christ in such a light that even the least intelligent mind might be brought into living sympathy with his humanity. Now, when their view of him shall have been faithfully answered by presenting his divine character to the common understanding, who will say that the present generation of Christ's skeptical biographers have written in vain? Those authors, having seen the necessity of a popular understanding of Christ, describe him as a man like ourselves. They have written from a wrong stand-point; but if their labors can suggest to evangelical theologians the immediate necessity of a popular view of Christ as our Redeemer, we will not believe that their labors, though exerted for a different purpose, are without good fruits. The people need to perceive clearly the character of Christ—not to look upon him as far off, but near at hand, not to regard him as the cold, indifferent observer of our conduct, but as that Friend who, being our Elder Brother, enters into sympathy with the humblest of his followers, and suffers not a sparrow to fall without his notice."

The author does not apprehend any ultimate disaster from the works of Darwin, Buckle, and others. In regard to the Darwinian theory he says: "Mr. Darwin's theory of development seems to be in outright opposition to the Scriptural account of the animal creation. But there is no occasion for alarm at what he has said, for neither he nor all who think with him can invalidate the truths of Scripture. We should despise no theory that aims at our better comprehension of great truths; for the day will come when science, in its mature glory and strength, shall cast its human master on all the pages of divine truth."

THE PHRENOLOGICAL JOURNAL,

S. B. WELLS, EDITOR,

Is devoted to The Science of Man, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in Choosing a Pursuit, in selecting a Wife or a Husband, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

TERMS.—A New Volume, the 45th, commenced with January (1867). Published monthly, \$2 a year in advance. Sample numbers, 20 cents. Clubs of ten or more, \$1.50 each. Supplied by Booksellers and Newsmen everywhere. Address, Messrs. FOWLER AND WELLS, 889 Broadway, New York, U. S. A.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

THOMAS C. DURANT.

PHRENOLOGICAL CHARACTER.

THIS organization may be likened to that of a highly-bred race-horse, that would, if he could, go "a mile a minute." It is active, wide-awake, restless, impatient, nervous, intense. It is a concentration of the eager, go-ahead spirit. The severest punishment that could be inflicted on such a nature would be restraint. He is lacking in that disposition to take repose which the physical processes of recuperation require. Instead of being made up of coarse material, heavy muscle, and ample adipose tissue, the predominant physical ingredients appear to be chiefly bone, nerve, and tendon. He is, perhaps, as good a specimen of the native American organization as can be found. In build, he is tall and slim, wiry and mobile. The framework is sufficient for a vigorous, long-lived man. The brain is quite large enough for the body, and possesses that intense nervous susceptibility which consumes with great rapidity the nourishment supplied

PORTRAIT OF THOMAS C. DURANT.

by the vital functions. There is, in fact, a lack of vitality, and his danger lies in the direction of premature exhaustion by over-mental action. He should live a very temperate life, if

he would live healthfully and long. There is no mud in this brain; nothing to impede the freest action of the mind.

His Cautiousness, Secretiveness, and Acquisitiveness are only moderately developed. He is almost without the sense of fear, danger, or timidity; has no cunning, or that foxy trait of character which lies low and keeps dark, but is as transparent as daylight itself. He is as free, generous, and open-handed as he is ambitious, enterprising, and venturesome. He has an ample base and a full crown to his brain, which give self-reliance, will, perseverance, and push. He is combative, resolute, and executive. He may listen to criticism, but he will not give much heed to objections.

Intellectually considered, he possesses an intuitive readiness of perception which is seldom equaled. If he does not comprehend the source and all the bearings of a principle, he can trace its application in a line to the end. There are no indications of love for abstract theories or for the marvelous, but the scientific, the definite, and the exact claim his closest attention.

His is an eminently practical rather than a philosophical cast of mind. He is a natural engineer, navigator, explorer; would go to the ends of the earth to carry out a purpose or to gratify a desire which he believed to be practically valuable. Nothing but death could stop him. He is inclined to subordinate all minor matters, all pleasures of the social circle, the love of gain, and the appetite itself to the development of a grand idea. If he fail, it will be owing to the incapacity of others to conceive and carry out his plans.

The hair, skin, muscle, bone, and nerve are more like silk than like hemp or flax; and the whole is tough, wiry, and enduring. The brain is especially developed in the following centers: in the crown, in the forehead, at the perceptive, and at Constructiveness, Comparison, Human Nature, and in the executive elements of Combativeness and Destructiveness. The organs which relate to the affections, which give feeling and ardor to the whole man, are well indicated. Concentrativeness is moderate, hence he is never tedious or prolix, but is facile and versatile. Ideality, Sublimity, and Imitation are fully developed. Veneration, Benevolence, and Conscientiousness are full or large, so is Spirituality; while rather strong Hope—unrestrained by Cautiousness—buoys him up and paints all things in vivid and attractive colors. He will not underrate his prospects, nor pay much respect to admonitions of restraint. He believes in action, agitation, pluck, and boldness, and that all things are possible to the earnest worker.

Notice the features. See how prominent! yes, defensive and belligerent, the nose! How high at the bridge! See how large the nostril! indicating copious breathing power and sprightliness of movement. How large and how expressive the eye! indicating power of expression, ability to say much in few words—if not affluence of statement. He has ability to

acquire knowledge, to receive impressions and to communicate the same. The upper lip is long, corresponding with his strong Firmness and Self-Esteem, while the jaws are long and strong. The chin is prominent and pointed, and the mouth, though not fairly visible in our engraving, is perhaps one of the strongest indications of the powers of this very remarkable man.

BIOGRAPHY.

Thomas C. Durant, M.D., Vice-President of the Union Pacific Railroad, was born in Berkshire Co., Mass., in 1820. What influence the vigorous air of that rugged region may have had in molding his racy and enterprising mental character, it is not for us to say; but doubtless the Green Mountain climate exerted its powerful and animating tendencies in rapidly developing his intellect and in sharpening his inherently quick perception. Selecting medicine and surgery as the field in which he might employ his natural and acquired talents advantageously, he entered the Albany Medical College at the early age of eighteen, and was graduated therefrom with full honors at twenty, receiving his diploma a year earlier than it is customary for medical schools to grant such license. Dr. Durant did not find in the practice of his profession scope enough; his mind yearned for larger fields, more extensive interests, and more comprehensive considerations, and having an opportunity to engage in mercantile life, after but a brief experience of three years as a physician, he accepted it, and became a partner in the firm of Durant, Lathrop & Co., of Albany. The business of this house was very extensive, having branches in Buffalo, Chicago, and New York, with numerous agents at different points, besides owning and employing a large number of vessels for the transportation of merchandise. Their operations were chiefly in flour and grain, and their transactions were conducted on a scale unsurpassed by any other dealers in their line. Mr. Durant had special charge of the New York branch, and shipped very largely to all the principal European ports.

The business was carried on with unexampled success until the breaking out of the French Revolution in 1848. Previous to that time the foreign demand for cereal productions had been very great, and the shipments of Durant, Lathrop & Co. were enormous. Soon after this contingency had been provided for, Mr. Durant directed his attention to railway matters. The knowledge of the resources of the great West, obtained in the course of his mercantile career, made him an earnest advocate of internal improvements, especially in the line of land and water transportation. He appreciated, with all the clearness and foresight of a De Witt Clinton, the importance of bringing the East and the West—the Atlantic and the Pacific—into a closer connection, strengthened by iron bands, and greatly improved commercial relations. He assisted very materially in promoting the interests of the Michigan, Southern, the Bureau-Valley, the Rock Island,

and the Mississippi and Missouri railroads. Exhibiting boldness, sagacity, and tact in manipulating stocks, he became one of the most successful operators of the stock exchange, and invested the greater part of his capital in railroad securities. Interesting himself from the first in the scheme of a great medium of transit from the Atlantic to the Pacific coast, at a time when the project appeared almost impracticable, Mr. Durant cherished and furthered it with all the enthusiasm of his energetic nature. As early as 1853 he was associated in the management of extensive explorations and surveys west of the Mississippi River and among the Rocky Mountains, which undertakings were at his and others' private expense. The government proffering little or no scientific or pecuniary assistance. In 1861 he was active in organizing the financial machinery of the Pacific Railway. He expended much money, time, and skill in negotiating with capitalists and railway authorities, until, in 1862, he paid down three fourths of the subscriptions for the great road, and the enterprise was taken out of the hands of the Commissioners, and the Union Pacific Railroad Company created. From 1862, the history of this great undertaking is too well known to require detailing at our hands. Under the superintendence of Mr. Durant, the construction of the road has rapidly advanced. The Company built two hundred and forty-five miles of track in one hundred and eighty-two working-days—a feat, when the difficulties encompassed are considered, unsurpassed in the annals of railroad construction. The line extends now over three hundred miles west of Omaha, making a continuous railway of over sixteen hundred miles, and it is confidently expected that three hundred miles more will be completed before the fall of 1867, which will bring us in direct railway communication with the Rocky Mountains. Ere long the great band of iron will be completed, and California, now a journey of weeks, will be but a few days' travel from the far-off Atlantic seaboard. The shriek of the iron horse as he threads the Western wild, will awaken into life a civilization and an enterprise to those distant fastnesses never before known, and the rock-ribbed mountains, the theme of so many strange and romantic tales and legends, and which have so many centuries frowned down upon a few painted savages or an adventurous hunter, will be compelled to yield their stores of mineral and vegetable wealth to a numerous population clustering in their very valleys.

PERILS OF RESPECTABILITY.—While open sin kills its thousands, worldly respectability kills its ten thousands; it is an inclined plane of unsuspected danger; it is covered with green grass, yes, enameled with lovely flowers to the very edge of the precipice, ending in eternal ruin. "Why will you spend money for that which is not bread, and labor for that which satisfieth not?"

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

[CONTINUED.]

In regard to Benevolence, Phrenology says that this yearning of the spiritual man must be guided by the intellect, or else unworthy objects of charity will be relieved, or wasteful and ruinous expenditure of money incurred; but the Bible goes farther, and gives us more explicit directions, which must be comprehended by the mind. "Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, they have their reward. But when thou doest thine alms, let not thy left hand know what thy right hand doeth." We thus find all the faculties of the spiritual man are to be guided by the intellect, and that intellect is to be guided by the infallible word of God, and we can easily appreciate the extraordinary force of our Saviour's declaration, "that man shall not live by bread alone, but by every word that proceedeth out of the mouth of God," for that word is exactly adapted to every faculty of man's spiritual nature, and without it, poisonous food will nearly always be provided for the hungering of the spiritual man. The emotional attributes or faculties of the spirit—veneration, faith, benevolence, etc., have their own appropriate functions to attend to, and can never take cognisance of anything else. To learn what the law requires belongs to the intellectual department; hence the extraordinary phrenological precision of Paul's language should be noticed; he says, "For God is my witness, whom I serve with my spirit." This phrase covers the emotional attributes, through which man holds sweet communion with his Maker, and by which his heart is filled with that fervor and zeal which in common parlance is styled "heart religion." But when speaking of the law of God which requires the intellect to apprehend, he says, "With the *mind* I myself serve the law of God." The extraordinary precision of Paul's language accords with and confirms the phrenological exposition of man's organization, and is therefore well worthy of noting, especially as the ordinary metaphysical expositions do not harmonize with revelation, and do not serve to throw light upon the learner's path.

When Paul says, "For God is my witness, whom I serve with my spirit," Phrenology points to the faculties of Marvelousness, or more properly Faith, Veneration, Conscientiousness, Hope, and Benevolence, and says these are the faculties which are brought into requisition when a man serves his Creator, and through their thrilling influences he is elevated and brought into communion with his Maker. Again Paul writes, that with the mind the law of God is served; Phrenology points to the intellectual faculties which enable a man to ascertain what the law of God is, and says most emphatically that they must be called into use whenever any law is given to man by the Creator, or that law can not be obeyed unless accidentally.

Instead, then, of concluding, as some bewildered metaphysicians do, that spirit and mind are convertible terms; if we say that the spirit of man is endowed with the faculties of veneration, faith, conscientiousness, hope, and benevolence through which God is served, and that the mind or intellect is an attribute of the spirit through which it obtains a knowledge of what a man must worship, believe, and hope for, we shall sweep away a large proportion of the obscurities, perplexities, and enigmas which puzzled the brains of those who follow the old-school metaphysics and reject phrenological revelations.

Furthermore we assume—

1st. That the spirit of man is endowed with certain faculties which are called into requisition whenever the Creator is served.

2d. That those faculties, dispositions, desires, longings, hungering and thirsting, or whatever else they may be termed, are blind propensities or yearnings, which call for gratification, just as those of the animal man.

3d. That the intellect, mind, or understanding is an attribute of the spirit of man.

4th. That through the intellect appropriate food is furnished to each one of those faculties of man's spiritual nature.

5th. That such is the intimate union of spirit and body, that the latter furnishes, in the varied developments of the brain, the tools or instruments which the former uses in manifesting in this world the varied faculties of its intellect.

6th. That precisely in proportion *ceteris paribus* to the quality and size of the various organs of the brain, will be the manifestation of intellect through them.

7th. That the appropriateness of the food furnished to the hungering and thirsting of the spiritual man will depend on its source, whether derived from the word of God or not, and the quantity will depend on the capability of the intellect to apprehend and comprehend its truths.

8th. That as the vitality and vigor of the physical system depend not only on the quantity and quality of the food taken into the stomach, but also on the ability of the digestive and assimilative apparatus to properly dispose of what is taken into the stomach, so likewise the vitality and vigor of the spiritual man will depend, not only on the quantity and quality of the food furnished, but also on the amount thoroughly digested and assimilated.

9th. That in consequence of the brain being the organ of the intellect, and also at the very heart of the nervous system, nerves being sent directly from it, and the spinal marrow with all its derivative nerves being merely an appendage of the brain, whenever there is a due appreciation of the glorious truths of God's revelations, and a due digestion and assimilation of them by the faculties of Veneration, Faith, Conscientiousness, etc., the brain, by the ramifications of the nervous system, thrills the individual through with whatever emotions those truths just apprehended by the intellect are calculated to produce, whether of love, hope, joy, fear, etc.

10th. That in consequence of the heart so

promptly responding in its pulsations to the emotions excited by the due appreciation of God's truths by the intellect, the term heart is very frequently used as interchangeable with understanding, or mind, or with some one or the faculties belonging to the group of spiritual organs; hence we are said to understand with the heart, to believe with the heart, etc., though in reality the heart is a mere lump of muscle, and can not possibly perform any intellectual operation whatever.

11th. That the group of animal organs can not possibly take cognisance of anything addressed to the spiritual organs, but call for enjoyment through the flesh, and as these passions must commonly lead us to sin, Paul writes "with the flesh the law of God is served."

12th. If we say that the spirit, with an immortal existence, with its various longings and faculties, to be guided by the intellect, and that intellect to be manifested while in this life through the variously developed organs of the brain, and more especially of the cerebral portion, and that the intellect is to be guided by the infallible word of God—if we say that the spirit thus constituted is the "spiritual man," and

13th. If we say that the soul (the *anima* of the Latins and the *psyche*, *psuche* of the Greeks) is subject to death with its various animal faculties located in the lower portion of the brain, but also requiring for the perfection of its existence the nerves of organic life, and for the perfection of gratification the sensational and motor nerves—if we say the soul thus constituted is the "animal man."

14th. If we say that spirit, soul, and body, intimately united through the medium of the nervous system, the intellectual belonging exclusively to the spirit, which, as before mentioned, operates more especially through the cerebral portion of the cranio-spinal nervous system, while the nerves of organic life are allotted exclusively to the soul; and then again, spirit and soul are more intimately united still in the cranio-spinal nerves of sensation and motion, and thus united, dwell in one body, the "spiritual man" borrowing from the "animal man" the uses of the body whenever it may be necessary, and the "animal man" borrowing in turn the use of the intellect from the "spiritual man" whenever it may be necessary to provide means for his gratification, we shall have an extraordinary insight into the working of the spirit, soul, and body.

And from this elevated stand-point, with a cloudless horizon around us and the glorious light of God's truth beaming brightly on us, we can take into one grand comprehensive view man's nature and history, past and future, from the day when the breath of the Creator first thrilled him with life, to the day when united again to his loving Creator he shall sit down at the marriage-supper of the Lamb.

The above exposition of man's organization will be found to harmonize most remarkably with Revelation, and with well-known facts which fall under our observation nearly every day; while on the contrary, the old-school

metaphysical expositions of man's organization are at war with Revelation, and with well-known facts; and we shall occasionally note some of them to corroborate the above, and also to show the falsity of the common old-school expositions.

For instance, many comments have been made to explain why it is that Moses uses the term *lives*, instead of the singular form, *life*, when speaking of man's creation. "And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of *lives*." None have as yet given general satisfaction; yet it is not strange at all that the plural *lives* should be used instead of the singular, when we consider there were really *two* lives given: the life of the body, subject to death, and the life of the spirit, not subject to death, but enjoying an immortal existence; and it really would have been inappropriate for Moses to have used the singular form, *life*.

[TO BE CONTINUED.]

THE MENTAL TELEGRAPH.

BY DR. R. K. BROWN.

EVERY psychologist knows that instantly succeeding (or even briefer in time than that) every sensation or impression, to which we are alive, there is a state, or "modification" of consciousness, a changed state thereof from what was existing, having a specific relation to the precedent particular or individual sensation or impression.

The determination, by experimental demonstration, of the exact time of this change has been the attempt of numerous observers from Johannes Müller onward, to Douche and Jaeger. The latter has accomplished it in a way that commands our fullest confidence. He has entitled the account of his experiments, "On the Rapidity of Thought and the Determination of the Will."

The first part of the title represents the further and necessarily continued complement of the proof of the subsequent proceeding or act of the wire ensuing upon the consciousness. The reader should bear in mind that *feeling or sensation* is a purely physiological transaction from *without* inwardly, and that the ulterior one, called the "determination of the will," though begotten of a specific state of consciousness of that precedent physiological transaction, yet takes form or distinctive character in a physiological act. It is, therefore, a transaction from *within* outwardly.

By means of an induction shock, *i. e.*, a shock from the induced current of an electric battery, coetaneously with *opening* of the current, and subsequent closure of the same, by pressure of the subject's hand, the latter being the act or will by means of the muscles, Prof. Jaeger accurately estimated the time, *after the sensation*, required for the formation of a consciousness or definite idea of it, and for the expression thereof through the organs of the will, the

muscles. The time was accurately registered by an electro-magnet on a revolving cylinder. The mean time was 26.09 in a second.

In the same way it was ascertained that the time varied slightly, whether the closing by pressure of the hand was done by the right or by the left hand; the difference, however, was very slight.

Again, it was demonstrated that the time varied slightly, whether the closing by pressure with the hand was done by the right or by the left hand.

Again, in cases where the person experimented upon was unprepared to anticipate precisely *where* the sensation would be, and the closing of the circuit which marked the time was effected respectively with the right and left hand, the difference in time of the idea of sensation and the act of will effected by the pressure of the hand which closed the circuit was 0.066° less than in the right hand. In this experiment the apparatus was so arranged, that if the pressure by both hands had been simultaneous, no closing of the current would have taken place. These experiments were made by instruments of touch.

It appears, therefore, from all these experiments, that when a pugilist strikes an opponent first, he can strike his second blow before the stricken person can retort to his *first*; for the first person has not to await the advent of a sensation before the act of will as the second one has to, before he delivers his first blow in rejoinder, and thereafter during the rencounter the first man can always keep one blow ahead of his opponent. This is a decided gain, equivalent to a psychological momentum, and, other things being equal in the parties, may determine in favor of which side the contest terminates.

Precisely analogous would be the cases of two contending armies; the soldiery and position being equal, the attacking party, or the one striking the first blow, has far the best chance of victory.

REAGENTS.—The delicate reagents used in chemical manipulation can scarcely be conceived. To detect the presence of sugar in diabetes, make a solution of the sugar or glucosuria, add a little of the solution of sulphate of copper, and then some caustic potash, and instantly the solution will become red, even if there be only the *ten-millionth* of a grain of sugar present. Compared with the following, however, this is quite rough: Dissolve one grain of silver in a small quantity of pure nitric acid, and then pour this solution of silver into 8,250 gallons of water, or about eighty barrels. When well diffused through the mass, put one drop of this water upon a plate of glass, and touch it with a glass rod previously dipped into pure hydrochloric acid. The drop of the solution will become turbid or milky, indicating the presence of silver, although there is contained in that drop only the *two-hundred-millionth* of a grain of silver.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

ABORIGINAL LEGENDS OF NORTH AMERICA.

BY E. G. SQUIER, M.A.

THE following Indian legends, whatever may be their value in other respects, have the merit of being genuine. They are what they purport to be, lodge stories, still current among the remnants of Indian nations, which the tide of an advancing civilization has swept beyond the Mississippi. Some of them, like "Neahkaybenais, or the Lone Bird," are mere creations of an exuberant fancy, in which "airy nothings" have taken a habitation and a name. But others, like "Manabozho and the Great Serpent," and "The Origin of the Indian Corn," etc., embody in poetical, and almost in fantastic, forms some of the highest conceptions of the Indian mind.

Among the aboriginal families of the United States, the Algonquins—under which designation is included the Delawares, Chippewas, and the New England tribes generally—had unquestionably most vivacity and animation. Not less martial than the Iroquois, their temperament seems to have been more active, their apprehension quicker, and their manners less reserved. Their religion and their legends partook of their national peculiarities. The latter are more imaginative, and have a less somber character than those of most of the Indian families. Some are exceedingly airy and beautiful, and others not without a vein of humor, entirely their own, running through them.

These Indians entertained a distinct idea of a Supreme Unity, a great, beneficent Creator and Preserver; and the inferior beings of their mythology were also, for the most part, beneficent—the friends and protectors of men, constantly warring against, and usually victorious over, the evil beings, the enemies of the human race. Like the pastoral Sabians of Central Asia, they were close observers of nature and its manifestations. In the sun they saw the symbol of that Great Spirit from whom they believed all life proceeded. It was deemed to be his abiding-place, whence he looked down kindly on his Indian children. The Milky Way was the "path of souls," the bright roadway of the dead, leading to the blissful hunting-grounds, the Elysium of the Western world. The fitful Northern Lights (Aurora Borealis) was the "dance of the dead," in which the disembodied spirits of emulous warriors and mighty medicine-men alone participated.

The Mandans believed the sun to be the "Master of Life," and regarded the moon as the residence of "the old woman that never dies"—the goddess of maize and of fruits, "she who wears a white band from the front to the back of her head." She has six chil-

dren—three sons and three daughters—who abide in different stars. The eldest son is the Day, the second is the Sun, and the third is the Night. The eldest daughter is the Morning Star, and they call her "the woman who wears a plume;" the second is the high star which revolves around the pole; and the third daughter is "the woman of the west," the Evening Star. The stars generally they believed to be the souls of the dead, and the rainbow a beautiful spirit that attends the sun. The thunder is the "Lord of Life" when he speaks in his anger.

The Minatarces adored the sun, and denominated the moon "the sun of the night." The morning star, Venus, they deemed to be "the child of the moon." The Great Bear is an ermine, and the Milky Way is the "path of ashes." The thunder is supposed to be the flappings of the wings of "the great bird that lived at the beginning," and the lightning is the glance of his eye, when searching for his prey.* They call the rainbow "the cup of waters," or the "cup of the rain." Once, say they, an Indian caught, in the autumn, a red bird which mocked him. This gave offense to the man, who bound the feet of the bird together with a line. The bird saw a rabbit, and pounced upon it, but the animal crept into the skull of

a buffalo and escaped; and as the line from the claws of the bird described a semicircle in the air, so was the rainbow formed.

The Housatonic Indians, Hopkins says, "believed the sun to be God, or at least the residence of the Deity. They also believed that the seven stars were so many Indians translated to heaven in a dance, and that the stars in Charles' Wain are so many men hunting a bear; that they begin the chase in the spring, and hold it all summer; by the fall they have wounded the bear, and the dripping blood turns red the leaves of the trees; by winter they have killed it, and the fat makes the snow, which, being melted by the heat of summer, makes the sap of trees."

The semi-civilized nations of Central America and Mexico had similar legends, of more or less interest, connected with the planets, the constellations, and the elements, of which space will not permit the recital. If they were collected, so as to admit of comparison, they would open to the world a new view of the aboriginal mind in some of its most interesting aspects.

As a specimen of the first variety of Indian legends, to which allusion has been made, may be adduced the Ojibway story of

NE-SHE-KAY-BE-NAIS;

OR THE

LONE BIRD.

Every one who has looked upon the face of the full moon, has seen there the faint outline of a human form. Many think it is the image of a man, whom they call the "man of the moon;" and some dull people, peering idly through glasses and long tubes, very learnedly protest that there is no man there, and that the outlines which we see are only mountains of scorched and blackened rocks, deep and gloomy caverns, where no life nor verdure is found, and not even a blade of green grass to relieve the utter desolation. But the clear eye of the Indian can penetrate farther than the eye of the astronomer, and the Ojibway hunter and the Ojibway maiden can plainly see in the faint outlines on the disk of the moon the graceful form of the beautiful Ne-she-kay-be-nais, the "Lone Bird," whom the Great Manitou transferred from the lodge of her father to the heavens, where she dwells in the embrace of the moon. The story of the Lone Bird is known to the inmates of every Ojibway wigwam, and thus it was told by Kah-ge-gah-bowh, the "Firm Standing," as, seated beside our camp fire, on the shores of the great Lake, we watched the harvest moon slowly rising from the bright waters before us.

Very many snows ago, before the pale face invaded the lands of the Indians, the Ojibways were great and strong, and numerous as the leaves of the trees. They chased the buffalo on the meadows of the West, they trapped the beaver and hunted the deer in the forest round the great Lakes, and struck the salmon in the rivers that flow from the mountains toward the rising sun. They were feared and respected by their enemies, and beloved by

their friends; the Great Spirit was pleased with his children, and they were happy.

It was then by the shores of Ojibwakechegun, which the pale-faces call Superior, dwelt Wah-bun, the "Dawn of Day," and his wife, Me-ge-seek, the "She Eagle." They had an only child, a daughter, mild as the mourning dove and beautiful as the day. She was tall and graceful as the fir-tree, and her step was like that of the spotted fawn. Her eyes were dark and clear as the fountains in the shade of the forest, and her voice was like the song of the stream in the evening. Very beautiful was Ne-she-kay-be-nais, the "Lone Bird," and though the Ojibways were numerous as the leaves of the forest, and their daughters many and fair, yet among them all was none to compare with the daughter of Wah-bun. From all the villages of the nations came the warriors to seek the favor of the Lone Bird, that they might bear her from the lodge of her father; but she looked coldly upon them all, and it was in vain they recited their prowess in war and their success in the chase. The fame of her beauty spread to the neighboring nations, and the sons of great chiefs brought presents to the lodge of Wah-bun, that they might gain the affection of his daughter; but the heart of the Lone Bird was like the ice of the winter, and the young chiefs were compelled to return, lonely and sad, to their distant homes.

Wah-bun saw the coldness of his child, and expostulated with her; he praised the young warriors, whose bravery and skill he knew and trusted, and he told her that no daughter of the nation had so proud an array of lovers from which to choose a husband. But the Lone Bird laughed aloud when her father ceased to speak, and she asked:

"What care I for the young braves? I love them not. Has not the daughter of the She Eagle her mother to love? Is not the arm of Wah-bun strong? and can he not cherish and defend his child?"

Wah-bun heard the laugh of his daughter, and was silent. But the next morning he went forth from the village of his tribe, and as the young warriors gathered round to ask concerning the Lone Bird, he proclaimed aloud that, at a certain time, they should all gather together on the smooth shore of the lake, and the fleetest of foot should bear her to his lodge. Great was the joy of the young braves, and much of the intervening time they spent in preparation, and in prayers to the Great Spirit that he might give them the swiftness of the prairie deer and the agility of the mountain cat.

When the sun came up on the morning of the appointed day, there was gathered on the shores of the lake a great assemblage, for the news of the race that was to happen had spread all over the nation, and it was known that the beautiful daughter of Wah-bun was to be the prize of the victor. The young men were all there, in their bravest array, painted, and plumed with the feathers of the wild turkey and eagle, and when they moved, the

* This idea of the Thunder Bird was well brought out by a Dacotah chief, Walking Thunder, in a speech addressed to the Indian Commissioner of the United States, at Travers de Sioux, Minnesota, in the month of July, 1851. Nearly a thousand Indians had gathered to the Council, the subject being, of course, a treaty for cession of lands. The time was exceedingly rainy, as indeed the whole season had been, and the Indians were short of food. The Commissioner endeavored to supply their wants, as far as possible, giving out rations of pork, but reserving his beef—a circumstance to which the Indian orator did not fail to make a number of satirical allusions. Early one morning, Walking Thunder came through the rain to the Commissioner's camp, and gave utterance to his complaints as follows:

"This high water is unusual. The Great Spirit does not smile. He growls at us. Something does not suit him. Our corn-fields, where are they? Our young men can not hunt. The powder in our rifles is wet. It will not burn. We kill no game; nothing. Our Great Father has given us little beef and a little corn, since we came to the treaty. But we are poor, very poor. Our ribs may be counted like the poles of a lodge-frame, through the skin. Corn will not grow without sunshine, and if we have nothing to eat, we must starve. Our horses are thin. We thought they could run once; but even Shasta Wasta's [Mr. Tyler's] horse can outrun our fastest buffalo nag. Our dogs are lean, very lean. They are too poor to bark. They howl a little sometimes, but very feebly. We are glad our Father has come up here with a little corn, and a little beef, and it may be, a few slices of pork, for us to eat. We were very hungry, and we are still. The red man is always hungry. The white young men are fat. They look very sleek and greasy. The reason is that the Great Spirit gives them more food. We do not like so much rain; it is more than there is any use of. (Ho! ho!) Our tents are soaked with water. It pains us to have our women loaded down with wet baggage when we travel. We can not bear it. It may be the steamboats drove this flood up the river when they came. The boats brought up a little corn and a little beef, and it may be a slice of pork. They are welcome. (Ho! ho!) Our lodges are peaked; our Great Father's tents are not peaked. The Great Spirit rains on both. But there is too much thunder, and rain, and sharp lightning. We want more beef and less thunder. They say the Great Thunder Bird has dashed his wing upon the head of the Blue Earth River, and broken open a fountain, out of which this freshest comes. It was whispered to me in a dream, that we ought to have a round dance this afternoon. (Ho! ho! ho!) It may save us much thunder, and lightning, and rain. If our Great Father wants to buy our land, we will talk with him about it at a proper time. Our Great Father has several cattle left yet. There is no hurry. Beef is good for the red man, but cookoosh (pork) is not very. If our Great Father's children think so much of cookoosh, why do not they eat it instead of beef? Probably, because, like whiskey, they think beef is not wholesome for us. (Ho! ho! ho!) We will attend the round dance this afternoon, and try to allay the storm, and appease the Evil Spirit. The wing of the Thunder Bird must be broken." (Ho! ho! ho!)

noise of their ornaments was like the fall of the dry leaves in autumn. The old men were there, for they were to judge the race and award the prize. The women, too, were there; the mothers to encourage their sons, and the daughters that they might look upon the young braves of their people and receive their admiration. But nowhere was the Lone Bird to be seen; she sat in the cabin of her parents and wept, for she loved none but her father and mother, and desired not to leave them.

The bounds of the race were fixed, and the judges silently took their places. The young men stood side by side, leaning breathlessly forward, every muscle quivering with excitement, and impatient for the struggle. The signal was given, and they dashed forward like the frightened deer when the hunter breaks from his covert, and with a sound like that of the storm when it breaks over the mountains. But soon it was seen that Me-te-quah, the "Bending Bow," and Mazho-hungk, "Who Strikes the Game," both of whom had long loved the Lone Bird, gained widely on their companions. They were fleet as the wind, but neither could surpass the other, and when they came to the end of the race, the old men could not tell which was the victor. Then it was that the two young braves ran again, but again they came in side by side. Again did they struggle, and still again the old men could not tell which was entitled to take the Lone Bird to his lodge. It was then proposed that they should leap; they did so, but neither could surpass the other the breadth of a hair. They were directed to go into the forest and hunt, and the Lone Bird should be the prize of the most successful. They went, and next day the Bending Bow returned, bearing the scalps of twenty bears that he had slain, and they all cried aloud: "The Bending Bow will bear the Lone Bird to his home!" Just then an exulting shout was heard in the forest, and "Who Strikes the Game," bounding into their midst, also threw twenty scalps of the bear at the feet of the old men.

Then was Wah-bun troubled, for he saw in this hand of the Great Spirit. And he sought his lodge, and there he found his daughter bowed to the ground, and her eyes were red with weeping.

He raised her up kindly, and asked, "Wherefore dost thou weep, my daughter?"

And the Lone Bird answered: "Are you not my father? Is not the lodge of Wah-bun large enough for his daughter?"

Then was the heart of Wah-bun moved; he kissed his child, and he said: "Never shall the Lone Bird leave the lodge of Wah-bun."

And he returned to his people on the shore of the lake, and told them it was the will of the Great Spirit that his daughter should not leave him; and the old men responded: "It is the will of the Great Spirit!" And the young warriors and women all returned to their homes. Then were the eyes of the Lone Bird filled with gladness.

The summer and the autumn passed, and

the snows of winter began to melt, and Wah-bun went forth on the sunny slope of the hill to make sugar. His daughter accompanied and assisted him, and in vessels of bark gathered the sweet juice of the maples.

One day, when the smoke was curling slowly up from her father's fire on the slope of the hill, and the warm sun shone mildly down on the trees, that seem to live beneath its glow, the Lone Bird seated herself on a bare rock and looked around her. And though all was bright and beautiful, yet she was sad. She thought of her father and her mother; they still lived, but their heads had grown gray, and their steps were slow, and she knew that they must soon die. She leaned her head upon her hand, and felt that she was all alone. At her feet the sun had melted away the snow, and the young flowers of spring looked modestly up in her face; and then she saw, for the first time, that they grew in pairs, two on a stem, and that they seemed to lend beauty, one to the other.

"It is strange," said the Lone Bird, "I have never noticed this before; it is very strange!" Just then she heard a merry chirping above her head, and looking up, she saw that the birds were returning from the South, and again spreading themselves through the forests of the North. She saw, also, that they nestled together, two and two, and she exclaimed: "Neither do the birds sing nor the flowers blossom alone!" At that moment swept over a great flight of water-fowl, and with much noise they alighted on the bosom of the lake. She looked as they flung up the spray on their glad wings, and lo! they glided over the water in pairs!

And then the thoughts of the Lone Bird returned to herself again, and she felt her loneliness more than ever. And she reflected on her coldness to the young warriors of her nation, and thought of the reproof of her father, and she said, despondingly: "Oh! I love not, I love not! I am all alone! Alas! why did the Great Spirit fill the breast of the birds with that love which he denies to his daughter?" And she bowed her head and wept.

The Lone Bird sat long, wrapped in her meditations, and when she rose to go home, it was evening. The full moon had just lifted its disk of silver, without a spot to mar its brightness, above the waters of the great lake, upon which the tiny waves leaped up joyously, as if to catch the slanting beams upon their crests. The Lone Bird gazed upon the moon, and her face grew radiant under its mild light, and, stretching forth her arms as if she would clasp it, she exclaimed: "Oh! how beautiful thou art! Would that I had such as thee to love; then would the Lone Bird no longer sorrow in her loneliness."

The Great Manitou heard the voice of the Ojibway maiden, and no sooner had she uttered these words, than he transferred her to the bosom of the moon, where her image is seen to this day.

Great was the lamentation in the lodge of Wah-bun because the Lone Bird returned not;

but when her father lifted his eyes to the Great Spirit in heaven, he there saw his daughter in the embraces of the moon. Then Wah-bun sorrowed no more for the loss of his child.

Many, very many snows have passed, and the Ojibways have become small and weak; the stranger occupies their hunting-grounds, and the graves of their fathers are unhonored; but still the spring comes, the little flowers still blossom on the slope of the hill, the birds nestle together on the budding branches, the wild-fowls toss up the waters on their wings, and still the Lone Bird looks down upon the daughters of her nation, who trace her form in the disk of the moon, and tell her strange story by the light of the lodge fire, in the long nights of autumn.

[TO BE CONTINUED.]

YOUNG MEN.

MANY great men performed their greatest achievements before forty! Alexander the Great died at thirty-three. Napoleon had achieved all his victories at thirty-five. Washington was twenty-seven when he covered the retreat of the British army under Braddock, and not forty-five in 1776. At thirty-three, Jefferson wrote the Declaration of Independence. At thirty, Hamilton helped to frame the Constitution of the United States. At twenty-three, Melancthon wrote the *Loci Communes*, which passed through fifty editions in his lifetime. At thirty-three, he wrote the Augsburg Confession. At twenty-nine, Ursinus wrote the Heidelberg Catechism. Zwingle wrote his chief works before forty, and died at forty-six. At the Disputation of Leipsic, Luther was thirty-five; at the Diet of Worms, thirty-seven. At twenty-seven, Calvin wrote the Institutes. Moses sent young men to spy out the land of Canaan, and Joshua sent young men, as spies, to Jericho. Saul, David, and Solomon achieved their greatest works before they had reached middle life.

John the Baptist and the Apostles did their life-work as young men, and Jesus Christ finished his labors and endured his sufferings as a young man. Not a decrepit, worn-out life, but the warm blood of manhood's morning, did he shed upon the cross for the world's redemption.

FACTS CONCERNING HUMAN LIFE.—The total number of human beings on the earth is computed at 1,000,000,000 (one thousand millions), and they speak 3,064 known tongues. The average duration of human life is 33½ years. One-fourth of those born die before they are 7 years old, and one half before the age of 17. Out of 100 persons, only six reach the age of 60 years. Out of 500 persons, only one attains the age of 80 years. Sixty persons die every minute. Tall men live longer than short ones. Married men are longer lived than the single. Rich men live, on the average, 42 years, but the poor only 30 years. There is a drunkard to every 74 persons.

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

WOMAN'S RIGHTS—AND WOMAN'S WRONGS.

BY JOHN NEAL.

THESE terms are co-equivalents. Each is the measure of the other, like allegiance and protection. Disagree as we may about the *facts*, and the reasonings therefrom, all are ready enough to acknowledge, that denying a right, or abridging, or withholding a right, is of itself a wrong, and may be a wrong of such magnitude as to endanger the whole constitution of society. Have we not found it so already with one form of human bondage?

The great problem—one of the greatest ever propounded to reasonable beings—that which involves the question of man's supremacy and woman's subserviency, begins to be agitated under a new aspect, both abroad and at home. The solution can not long be deferred. The spirit of the age will not brook delay. However men may differ, and conscientiously differ, about the principles involved, or the policy, or the expediency, of righting an acknowledged wrong, it is growing more and more evident, by what we see in our leading newspapers, and in Congress, upon what is called the woman-suffrage question, that we may soon be called forth to decide it for ourselves. In a word, it is a question that can not be overlooked—nor thrust aside—nor trifled with—nor answered by two or three quotations from the Bible—as it has been heretofore, and we might say hitherto, by Statesmen, philanthropists, and theologians.

Reduced to its simplest elements, the question is this: Have women souls?—are they accountable beings? If they have souls, and are accountable beings, why should they not be free as men? Why not allow them to govern themselves as men do, by proxy—that is, by representation? Are all men lawgivers from their birth, hereditary legislators, and rulers in perpetuity? and all women destitute of the qualifications for office, which are so abundant in man?

"There!" said I, throwing down a paper, five or six years ago, from which I had just been reading aloud to my family a report of the proceedings of a Woman's Rights Convention, held somewhere in New York, "there! you see what is brewing; but they have stolen my thunder."

"Well, I don't mind that," said my wife, "if they won't tell where they got it."

Here she represented, without intending to do so, the great body of our worthiest and most intelligent women. To her and thousands like her at the time, all these Bloomerisms were both preposterous and pernicious—unwomanly—and affronting to the holier instincts of woman's nature, if not absolutely shameful and wicked.

But she has lived to change her views; and

not more than two months ago I heard her advocating, with uncommon earnestness, the natural and unalienable right of woman to vote, side by side with her husband, her father, her son, and her brother, subject nevertheless to the same conditions and qualifications. And why not?

I said nothing, for I saw that the generous leaven of thought was astir, and that if she were let alone, she would be quite sure to "work out her own salvation," though it might be "with fear and trembling."

The oldest objection, and that which is most frequently urged to this hour against woman-suffrage, is founded upon her alleged inferiority to man; a false and foolish assumption, for if it were true, it could never be proved, and if proved, it would not affect the question. Having no common standard for both, and the type of womanhood not being the type of manhood, you can no more compare them, with a view to logical results, than you could compare a rose-bush with an oak, the butterfly with a humming-bird, the Apollo Belvidere with Titian's Flora, or the Mississippi with the Rocky Mountains.

But if true, what then? Where is intellect a qualification? or bodily strength? or stature? or moral character? or a special aptitude for public affairs? If a man be not a driveling idiot or a town-charge, if he be neither an outlaw nor a lunatic, nor under age, he is allowed to vote, if the people say so—to become a law-giver by proxy, if not in person, and a President-maker. And why should it not be so with woman?

Give to the word "inferior" what meaning you will, you can not mean that all women are inferior to all men; though you reach that conclusion in a roundabout way, by refusing to them the privileges that men are allowed. Nor can you mean that there are not many women superior to many men, if not to most men. If you do not mean this, to be consistent with yourselves, you should allow *such* women to vote, and to hold office. But enough; the argument, if argument it may be called, is not worth demolishing; and I only mention it here, because I see it revived and urged with great earnestness, though under different disguises, in the Senate chamber of the United States. Because some women are inferior to some men, in some things, or all women inferior to some few men in mathematics, or statesmanship and war, in architecture, eloquence, music, or poetry, *therefore* all men are so superior to all women, that no woman is entitled to representation. What a syllogism! It is in vain that we point them to Semiramis, to Maria Theresa, to Elizabeth of England, or to hundreds who have been distinguished for administrative power; the answer is, Where women reign, men rule? Very true; but *who chooses the men?* Compare the ministry of Elizabeth, chosen by herself, with the mistresses of Charles or of George the Fourth, and you have a sample of what might be urged to show at least woman's *equality* with man, as a governing power.

But, say others—and among them the theologians—the husband is the head of the wife, because by God's ordinance he is to "rule over her." Granted—after marriage, and with certain qualifications, which leave her accountability undisturbed. We treat her as a free agent where she sets for herself; but under English law, and here and there under our law, if she transgress in the presence of her husband, or if she aid and abet him in the commission of a crime, the husband is punished, and the wife goes free—thereby showing that by law a married woman is no longer a free agent, and no longer responsible. But will God sanction these decisions? "God created man in His own image . . . Male and female created He *them*." Is there any distinction of rank here? And when he breathed into them the breath of life, and man became a living soul, how was it with woman? Was there but one soul for both, and that the soul of man?

But are *all* men to have dominion over *all* women, by virtue of this declaration, whether married or unmarried? It would seem so, judging from what we hear every day in courts of justice, as they are called, and in our Senate chambers. *Non sequiturs* are all the rage now, like *chignons*, and might be classed with them, and called by the same name, for they are both *non sequiturs*.

And even after marriage, is the "rule" of the husband without limitation? Is it a blind, absolute despotism, demanding a blind, absolute submission? Is the wife to abandon her convictions at his bidding? to have no opinions, and no conscience of her own? Is her husband to be her representative, and she to lose her *individuality*? that glorious prerogative which God himself appears to reverence in his creatures, since he never allows one man's to merge in that of another, and will not suffer it to be questioned or tampered with, from the beginning to the end of his career, on earth or in heaven—that property which lies at the very foundation of the system, whereby he administers the affairs of the universe? that unshifting, unchangeable center to which all that we know of man's history and hope converges?—that wonderful microcosm we call *self*?

And why in politics, any more than in morals, or religion, or in matters of taste? Where are the limitations? "Saint Paul says so and so," said a man to his wife, who had somehow got an idea into her head that she was not her own husband—not he the wife—that one soul was not enough for both, and that they ought at least to have one soul apiece, with a corresponding conscience, and a corresponding accountability. "That's where Paul and I differ," was her reply. And why not, if the words of St. Paul are to be twisted from their evident signification, to disparage woman's equality, and to establish man's supremacy in everything? Who has declared the bounds, over which the wife's judgment or conscience may not be allowed to pass, if the judgment and conscience of her husband should happen to differ from hers? In other words, is the wife

a responsible being, or is the husband to answer for her misdeeds before the tribunal above, as he answers here sometimes before earthly tribunals? Will God entertain such a plea to his jurisdiction? Will he be likely to defer to the authorities that men cite before the judges of the land? If not, woe to the husband that would enslave, not the body of his wife only, but her conscience and her soul.

Subordination there may be—there is—and there always must be, within certain acknowledged limits. But subordination does not imply inferiority beyond the relationship that exists between the parties. "A man's a man for a' that," and so is a woman a woman for a' that, whether married or unmarried.

"Order is Heaven's first law,"

says Pope.

—"This stands confest,
Some are, and *must* be, greater than the rest."

Granted; but are the smaller, good-for-nothings? Are they nobodies? If so, then of the ten thousand millions that inhabit the earth, only one, and he the greatest (for there can be but one greatest), has dominion over all the rest.

And even if it were a blind, unreasoning submission that God established for the wife, when He said that her husband should rule over her, how is it with the unmarried? And how with the men who are not husbands? Are they to rule over all women, because husbands rule their wives? And is not the argument derived from this brief Scripture, rather too much of a piece with that which seeks to justify another kind of human bondage, even slavery, by the curse pronounced upon Ham?

Does the right of self-government exist only in man? If original and inherent with man, why not with woman? And if neither original nor inherent in all who are endowed with understanding and conscience, how came it to belong to man exclusively? *Because men are the lawgivers.*

Were it otherwise—did women make the laws, or establish governments—the tables might be turned with a vengeance. By the courtesy of lawyers and lawgivers (and almost all lawgivers have been lawyers in the tadpole state), married women are always classed with infants, idiots, lunatics, and persons beyond sea, where their rights are in question. How would the men relish this, if they had women who chose to retaliate, for legislators?

That women are unlike men does not show that women are inferior, or that man is the type, and woman a degeneracy, or a departure. Yet it would seem to be so understood by some of her adversaries. But wherefore such infinite variety? No two of the whole human race are alike. Men do not differ from women more than men differ among themselves, in all the attributes of manhood, character, and purpose. Why such endless variety, therefore, but that our sympathies may be engaged, our affections enlarged and strengthened by exercise, and that we may become tolerant and charitable in matters of opinion, eschewing

prejudice, and cherishing what we call good-fellowship? In barbarous ages, and even among the civilized—like the Romans and Greeks—all strangers were enemies. The Chinese are no worse than were the Hebrews in the great commonwealth of Israel. All the rest of the world were "heathen" to the Jews, as they are "outside barbarians" to the Chinese.

At the beginning, the great human family, after the separation of tribes took place, were strangers. They were like a vast multitude gathered about the base of a mountain whose top was lost in the sky. They were in groups, widely separated, not within speaking distance, and having little or no communication with each other. But in their progress from barbarism to civilization, and from civilization to Christianity, they go up the mountain by tribes, and are brought nearer and nearer together at every step, and often without knowing it, or desiring it, lest their prejudices may be disturbed, until at last they get a glimpse of the great white throne, and begin to feel the glow of universal brotherhood. Shall this great distinguishing power and privilege, founded on man's individuality, be denied forever to one half of the whole human race? or shall they be encouraged and helped, whenever they stretch forth their arms toward the topmost elevation accessible to man?

But we must go deeper, much deeper, and make thorough work of our investigation. A great principle is involved—the very germ of our nationality—the great seal to our character of independence. If we have any real veneration for our fathers, if we have any regard for consistency, how can we refuse to our women the right of representation, so long as we tax them to the uttermost? We went through a war of nearly eight years with a mighty people, to establish the great fundamental principle that representation and taxation should go together.

And when our fathers were told that they had nothing to complain of—that they were *virtually* represented by their brothers, whose interest was *identical* with theirs, what was their answer? The roar of artillery, the bayonet charge, and red-hot thunderbolts. And what then? Why, then, having established the principle for themselves, and for their *sons* forever, they turn round upon their daughters, and wives, and sisters, and mothers, urging the very arguments which they had trampled under foot in their fiery indignation, and declare that one half of their whole population shall be denied the privilege forever, and be doomed to a sort of qualified bondage—only distinguished from slavery, by their not being sold in the public market-place to the highest bidder; not being allowed to share in the government of themselves—to enjoy their own earnings—to acquire or transmit property as men do—and always subject to taxation without representation. And if they seem to be dissatisfied, or stretch forth their hands to us, we ask what they would have. We assure them that they are *virtually* represented, and

by those who can have no interest in wronging or oppressing them—their fathers, and brothers, and sons. We tell them that their interests and ours are *identical*, as if all the interests of any two human beings, with a soul apiece, could ever be identical. But *virtual* representation did not satisfy our fathers; and after it comes to be understood, it will not satisfy their daughters. Already there are signs, both abroad and at home, east, west, north, and south, which can not be mistaken—signs portentous and alarming, if they should be disregarded. Only a few days ago, on motion of Mr. Eaton, the Committee on the Judiciary, in the Senate chamber of Maine, were instructed to inquire into the expediency of so amending the Constitution as to allow *suffrage to females*. And so in other legislative bodies, there are signs of new life.

"But women are never satisfied," say their husbands and fathers, without stopping to ask, "Are *we*?" Let me give an illustration which just occurs to me. Many years ago, in looking over a pile of caricatures at a book-stall in Paris, I lighted upon one representing a husband and wife taking a walk in a heavy shower. The husband wore high boots, a large overcoat with capes, and carried an umbrella, so that the rain poured down upon the shoulders of a delicate-looking woman wearing muslins and thin slippers, and trying to step daintily over the puddle, with her dress lifted to her knees. "*Tu n'es jamais contente!*" says the husband, looking over one shoulder at her, as they plunge forward through the rattling shower. Could a better illustration be furnished for our legislation just now?

"But," say certain of our leading politicians and embryo statesmen, through the newspapers, "what would women have?" Will they never be satisfied? No longer ago than last week I saw, in the *Boston Journal*, a clever essay on the subject, in which the two following arguments were used, which, being new, deserve an answer:

1. Women do not ask for the right of suffrage.

Answer: Very true. As a body, they do not; as individuals, they do sometimes, if not always. They are not sufficiently enlightened. They do not understand well the bearings of the question. They have been so long under bondage, if not to the fear of death, to the fear or being laughed at, of being misunderstood and misrepresented—and *misrepresented*, even more cruelly than they are now.

But if none asked for the right of suffrage, what then? The Chinese women do not ask to be set free from the bandages that cripple their feet, and keep them from gadding; with them, it is a distinction that they are proud and jealous of; they glory in their helplessness and submissiveness to long usage. And why should not our women glory in theirs?

So, too, the Hindoo widow does not ask to be made free from the law that binds her, hand and foot, to the dead body of her husband, and roasts her alive.

But are these good and sufficient reasons for

crippling one hundred and fifty millions of women in China, more or less, and for roasting widows alive in Hindostan?

By far the largest portion of the slaves held in this country—the colored slaves, I mean now—never asked to be delivered from their bondage. But, instead of waiting until they were sufficiently enlightened to understand the question, we set them all free at a single blow, leaving them to *ask* at their leisure.

The boys at Eton and Harrow who were loudest in their denunciation of the flogging system, when it came to the pinch, voted for it, because they wanted their turn. Should this interfere with the proposed abolition of such brutal barbarism?

If it were left for our children to *ask* for education, before they were led or forced into the school, or the meeting-house, what would they know of reading, writing, and arithmetic, and what of algebra, and the higher mathematics, and the sciences, in after life? and what of the Bible? Are we to withhold what we know they are entitled to, what they need, and must have, because they do not *ask* for it? They do not often ask for medicine; but we give it, nevertheless. And whenever they are incapable of judging for themselves—as women are upon the subject of law, as well as about taxation and representation, and the inherent right of suffrage—what is our duty? Are we not bound to judge for them, and to act for them, taking care that the commonwealth shall suffer no wrong? In all other cases we do, and it is not only expected, but required of us, to enlighten the ignorant, to help the helpless, and right the wrongs of all who are deceived or oppressed. Let women understand how much they have at stake in the question of suffrage. Let them be made to see that voting is a bargain, that salaries and wages and employment depend upon the elective franchise, and they will soon ask to have the bandages taken off, and the funeral pyre split up for oven-wood.

2. But, says the *Boston Journal*, "Men do not always vote."

Answer: Very true. A large portion of our people seem to regard the privilege as a tax, the distinction that others are fighting for throughout the Christian world, as a burden, except on great occasions. But then, observe, *they always may vote, if they will*. So, too, they do not always bear arms, nor keep arms in their houses, but they are allowed to do so; deny the right, and a revolution would follow within forty-eight hours.

And this is all we would ask for woman. Allow her to vote—concede the right—and leave her to decide for herself, whether she will exercise the right or not; and if she should prove herself incapable or unworthy, by abusing or neglecting the privilege, the controversy will be ended forever, and we shall have the satisfaction of knowing that we have done all we could for her.

But under this division of our subject, enough. Senator Morrill, one of our ablest and best men, has just been embodying the arguments against woman-suffrage, in the Senate chamber of the United States, with such effect, that he deserves to be answered; and in my next, which will be my last, I propose to answer him—as he deserves. His positions are well taken, and well sustained, but, in my judgment, are both unsound and inconclusive—I do not say unsatisfactory, but unsound and self-destructing.

NO BABY IN THE HOUSE.

No baby in the house, I know—
'Tis far too nice and clean;
No tops by careless fingers strewn
Upon the floor are seen;
No finger-marks are on the panes,
No scratches on the chairs,
No wooden men set up in rows,
Or marshaled off in pairs;
No little stockings to be darned,
All ragged at the toes;
No pile of mending to be done,
Made up of baby-clothes;
No little troubles to be soothed,
No little hands to fold;
No grimy fingers to be washed,
No stories to be told;
No tender kisses to be given,
No nicknames, "Love" and "Mouse;"
No merry frolics after tea—
No baby in the house.

PLAIN WORDS WITH THE BIG BOYS.

BY REV. ALFRED TAYLOR.

ABOUT SLUGGARDS.

It is neither right nor reasonable to suppose that our Creator has made anything which is positively of no use at all. There are many things that seem useless when we first look at them, but on more careful investigation we find some wise purpose in their creation. If we ransack the universe for the most useless thing that is to be found, we find it in the person of the genuine sluggard—a fellow who appears to have no object to live for; who verily lives and has his being, moving in paths of activity only so much as is necessary to get enough to eat; dawdling and idling his time in thankless forgetfulness of the fact that society has a right to expect some service from him, at least in proportion to the amount of good food he consumes; without energy of body, and with only enough energy of mind to care for providing himself with "a little more sleep, and a little more slumber." There is but one good use to which the poor creature can be put, and it is well, occasionally, to catch a first-class sluggard, and show him up, as animals are shown in moral menageries, for a sample of something which every right-minded young man wants to resemble as little as possible. Beyond this degree of usefulness the sluggard has no value, unless it is to be appointed to office by some professional politician who has offices in his gift, and so to be used for stuffing, just to keep other and better men out.

It may be said that the Creator did not make the sluggard in all his sluggishness, exactly as we find him. To what extent laziness is "original sin," and to what extent it is actual transgression, we will not here discuss. That is a theological question, which may be discussed elsewhere by anybody who chooses to discuss it. Suffice it to say that the best of us have a little streak of *lazy* in our make-up. Very few of us are so made as to work merely because we love work. The sluggard is the poor crea-

ture, who never fought against the *lazy* in him, but looked on it as a "lion in the way," and yielded submission to it rather than take the trouble to fight it. The industrious person who has overcome it, has overcome only after long struggles with it, until industry has become a habit and a pleasure.

Solomon must have had some sluggards about him. Most probably they were some of his own immediate relations, whom he did not like to turn out of doors. His energetic disposition would have prompted him to part with any of his officials or servants who might prove to be of the slothful sort. From his allusions to them, and his graphic pictures of their character, in the book of Proverbs, it is easy to see that he had no respect for them. Lazy folks nowadays need not look to his writings for aid and comfort in their laziness. We can almost see Solomon pulling some idle chap's ears, and bidding him to "be quicker, sir!" as he says "he that is slothful in his work is brother to him that is a great waster." How true to the life is his description of the indolent young man waiting for a fortune! "The soul of the sluggard desireth, and hath nothing;" and the addition, by way of contrast, of the man who has toiled for his living, and, spite of obstacles, gained a competency—"but the soul of the diligent shall be made fat." It is not difficult to imagine that we hear Solomon pounding at the door of the snoring laggard, and calling, in a pretty loud voice, "How long wilt thou sleep, O sluggard? When wilt thou arise out of thy sleep?"—and following up his call with the prophetic exhortation, "so shall thy poverty come as one that travelth, and thy want as an armed man!" And when he photographs the drowsy fellow's garden, with its dilapidated fence, its unprofitable crop of nettles and thorns, its generally untidy appearance, its ragged and uncombed proprietor, and his poverty-stricken surroundings, it is enough to make any young man who has brains, eyes, and hands cry out, "O God, save me from being a sluggard!"

Boys, let me tell you of a young man whom I know. A decent-looking fellow he used to be, except for a sleepy-looking pair of eyes, a shuffling gait, and a do-nothing way of getting along. In the morning he snored till breakfast-time, hurrying down stairs just in time to avoid having to eat a cold meal. At school he made it his rule to learn nothing that he could avoid learning, and to do nothing which he was not made to do. He was at the tail end of every class he was in, and had he sat in any seat but the tail seat, it would have brought forth the remark from some of his class-mates, "Hallo! Sleepy, you ain't in your place!" He was turned out of three or four stores, successively, because he was too lazy to be of use to the people who kept them; after which his father undertook the difficult task of "setting him up" in business. But as fast as the father would set him up, he would set himself down and by his indolent habits and miserable inattention to business lose all the capital the old gentleman had generously intrusted him with. At last, in despair, papa said he would set him up

no more, but let him try his hand at paddling his own canoe. Poor fellow! He is too lazy to paddle. He is willing to float along, and he has floated into a "situation." I saw him the other day. Out at elbows, ragged at the knees, shabby all over, he occupies one of the very lowest stations in society. He might have been in good position, respected, esteemed, and with money in his pocket and good clothes on his back. But he did not choose to fight the *lazy* in him, and all his life he will reap the bitter consequences of his easy surrender.

Boys, IT DOESN'T PAY to be a sluggard. IT DOES PAY to fight against sloth, ease, and the disposition to sit down and rest before the work is done. Up with you, and work like men till life's work is accomplished. And when the work is over, and the results of the work are attained, then thankfully sit down to a rest, not of snoring indolence, but of usefulness, benevolence, and sunshiny old age.

THE TEACHER.

NEXT to the parent, the teacher may be said to exert the greatest influence upon the rising generation. In a country of school-houses the teacher is regarded by many as more than priest, more than magistrate; and we venture nothing in the assertion that every man or woman to-day, who was trained in early life either in a public or private school, will recall more facts in connection therewith that have stamped the character and guided the purposes and shaped the future life—will remember more that the teacher has said and done, than perhaps all other incidents and influences combined—save always the admonitions, the affectionate solicitude, the gentle guidance and training of the mother. In using the term mother, we mean not only she who gave birth, but she who was also able to give the motherly culture and instruction. If a mother happen to be vicious, she can do more than all other agencies combined to pervert and mislead her child; and in this article we would be understood as using the word mother in its best sense, as we also use that of teacher.

Giving birth and nursing to the babe does not comprise the whole of motherhood. Teaching a child to repeat its alphabet and to spell and read, is not all we mean by the word teacher. To be a mother is to brood over the child's soul, to feed its opening intellect, to regulate its passions, to develop its powers, and to lead it, if we may so speak, by the heart rather than by the hand. The teacher to a considerable extent takes the place, for the time being, of the mother, and is to love the child, to regard it with the eye of prophecy, to see what it is capable of doing and becoming, and to lead its mind by proper encouragement and assistance to take hold on and appreciate the noble and the true.

We have heard the question discussed, "Whether there should be anything taught in a school besides mere intellectual education?" While in this country it may not be

good policy or at all necessary to teach dogmatic theology and sectarian forms of thought, still we believe that no school ought to exist where the cardinal principles of religion and the purest morality are not explained and inculcated. The real teacher, like the mother, is not confined to the cultivation of the intellect alone, but has a mission to the moral sentiments, to the heart, to the soul; to the social also as well as to the intellectual faculties. The teacher must regulate the passions, must guide and instruct the feelings. The world has suffered too much already from persons educated only in intellect. He who is only thus instructed, having neglected the moral feelings, may become an intellectual giant, but a moral pigmy; and he whose moral nature and passions are not instructed and guided, is the more to be dreaded in proportion as he has the sharper intellectual perceptions, for he is all the more fitted to "scatter firebrands, arrows, and death."

But what particular faculties does the teacher require? In the first place, the teacher should have a good constitution—should be healthy. Unfortunately, many teachers are not healthy, for those who have not an excellent supply of physical power are most apt to adopt a mental pursuit, and as life is adjusted, close study, of all human pursuits, tends most to sap the foundations of health. But when the whole man is educated, in the body as well as in the brain, the teacher may be as healthy as any other person. The teacher, then, should have a plenty of warm blood, an ample endowment of the vital temperament, to produce good-nature and an easy, mellow, pliable spirit. There should be enough of the motive or bilious temperament to give endurance and power, There should be a high order of the mental temperament, to give clearness of thought, vigor of judgment, promptness of mental action, and susceptibility. In short, the teacher should have a first-class temperamental organization, high-toned and strong.

In mental development there should be enough of Combateness and Destructiveness to give courage and energy, and enough of Firmness and Self-Esteem to command the respect of every pupil. There should be courage enough to make the roughest boy feel that his master is present. We do not approve of harsh measures, or of fierceness and force. We simply want the teacher to possess the power, and to impress those inclined to be rude and stubborn that the teacher could, if necessary, subdue them without much effort. Let the spirit of might in the pupil feel that the teacher has more might, and that is all that is necessary. It need not be brandished or shown up.

The teacher should have a good intellect. It is fatal to the teacher's success if the pupil can think faster than the teacher. The teacher should have good reasoning as well as good perceptive power; and there is no man who needs a better memory than the teacher, so that he can carry his knowledge constantly in

mind, ready for use whenever required. Nothing gives pupils a higher appreciation of the teacher than his appearing to know everything; and there is nothing like prompt answers on the part of the teacher to inspire this idea.

There should be a strong endowment of the faculty called Human Nature, in a teacher, to enable him to read the minds and dispositions of the pupils at a glance. There is nothing like knowing whom we have to deal with, in order to secure respect and influence.

The teacher should also have large Benevolence, so that discipline and intelligence may be exercised with kindness.

Authority or governing power is necessary. This arises from a good degree of Self-Esteem and Firmness, which give steadfastness and dignity; and these should be backed up by Combateness and Destructiveness, which give courage and executiveness. These qualities impress the pupil in such a way as to induce obedience without a contest.

The teacher should have a good degree of Secretiveness and Cautiousness, so as to seem to know something that has not been told, and to keep in reserve penalties and pains that have neither been threatened nor shadowed forth. We think it is not well for the teacher to lay down laws and penalties. The penalties, especially, should be kept back, so that the pupil shall never know what kind of annoyance, or pain, or privation will follow an act of insubordination.

The social nature must be large in the teacher, so as to enable him to feel a natural, drawing attachment and affection for the pupils under his care. We can instruct those we love a thousand times better than those we do not love. Besides, we feel an interest in those we love, and awaken in them a corresponding love for us; and when this magnetic connection between teacher and pupil is established, government, instruction, reception, and obedience come as a matter of course. There may be exceptions, but they are few and far between.

The teacher should have a simple style. The Great Teacher in his parables made everything plain and simple to his disciples, and so far as the teacher can imitate the Great Model, in gentleness, kindness, patience, clearness of thought, and elevation of purpose, the greater will be the success. He who can enlist the moral and religious nature of the young, can employ and control all the other powers advantageously.

STUDY OF THE BIBLE.—Looking at the Bible merely as a historical fact; as a power in the world, which has influenced the opinions, and directed the life, and quickened the hearts of millions; which has been inspiration to the greatest minds of the race; which has lifted up nations from barbarism; which has been the spring of that philanthropy which is the boast of our civilization; and which is now the professed guide of three hundred millions of our fellow-men; surely these facts, apart from any consideration of its Divine origin, of its claims to be a revelation from God, demand for it a respectful attention and diligent study.

TRAVEL AND TRAVELERS. BEAR AND FORBEAR.

BY MRS. GEORGE WASHINGTON WYLLYS.

PEOPLE travel as differently as they live. Can not every one number among his friends those who make hard work of life, and again those who enjoy it, and turn it into pleasure, and extract every ray of sunshine out of its prosaic atmosphere? Just so it is in traveling. Your sour-tempered, cross-grained old misanthrope rolls himself in his overcoat, pulls his hat down over his eyebrows, unfolds his newspaper, and woe to anybody short of a regularly badged conductor who shall attempt to interrupt him; while the fair-faced woman behind him enjoys every step of the journey, takes in the lovely bits of woodland, and water-view, and nestling villages, and steep glens, that lie along the iron track like so many living pictures—reads the countenances of those around her, with a never-flagging interest in the great physiognomic volume, and treasures up every incident of the journey for future thought and discussion. Who do you suppose gets the most money's worth for their ticket, old Cross-grain, or his neighbor?

Sometimes we think there ought to be a regular Act of the Legislature to protect the rights and redress the wrongs of our traveling community. Is it *right* for huge, stalwart men to occupy all the seats in the ladies' cabin of ferry-boats, while delicate women and fragile little girls stand? Is it right for them to crowd 'round the red-hot stoves of waiting-rooms, while women stand back by doors and windows and shiver in murderous draughts? Or, again: is it right for women to pile up bandboxes and bundles on the seats beside them, while weary mechanics and toil-worn business men fill the aisles of railroad cars, preferring one extra degree of weariness to the bold undertaking of claiming their own rights?

The truth is, that American women are too apt to presume on the many delicate courtesies awarded them by the opposite sex, and demand as a right what is but a mere matter of option. It is not that we do not *know* better; the trouble is, we so seldom stop to *think*! I have no better right to a gentleman's seat in an omnibus than I have to the five-dollar bills in his pocket, or the piano in his parlor; why, then, should I look at him as if he were an escaped convict, because he does not offer it to me the moment I enter an already over-crowded vehicle? Little courtesies make life very sweet, but no woman should lose her temper because they are occasionally withheld.

Another interesting and not altogether unprofitable study in traveling, is *dress*. Your practiced traveler wears something dark in color, serviceable in material, and, above all, something that will wash and won't spot. But the woman to whom a journey is a rare occurrence, likes to wear her "best things," lace bonnets, vivid shawls, and things appropriate only to a drawing-room! She looks with rather a pitying eye on the plainer guise of

those around her; but by the time her skirts have been well trodden on by hurrying passengers, her bonnet squeezed out of shape by the basket of the enterprising female behind her, and her shawl neatly touched with widening circles of grease from newly-oiled brakes, she views matters from quite a different standpoint!

After all, experience is the teacher from whom we learn most!

Here is the most fitting place for us to lift up our voice against an atrocious habit we have as a nation—that of reading in railroad cars, with the vehicles jumping and jerking and swaying from side to side, and the printed words dancing about the page, with our over-worked and over-strained eyes in reckless pursuit. Take it as an average, every third person is armed with a book, or still worse (on account of bad type and obscure print), a newspaper. Just take note of them, and then afterward reckon up the number of eye-glasses and spectacles in the car. "Put two and two together," and at the end of ten years you may safely double the number! But what is to be done? It's none of your business, nor mine, decides the indulgent Public, if a man chooses to ruin his eyesight!

"I can always judge of people's intellectual caliber," says a would-be student of human nature, "by the books they read in traveling."

Now, this is where our conceited friend is entirely mistaken. We happen to know that one of the Men of the Age—a giant in intellect, a chieftain in the world's battles—laughingly declares that he never travels without one of Eugene Sue's or Victor Hugo's novels, by way of companion. "One's mind can not always be on the tension," he says. And we know poets, philosophers, and scientific men who generally travel with "paper-covered literature" in their coat-pockets! Perhaps this is not strictly according to the theory of consistency, but who ever knew a man who *was* wholly consistent?

"Bear and forbear" is perhaps the best motto that could be inscribed over the doorways of steamboat saloons and cars; for surely there is nowhere so great an occasion for Christian charity and uncomplaining good temper as here. We only wonder that conductors, ticket-agents, and official employees are not canonized after ten years of duty! Just consider the perpetually-recurring trials of their daily life! Remember the fat man who has always put his ticket away safely, "he don't just remember where," and expects the conductor to stand patiently ten minutes, while he rummages the depths of his pockets and turns his portmanteau inside out! Remember the old lady who keeps you waiting while she wants to know just how far it is to Snailstown, and whether twenty-five cents isn't rather too high for her ticket, and when the Company expect to reduce their rates, and whether you are acquainted with Giles Hornby, who used to be a ticket-agent on this road, twenty years ago, when her John used to travel a good deal

on it?" Think of the sharp-visaged old maid who is indignant because you decline to take her torn bills and jagged "currency." Think of the helpless people who have to be helped, and the ignorant who have to be instructed, and the behindhand who have to be hurried up, and the indignant who are to be reasoned with, and the foolish questions which are to be answered, *not* according to their folly! Think of all these things, we say, and then bless the lucky fate that made you a merchant, or a grocer, or a banker, or a rag-picker—*anything* but a conductor or a railroad agent!

"Bear and forbear!" We do not mean you are to allow yourself to be crowded out of your seat by the encroaching elbows of your neighbor, nor to sit patiently by while some silly mamma's darling baby drags wet candy over your broadcloth, or wipes orange-juiced fingers on your wife's dun-colored dress! That would be a little too much for human nature to endure without remonstrance. We simply mean, try, and regulate your conduct in some degree according to the Golden Rule. If children are noisy and disturb the even current of your thoughts, remember the time when you were a child yourself; if the old gentleman in the corner snores too loudly, think of your own white-haired old father at home, and be charitable! We have seen venomous glances directed at the mother of a crying babe in the cars—aye, and from soft eyes, too, that *could* beam with gentle womanly light—that fairly made us indignant; as if the poor, nervous little woman was in any degree to blame—as if she were not already sufficiently worn out and fretted, without being made to feel that she was obnoxious to all her fellow-travelers!

Not many months ago, the sleep of various "first-class travelers" in a night boat was sadly broken by the wailing and crying of a young infant, who, like Rachel of old, "refused to be comforted," and kept its father walking up and down the cabin floor with it all night long. Our readers may very easily imagine the only half-suppressed complaints and comments of the other passengers, who found that sleep was a luxury to be wooed in vain. At length one of the state-room doors opened, and a choleric gentleman thrust forth his head and surveyed the dimly-lighted cabin where the tired-out father was vainly endeavoring to quiet the restless little one.

"I should like to know, sir," said the indignant traveler, "where that child's mother is, and why she is not here, taking care of it, so as to give other people a chance to sleep? This noise is perfectly intolerable!"

The poor, pale father paused an instant in his efforts to still the little wailer, and answered quietly, "Do you wish to know where this child's mother is, sir? Well, I will tell you. She is lying in her coffin, in the baggage-room, at this instant."

There was no word more of complaint, but a silence fell upon all who had been most ready to find fault. The gentleman who had asked the question went back to his state-room, dressed himself, and came out once more.

"Give me the child," he said, "I will take care of it while you lie down and try to get a little rest." And all that night the little creature had volunteer nurses enough for ten babies!

Should we be as ready to criticize our fellow-creatures, if we could always know all the circumstances? There is a deep moral in this little incident, told by a gentleman who was himself present—a moral that should reach us all to "bear and forbear" more than we do.

VISITING THE SICK.

To visit the sick is a Christian duty; and to learn how to make these visits pleasant and profitable to the sick, is another. Will you, kind friends, allow one who struggled with disease upon a couch of pain, while days lengthened into weeks, the weeks to months, and even these to years—will you allow such a one, for the sake of her suffering friends, to offer a few suggestions on this subject?

It is a hard thing when the young heart is glowing with bright hopes for the future, when fancy is painting its most beautiful pictures for the young eyes to gaze upon, to be suddenly stricken down, to see all your bright hopes and plans, all your beautiful fancy pictures, lying in ruins at your feet. It is a hard thing at any time or age to be laid aside from life's busy work, to feel that the world can get along just as well without you, to be shut away from even a ray of God's blessed sunshine, to have the poor body racked with pain, but worst of all to know that long years may come and go ere health can return or death come to relieve. Such chastening does "for a time seem grievous," but through the loving-kindness of a merciful God, it can "bring forth the peaceable fruits of righteousness to them that are exercised thereby."

But aside from the unavoidable suffering from disease, inconsiderateness and thoughtlessness in a sick room have been the cause of much more. How often has the relating of an exciting piece of news in the presence of a sick person undone entirely a physician's work of months! My dear friends, before you start on your errands of mercy to the sick, think of what you are going to say. Do not enter the house all out of breath and tell of a fearful railroad accident or horrible murder. Do not start back and utter an exclamation of surprise if the sick one seems nearer the "shining shore" than when you last saw her. Do not turn to an attendant at the bed-side and ask all manner of questions as to how she came to be worse, etc. It is not pleasant to hear our own sufferings rehearsed.

But above all things else, do not beg to go in a sick-room, and then with a woe-begone expression and a little snuffling stand and "look" at the invalid as though she were on exhibition. This is very provoking as well as ludicrous in the extreme. If you can not command your feelings, you will do but little good in the sick room. A cheerful smile in sickness is often stronger proof of sympathy than tears. Avoid the other extreme. Do not talk and laugh loudly, and say to the patient, "Why, how much better you look! you must be nearly well! You look nearly as well as you ever did," fancying that this is the kind of cheerfulness a sick person needs. You can not deceive us. We sick ones learn to be physiognomists and clairvoyants, and the desired result is never obtained by telling us what we know to be false, and what we know that you know to be false. You can not make us believe that we are well when we are sick, and

all efforts at such deception annoy us. And when you struggle with your feelings, striving for our sakes to bear with you calm, hopeful faces, though your hearts are anxious and sad, when for our sakes your voices are gentle and cheerful, though your souls are burdened, you do not deceive us even then. We are not unmindful of your noble sacrifice, we appreciate the delicacy of your feeling, we respect you for your bravery and strength, we love you for your love and sympathy, proven to us in such a tender manner. We do not want those near who try to make us think that we are better or worse than we really are; that our sickness is all imaginary, or that death will soon end it; but we do want the pure, tender, delicate sympathy that a calm, hopeful, loving spirit always brings us. We want the soothing, blessed influence around us that needs not words to give us strength and patience, and if words are spoken, the tuneful voice that calls a blessing from our hearts.

But we have wandered, and will renew suggestions. When you leave the sick-room for fear that "talking may disturb the invalid," do not sit down in an adjoining room, from which every word can be distinctly heard, and talk steadily for the next two hours; and when you go to "watch" through the night, please do not take a friend with you for company, and after satisfying yourself that the sick one is sleeping because her eyes are closed, commence "whispering," till warming with your subject, which is usually the invalid herself, you reach a pitch about half-way between the buzzing of a swarm of bees and the screech of a steam-engine, and then in the morning tell her friends that she has rested "very comfortably through the night." A long train of sick-room experiences comes thronging into my mind as I write, many of them very painful even now, others assuming only a ludicrous aspect. A few of these incidents, without exaggeration, shall be committed to paper, with the prayer and hope that they may spare some poor sick friend somewhere from a like experience.

Many people seem to have the idea that a person to become very sick must necessarily lose all his senses, especially that of hearing. Just think how entertaining such a conversation as the following, to one lying helpless, without even the power to say "Stop!"

"Do you think she'll ever get well?"

"O no! I shouldn't be surprised at all if she didn't live till morning."

"Do you know what the doctor thinks of her?"

"Well, he didn't say much, but then any one could tell plain enough that he didn't have much hopes of her."

"How do you suppose her mother will stand it? It'll almost kill her, won't it?"

"It'll be a terrible blow. Won't you just look and see if she's warm?"

A pinch of the ear, and a not very tender rub of a hand across the face, brings the comforting exclamation, "Cold! I shouldn't wonder if she never knew anything again!"

But death does not come this time, and weary days and nights pass by, till at last the day of triumph arrives, when the bed for a few moments is exchanged for the arm-chair; and with this day of victory a kind-hearted but very inconsiderate old lady arrives too, to "cheer us up and help wait upon us." Her words of cheer commence in this way. "Well, poor child, you've been sick a long time, haven't you? Your folks must be all clear worn out by this time?" Ah! what a thrust that was. Do not all invalids feel that the cross hardest to be borne in sickness is the knowledge that other hearts must ache for them; that other hands must grow weary in caring for them; that precious lives may be shortened by the effort to lengthen theirs.

"Do you know how much the doctor charges a visit?" is the next inquiry, closing with the remark, "doctors' visits count up in the bill dreadfully!"

Oh, we had almost forgotten about the care, the anxiety, the expense, and our heart was full of hope—the blessed hope of being well again, and of repaying, if possible, all that had been done for us. But back it all comes, and the poor weak nerves can hardly bear the shock. We were not strong enough to reason then, and the thoughts born of these few words fever the brain, till all thought is lost in delirium, and days and nights pass ere consciousness returns. Then over the same road again we have to go, from the terrible prostration, up, up slowly to the day of victory once more.

What do you think our friend said the next time we saw her. To our great astonishment she asked, "Do you really think you'll be insane? I heard that the doctor told some one, that he didn't know but you might be."

We do beg of you never to go to the sick and tell them what people are saying of them. No one can suffer from disease any great length of time without calling forth remarks not pleasant to hear, from those who have experienced but little bodily pain, and were cowards when they did, who have not mind enough to suffer mentally, nor heart enough to have a spark of pure sympathy for those who can, and who are strangers entirely to that quality which "suffereth long and is kind;" and if you hear one who has long been an invalid called "fidgety," "melancholy," "disappointed," "insane," or "lazy," do not think it a kindness to tell the victim.

Those who visit the sick for the purpose of religious conversation and prayer, often from pure motives of giving comfort and doing good, sometimes make sad mistakes. Let not those who visit the sick for this purpose consider it a solemn duty to say all that they had intended to say, even though those who should be their listeners are almost utterly unable from pain and weakness to attend to a word that is said. Never shall we forget a severe ordeal through which we passed one hot summer afternoon, during the fierce burning of three blisters, the pain of which was even yet surpassed by that which they were

intended to cure. A chilly presence in the room caused us to look up, and just inside the door stood a man with whom we had but little acquaintance, but whose missionary spirit had prompted him to pay us a visit. After a few words with another in the room, he suddenly turned and asked, "Are you a professor, miss?" We could not have been more startled had he said, "Have you a cow or a sheep to sell?" so abrupt and business-like was his manner; and in spite of blisters, in spite of pain, in spite of the solemn visage before us, we could not keep from smiling, while the wicked thought suggested itself, "Ask him professor of what?" Question after question followed, then a long lecture upon the duty of bearing afflictions with patience and meekness, after which a very long prayer, the final exercise being the singing of two hymns. It was terrible then, and the recollection is terrible now, so we will turn to a more comforting scene for relief, and also to picture a Christian minister well fitted to offer consolation to the sick and dying.

In imagination to-night we see his peaceful, sunny face and hear his gentle, soothing, considerate words. "I see you are suffering and very weak to-day, so we will not talk much. Remember there is One who careth for you always. He is a precious Comforter. Look up to Him! Grow strong in His strength! Love Him, trust Him, pray to Him! To His love and care I commend you. Good-bye."

We could remember these few words. They left no weariness with them, but taught us to look up more trustingly to the precious Comforter, to lean more heavily upon His strong arm, to pray more earnestly that our afflictions might "work out for us an exceeding and eternal weight of glory."

We do not forget the doctors, and will talk about them another time. HOPE ARLINGTON.

NATHANIEL PARKER WILLIS.

WE condense from the *Tribune* the following interesting accounts of the last moments of this highly esteemed American author: The death of Mr. N. P. Willis, which took place on Sunday evening, January 21st, at his residence, Idlewild, on the North River, although not an occasion of surprise to the circle of intimate friends who had watched the progress of the chronic maladies against which he had so bravely fought for many years, will awaken a feeling of tender regret over a wide portion of our country which recognized the brilliant qualities of his mind, and the peculiar traits of character, that gave him such marked distinction as an American poet, a lively and sparkling essayist, and a popular journalist.

Mr. Willis was born in Portland, Me., on the 20th of January, 1807, and had just completed his sixtieth year. He received his early education at the Boston Latin School, and at Phillips Andover Academy, where he was prepared for Yale College, at which institution he graduated in 1827. During his residence in

PORTRAIT OF NATHANIEL PARKER WILLIS.

New Haven he published a series of poems entitled "Scripture Sketches." After leaving college, he wrote for the periodical press until 1828, when he established the "American Monthly Magazine," which was continued about two years, after which he joined Mr. George P. Morris in conducting the "New York Mirror." Soon after this he visited Europe, where he remained several years, writing for the press. While in England he married Miss Stace, an English lady. In 1837 he returned to America, and settled near Owego, in the State of New York, residing in a romantic spot which he named Glenmary. In 1839 he became one of the editors of a paper called the "Corsair," and again visited England, where he published "Letters From Under a Bridge," and a volume of poems. He also contributed the letter-press descriptions to Bartlett's "Views of the Scenery of the United States and Canada." He returned to America in 1844 and joined his former associate, Mr. Morris, in the editorship of the "Daily Evening Mirror." The death of his wife, and his own failing health, induced him to make a third visit to Europe, where he soon after published a work under the title of "Dashes at Life with a Free Pencil." He returned to New York in 1846, and married a

daughter of the Hon. Joseph Grinnell, of New Bedford, who survives him. Soon after this, in connection with Mr. Morris, he established the "Home Journal," which rapidly won a large share of the public favor, and has continued from that time to the present, a popular and almost unique organ of literature, society, fashionable life, and the needs of the day. The reputation of this favorite journal was due, in a great degree, to the assiduity, tact, and versatile literary powers of Mr. Willis. He was never weary of his task, never at a loss for suggestive themes, never wanting in skill of adaptation, in curious surprises of expression, or in flowing wealth of original illustration. His devotion to his editorial duties was like that of a fond mother to her pet child. The languor of disease seemed to produce no effect on the fertility of his pen. His mental energy triumphed over the weakness of his bodily frame, and the dashes of quaint humor and the utterance of dainty conceits which constantly enlivened the columns of his journal were often produced in the intervals of pain, or dictated amid the pangs of lingering illness. Even until within a few days of his death he would not consent to relinquish his grasp of the pen, maintaining the same persistent energy

which had kept him firm at his post through so many years of hopeless invalidism.

No man caught with a quicker eye the fleeting aspects of social comedy, or reproduced their rainbow colors with a more dexterous touch. His poetry shows that he was not destitute of the deeper sentiment for the exercise of which he had little use in the airy sketches which charm alike by the frivolity of their tone and the piquancy of their diction. As we have not seldom had occasion to remark before, his lightest compositions often betrayed a subtle delicacy of discrimination, an acute perception of evanescent differences and similarities of relation, which, if applied to the discussion of graver and more profound topics, would have given him the name of a master in a sphere of intellect in which he has now scarcely the credit of an imperfect initiation.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Orbis*.

My people are destroyed for lack of knowledge.—*Isaiah* iv. 6.

HEALTH AT HOME; OR, HYGIENE IN ITS PERSONAL AND HOUSE- HOLD RELATIONS.—No. III.

BY JOHN H. GRISCOM, M.D.

If in the preceding numbers the subject has been clearly presented, the reader must be convinced that so important a means of sustaining life as breathing, should be most scrupulously guarded against the possibility of deterioration, or the inhalation of impurities of any kind or degree. We have seen that the very act of breathing itself not only deprives the air of a considerable portion of its vital properties, and thus unfits it for a second inhalation, but moreover puts in the place of the removed oxygen a certain amount of another gas, which is absolutely poisonous. Thus there are two sources of danger to the animal which breathes the same air more than once: first, the deficiency of oxygen, and second, the presence of carbonic acid gas. The chyle of the food can not be thoroughly vitalized, or the blood thoroughly purified, without the fullest action of all the oxygen that can be inhaled with the purest atmosphere in the largest amount.

And here let us stop to advert to a remark often uttered by people, viz., that the air is "too strong for them." This expression does not convey any very definite idea, and is evidently derived from some erroneous view of the nature of the air. If by it, it is meant that the air is too pure, that it contains too much oxygen, then it is simply absurd, for in this particular all parts of the general atmosphere are precisely alike. The chemical constituents of the free atmosphere never vary. It is, however, true, that what may be termed the mechanical qualities of the atmosphere differ in different localities. It is well known that the air is the vehicle of some of the most deleteri-

ous agencies, such as marsh miasma, which produce intermittent fever, also the miasm of yellow fever, cholera, and other virulent diseases. But these are influences entirely independent of the chemical composition of the air itself, which is such as to yield good, and good only, to those who inhale it in its purity. What is meant by "too strong air," therefore, probably refers to such influences as too great abundance of aqueous vapor, emanations from the soil, from stagnant waters, etc., which are impurities, and can not properly be regarded in any other light.

The impurities here noticed are what may be called natural products, i. e., independent of any human agency. But the impurities resulting from the use of the atmosphere by animals, and their concentration in our dwellings and cities, where the poisonous products are increased many fold by their long retention and the absence of ventilation, constitute causes of sickness more abundant and powerful than those derived from natural sources, owing to their greater intensity and the larger number of persons exposed to them.

Few are aware of the enormous amount and virulent character of the effete matters constantly eliminated from their own bodies, or which the following calculations may serve to give some idea:

"The average amount exhaled from the lungs and skin of a healthy adult of ordinary size, in twenty-four hours, is about forty ounces, and of this quantity, about ten dwt. (half an ounce) consists of *animal matter*."

From these data it is easy to calculate the amount of effete emanations from the bodies of any number of persons occupying one room, or one building; we have but to multiply the above amounts by the number of individuals, to convince ourselves of the highly deleterious nature of any atmosphere breathed by a number of persons for a few successive hours, a fact which soon becomes apparent to the senses, as well as demonstrative upon the health.

Take for example one of our public school buildings, in many of which not less than twelve hundred pupils are confined six hours a day, for five days in the week, and often a large number several evenings in the week in addition. Assuming the amount eliminated from the lungs and bodies of the children to be equal to that above given for adults (which under their circumstances of exercise of bodies and lungs can not be very wide of the truth), there will every day be about one thousand (1,000) pounds of effete matter thrown out upon the air, and which, if there is no ventilation, must remain to poison their delicate tissues. In the course of a single week there will be produced the enormous amount of *two tons* of these foul matters. And this is independent of the dust and dirt and moisture derived from other sources, or the gases from combustion of fuel, oil, and gas, or the emanations from the gutters, etc., of the streets, which, to a greater or less extent, find their

way into the building. In such a school, with no other means of ventilation than the accidental one of the occasional opening of doors and windows, and their crevices when closed, it is not difficult to perceive that a large proportion of this foul and poisonous matter must be retained within the walls, to produce its injurious effects upon the blood of the children and teachers.

But it is not the impurities thus eliminated in their primary state which alone poison the air. As before stated, a certain portion of these excretions, ten dwt., or about two per cent., is *animal matter*, that is, matter separated directly from the animal tissues, and having an organized character, and which, though existing in the form of a vapor, is void of the diffusive property possessed by carbonic acid and other gases, floats about in the air, and becomes attached to the clothing and persons of the inmates, or to the walls and furniture, and becomes decomposed and converted into a miasm or poison of an exceedingly offensive and deleterious character, productive of worse diseases than carbonic acid or the other more gaseous matters. Any one who enters a close room which has been occupied a few hours by a large number of people, even the most cleanly, can not fail to perceive a peculiarly offensive odor, which the inmates themselves are unconscious of, because it commenced after their gathering together, and has increased gradually, allowing their senses to become accustomed, and hence insensible, to it.

There is, however, very often produced a great sense of oppression, causing a copious breaking out of perspiration, requiring the use of fans even in cold weather, and culminating in headache, difficult breathing, and sometimes reaching to absolute exhaustion and swooning. All these result from the various causes we have noticed, viz.: the loss of oxygen, the presence of carbonic acid and watery vapor, preventing the proper decarbonization of the blood, while the disgusting odor is doubtless for the most part from the exuded *animal matter* spoken of.

But if the effects above noted, which are temporary, and may be recovered from by the removal of the offending circumstances, by the admission of fresh air to the apartment, or by the removal of the oppressed and fainting person to the open air—if these were all the evils of such unnatural circumstances we might be content to let these foul practices go on unchecked, for only those who choose to endure them would be the sufferers. But unhappily the evil does not end with a recovery from a fainting fit, or with relief from oppression when the open air is gained. Impressions more durable and more serious are too often seen. In these circumstances we find the actual causes of a large proportion of the protracted fevers, and other still more permanent diseases, which prevail in cities, and from which are derived much of their great mortality.

The matters eliminated from animals during life are no less poisonous to others than those

from dead animals, in proportion to the quantity. Every one is aware of the disgusting and injurious character of decaying animal substances, and how important it is that all dead bodies should be buried, or otherwise disposed of, to avoid the effects upon the living of the putrefactive process. A dead animal, as a horse, weighing several hundred pounds, when undergoing decomposition, gives forth an enormous amount of solid, liquid, and gaseous material. The quantity given off by the living body is less, only because of the greater slowness of the changes during life, but their poisonous character, and their effects upon others, are the same, varying only in extent and intensity. Hence comes much of the typhus, intermittent, and other fevers, the consumption, scrofula, cholera infantum, hydrocephalus, and many other disorders, both acute and chronic, which afflict mankind, especially in cities, where people and animals of all sorts are densely crowded, where there is so much combustion of fuel and gas, where manufactories of all kinds add their taints to the air, and where artificial ventilation is so completely ignored and neglected.

The decomposition of these excretions is greatly hastened by dampness, especially when combined with heat. It is for this reason that the occupants of cellars, and other apartments into which the sun's beams never penetrate, obtain an odor of person by which they are easily detected; a peculiar, disagreeable, musty smell pervades the clothing, and even the person, especially the hair, indicative of some damp, unventilated locality; and among such we may be sure to find pale, sallow faces, from unoxygenized blood, forms either emaciated by unvitalized food, or bloated from obstructed circulation; and when diseases prevail, they are of the low, prostrating, febrile, and disorganizing character; even trifling complaints produce in such places a mortality as great as more serious ones in drier, purer, and better ventilated localities and apartments.

But it is not the indoor atmosphere alone that is affected by the respiration, excretions, and changes of structure of human and other animals; nor is the injurious influence of air thus depraved exerted solely upon the occupants of the household. In every large city, and in every village, the crowding together of human beings exerts a deleterious influence upon the general air. Even in different parts of a city, populated with different densities, this influence is observed, in proportionate degree, upon the health, longevity, and mortality of the respective inhabitants. To be convinced of this, we have to consider, in addition to the effete matter excreted by the bodies of the inhabitants, the increased amount of refuse animal and vegetable substances which accompany an increased population.

Thus, a family residing on a farm of twenty acres in the open country, have just as much air above and around them as five hundred or one thousand families living on twenty acres in the city of New York. But what a vast

difference in the rapidity and extent with which the air of the two localities is used up in respiration, and in the amount of putrescence discharged into the air from animal and vegetable decomposition, and from the emanations of the animal bodies, both brute and human, and how vast the difference in the facilities of ventilation! The ratio of this difference it would be impossible to calculate, but would be feebly expressed by a unit in the one case, and millions in the other. Nor is this all. Independent of the magnified circumstances of deterioration, there is in cities a corresponding obstruction to the natural means of aerial purification. Into a large portion of the dwellings in a city, the direct light and heat of the sun never penetrate; and the winds, which are the great purifiers of the air the world over, are deprived of a great portion of their sanitary power, being excluded by the high walls and the compactness of the buildings from freely visiting even the streets which traverse the inhabited space, while the interior of the houses are, in most cases, completely closed against them.

EVILS OF THE SEWING-MACHINE.

THE sewing-machine has proved itself a blessing to society in a thousand ways; but its use, like the use of everything else, can be made a source of much physical suffering to the operator. The *Boston Medical and Surgical Journal* furnishes some startling information with respect to the injurious results of constant work on this convenient instrument:

"A French physician, M. Guibout, says: 'A young woman, whom he had known as the very picture of vigorous health, presented herself at his office in such a condition of emaciation, and with such a change of countenance, that he was greatly shocked at her appearance. The explanation which she gave was as follows: For seven months, from morning till night, she had been working on a sewing-machine known as the "American machine." The constant motion of the lower extremities in propelling it had produced such weakness that she was often compelled to suspend her work; and to the frequency of this effect and the fatigue resulting from it, she attributed the loss of strength and flesh from which she was suffering.' During the past year, he goes on to say, he found in the hospital Saint-Louis three similar cases; and during the present year he had already found five in the same hospital. He also adds that within a month, 110 females, entirely unknown to each other, and working in different shops, called upon him the same day, to consult him for similar symptoms. The first of these, a blonde, in the most vigorous health when she began to work at the machine, in seven or eight months had become enfeebled, her general health had declined, and she had become the subject of a membranous irritation which was daily increasing. She said, also, that many of the girls in the same establishment were affected in the same way, by the same cause, "the continual movement of the lower limbs, the jar and the swaying of the body," and that many of them had been so annoyed as to be obliged frequently to suspend their work and leave the shop for a time.

"The second of these two patients was a brunette, of entirely different temperament from the other. She had been obliged to give up

her place after working at the machine for a year, on account of the same symptoms. To the inquiry as to any local excitement produced by it, she answered in the affirmative. To translate her own words: 'Among 500 women who worked with me, there were at least 200 who suffered as I did; so that the operatives were constantly changing, none of them being able to stay long. It is a constant going and coming of women, who enter strong and well and who go out weak and emaciated.'

Ladies, do not drive the sewing-machine too hard. Moderate use proves it a blessing; too frequent use will make it a curse, so far as health is concerned.

DRINKING UNPROFITABLE.

It has become a sort of popular, almost national, faith, that it is not possible to be truly happy unless you drink. Among certain classes—and they are by no means exclusively the lowest—drink is the beginning and end of everything. The very name of liquor is held to be synonymous with enjoyment, and the dearer the liquor the more it is prized and coveted. Yet every man who is not a downright drunkard is well aware that the pleasures of drinking are, beyond a certain point, a mockery, a delusion, and a snare. I put it to any one who has stood half the night at a pewter bar, or sat half the night in a club-room, drinking, smoking, and bandying reckless talk, if the enjoyment of such an evening has been anything like that of a few quiet hours spent at home with a book or a newspaper? The evil influence of tavern pleasures on the health is too obvious to be denied by any one, and the illusory nature of the pleasures themselves would be undeniable also, if the persons who indulge in them did not deceive themselves and put the truth out of sight. No one ever brought any good out of a drinking bout yet. It is a short, feverish spasm of animal enjoyment, which leaves nothing behind but moroseness, regret, bad temper, self-reproach, and headache. I should like to ask you, sir, if you say your prayers when you come home in that state? No—you don't. You are ashamed to say them. You postpone them until you have purged yourself—your mind and your lips—by more sober and rational behavior. Next night, when you pass the hours quietly at home with a book or a friend, you feel that you have had real enjoyment, that the time has passed pleasantly, that you have learned something, and that you have not injured your health. You are not ashamed to say your prayers, and you get up next morning with a clear head, a good appetite, and an increased faculty for work and the enjoyment of life.—*All the Year Round.*

CHILDREN are impartial judges, and their intuitive judgment should often be heeded. A little girl in a neighboring city had heard of the fame of a popular preacher, and desired her mother to take her to his church. The mother gratified her request, and when the child was returning home, she looked up and said, "Mother, I don't like the preaching of Mr. —." "Why do you not?" "Because, mother, he speaks of God just as if He was his cousin."

THE CONGRESSIONAL EXCURSIONISTS.

HON. JOHN D. ALLEY.

HON. BENJAMIN F. BOYER.

HON. JAMES W. PATTERSON.

HON. JOHN H. FARQUHAR.

HON. R. B. HAYES.

HON. RALPH P. BUCKLAND.

HON. WILLIAM LAWRENCE.

HON. MARTIN WELKER.

HON. SYDENHAM E. ANCONA.

CONGRESSIONAL EXCURSIONISTS.

WE present herewith sketches of character, with portraits and biographies, of a few of the distinguished excursionists who were invited to celebrate the opening of the Union Pacific Railroad to the one hundredth parallel of longitude in October last. We had intended to give portraits and sketches of the gentlemen connected with the management of the Railway, but we were unable to obtain the likenesses of many of them. We shall, however, try to do so at another time, and must content ourselves at present with the following:

HON. BENJAMIN FRANKLIN WADE.

This gentleman is not far from five feet ten inches in height, and his weight must be nearly 170 pounds. He is broad-shouldered, has a large chest, and is compactly built. The circumference of his brain is not so proportionally great as its length and height. The whole organization is of good texture and quality. Observe the height from the ear to the top—it is immense. Firmness, giving decision and stability, Self-Esteem, giving dignity and self-reliance, are prominent traits in his character. Approbativeness is moderate, rendering him comparatively indifferent to the opinion of Mrs. Grundy. His integrity will not be questioned by those who know him, but his devotional feeling is not so strongly marked. He is decidedly incredulous, requires positive proof before he will accept anything as true. His sympathies are strong and his affections are ardent. He has the most perfect control over all his impulses, and he will turn neither to the right nor to the left, for fear or favor. No amount of opposition, no amount of flattery, would turn him from a purpose. He may be likened to a rock, against which the waves of popular applause or denunciation would vainly dash themselves in the effort to dislodge him. He would remain proof against the ebbing and flowing of the tides of opinion. He has too little Cautionness to make him irresolute or timid, too little Secretiveness to make him cunning, and not enough Acquisitiveness to make him sordid; while his appetite is so moderate that he is not much inclined to indulge in luxuries, as such, using only such substances for food as are healthful and indispensable. His love for the beautiful and the fanciful are quite subordinate to his regard for the useful; indeed, such an organization as this may well be denominated utilitarian. He is a great observer, with decidedly large perceptive faculties, and with a good thinker. His language is sufficient to make him a clear and forcible though not a copious speaker. He should be very methodical, and prompt in keeping engagements, and especially desirous of being among the foremost. That is a striking face, a very prominent nose, a long, full upper lip, strong jaws, a prominent chin, high cheek bones, speaking, nay, flashing, dark brown eyes, which when animated are electrical. But the power of the man lies in his executive power, resolution, steadfastness, dignity, and force of character. It will appear in the following biographical sketch that this gentleman was thrown upon his own resources at an early age, that he has been the architect of his own fortune, and as such is a fair representative of the great body of American citizens.

Hon. Benjamin Franklin Wade, U. S. Senator from Ohio, was born in Springfield, Mass., October 27, 1809.

His father was a soldier in the revolutionary war. Being poor, his early education was obtained for the most part in the common schools during the winter, the summers of his youth being usually spent on a farm or in cutting timber. In 1826 he began to study for the legal profession, and in 1828 was admitted to the bar in Ashtabula County, Ohio, where he has ever since resided. In 1835 he was elected prosecuting attorney of that county, and in 1837 he was elected to the Senate of Ohio, to which body he was twice re-elected. In 1847 he was chosen by the Legislature presiding judge of the third judicial district of the State, and in 1851 he was elected a member of the U. S. Senate, to which body he was again returned in 1857. In the Senate Mr. Wade has been prominent as a leader, first of the anti-slavery Whigs, and afterward of the Republicans. In 1852 he voted, with only five other senators, to repeal the fugitive slave law; he also spoke and voted against Mr. Douglas' bill to abrogate the Missouri Compromise; against the Lecompton Constitution for Kansas in 1858; against Mr. Sillidell's bill for appropriating \$30,000,000 for the acquisition of Cuba, and

the enactment of a law providing for the confiscation of all the property of leading rebels, and for emancipation of their slaves. He spoke and voted for the bill making Treasury notes a legal tender, for the bills abolishing slavery, and for the so-called black laws of the District of Columbia. As chairman of the Territorial Committee, he reported a bill, in 1862, abolishing slavery in all the territories of the Government, and prohibiting it in any that may hereafter be acquired. Mr. Wade has always insisted on the utmost economy being exercised in the public expenditures, and in holding officials to a stringent accountability. He is now one of the oldest, ablest, and most respected members of the United States Senate.

HON. JOHN B. ALLEY.

This is, perhaps, one of the clearest-minded men in Congress; and yet it is not at all likely that he would be so judged from his personal appearance. In manner he is plain, without formality or the least attempt at display. He simply seeks the truth, accepts the truth, and lives the truth. There is nothing about him of the light or trifling, nothing of pretension or egotism; but the more he is known the more highly will he be appreciated. He is a most rigid economist. He saves his time and saves his means, wasting nothing. He sympathizes with those who suffer, and would help them to help themselves; but he is no indiscriminate giver to indiscriminate applicants for favors. He has great natural shrewdness and sagacity in the discernment of motives and character, knowing human nature through and through, and is the last man to be deceived or imposed upon. Judging from the portrait before us, one would infer that he was a quiet, easy, peaceful spirit, without much pluck or perseverance; but a more careful inspection reveals the fact, that he is one of the most resolute and determined spirits to be met with. Combative, Firmness, and Self-Esteem are very large. Cautionness, Concentration, Secretiveness, and Intellect are also prominent. He is watchful, self-restrained, deliberate, practical. The whole nature is warmed up by ardent affection, strong friendships, and love of home and country. Observe the lips, how long, and how full! See how high the head is from the ear to the top! This we consider one of the most remarkable heads in the group. With a stronger body, with vital powers unimpaired, he would be one of the most energetic and executive of men. It is such an organization that secures success in nearly everything it touches.

Mr. Alley is a Representative in Congress from the Fifth Congressional District of Massachusetts. He was born in Lynn, Massachusetts, January 7, 1817. He received a common school education in his native town, and was apprenticed while quite young to the shoe-making business. His apprenticeship expired when he was nineteen years of age.

In the following year he entered largely into the shoe-manufacturing business, and in 1847 he established himself in Boston as a hide and leather merchant, where he has been preeminently successful. He has taken a leading part in the politics of his town and State; was a member of the City Council of Lynn, and owes his present advancement to genuine ability and sterling integrity.

HON. BENJAMIN MARLEY BOYER.

This gentleman has a finely formed head on a delicately constructed body, but the fiber is fine and tough, and the whole symmetrical and well proportioned. He takes time to rest and recuperate, if he has been laboring, and sleep plentifully, all the functions of the brain will do their allotted work, and

HON. BENJAMIN F. WADE.

against all schemes of compromise between North and South propounded after Mr. Lincoln's election. The Homestead bill, making a free grant of 100 acres of public land to every actual settler, he advocated for years, and it was in his charge when it finally passed the Senate, in 1862. He has always voted on every measure for the protection of American industry; he supported the Agricultural College bill, as well as the Pacific Railroad bill. He also favored the discontinuance of West Point as a military academy, on the ground that it is essentially aristocratic, anomalous, and impolitic. In the very outbreak of the war, Mr. Wade advocated its vigorous prosecution by the Government. On the opening of the Thirty-seventh Congress he became chairman of the joint committee on the conduct of the war, appointed by the two Houses, and also took an active part in urging

working order, even to old age. His danger lies in too much mentality with too little vitality to sustain it. The most abstemious and temperate habits, with a careful avoidance of excesses, will be necessary to keep him in a healthy condition. This done, he will display rare talents as a thinker, a scholar, an orator. He should be diligent in the pursuit of an object, faithful in the discharge of his studies, reliable in matters of honor and integrity, respectful, kindly, dignified, and manly. Though witty and fond of fun, he will rarely lose sight of gentlemanly proprieties in the exhibition of his wit. Sarcastic he may be, but not vindictive. He will be imaginative, poetical, with great love for that which is chaste, refined, tasteful, perfect. He is more affectionate than demonstrative, more resolute and executive than he appears, and has more policy and wisdom than many give him credit for. He is ambitious, aspiring, and will continue to rise. Our portrait of this gentleman is far from satisfactory to ourselves, though it is a fair copy of the photograph from which we engraved.

Mr. Boyer is the Republican Representative elect from the Sixth Pennsylvania Congressional District. He was born in Montgomery County, Penn., January 22, 1822, and graduated from the University of Pennsylvania, in Philadelphia, in 1841. He then commenced to study law, and subsequently entered into the practice of that profession. From 1848 to 1850 he held the important office of District Attorney for Montgomery County, Penn., and was subsequently elected Representative from his native State to the Thirty-ninth Congress. Mr. Boyer has been eminently successful in the practice of his profession. His Congressional career has also been a marked success, and his constituents have shown their appreciation of his talent and energy by re-electing him to the Fortieth Congress.

HON. JAMES W. PATTERSON.

This is a scholarly temperament, an open, free, and flexible nature. In stature he is tall and well proportioned. The body is ample for its purposes, but is well subordinated by the mind. He lives in his brain, as it were, rather than in the body, and all the animal nature is subject to the higher nature. Though incredulous, even of the "doubting Thomas" sort, his mind is open to impressions, free from bigotry and superstition, and like the plate of the photographer when held in right relation to the light, takes a clear and truthful impression. Those features indicate a cultivated and sprightly mind. Look at the apple forehead, notice the oratorical eye, the emphatic and almost aggressive nose, the long upper lip, the prominent chin, and the length, breadth, dignity, and expressiveness of the whole. There is ability to understand science and philosophy here. Mathematics, astronomy, and other natural sciences would simply be diversions to such a mind. He would readily comprehend and as readily apply them. He will shine in statesmanship, in oratory, and in general scholarship; but his right sphere is in teaching the teachers, in directing minds to the development of ideas and principles. He could excel in authorship, and ought to produce both prose and poetry, to be read, "not for a day, but for all time." He is something of a Seneca and a Cicero combined, though he may not realize it. He is emphatically a man with ten talents, the right use of which will be required of him. His Benevolence is specially large, his social feelings not less conspicuous, while Combative-ness, Firmness, and Self-Esteem are prominent. Veneration, Acquisitiveness, and Secretiveness are but moderately developed. He scarcely appreciates the true value of property, regards doing right and doing good cardinal principles. But he has no feeling of deference toward those whose claims for superiority are not based on personal worth. In estimating another, the question with him would be, what has he done? not, who was his grandfather or his grandmother? We predict a hopeful future for this gentleman.

Mr. Patterson, Senator from New Hampshire, was born at Merrimack, Merrimack County, New Hampshire, July 5, 1823. His education was completed at Dartmouth College, from which institution he graduated in 1843. Four years subsequently he returned to the same college, where he held the position of tutor for a year or two. In 1854 he was appointed Professor of Mathematics, which post he held until 1859, when he was transferred to

the chair of Professor of Astronomy and Meteorology, in the same college. This professorship he occupied until 1863. From 1858 to 1861 he was school-commissioner for Grafton County, and at the same time was Secretary of the Board of Education for the State. In 1862 he served in the State Legislature, and was afterward elected a Representative from New Hampshire to the Thirty-ninth Congress. He has served on the Committees on Expenditure in the Treasury Department; on the District of Columbia; on Foreign Affairs, etc. In 1864 he was appointed a Regent of the Smithsonian Institute, serving in that capacity until December, 1865. Mr. Patterson is a Republican, and one of the new members of the United States Senate. He has gained his present position solely by his own unaided efforts; having from eighteen years upward worked his own way, and secured for himself a thorough education and his present success.

HON. JOHN H. FARQUHAR.

This portrait represents a most amiable gentleman. What can I do for you? or what can we together do to best serve the public good? would be the first questions with him. Seeing these traits conspicuously manifested, he would be first sought to serve. His own personal ends would be altogether secondary; and he would sacrifice more through a desire to do good, to confer favors, to improve the condition of his State and nation than the majority of men. In intellect, he is clear, practical, scientific; in morals, honest, hopeful, philanthropic. Socially, he is friendly, affectionate, and his love of home combined makes him truly patriotic. His executiveness is fairly indicated, but he is no belligerent from choice, and will only fight on the defensive; not as an aggressor—nor for pay or fame. As a judge, he would seek the golden mean between extremes, and see to it that justice modified by mercy be done unto all. He is no blind bigot, no worshiper of ideas or of men, but is at once a kindly, cautious, consistent Christian gentleman. If not a genius, he is amply stocked with strong practical common sense; and if not a shrewd, cunning, selfish politician, he is a conciliatory, broad, liberal, comprehensive statesman.

Mr. Farquhar, Representative in Congress from Indiana, was born in Frederick County, Md., December 30, 1818, and at fourteen years of age removed with his father's family to Indiana. In 1837 he removed to Brookville, where he has since resided. From 1837 to 1840 he was employed by the State of Indiana as civil engineer. He then commenced the study of law, and has practiced his profession since 1843. In 1852 he was appointed secretary of the Indiana Senate, and chief clerk of the State House of Representatives. In 1852 he was a candidate for Congress, but was defeated by Jim Lane (of subsequent Kansas notoriety). In 1861 he was commissioned as captain in the Nineteenth United States Infantry, in which capacity he served until August, 1864, when he was elected a representative from his adopted State to the Thirty-ninth Congress. In politics, Mr. Farquhar is a Republican.

HON. R. B. HAYES.

Mr. Hayes is a good-sized, well-formed man. He is between the extremes of large and small, or lean and stout. He is every way well made, has a handsome head on a rather handsome body, and a face which would introduce him favorably anywhere. His complexion is light, skin florid, temperament composed of the vital-motive and mental in almost equal proportions. He is neither too fast nor too slow, excitable or sluggish, but he is at once sufficiently energetic, original, comprehensive, dignified, and resolute. He is more profound than showy, and has more application than versatility. He will finish what he begins, and make thorough work. He has a hopeful, happy, loving nature; is eminently social, fond of home and all that belongs thereto; indeed, when surrounded by wife, children, and friends he is as happy as a king on his throne, and as hospitable to all as he is thoughtful and considerate. But to be more specific. This gentleman is comparatively young in years, and younger in spirit. Though he has already accomplished much, he has by no means reached the climax of his fame. He is a rising young statesman, and, if spared, will, in the course of a few years, be found in the front ranks of the best minds in the nation. We

base our prediction on the following points: First, he has a capital constitution, both inherited and acquired, with temperate habits. Secondly, a large and well-formed brain, with a cultivated mind; with strong integrity, honor, generosity, hopefulness, sociability, and ambition, and all well guided by practical good sense. At present he may seem to lack fire and enthusiasm, but age and experience will give him point and emphasis. Mark us! this gentleman will not disappoint the best expectations of the most hopeful.

Mr. Hayes represents the Second Ohio Congressional District in Congress. He was born in Delaware, Ohio, October 6, 1822, and graduated from Kenyon College in the same State. He afterward studied at and graduated from the Law School at Cambridge, and adopted law as his profession. From 1868 to 1861 he was City Solicitor of Cincinnati. Then he became Major, and afterward Lieutenant-Colonel of the Twenty-third Ohio Volunteers, doing good service with that regiment. In 1869 he was promoted to the position of Colonel of the same regiment, and afterward Brigadier-General. In 1864 he was elected to the Thirty-ninth Congress from the Second Ohio Congressional District, and was re-elected to the Fortieth Congress in 1866. Mr. Hayes is a Republican in political sentiment.

HON. RALPH P. BUCKLAND.

This is a quiet, modest, unassuming character, one that would as well become a white cravat and the robes as the sword or the scepter. That is a very high, long, and well-proportioned head. It is comparatively narrow between the ears, indicating much kindness, forbearance, and meekness rather than a disposition to contend. He would settle his disputes by arbitration, by conciliatory measures, rather than by force or constraint. His character centers in his intellect and moral sentiments. His proper sphere in life would be in the prosecution of peaceful measures rather than in conducting warlike operations; in the broadest and highest philanthropy, rather than in sectional selfishness. He would manifest a missionary spirit, seeking the good and the happiness of all mankind. That countenance indicates a cultivated mind. With large language, and such an intellect, he would be at once a good thinker, a good speaker, and a good writer. He would exercise authority considerably, would command respect by being respectful and dignified, would be trusted because trusty, would be loved because loving. He is evidently his mother's son; has taken on her spirit, and will be animated, elevated, and guided by the same. If called to be a soldier, he would fight for a principle which he believed right, but not for conquest or for fame. To be known, he would be honored. He is intelligent, thoughtful, hopeful, trusting, kindly, loving; and living a temperate, circumspect life he must continue to rise in public favor and esteem.

Mr. Buckland is the Republican Representative from the Ninth Congressional District of Ohio. He was born at Leyden, Mass., January 20, 1812, and in the following year was taken with his parents to Ohio. He received his early education at Talmadge Academy, and subsequently at Kenyon College, Ohio. In 1837, after having studied for the law, he was admitted to the bar, and commenced the practice of his profession at Tremont, Ohio, where he still resides. In 1855 he was elected representative to the State Senate, and served for four years. In the fall of 1861 he entered the army as Colonel of the Seventy-second Ohio Infantry, and commanded a brigade at the battle of Shiloh, and at the siege of Vicksburg, under General Sherman. In November, 1863, he was promoted to the rank of Brigadier-General. During the year 1864 he was placed in command of the District of Memphis, and during his absence in the field he was elected to Congress. He was re-elected in 1866 as representative to the Fortieth Congress. After the close of the war he was breveted Major-General.

HON. WILLIAM LAWRENCE.

A peculiarly-shaped brain on a substantial body, with a good physical constitution. The whole make-up indicates great endurance, activity, toughness, flexibility, and long life. He evidently comes from a hardy stock, a vigorous and long-lived family. Notice the breadth between the ears; see how largely the development of the propelling powers; see how prominent the perceptive faculties; how pointed, how expressive, and how empha-

tic the features; how quick to observe and how penetrating and far reaching such a mind must be! How full of facts, statistics, and practical knowledge! How little of the abstract, and how much of the exact! That is a literary and scientific cast of brain. How such a mind would revel in the investigation of physical phenomena! It is a hungry mind, hungering and thirsting for information. It is unbelieving, doubting, yet asking, soliciting for "light, light, more light." Individuality, Eventuality, Causality, Comparison, Constructiveness, Acquisitiveness are large, or very large. Firmness, Self-Esteem, Combativeness, and Destructiveness impart energy and force to his character, and keep him constantly at work. More Cautiousness, more hopefulness, with something more of love for repose, more faith and humility, would incline him to take life more calmly and quietly. His tendency is to overdo, to wear out, and prematurely exhaust himself. That is the head of a practical economist. He would acquire property and enjoy it. Would neither waste anything nor indulge in mere luxuries. In all his purchases for whatever purpose, utility would be the first consideration. Whatever other fault he may be charged with, it will not be that of prodigality, either with his own or the funds of others. As a writer, he will be clear, terse, and vigorous; as a speaker, pointed, definite, emphatic. Do what he may, go where he may, he will gain knowledge, facts, figures, history, science, and use it, too. In his pursuit or line of investigation, what he does not know can scarcely be found in books. His social nature is strongly marked, and he is more affectionate than would be generally supposed.

Mr. Lawrence is the Representative in Congress from the Fourth Ohio Congressional District. He was born at Mount Pleasant, Ohio, June 26, 1819. His youth was alternately employed in agricultural pursuits on his father's farm, with the benefits of a common school education in the winter, and in mechanical operations. In the fall of 1836, after spending the summer in his native village in a merchant's office as clerk, he entered Franklin College, Ohio, from which institution he graduated in September, 1838; subsequently he received the degree of M.A. In the same year he commenced the study of law at McConneville, Ohio, teaching school to defray expenses, and in March, 1840, he graduated from the Law Department of Cincinnati College. He then returned to McConneville, where he soon obtained an extensive legal practice, and took a prominent part in politics, favoring the election of Gen. Harrison to the Presidency. He was admitted to the bar at Zanesville, Ohio, Nov., 1840. During the session of the Ohio Legislature 1840-41, Mr. Lawrence acted as reporter for the *Ohio State Journal*, and correspondent for the *Zanesville Republican* and *McConneville Whig Standard*. Shortly afterward he effected a law partnership with the Hon. B. Stanton, at Bellefontaine, Ohio, which continued for three years, and where he has since resided, enjoying an extensive and lucrative practice. In 1842 he was appointed Commissioner of Bankrupts, and in 1845 was elected Prosecuting Attorney for Logan County. From 1845 to 1847 he was editor and proprietor of the *Logan Gazette*, when he was elected representative for Logan and Hardin counties in the State Legislature. In 1849 he was elected a member of the Senate for Logan, Union, Marion, and Hardin counties, and served during the sessions of 1849-50 and 1850-51. In March, 1851, he was elected reporter for the Supreme Court of Ohio, and compiled the 20th Vol. of Ohio Reports. In 1853 he was again elected Senator for the term 1854-55. As a member of the House and Senate he was the chairman of several important committees: on the Judiciary; on Railroads; on the Penitentiary; on Public Printing; and was a member of the Committee on Finance and State Library. At the session of 1846-47 Mr. Lawrence introduced the bill to quiet land titles, which has been of vast importance to the real-estate interest, and is now known as "Lawrence's Law." At the session of 1850-51 he made a report in favor of establishing a Reform School for the correction of juvenile offenders, instead of imprisonment in the penitentiary, a measure since adopted; and he has always taken deep interest in anything pertaining to the education and welfare of the children of the common schools of his State. Mr. Lawrence is the author of the Ohio Free Banking Law, which is admitted to be the best State system ever devised, similar in some respects to the existing National Banking

Law. In 1856 he was elected a Judge of the Court of Common Pleas and District Court, having jurisdiction in twenty-one counties; was re-elected in 1861, but resigned in 1864, when he was elected a representative from the Fourth Congressional District of Ohio to Congress. He has since been re-elected to the Fortieth Congress. In Congress he is a member of the Committee on the Judiciary; and the legislation of Congress attests the labor he has performed. He has participated largely in nearly all the important debates. In politics he is an earnest Republican.

During his eight years' Judgeship, Mr. Lawrence's decisions have been published in the *Boston Law Reporter*, the *Western Law Monthly*, of which he was one of the editors, and in the *Cincinnati Weekly Law Gazette*. In 1862 he was appointed, by Governor Todd, Colonel of the 84th Regt. Ohio Infantry Vols., mustered into the service for three months, and served with his regiment mainly under Gen. B. F. Kelley at Cumberland and New Creek. On the 9th of September, 1863, President Lincoln conferred upon him the unsolicited commission of Judge of the United States District Court for the Southern District of Florida, which honor, however, he declined to accept. Mr. Lawrence has been engaged for some time in the preparation of a work on the *Ohio Civil Code*, and an elementary treatise on the "Laws of Interest and Usury."

HON. MARTIN WELKER.

Our artist has not been so fortunate in giving the true expression to this portrait as with most of the others. The original has a much more amiable and quiet look than our engraving. In this there is an expression of disquiet and of resistance if not of acrimony, which is far from true of the gentleman himself. Our description is based on personal inspection, and will therefore differ somewhat from the portrait.

Mr. Welker has a large brain (compared with his body, it would be classed with the very large), and it is admirably balanced. His head is high, long, and broad; the intellect is capacious, and well sustained by those organs which give energy, and by a temperament of great activity. It is of the mental-motive type, with a little infusion of the vital. He will be clear, comprehensive, and correct. He will be honest, honorable, high-minded, and all his aims will be in the direction of progress and improvement. There is economy and generosity combined, with devotion, hope, and caution. He has imitation and originality, intuition and reason. There is love for both the useful and the beautiful—for art, mechanism, science, literature, history, and philosophy. He could do something in almost any calling, would do well as a teacher, a preacher, a lawyer, or a legislator. He has a warm, social nature, and will command respect and make friends go where he may.

Mr. Welker, Representative for the Fourteenth Ohio Congressional District, was born in Knox County, Ohio, April 25th, 1819. His father was an early settler of that State and resided on a farm, where young Welker remained until fourteen years of age, going to a subscription school (for there were then no district schools in Ohio) in winter, a distance of three miles, where he learned reading, writing, and the lower branches of arithmetic. He then went as clerk in a store, where he remained for some four years, studying the higher branches of education in the mean time, so that, at eighteen years of age, he entered a lawyer's office, and was considered a good scholar in the English branches. At twenty-one he was admitted to the bar, and commenced life's contest as a lawyer, without one dollar in the world, and somewhat in debt for his board. Having studied law longer than the time required by the statute of his State, he had time to improve his general education. He remained in practice until 1851, when he was elected District Judge of the Sixth District in Ohio, and served for a term of five years. Being a Whig in politics, and the district largely Democratic, he lost a re-election by some eighty votes. In the fall of 1857 he was elected Lieutenant-Governor of his State at the same time Chief-Justice Chase was re-elected Governor. He served one term, and declined a re-election. At the breaking out of the rebellion he was appointed a Major on the staff of Gen. Cox, now Governor of Ohio, and served out the time for which his troops had been called

out. He was then appointed Judge-Advocate-General of the State, and served until the expiration of the term of Governor Dennison. In 1862, he was appointed Assistant-Adjutant-General of the State, and was the State Superintendent of the Draft in that year. While on that duty he was nominated for Congress in his district, but was defeated by a majority of only thirty-six votes, for the reason that he could not leave his business to canvass his district. In 1864 he was again nominated, and elected by a large majority. He was renominated by acclamation, and re-elected at the late election to the Fortieth Congress. In politics he was always an old line Whig; went with the Republican and Union party, and is now a Republican. Since leaving the bench he has been in active practice of the law at Wooster, where he now resides.

It will be seen from this sketch, that Mr. Welker has "paddled his own canoe," and what he has accomplished has been through his own efforts. A little incident in his history will illustrate what can be accomplished by a determined purpose.

While clerk in a store, he was called to the county-seat of his State as a witness before the grand jury. He had to remain there several days. At that time he had never seen a court or a live judge. Judge Dean, who now resides in Wooster, Ohio, was then upon the bench, and Welker thought him the greatest man he had ever seen. His ambition was aroused, and he said to a boy who was along with him, "I will be a judge too." But his boy-friend only laughed at his ambitious saffly. From that time he determined to be a judge, and he never lost sight of that object. Twenty years afterward he was elected judge of the same district over Judge Dean, who was his competitor in the contest; and he subsequently held court in the same court-house, and occupied the same chair occupied by Judge Dean when he first saw him. His boy-friend went to the court-house at the first term to remind him of his youthful declaration made twenty years before.

The life of Mr. Welker shows how our "Western men" have to fight their own way through the world, and with what great disadvantages they have to contend; and nothing can better illustrate the indomitable energy and perseverance of the man than the little incident which we have recorded.

HON. SYDNEY E. ANCONA.

This is literally a man of iron. He comes from an iron country, and has lived among iron men. Strength, force, and self-reliance characterize this gentleman. He would be ready, prompt, and resolute, all his forces being available in any emergency. He is sufficiently worldly to appreciate the good things of life, to enjoy its luxuries, its realities, and its fancies. He is without love for display, or regard for mere appearances. He comes to his own conclusions, forms his own opinions, and quietly enjoys them. If you think as he thinks, all right; if you differ with him in opinion, it is all the same to him. He would argue the point for your information, and correct you for your good; not that it will in any way affect his own happiness or tend to change his course. Love of liberty, sense of independence, disregard for popular applause, and a spirit at once confident and determined to succeed, animates him. He will defend the right, his honor, his property, and his life. If a farmer, he would have the best stock; if a business man, it would be in a wholesale line; if a navigator, he would command a large ship; and as a statesman, he must come up and take a prominent place.

Mr. Ancona is the Republican Representative from the Eighth Pennsylvania Congressional District, and was born in Warwick, Lancaster County, Penn., November 20, 1824. He afterward removed to Berks County, and was for several years connected with the Reading Railway Company. In 1860 he was elected Representative to the Thirty-seventh Congress, from Pennsylvania, where he served in the committees on the Militia and Manufactures. In 1862 he was re-elected to the Thirty-eighth Congress, serving on the same committees. In 1864 he was again elected to the Thirty-ninth Congress, and served on the Committee on Military Affairs. Mr. Ancona was one of the representatives designated by the House to attend the funeral of General Scott. He is now a member of the Fortieth Congress.

MY TRIP TO OMAHA.

A great railroad excursion, perhaps the grandest ever inaugurated, was that given by the Union Pacific Railroad Company, in celebrating the completion of that road from Omaha, Nebraska Territory, westward to the one hundredth meridian of longitude, between the 15th and 25th of October, 1868. The invited guests numbered between two and three hundred, embracing distinguished gentlemen, members of Congress and others, from Washington, leading capitalists from New York, Boston, Philadelphia, and other cities, by whom \$40,000,000 of capital is said to have been represented; also clergymen, editors, artists, physicians, lawyers, actors, engineers, miners, explorers, and others, with a galaxy of beautiful ladies, and the Editor of the PHRENOLOGICAL JOURNAL. Indeed, nearly all classes of American society and industry were represented. We also had a live English lord, French counts and princes, with a sprinkling of both aristocracy and democracy, sandwiched with Africans and red Indians. The Railroad Company and the capitalists furnished the wherewith to defray all expenses; the statesmen made the speeches; the editors and reporters recorded and published the same; the artists took beautiful views of the scenery on river, prairie, and plain; the engineers managed the trains and steamboats; the actors rehearsed pieces, and represented characters ancient and modern; musicians, two brass bands, and ever so many vocalists, discoursed "sweet music, morning, noon, and night;" soldiers and patriots attended to the guns (every man went well armed); explorers and hunters went out on hunting expeditions and brought back game; clergymen each performed their functions, sanctifying the enterprise; the lawyers had nothing to do; physicians were at a discount, while the phrenologist examined the heads of the excursionists, the Africans, and Indians, delineating their characters, pointing out their faults, and giving them, of course, some excellent advice.

We may be pardoned for naming only a few of the chief actors in this grand affair, conceived and put into operation by Mr. Thomas C. Durant, the able manager of the road, seconded and assisted by the Board of Directors, which included Messrs. Cook, of Iowa; Dillon, of New York; Lambard, of Boston; Duff, of Massachusetts; Sherman, of Ohio; Dodge, of Iowa; Seymour, of New York; Frost, of Omaha; General Simpson, of Washington, D. C.; Curth, of Iowa; and White, of Connecticut. Mr. Hoxie managed the steamboats, Messrs. Bunker and Gessner had charge of the special trains, while Mr. Carbutt, of Chicago, assisted by Mr. Hien, took the pictures. Mr. George Francis Train was, as usual on all occasions, omnipresent, assisting in all departments of the grand entertainment. It will be conceded by all that this gentleman possesses one of the most fertile and versatile characters to be met with, and that his presence is ever welcome by all who are fond of fun, and enjoy the lively, the grave, and the gay. It is our intention to give a phrenological analysis, with portrait of this gentleman, at another time. Revs. Dr. Tuttle, of New York, and Wiswell, of Wilmington, Delaware, will be kindly remembered by all the party. We give on another page portraits of some of the honorable guests of our party.

The New Jersey Central Railroad placed at our disposal their splendid palace sleeping cars, elegant as a Fifth Avenue drawing-room, and the train started from the depot in Jersey City at eight o'clock, evening, on the 15th. Our route was over the Pennsylvania Central, via Harrisburg, arriving at Altoona the next morning, where we breakfasted. Ascending the Alleghenies on a beautiful October morning, the most vivid imagination can scarcely conceive the beauties and grandeur of that magnificent panorama, and the pleasurable experiences of one and all. With a clear track, other trains everywhere giving us the right of way, we soon reached Pittsburg, where the same train passed on to the Pittsburg, Fort Wayne, and Chicago roads, arriving in the latter city on the morning of the 17th, without change of cars. Stopping for the night at the Tremont Hotel, where a grand reception was given our party, a new train of the most elegant cars in America, manufactured by the Brothers Pullman, was placed upon the Chicago, Burlington, and Quincy road, and we were soon landed on the banks of the Mississippi. Breakfasting at Quincy, we crossed the river, and took a special train on the St.

Joseph and Hannibal Railroad to St. Joseph, Missouri. Here two splendid steamers, the "Denver" and the "Colorado," fired up, and illuminated, with bands of music, cannon, and flags, with a splendid display of fireworks, received the party, and proceeded up the Missouri River to Omaha. The first Sabbath was spent on the river, where the aforesaid clergymen, properly assisted, preached appropriate sermons, conducting religious services with all the sacredness of church or cathedral. Passing up this river, our party were kept in a somewhat excited state of mind by the new and strange sights everywhere visible. There were millions of wild fowl—such as geese, swan, ducks, etc., sometimes within gunshot, but usually at a safer distance, nevertheless most tempting to the sportsmen, who could not refrain from trying their rifles even at long range. We also met tribes of Indians, Sacs, Foxes, and Iowas, at the towns on the river at which we stopped, with whom we conversed and trafficked to some extent. On reaching Omaha, we were met by the Governor of Nebraska, the Mayor, Town Council of Omaha, and other dignitaries, who, with horses and carriages, transported us through the streets of that enterprising city, now said to number eight thousand souls. The State Legislature sits here, and the government buildings of Nebraska are located in this city, said to be the geographical center of the United States; and more than one member of Congress seriously proposes removing the National Capital to this locality. After visiting, feasting, and resting a day and a night in Omaha, we took a train of new cars on the U. P. R.R., with provisions, cooks, kitchen, and all the hotel accommodations attached, and proceeded across magnificent prairies to the new town of Columbus, more than a hundred miles west of the Missouri River, where we arrived in the evening. Here more than a hundred beautiful snow-white tents were pitched to accommodate us, with splendid camp-fires burning in front of each, with a grand stand in the center, with Drummond lights illuminating the whole, and with the Stars and Stripes floating above, giving a sense of security and a feeling of home to all, even in that far Western wild.

A party of pioneers had preceded the excursionists and had arranged all things for their comfort. After a bountiful supper, the party visited an Indian camp near by, where had assembled large numbers of genuine Pawnee Indians, with their horses, squaws, and papooses, armed and painted, some half naked, others in the most hideous conceivable costumes. The squaws, with an instrument something like a tambourine, kept up a strange sort of music, while the braves, with tomahawks and feathers, gave us their grand war dances around a great fire. This was one of the most interesting and exciting episodes during the entire excursion—civilization was visiting the savage in his native wilds. Some time before midnight our party returned to their tents, where, on prairie grass, under buffalo robes, blankets, etc., all retired to rest, save the sentinels, whose business it was to keep watch and to warn. But imagine our consternation, especially of the ladies, when, two or three hours later, between midnight and morning, the whole body of noble braves, in other words, wild red-skins, came rushing through our camping-ground on horseback, with such unearthly yells as to terrify all. Of course every man grasped his gun, resolving to defend his scalp to the last. But the Indians had no malicious intent. They were simply led on by a party of excited "Elkhorns," from Chicago, who practiced this wickedness on our innocent cautioners. Here the phrenologist had a splendid field for the application of his science. Nor did modesty or fear prevent him from mixing familiarly with the Indians. He examined the heads, faces, bodies, and even the teeth, of the natives, and such splendid forms afforded him the greatest treat. He saw magnificent heads on magnificent bodies among the old patriachs which he can never forget. He went so far as to go into their tents, ride their horses, and make himself perfectly at home among them. He owns, however, to parting with what small change he took with him, and for no other equivalent than "dankedapkee." (Thank you.) The Indians are great beggars; anticipating this, the Railroad Company generously procured in New York several thousand dollars' worth of presents, which the ladies of the party, assisted by the gentlemen, were permitted to distribute to them. The next day they gave us a splendid exhibition of a battle scene or sham fight on horseback on the

open prairie; which was witnessed from the cars and other eligible points. After this display we pushed on to the end of the road. Did we say the end? Indeed, it was not so easy to reach the end, for they were then building at the rate of between two and three miles a day, one party following the engineers throwing up a road bed, another throwing down the ties, another throwing on the rails, another spiking them down at this rapid rate, all of which was a sight to be seen in this wild buffalo country.

It is on this plain, in the valley of the Platte—a plain seven hundred miles long and many miles wide—where have been seen droves of buffalo millions in number, extending in an unbroken body over one hundred and twenty miles in length, together with antelope, prairie-chickens, partridges, quails, prairie-dogs, etc., which with Indians inhabit it. But railways and permanent settlements disperse the former occupants, and claim the soil for civilization.

On returning, we stopped an hour at Dogtown, where the grounds are occupied for miles around, in a sort of settlement or village through which the road passes, by prairie-dogs, which are in appearance more like an opossum or woodchuck than the common dog. Prairie-dogs, rattlesnakes, and owls are said to inhabit the same hut or burrow. Our sportsmen, firing from the windows of the car, killed several prairie dogs. Mr. Ancona, M. C., had one dressed and cooked. The taste of its flesh was something like that of a pig, coon, or opossum. Mr. Painter, of the Philadelphia *Inquirer*, killed a large rattlesnake at the mouth of a prairie-dog's hole.

Coming down from the base of the Rocky Mountains, on our return, we came over a stretch of road eighty miles without a curve, at the rate of a mile a minute. After this, we had a splendid sight of a prairie on fire, extending for many miles on our larboard. Returning to Omaha, we found lodgings at the "Herndon House," which is the "Tremont" of that city, where we were entertained by the life of the town with a grand ball, in which citizens and excursionists vied with each other in making all welcome and happy. It was a delightful occasion. In the morning we crossed the ferry to Council Bluffs, Iowa, soon to be connected with Omaha by a bridge, where we breakfasted, paying our respects to Mr. and Mrs. Bloomer, of "American costume" fame, who reside here, and to Mrs. Bachelor, one of our former employees, when our company took a long line of stages for a day's journey across a portion of Iowa, to intersect the Chicago and Northwestern Railroad, then being rapidly laid, to terminate at Council Bluffs, putting Chicago in direct communication, by way of the Union Pacific Railroad, with the Rocky Mountains and the Pacific coast. Another day's ride by rail, which was the second Sabbath, brought us to Clinton, on the Mississippi River. Our train passed on to the iron bridge which spans the river here, where dinner was being prepared for the guests on the train. Previous to this, religious services were held in the two large saloon cars, by the different clergymen; and with the aid of musical instruments attached to the cars, and choirs of singers, the services were appropriately rendered. In the one by the Rev. Dr. Tuttle, of St. Luke's Church, New York, Episcopalian, and in the other by the Rev. Mr. Wiswell, of Wilmington, Del., Presbyterian. Is it irreverend to say that on this occasion divine services were rendered at the rate of forty miles an hour? And why not on the railroad as well as on steamboat, on river, lake, or sea. We pushed on, passing through Iowa, one of the grandest States in the Union, and reached Chicago, where eight thousand homes were built last year. Here we found propellers ready to take us out into the lake to visit the tunnel, one of the lions of Chicago; after which we found a long line of carriages, sufficient to give comfortable seats to all our party, waiting to take us through the streets to the elevators, public buildings, monuments, etc., thence to the Opera House, to be met and welcomed by the Mayor of the city, and a band of music, where speeches were made by our Congressional companions, with responses by the Mayor, President of the Board of Trade, and other prominent men. In the evening another grand ball at the Tremont was given. Mr. Train spoke from the balcony of the hotel to a few thousand people, who had assembled for the purpose of listening to this rattling orator. In the morning we took a special train, provided by Mr. Le Grand Lockwood and the officers of the Michigan Southern Railroad, for the East. We passed over that excellent road, via Sandusky and Cleveland, to Buffalo. Thence by way of Niagara Falls, on the New York Central, to Albany. Thence on the steamer "St. John," down the Hudson to New York, with new and agreeable surprises every hour, from beginning to end—a journey of nearly three thousand miles, over many lines of railroad, through several States, across rivers, and with less friction than one would suppose possible. It was indeed a great treat as well as a grand play-spell to all concerned. It gave us, of the East, a slight view of the Great West, opening up for settlement millions of acres of rich land yet untouched, and in a measure annihilating distance.

The Government gave to the U. P. R.R. Company twelve thousand acres of land for each mile of road they build, and in cash, from sixteen to thirty thousand dollars a mile, depending on whether it be on the plain or in the mountains. Did space permit, we should describe more at length the operations of this and other railway companies now pushing westward from the Atlantic, and eastward from the Pacific. They will shortly meet and connect, and within four years we are promised direct communication by rail between Eastport, in Maine, and San Francisco, in California—an overland line across America—from the Atlantic to the Pacific Ocean! Who can comprehend the effects on civilization of this great enterprise?

NEW YORK.

MARCH, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous practice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Fin.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$2 a year in advance; single numbers, 20 cents. Please address, Messrs. FOWLER AND WELLS, 389 Broadway, New York.

FLOGGING.

Obedience to rightfully constituted authority is the basis of civilization, and it is imperative on all. A violation of the *natural* laws is followed by a penalty. If we carelessly fall over a precipice, the law of gravity prevails, and bruises, broken bones, or death is the penalty. So, if we put our naked hands into fire, we get burned in accordance with the laws of heat. If we knowingly violate a moral law, be it that of the sentiment of justice, kindness, or godliness, we must suffer the punishment which those sentiments inflict. One can not escape from himself. A consciousness of wrong, be it injustice, selfishness, violence, or a trifling with sacred subjects, must be atoned for, sooner or later. So of the appetite; if we dissipate, we suffer. So of the affections; if we commit social excesses, or go to extremes by over-indulgence of whatever name or nature, we will be punished. Justice, mercy, obedience, and godliness are exacted alike from all. As it is with the natural, spiritual, and religious laws, so it is intended to be with the civil laws. Obedience to them is incumbent alike on all. But the laws of nature and of God are unalterable. Civil laws, manners, customs, modes of government, and of worship may be altered, revised, or repealed. Natural laws are God-made; civil laws are man-made. And each nation, state, or community may establish such laws and regulations as they please—the majority governing. The objects of civil government are individual protection, enjoyment, improvement, and the administration of justice. The question arises, How may we best perfectly attain these ends? Man is per-

verted. He is selfish, dishonest, cruel, wicked. His children "take after him." Waywardness is one of the earliest manifestations of the child. He may be very "innocent;" he is certainly very selfish, and clamorous for all he sees, even for the moon. The moral sentiments—Benevolence, Veneration, Spirituality, etc.—are developed later in life, certainly not in babyhood. Nor do those higher organs come into full natural action till the period of puberty. In childhood, he lives chiefly under the influence of the propensities, and the perceptive. Grace is both a gift and a matter of growth. The child is not yet self-regulating. His parents, guardians, or teachers must guide, guard, direct, and train him. If *they* be wise and good; if *they* be thoroughly self-possessed and *capable*, they can manage the "little folks" through their superior wisdom, superior kindness, and authority—and that, too, without resorting to violence. If one say he can not control or subdue a child, "he simply confesses his unfitness for the duties of government devolving upon parent or teacher. Such persons resort at once to force, and appeal to fear, to cautiousness instead of conscientiousness, reason, honor, or affection. The abuse or misinterpretation of Solomon's saying, "spare the rod and spoil the child," has brought more personal degradation and suffering on mankind than can ever be described. Bad Jews and bad Christians alike shield their inhuman acts behind this ancient authority. If "a little knowledge be a dangerous thing" in any case, it is so here; and we have often regretted that Solomon did not, in the same connection, charge parents not to flog their children in anger, nor in public. Those who flog the most, have themselves a violent temper, and do their flogging in the spirit of retaliation. It is through a love of power, through Destructiveness and Combativeness unmixed with Benevolence, and a moderate intellect with very little self-government, that most whipping is done. Young physicians deal out more poisonous drugs in a given number of cases than older physicians. Young parents and young school-teachers flog more frequently and more severely than older teachers. Older parents, physicians, and teachers are themselves

more considerate, wiser, and self-regulating. A brutal driver or overseer will "thrash" and abuse a horse or servant, while a kindly, intelligent, self-regulating man would direct and control the same without ever resorting to violence. When a heartless human fiend is seen clubbing and goading a poor, helpless dumb animal, all good men cry out against the act. These same bad men, having the legal right to flog, may vent their spite on children, maiming them for life, and thus reverse Solomon's precept; *they use the rod and spoil the child, i. e., ruin him by degrading him, whipping all feeling of true manliness out of him, and leaving him, not subdued, but a mean, sneaking, whipped dog who, if he have enough courage left, would wish himself unborn.* Do not tell us that goodness or Christianity can be whipped into anybody. Children take after their parents, inheriting a tendency to the same infirmities of body and mind. And this fact *ought* to make parents both considerate and merciful. Are parents wicked, ill-tempered, dissipated, godless creatures? Are their children likely to be natural-born saints? And is the grace of God to be whipped into them? Compare the children born and educated at the Five Points, Mackerelville, St. Giles', or in Garry-Owen, with those born under more favorable circumstances, and say if there is no difference. Then extend your observations, and learn what sort of treatment answers best in the government of any class, be they high or low. Go into the insane asylums, to-day, and ask their superintendents what was the effect of leaving off the strait-jacket, the chain, and confinement in total darkness. They will answer, that the most humane treatment answers every way the best. So it is in our prisons—kindness always begets kindness, cruelty always begets revenge. But do you not approve of the exercise of rightful authority? Yes, even that backed up by the guns; and we would put down a rebellion in ourselves, in the family, or in the nation by kindness if we can, by force if we must. We would have the law obeyed. A parent must govern, direct, educate, and "train up his child in the way he should go." But *he himself* must also both govern and *go in that same way.* How few, how very few do it! and yet

how prone parents are to complain that their children are ungovernable. We take the ground, that the parents are responsible for their children—yea, for their dispositions, even for their waywardness, their ungovernableness, or their imbecility. God's laws are right.

We conclude our statement by quoting the following from the *Boston Medical and Surgical Journal*, on the subject of flogging girls:

"Corporal punishment, the most degrading and least justifiable of all forms of corrective discipline, bad enough as it is when administered to boys, is utterly revolting and abominable when applied to girls. One might have supposed that the common judgment of mankind had forever consigned it to the tomb of past ignorance and brutality as an element in our systems of education, had not the occurrence of last summer, in the neighboring city of our oldest University, made it too painfully apparent that reform was needed in this respect where we should have least suspected it. Much as that occurrence is to be deplored, however, and disgraceful as it was to all the parties directly or indirectly connected with it, we are not sorry that it happened just as it did, in a locality which made it especially conspicuous. It has led to such indignant protest from men whose voices are most likely to be heard the farthest, that the public exposure thus given to the transaction must have great weight in doing away forever in this part of the country with the whole system of which it is a part. We do not suppose for a moment that such occurrences are common, and it is libelous on our New England character and our school system generally to quote the case in question as evidence of prevailing feeling or prevailing custom here. Still, it shows that neither public opinion nor statutory provision had settled the question beyond appeal, and that there was constant danger that the ungoverned temper of a passionate teacher might at any time revive a custom which never could be characterized by any other name than brutal.

"All friends of education here must rejoice in the popular verdict of the recent election at Cambridge which has set the seal of universal condemnation on the occurrence to which we have alluded. Its power must be felt far beyond the immediate locality where it took place. Some of the most eminent men connected with the University have made their influence felt in this movement, and a gentleman of the medical profession, Dr. Morrill Wyman, has spoken seasonable words at a public meeting before the election, which must have had great effect upon his hearers. They were words of a wise, benevolent man; and they forcibly present the whole subject in its true light. He regards it as a moralist and a physiologist. His remarks, as printed in the report before us, are so excellent that we can not refrain from giving our readers the following extract from them:

"Why should not girls be treated as boys? Because girls are not boys. Every parent having children of both sexes knows that they have moral characteristics which at once distinguish them before they arrive at the school age. They are weaker in body and more sensitive in feeling, and are more occupied with the impression they make upon others long before they know its value. That delicate sense of propriety which distinguishes the woman has already begun in the girl. They seem to know instinctively that they can not rely upon physical strength, and instinctively cling to others for support and protection. They are

gentle, docile, confiding, and affectionate. They exhibit these gentler qualities at home and in school in a thousand ways; they hasten to meet their teacher as she approaches in the morning; they run by her side, they seize her hand, and evince their affection by kisses upon her cheek and roses upon her desk. The skillful and faithful teacher takes advantage of these qualities, especially of their docility, and so molds them that corporal punishment is not only unnecessary but it is cruelty.

"Physiologically she is different, and to this I would most earnestly beg your attention. Her blood corpuscles are smaller, her nervous system is of a more delicate structure, her brain is lighter, and her muscles smaller; she is made for quickness and vivacity, but not for strength and endurance. The same reasons which prevent her from sharing the rougher games and plays of boys should protect her from suffering the harsher punishments of boys. She is more sensitive to internal emotions and external sensations; and I assert without fear of contradiction, that no physician can be safely trusted to advise for the preservation of health or its restoration who disregards even in the child the distinction of sex. The most eventful period of her physiological life is spent in schools. During this period there is not unfrequently mental uneasiness, irritability, and depression, easily mistaken for petulance and defiance by the unwise, and I greatly fear has sometimes produced punishment for that for which she is answerable to her God alone.

"With a rapidity of development unknown in the other sex, she becomes a woman, with all a woman's refined sensibilities, hopes, and fears. She now instinctively knows that upon the good impression she makes upon others is based her hopes for the future. If her physical organization is sensitive, her spiritual nature is doubly sensitive, and it is this that makes her what she is. It is in vain to count the number and weigh the severity of the blows upon her person, and note the hours that elapse before their marks disappear. Her spirit is wounded, she is disgraced and degraded; years may not efface the consequences. It is this that stirs the sensibilities and brings down the censure of the greater part of the civilized world, and from none is that censure more severe than from cultivated women. Strike not a woman, even with a feather, is the motto of civilization, and it is in accordance with the spirit of Christianity also."

We submit whether it is not time to abolish the ancient and barbarous custom of flogging? But if mankind are not sufficiently advanced in civilization and Christianity to drop the practice, we suggest that all flogging be done, hereafter, by prayerful, temperate men. Let it be done by the clergy; and let these be appointed by the civil authorities of each town or district. Let it be a penal offense for a dissipated, petulant vagabond—of either sex—to strike man, woman, or child—white or black.

OUR LATE CLASS IN PRACTICAL PHRENOLOGY.

It gives us unqualified pleasure to state that our recent session was, in every respect, satisfactory. The class was just large enough to give all the variety of character needed for practical illustration, and not so large as to be

unwieldy, each student receiving his full share of personal attention, and all making decided progress. We confidently predict for the young men who constituted this class the best of success. They will go into the field prepared to speak the truth as it is revealed by the Science of Mind, and to disseminate widely a practical knowledge of the same. All of them are temperate, active, healthy, energetic men, under middle age, ripening into the strength of true manhood. Besides having received in this class instruction in Phrenology, Anatomy, Physiology, Physiognomy, and Psychology, as a means of comprehending human nature and of reading character, the students have been well drilled in Elocution by one of the most competent teachers in New York, and all that now remains to fit them for the practice of their chosen profession is the experience which comes from observation and practice. Once having taken such a step, what may we not predict? What may we not confidently hope for? We see the doctrines which, for a third of a century, we have labored to promulgate, being planted in the minds of thousands by these new missionaries. We see them supplanting the impostors and charlatans, and occupying the ground which they have disgraced. We see them growing in wisdom and honor, and filling up a useful career with the happy consciousness of doing good. May God bless their efforts, and preserve them from the temptations of a perverted world. We append the names and addresses of the students. There are others who have taken only a partial course, but who intend, another season, to prepare themselves for their work.

RESOLUTIONS OF APPROVAL BY THE CLASS.

WE, the undersigned students forming the professional class in Phrenology and Physiognomy, for 1867, at Messrs. FOWLER AND WELLS' establishment, 389 Broadway, New York, under the able instruction of Messrs. NELSON SIMMS and S. R. WELLS, offer the following Preamble and Resolution as a slight testimonial of our high appreciation of the invaluable benefits derived:

WHEREAS, it has been our aim and object to acquire a knowledge of that science which is the only basis of human improvement, the correct system of teaching men to know himself, and mitigate the evils occasioned by ignorance of the laws of life as they pertain to mind and body, and thus promote the welfare of mankind, we do cheerfully indorse the following Resolution:

Resolved, That the facilities afforded by our eminent teachers of human science were fully equal to our most sanguine expectations, and we cordially congratulate our preceptors on their ability to present the subject with so much clearness and efficiency, and that we owe them a debt of gratitude, and shall ever hail with joy the prosperity of the nucleus which has radiated so much light, and which is the pioneer Phrenological Cabinet of America. [Signed.]

GOING TO PARIS.

MANY Americans are getting ready to cross the Atlantic in the spring, to be present at the opening of the Paris Exhibition in April. Passages have already been secured by many on steamers, and hotel accommodations engaged in Paris. We write to admonish our countrymen to provide themselves amply with the means of defraying all necessary or extravagant expenses before entering upon this enterprise; for we foresee large numbers of improvident persons who, without sufficient cautiousness, will start off with barely enough means to take them across the ocean, trusting to luck for what will be necessary to defray their further expenses on the other side. Of all places in the world for a poor American the Old Country is the worst. He should not depend either on his wits or his labor, for he will find enough others as witty as himself, and a vast horde of laborers who can live and labor cheaper than he can in that country.

We can furnish excursion tickets, to go and return, by the different lines of steamers sailing from New York, Boston, Philadelphia, Baltimore, Canada, etc., and all the necessary guide-books for visiting the Old Countries, and no one should start without first investing from ten to fifteen dollars in these indispensable volumes, which are devoted respectively to England, Scotland, Ireland, France, Italy, etc., showing all the routes, describing most of the interesting places of historical importance, and what is to be seen, and how to see it. But we can not indicate here all that the tourist will need to know. We published in last year's JOURNAL something at length on this subject, to which the reader is referred. But we wish now particularly to caution our enthusiastic and ambitious young American friends whose motto is "Go-ahead," first to be sure they are right, having a "pocket full of rocks," and a good sum to their credit in their banker's vault, against which to draw in emergencies. These emergencies are sure to occur.

American newspapers and magazines will be flooded with voluntary and paid-for descriptions of everything relating to the great show, and it will be very difficult for new writers to find profitable openings in this direction. Many who go without being amply provided for, may go in joy to return in sorrow. Others being disappointed will pronounce the whole thing a magnificent "humbug." Still others will go into ecstasies over some new kink or crotchet, to be seen in that great store-house, which they had not seen before. Small brains with small minds will see many little things; while others of more comprehensive and perhaps less practical judgment will see more than they can describe; while the thieves, pickpockets, and gamblers will rob and swindle the poor foreign geese out of all their funds and feathers. But let us not expend our pity in advance—"A word to the wise." The "otherwise," with more curiosity than judgment, will heed no one.

INFIDELITY AND PHRENOLOGY.

WE have heretofore striven to be open and aboveboard with reference to our religious sentiments. From time to time we have had occasion to state our views on this or that theological topic, and we presume we are thoroughly understood by the great majority of our readers. At least we have reason to think so, from the numerous expressions of approval and encouragement we have received during the past year or two.

A correspondent who resides in some greasy locality vaguely denominated Olddom, professes firm belief in Phrenology, and in the same breath does "not see the necessity of confounding the truths of Phrenology with the false and dismal doctrines of Christianity and 'revealed religion.'" We are sorry for his dark and gloomy spiritual state, especially as his firm belief in Phrenology does not help him out of the depths into the genial, life-imparting sunlight of a certain faith. If he truly credits Phrenology, it teaches him the substantial realities of spirituality, and points him, through the organs of Veneration, Spirituality, and Hope, to a Power above and a world unseen. He may not heed the promptings of that science, and like the "undevout astronomer," be "mad" in his indifference. We think ourselves safer within the ark of true religion than, like our friend, adrift on the shoreless sea of infidelity. He says further: "Why not confine yourself to the truths of Phrenology alone? If you did so, your journal would be held in much higher estimation by your intelligent subscribers." How surprising it must be to our easy, self-collected—we may not say self-satisfied—friend, when we tell him that our religious views are based on phrenological teachings, and are the result of special attention to our chosen field, and that if he will give the subject the serious consideration it merits, we have but little doubt of his final acceptance of those views. We must join issue with him in regard to his very extraordinary statement which intimates that all our intelligent subscribers are as unchristian as himself. We feel strongly inclined to use severe language in reflecting upon this very unchristian opinion, so very coolly pronounced; but as he disclaims being a Christian, and therefore is not especially observant of those precepts of forbearance, meekness, and charity which He who "spake as never man spake" enjoined, we will forbear critical acerbity. We will say that so far as intelligence is concerned, we have received the most striking evidences of it from those on our own side of the question, and we are quite willing to trust our enterprise for weal or woe to the support of those who accept the doctrines of "revealed religion" or Holy Scripture.

We would not disparage the native and scholastic capabilities of these "intelligent people" in the section of country where our correspondent resides; but did we name that section, the intelligent among our subscribers who have reason to be indignant at so bold an assertion as the last quoted, would doubtless find more cause for intellectual amusement than for serious displeasure.

We have now before us the letter of a clergyman who writes warmly in favor of Phrenology, and the tenor of the letter indicates a superior mental cultivation. With an extract from this we would offset the remarks already quoted. He says:

"I am a Gospel minister, and the study of Phrenology has cast a flood of light on the science of Theology, and is the only reliable science of mental philosophy and of moral obligation. * * * I believe in reform and progress, and I am willing and anxious to do what I can to render all mankind wise, virtuous and happy."

It is quite probable that our *only* friend sincerely means well, although his suggestions have not the tone most desirable; but we can not think of abandoning the standard which has many times proved a blessing to us, and which we earnestly commend to all who seek consolation and mental peace in this world, and who hope for immortality.

PARENTAL INFLUENCE.

How often do we find parents weeping over the dissolute habits of a beloved son, and wondering how their child could ever have fallen into such evil habits! Yet, if they go back and examine their actions and conduct in the presence of and toward that son, too many a parent will find, with bitter agony, that he himself has furnished a ruinous example to his own child. Has he not himself, from time to time, at the invitation of a friend, or on some convivial occasion, been induced to take his social glass? Has he not lent the aid of his name and character to enable that tavern-keeper to procure a license to sell liquor? Has he not offered wines, or other liquors, to his guests, at his own house, on the occasion of some social entertainment or New Year's day anniversary? Has he not withheld his name and influence from the great temperance reformation, and by thus standing aloof been in fact opposing this benign element of regeneration to drunken humanity? If so, he may be assured that he has furnished a terrible example to lure his own child on to its destruction. That son will not think it wrong to take his social glass with a friend after seeing his father do so; and that very tavern for which the influence of the father had procured a license, may become a "gate of hell" to his ruined son. At the social board, in his own home, that mother may pour out for her own son his first glass, and may kindle in his bosom that terrible passion whose devouring flames will blast and destroy the happiness of herself and son forever. An awful responsibility does indeed rest upon that parent who, either by example or otherwise, countenances habits in his child which will probably end in intemperance.

We often, too, hear fathers mourning over the dissipation of their sons, and averring that they would be ready to lay down their lives if it would effect the reclamation of their children. They no doubt pray anxiously that their sons may become members of some temperance society; and yet, do they belong to any such society themselves? Have they ever done anything to advance the interests of the temperance cause? Have they not rather, by declining to become connected with such associations, furnished an example to their own children and others to decline also? To them, then, we would say, join first yourselves. Your names and influence may not only be the means of saving your own sons, but may help to give freedom and happiness to thousands of others who groan under the thralldom of intemperance. Do not hope and expect that others will labor amid contumely and reproach, for the benefit of your sons, while you yourselves are virtually opposing their efforts, and lending your countenance to those who are sneering at the benevolent enterprise of temperance men.

J. S. G.

ENCOURAGEMENT FROM OUR SUBSCRIBERS.

It is most encouraging to an editor, especially if he be one who labors for some worthy object in the conduct of his periodical, to receive from those who regularly read his pages words of hearty commendation. Renewals of subscription from old readers of the JOURNAL are coming in rapidly, and in nearly every instance the subscriber has penned some remarks of approval. The few following extracts are fair specimens of the general tenor of hundreds of letters on file in our office, and we give them *verbatim et literatim*.

"Accept my thanks for the vast amount of information contained in your JOURNAL, of which I am a constant reader. I hope the time will come when it will be considered a household necessity in every family, and Phrenology looked upon in its true light."—H. W. G.

"I believe from what I have seen of it that, no mother can afford to be without it."—F. A. F.

"What! do without the JOURNAL? No, I can not think of such a thing as long as I am blessed with the means, and life."—D. H. H.

"I am fully satisfied now that paying two dollars for the PHRENOLOGICAL JOURNAL was the most profitable investment I have made during the year."—A. C. S.

"I look upon it (the JOURNAL) as one of my most valued friends. Indeed, I would not exchange the twelve numbers which I have received—considering what their pages have taught me—for a whole year's free entertainment of any two of the leading magazines published in the United States."—L. J. P.

"My parents say that they see a marked improvement in me since I have been a reader. My father's indorsement is, that it improves every month. My mother's, that we *must* have it if it costs twice as much."—J. J.

"I regard the JOURNAL as the best paper in circulation. If I were to do without it, I would be quite at a loss."—S. R. L.

"I have been a reader of your JOURNAL two years. The longer I read it the better I like it."—L. G. M.

"Permit me to acknowledge the gratitude I must ever feel for the many useful lessons I have obtained in studying the JOURNAL's instructive columns. My JOURNALS are worn out from constant use in the circle of my acquaintance."—J. A. T.

"I have read it attentively this year, and have come to the conclusion that it is indispensable. Set me down as a lifetime subscriber and reader."—F. M. A.

"For the past year I have purchased the JOURNAL regularly, and prefer it to any other periodical in print. It contains general information, and withal such a high moral tone, combining the useful with the agreeable, that it makes its study doubly interesting. * * * I send you my subscription thus early, for I want to be among the first to get the JOURNAL after its publication."—N. P. T.

"I wish it the most abundant success, as it is from its teachings that I received the first correct impressions of the functions of the human body."—E. C.

"I must say in justice to you, that I have received much valuable information from the perusal of your JOURNAL, which I hope has made, and will make me a wiser and a better man during the whole course of my lifetime; and my prayer is that its usefulness may never cease."—B. A.

"I have received the A. P. J. regularly through the past year. I have quit the use of tobacco, and have received more value from its teaching than I can tell."—E. P. M.

"I feel lonesome without it."—M. J. B.

"You will please find inclosed my compliments in the form of a two-dollar greenback, which I consider a trifle for so good a work."—T. J. R.

"I honestly think the JOURNAL one of the best and most useful publications in the country. I could not now consent to do without it."—F. E.

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indorsing either the opinions or the alleged facts set forth.

A VOICE FROM MAINE.

PERHAPS a few words from this "ultima thule" of the Union and of phrenological domain may not be unwelcome. You give frequent expression to the hopeful views of your friends; may-be this of mine will not prove valueless.

Maine is a rugged State, but the hearts of its sons are true blue in their love for the Republic, and science has its devotees among them, despite its want of advantages and its unwilling soil. Your JOURNAL finds many a pleasant home in these parts, many an earnest student of your books, many a sympathetic disciple of Phrenology.

There is an interest yearly increasing, a development of organs and incentives, even among the old schoolmen of the past, those old fogies who keep the same threadbare coat and russet garb that their fathers wore before them, who follow in the same ruts of thought and chew the same cud of ideas from one year's end to another; even among these hard-fisted ones breaks a ray of light now and then, that knowledge is good, and that in Phrenology "there is some truth."

I believe Phrenology is the only system of mental philosophy that is worth anything; simple, plain, inductive in its teachings, it is the gospel of philosophy, the "vis medicatrix nature" of medicine, of mightier import than Congressional debates or the strifes of party spirit.

When Phrenology is understood, and somewhat enters into life and action, the negro will have his place and the white man his; the South will not be the North, nor the East the West, but all blending in one, with their varying interests, one law, one language, form that unity that we find in man, in nature, and in the universe of God.

As I said before, your JOURNAL circulates to a considerable degree in this Down-East section. Where a few years ago not a single copy entered the place, now a large number are sold.

So, you see, Phrenology is making progress even here. That great wave of knowledge which is overspreading the world is breaking over us. The world is going ahead, and Phrenology is on the move.

We live in an age,
A wonderful age,
Of steam and the telegraph,
Of the printing-press,
And crinoline dress.
And men may scorn and laugh
As much as they please,
For God's in the breeze,
And knowledge is on the deep;
There's an undertone,
Like the saddened moan
Of a wave that can not sleep;
'Tis the promised sign
Of that endless line
That shall clasp the earth around;
The cable is laid
'Neath Atlantic's bed,
Huzzah! is the pealing sound.

Wishing you God-speed in your efforts to disseminate Phrenology, which is one of the leading features of the age, I remain yours, earnestly,
TILDEN.

DISTRIBUTION OF RAIN.

For the conveyance of water we are indebted to the winds. The greatest extent of water-surface is in the southern hemisphere, and there we find the greatest evaporation. In the northern hemisphere the annual fall of rain exceeds that in the southern by about twelve inches. This can be accounted for only through the agency of the trade-winds. The southeast trade, laden with the burden of vapor from the southern seas, as it proceeds northward becomes chilled and throws off a large portion of its moisture. To this wind northwestern Europe owes its rainy climate. Ireland lies in the

course of these southeast trades, which absorb much moisture in their passage over the north Atlantic, most of which is condensed by the headlands on the Irish coast. In Peru, west of the Andes, an umbrella is purely ornamental, because it lies in the region of perpetual southeast trade-winds. These cross the Atlantic and strike the coast of Brazil, over which they pass, depositing the vapor as they go, and at length reach the Andes, where the temperature is so reduced that the last particle of moisture is wrung out of them. They cross the mountains as dry winds, and receive no accession of vapor until they reach the Pacific. For like reasons are found rainless regions in Asia, Africa, and western Mexico. The rainy seasons in tropical countries are caused by the motion of the trades as they follow the sun; at one season the trades prevail, and at another the surface winds, returning to the poles. In some districts lying on the weather-side of mountain ranges, the fall of rain is almost incredible. In Patagonia, where the north-west winds are literally desiccated by the Andes, Captain King found the fall of water equal to nearly thirteen feet in forty-one days; and Darwin reports that the superficial sea-water along the coast is quite fresh. Herschel says that nearly fifty feet of rain fall annually at Cherra Punjee.

THE LAST PAPER DOLLAR. A PARODY.

BY REV. EDEN B. LATTA.

'Tis the last paper dollar,
Left folded alone;
All its former companions
Made use of and gone;
No silver relation,
Nor gold one is nigh,
Wherewith I may purchase
The things I would buy.
I'll not leave thee thus lonely,
Dejected and sad;
Though I've none but thee only,
Of all that I had;
The others I needed,
And used all but thee;
Thou only remainest,
To buy aught for me.
And thou, too, must follow—
Must go the same way;
For I have occasion
To use thee to-day;
And 'twere not in kindness—
Thy kindred all down—
To let thee remain in
The pocket alone.

OUR NEW PHYSIOGNOMY.

TESTIMONIALS, oral and written, are extended daily, expressing satisfaction with the work. The *press*, almost without exception, commends the book. We may, at another time, put the gist of what they say on record. Here is what Dr. B. W. NICHOLS, of the Government Insane Asylum, at Washington, D. C., says of it:

"I have no hesitation in certifying that I believe yours to be the largest and most elaborately illustrated work on Physiognomy that has appeared in any language, and that it is calculated to afford the philosophical reader much valuable instruction. It can not fail to greatly interest every intelligent reader. Not being expert in practical Physiognomy, I am not capable of judging how far the minute peculiarities of the features of the face are reliable indications of character, but I think the general physiological principles laid down in the work are entirely sound, and that they should be carefully studied and applied to the great business of healthful and useful living."

[We claim for Physiognomy no more than every intelligent, unbiased mind would willingly grant. Every statement we make, every proposition laid down, will be found to be in harmony with Anatomy, Physiology, Phrenology, and common sense. Probability is clearly apparent in every paragraph. Were this book generally read, we should hear less of the incurability of insanity and other mental infirmities. It would deter one and all from rash acts, from violence, crime, and suicide, and incline all to a truer and higher life.]

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—TO CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE slips.

SPECIAL NOTICE—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

WHAT CHURCH DO YOU BELONG TO?—Thoughtless and impertinent persons not only put such questions to us, but indiscriminately to whomsoever they meet. The most suitable answer which can be made in such cases is the Scriptural direction of "answering a fool according to his folly," or, we might say, impertinence, by saying nothing; or still better, by referring him to the little book we publish, entitled "How to Behave." A dull mind may not realize how painful it must be to a sensitive nature to be thus publicly catechized on a strictly personal matter. When it is considered how intense is sectarian animosity, it is no wonder that one should cringe under such vivisection. In this country, thank God! a man may not be persecuted or crucified on account of his religious convictions; but he may on all proper occasions proclaim them, and not be molested. Still, in strictly sectarian neighborhoods, one may be "left out in the cold," unless he belongs to a particular church. Our religion is between ourselves and our God. We would that it were so with all.

FAITH, HOPE.—One may have weak Hope and strong Spirituality, and the reverse, according to the size of those organs.

CHOKER, OR SAINT VITUS' DANCE.—Of course the treatment of this disease will depend very much upon its character and stages. In the great majority of cases much relief will be derived from the simple treatment of a thorough daily ablation, an occasional injection, and a free diet of brown bread, wheaten grits, potatoes, and a moderate quantity of fruit.

What is the use of studying algebra?

Ans. The study of algebra is considered necessary as a preliminary to the higher branches of mathematics. We do not hold that algebra furnishes by any means the best modes of comprehending relations, either quantitative or qualitative, and therefore is not superior as a discipline of the mind. For those who intend to pursue any one of the scientific professions, such for instance as civil engineer-

ing, chemistry, or astronomy, algebraic formalization is necessary. Algebra may be looked upon as the foundation of technical formulæ.

"INFORMATION ON THE BRAIN."—We are desired by two doubting Thomases to answer the following objections to Phrenology, which we do, in brackets:

1st. That along under the organs of Time, Color, Order, etc., there is no brain whatever, and for this reason we can not determine by the prominence of this portion anything in regard to these organs. [Ans. Some folks can not.]

2d. That the evolutions of the brain in no wise correspond with those of the skull. [Indeed!]

3d. That there is a vacancy between the frontal sinus and brain, varying from $\frac{1}{4}$ to $\frac{1}{2}$ of an inch, and for this reason we can not tell by the exterior in this region of the skull anything in regard to the promiscuity of the organs said to be located there. [We admit the vacancy. There are houses with large rooms and no furniture; so there are skulls without brains. We can't supply them.]

4th. The brain is the organ of the mind, and how are we to tell, in the regions of the skull where the brain and skull do not meet, anything about the organs said to be located there? [Echo answers, how? P.S. On second thought, why not cut the skull open and find out all about it?]

HOPS.—As hops constitute an element of ale, can a man conscientiously raise hops for that purpose?

Ans. It depends on how his conscience hinges. If he is a temperance man, and believes in discouraging all kinds of intoxication, we think he might just as well raise wheat and corn, with the express expectation that they shall be made into whisky, as to raise hops. Men raise corn and sell it for whisky; men make whisky, and even may perhaps sell it, and be entirely conscientious. In some European countries, nearly everybody drinks ale, beer, or ardent spirits, even ministers of religion—and their consciences do not condemn them. For ourselves, we could neither raise tobacco; nor hops for ale, nor grain for whisky. Though in raising corn and selling it for breadstuff, it takes the place for bread that another man's wheat would if his grain did not go to the manufacture of alcoholic liquors. So that a man hardly knows where the influence of his products shall be exerted, either directly or indirectly. But the matter of conscience must always center in this—whether a man does this or that for such an express purpose, or knowing that it shall produce such results.

SEX AND MIND.—Does sex exist in the mind?

Ans. We do not know how much is meant by the question. Man's mental organization, as it exists on the earth, contains within itself an element of sexuality. It is masculine, or it is feminine. If the question means whether the immortal soul will have a sex, we can only say, in the language of the Saviour, when questioned as to whose wife the widow of the seven brothers should be, "for they had all had her," he replied: "In heaven they neither marry nor are given in marriage, but are as the angels of God." He simply gave a negative, and in telling us that they were as "angels of God," he did not say positively what human beings were to be, what was their condition, only like something we don't understand. But it is pre-

sumptive that in the spirit-world sexuality will not have such a sphere of action as in this life, yet that there will be a duality there as well as here; but it will have a spiritual refinement and a sphere of influence adapted to the purified and spiritual state.

FROSTED FEET—CHILBLAINS.—What is the best treatment for frosted feet and chilblains?

Ans. The best thing on this subject is to keep from having the feet become cold, by wearing thick boots and stockings, and avoiding exposure as much as possible. Applications of water bandages are as good as anything to remove the soreness and restore the circulation.

THE WIND.—What is the cause of the wind blowing from the north or northwest in fair weather, and from the south or southwest in stormy and wet weather?

Ans. This is not so in all cases. In some sections of the United States the big storms come from the northwest; in others, from the northeast; in others, from the south or southeast; in others, from the southwest. It depends upon the local currents of air, upon mountains, upon oceans, and upon electrical conditions. In New York and on the Atlantic seaboard, the northwest wind comes from the dry land; the northeast and southeast come from the ocean; and the warm, damp breezes meeting the cold northern breezes, the dampness is condensed into rain.

INSANITY.—What change takes place in the brain of a sane man to produce insanity? and what treatment is necessary to restore it to reason?

Ans. Insanity originates generally in an inflamed condition of the brain. Trouble, disappointment, over-exertion, over-study, dissipation, abuses, improper food, etc., are among the causes of insanity. These acting upon the brain, produce in it abnormal conditions—whether they be congestion, a state of irritation, or both, it may not be easy always to determine. Cold applications to the head, leeches, reducing the diet, have been efficacious. We remember a friend who received a blow on the external angle of the forehead, and he became insane, and exhibited his insanity by immoderate laughter, and was taken to the Insane Asylum at Hartford, Connecticut, for treatment. Ascertaining that he was there, and that he had received a blow on the temple, in the region of the organ of Mirthfulness, we wrote to his father on the subject, stating our opinion and giving suggestions; he went to the physician with the letter. They made cold applications and leeches, and in a day or two the lunatic showed great improvement, and was soon entirely well. But the question of insanity can not be answered in a single paragraph. Insanity, however, let it be remembered, is a disease of the brain, not of the mind.

MATRIMONIAL FITNESS.—We have before us letters from subscribers—indeed, three letters on one sheet—containing the phrenological development of the parties, as given by some phrenologist unknown to us, and asking what organizations would be adapted to matrimonial alliances with the persons whose charts are sent. This sending marked charts to us is no new thing. Indeed, it is coming to be a great tax on our time and patience. We are asked to study the developments as given, and then study out a character, and give in the JOURNAL the developments necessary for a matrimonial mate

to each. We can not afford thus to spend our time, nor can we afford the room in the JOURNAL; besides, one of the charts sent us could not have been marked by a respectable and intelligent phrenologist. By the way the temperament is set forth, we know that he did not understand his business, and we are not inclined to pay any attention to such charts. Let our readers understand, that if they wish to consult us on this very important subject, they may send us a three-cent stamp and ask for the "Mirror of the Mind," which will tell them all about having their likenesses properly taken for examination, and what it is necessary for us to know in order to give a correct delineation of character from likenesses.

LETTERS WITHOUT NAMES.

—Persons write us anonymous communications, very often inclosing long lists of questions particularly interesting to themselves, and expect to have them answered in the JOURNAL, when the room they ask would be worth \$20. Many such letters (especially if they contained a three-cent stamp) we should greatly prefer to answer privately, but not having the name and address, we are obliged either to bore our other readers, and occupy valuable space or throw the communications in the waste basket. We earnestly request all who send questions for the JOURNAL to give us their name and address (not for publication), so that we may give answers privately if we choose. We would also repeat our admonition for the benefit of some correspondents who fairly overwhelm us with questions, that one sensible inquiry at a time is all we care to notice.

DREAMING.—What is the cause of continual dreaming, and how can it be prevented?

Ans. One prolific cause of dreaming is over-eating. There is a story told of a young lady in England who complained to her physician of having a dreadful dream, all about her grandmother. "What did you eat for supper?" inquired the physician. "Not much," she replied. "A little boned turkey, pickled oysters, roast pork, a few sardines, and a half of a mince pie." "Ugh!" says the old physician, "if you had eaten the other half of the mince pie, you would probably have dreamed of your grandfather too!" Eating heartily of meat late at night, one may dream of droves of hogs, cattle, sheep, etc. Eat light suppers, not too late in the evening—say not later than six o'clock. Take an hour's brisk exercise in the open air, or its equivalent out of doors, and avoid exciting novels, plays, and games, winding up the day with a pleasant hymn, and the necessary devotional exercises, resigning yourself to God's care and keeping, and your dreams, if you dream at all, will not be of a frightful or an unpleasant nature.

TICKLISH.—Why is it that a person is susceptible of being tickled by another, when he can not do so by using upon himself the same manipulations?

Ans. Some persons can not wipe the bottoms of their own feet, or rub them in washing, without producing this tickling sensation, though generally when one purposes to act upon himself in any way it does not produce a tickling sensation. We suppose that it is the unexpectedness or surprise which produces that peculiar sensation. A horse being unexpectedly touched in some parts of the body will jump and cringe; whereas if he be approached from the neck, and the ticklish places gradually

reached, he will not then move or cringe; and we think he has similar sensations to those which a man has who is tickled about the neck, or under the arms, or on the soles of the feet. There are few people who do not feel this nervous susceptibility.

Why do persons close their eyes when they pray?

Ans. Those who read prayers do not close the eyes; but generally persons offering extemporaneous prayers do close the eyes, and we suppose the reason for it is, that the prayer is addressed to an unseen spirit, and when the eye is closed and the external world shut out, the imagination, the faith, the hope, the thought, more readily rises into the realm of the sacred and the spiritual.

THE LONG SLEEPER.—We clipped the statement relating to Mr. Gabriel Ellis, which appeared in our January number, from a scientific periodical published some time in the latter part of November, we think, not having the document before us just now. Inferring, then, that Mr. Ellis awoke from his trance-like slumber on the 9th of November, he had suffered almost six months to elip by unused and unimproved.

LORD'S PRAYER PICTURE.—Have you seen, and if so, what is your opinion of the Lord's Prayer Picture, published by Mr. L. Cowles, of New York city, and advertised in the JOURNAL?

Ans. Yes, and our opinion is, that it is the work of a master penman in every sense of the term. To describe the picture according to its merits would take more of our time and occupy more space than we can give it; yet it is a subject suggestive of volumes. Not only have we the simple words of the prayer exquisitely traced in various styles of letter, but interwoven with it are the leading incidents of our Saviour's life. The chief features, to us, of the work are the portraits, or busts, of Christ and his twelve apostles. These are miniature copies from Da Vinci's "Last Supper," but are clear and classic in outline and expression. Besides these there are several other beautiful engravings from some of the choicest paintings in the world. A key accompanies each copy of the picture, and also a "monitor," intended for the use of children, acquainting them in simple language with the many Scripture lessons illustrated by the engravings. A picture of this character should be in every family. A father could not invest his money to better advantage than by presenting it to his children.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE HISTORY OF A MOUTHFUL OF BREAD and its effects on the organization of men and animals. By Jean Maie. Translated from the eighth French edition by Mrs. Alfred Gatty. First American edition. Reprinted from the above, carefully revised and compared with the seventeenth French edition. New York: American News Co. 12mo. Cloth, \$2.

In this very neat American reprint of a very highly esteemed French book, the author, M. Maie, treats of the human physiology in a way calculated to interest even children. He has endeavored to render the great principles of Respiration, Digestion, Circulation, etc., intelligible to the youthful intellect, by using the simplest illustrations and the very plainest lan-

guage, and he has succeeded remarkably well. If seventeen editions of the work which have been published to meet the demand for it, are any evidence of its practical value. The translator has striven to render the English edition as simple as the French, and deserves much credit for the *recherche* manner in which she has performed the difficult task. We need more of such books which will bring the great truths of science within the intelligent grasp of the humbler mind. The staid and formal style of nearly all the books on scientific subjects published in this country, tends to retard the general diffusion of scientific knowledge, and strengthens the impression that science is a field which but a few favored by circumstances are permitted to explore. The more the general public know about science, the more extended and improved will be their facilities for social and private happiness. Professor Youmans has done much toward popularizing chemistry, but there is ample room for farther effort in that department. The author of "Physical Perfection" wrote his admirable treatise for the purpose of disseminating generally the main features of physiology, but his work is hardly simple enough for the child. M. Maie writes for the child, and his childish phraseology makes the subjects treated on all the more clear to the mature intellect.

THE HOME JOURNAL, edited by Mr. Morris Phillips, evinces its prosperity by putting on a "bran new dress." Always tasteful, always rich and spicy, it now brings to its service able writers—American and European—of both sexes, and pronounces in favor of female suffrage. Though the *Home Journal* represents the upper ten thousand, it is in hearty sympathy with the best interests of society. A clean, handsome weekly; published at \$3 a year.

SIX HUNDRED DOLLARS A YEAR. A Wife's Effort at Low Living under High Prices. Boston: Ticknor & Fields. Cloth, \$1.

This account of a wife's effort in household economics has nothing in it to clash with reasonable probability, and may be read by those who strain to "make ends meet" now-a-days. We would like a book reciting the actual experience of a frugal housekeeper in New York city. We think it would approximate more to the character of a standard authority than memoirs of domestic experience in the less expensive retirement of a country town.

RECENT MURDERS IN AUSTRALIA. We have received from Mr. Plunkett, of Nelson, New Zealand, an "Illustrated Narrative of the Dreadful Murders on the Maungatapu Mountain, and on the Track between the Wakamarina River and Nelson, in the province of Nelson, New Zealand," together with photographic portraits of the murderers, and biographical sketches, for which he has our thanks. The "narrative" does not give us a very flattering picture of Australian life; but shows unmistakably the evils that have been entailed upon that young and beautiful country by the transportation thither of convicts from England.

VICK'S ILLUSTRATED CATALOGUE AND FLORAL GUIDE. We feel constrained to make a special notice of this beautifully prepared compilation. The floral and vegetable illustrations are no mean specimens of the engraver's art, but reflect credit on the artist for his skill, and on Mr. Vick for his taste and liberality.

The catalogue constitutes a neat little floral album worthy of any library. Those interested in horticulture should send to Rochester for a specimen catalogue.

THE AMERICAN PHOTOGRAPHIC ALMANAC for 1867—by John Fowler, M.D.; New York, Joseph H. Ladd, publisher—contains information of value to those interested in the "work of the sunbeam" and some items which all can read with advantage. Price 50 cents.

THE NEGATIVE AND THE PRINT: or, the Photographer's Guide in the Gallery and in the Field, being a text-book for the Operator and Amateur, containing Brief and Concise Instructions for the Preparation of the Different kinds of Photographs now in vogue. By John Fowler, M.D., Professor of Chemistry, etc., in Hobart College; author of "The Silver Sunbeam," etc. New York: Joseph H. Ladd. 12mo. Cloth, \$1 75.

We feel safe in commending this book to the photographic profession. It is brief and condensed in statement, yet simple enough for the comprehension of the tyro. The author's name is a sufficient guaranty for the quality of the manual.

THE MYSTERIES OF THE PEOPLE: or, the Story of a Plebeian Family for 2,000 Years. By Eugene Sue. Translated by Mary L. Booth. New York: Clark, 418 Broome Street. First Series. Paper. Price \$1.

"The Mysteries of the People" presents, in the garb of romance, the history of the French people through the ages of oppression and monarchical despotism, till they became strong enough to assert their own sovereignty. This is a chapter in French life hitherto unwritten. The author, by historic example, shows the abuses and dangers which grow out of inequality, class, and privilege—a doctrine so well advanced by the author, that Louis Napoleon ordered the suppression of the first issue of the book, and imprisoned M. Sue.

BROUGHT TO LIGHT. A Tale of England and America. By Thomas Spaight. New York: Hilton & Co., 138 Nassau Street, 1867. Paper. Price 50 cents.

Like most of our paper-covered literature, his novel opens with a deep mystery, which of course is gradually "brought to light." Its descriptions of English aristocratic life are good, and in the main interesting; but the connection of the story with America is somewhat obscure; save that the villains introduced in the narrative escape to America. The interest of the reader is tolerably well enlisted throughout.

THE AMERICAN NATURALIST. A popular illustrative monthly magazine of Natural History is announced in our present number, to be published by the Essex Institute of Salem, Massachusetts, at \$3 a year. If the promises of the prospectus be fulfilled, the new magazine will become a record of great value. Send for a specimen number and judge its merits for yourself.

RECOLLECTIONS OF ITINERANT LIFE, including Early Reminiscences. By Rev. George Brown, D.D., of the Methodist Protestant Church. Cincinnati: R. W. Carroll & Co. 8vo., cloth, 466 pp. Price \$3 00.

Through the politeness of Rev. Alexander Clark, of Pittsburg, Pa., we have received a copy of this handsome volume, which, doubtless, will be welcomed by every Methodist. We hope soon to give a suitable critical notice of the work.

SCHOOLDAY DIALOGUES. Compiled by Rev. Alexander Clark. Philadelphia: J. W. Daughaday & Co. Price, \$1 75. New York: Fowler and Wells.

This is just such a book as every youngster who thinks himself a natural-born orator and actor would like to have. Indeed, it would be accounted indispensable were its merits known. The demand for a first-rate book of dialogues has been great, but that demand very inadequately supplied. We think Mr. Clark has been eminently successful in the work before us. He is not only familiar with schools and their requirements, but he is also familiar with boys and girls, knowing their natures, wants, and capacities; and he is just the one to prepare mental food for their minds. A long experience as editor of one of the best of juvenile periodicals, considerable experience as a teacher, and more recently as a preacher, fits him for the work undertaken. The book contains over eighty pieces in prose and poetry, suitably dramatized by the best writers, making a volume of some three hundred and fifty 12mo pages. It must become at once a success.

THE NEW YORK COACH-MAKER'S MONTHLY MAGAZINE for Feb.; with its usual assortment of information to the trade, and some neat illustrations of new vehicles, is well worth the price asked for specimen numbers—50 cents.

THE LAWYER IN THE SCHOOL-ROOM, comprising the Laws of all the States on important Educational Subjects. By M. McN. Walsh, A.M., LL.B., of the New York Bar. New York: J. W. Schermerhorn & Co. Cloth, \$1.

This book comes to us most opportunely—at the time when the subject of school discipline is agitating the educational world. We have therein presented in brief the specific legislation of the leading States with reference to the conduct of schools. The respective rights of teachers and parents as affecting the education of children are very clearly defined. A lengthy chapter is devoted to the consideration of that momentous subject, "corporal punishment." All who have to do with teaching "the young idea" will, doubtless, hail the book as a volume long desired to set at rest the many prevailing uncertainties relating to school jurisprudence.

PARTS 113 and 114 of Chambers' Encyclopedia or Dictionary of Universal Knowledge for the People have come to hand, containing installments of historical and scientific matter. Any library would be greatly enriched by the addition of this encyclopedia to its catalogue.

New Books:

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting.]

PHILIP THE SECOND, OF SPAIN. A Companion Volume to Prescott. By Charles Gayarré, Author of "The History of Louisiana." With an Introductory Letter by George Bancroft, and a fine Steel Portrait of "Philip" from the Titian picture engraved by Bart. An elegant Octavo Volume. Extra Cloth, \$3 50, Half Calif, \$5 50.

GOOD ENGLISH: OR, Popular Errors in Philology. By Edward S. Gould. 1 vol. 12mo. \$1 75.

THE HISTORY OF LOUISIANA. By Charles Gayarré, being the American Domination, from 1803 (its Cession to the United States) to 1861. Comprising also The French Domination and The Spanish Domination. In three volumes. 8vo. Cloth; \$4 50 per vol. Half Calif, \$7 50.

TWO HUNDRED SKETCHES, Humorous and Grotesque. By Gustave Doré. Folio, pp. 86. Cloth, \$4 25.

THE FRENCH MANUAL: A New, Simple, Concise, and Easy Method of acquiring a Conversational Knowledge of the French Language. Including a Dictionary of over Ten Thousand Words. By M. Alfred Havet. Half Leather, \$2.

"SWINGIN' ROUND THE CIRCLE." By Petroleum V. Nasby (D. R. Locke), late Pastor of the Church of the New Dispensation, etc. His Ideas of Men, Politics, and Things, as set forth in his Letters to the Public Press during the year 1866. Illustrated by Thomas Nast. 12mo, pp. 209. Cloth, \$1 75.

-MANUAL OF CHESS. To which is added a Treatise on the Games of Backgammon, Russian Backgammon, and Dominoes. By N. Marache. 16mo, pp. 156. Boards, 65 cents.

NOTES ON BEAUTY, VIGOR, AND DEVELOPMENT; or, How to Acquire Plumpness of Form, Strength of Limb, and Beauty of Complexion. By William Mille. With additions, etc., by Handsome Charles, the Magnet. 16mo, pp. 23. New York: Fowler and Wells. Paper, 12 cts.

PATRIOTISM AT HOME: or, the Young Invincibles. By the Author of "Fred Freeland." 16mo, pp. 320. Boston: W. V. Spencer. Cloth, \$1 75.

OUR STATES AND TERRITORIES. Being Notes of a Recent Tour to Colorado, Utah, Idaho, Nevada, Oregon, Montana, Washington Territory, and California. Illustrated, by A. D. Richardson. Paper, 40 cents.

ELEMENTS OF ART CRITICISM. Comprising a Treatise on the Principles of Man's Nature as addressed by Art, together with a Historic Survey of the Methods of Art Execution in the Departments of Drawing, Sculpture, Architecture, Painting, Landscape Gardening, and the Decorative Arts. Designed as a Text-Book for Schools and Colleges, and as a Handbook for Amateurs and Artists. By G. W. Samson, D.D. Cr. 8vo. pp. 840. Cloth, \$4 50.

THE SAPPHIRE. A Collection of Graphic and Entertaining Tales, Brilliant Poems and Essays, gleaned chiefly from Fugitive Literature of the Nineteenth Century. 16mo, pp. 319. Paper, 90 cts.

THE SECRETARY'S SPECIAL HELP; a Monitor for the Secretary of the Lodge, with Directions for Keeping Minutes, Records, Accounts, etc., likewise Forms of Official Documents. 18mo, pp. 95. Cloth, \$1 25.

THE DRAYTONS AND THE DAVENANTS; a Tale of the English Civil War. By the author of "The Schonberg-Cotta Family." Handsome 12mo. \$- 30.

P. O. ORDERS.—Our patrons will oblige us, and save risk, by sending P. O. orders when remitting money for clubs and for books.

Publishers' Department.

OUR cotemporaries of the *Tribune* are becoming a little rusty in anatomical lore, if the following item clipped from a recent edition of that paper furnishes any evidence thereof.

"**SKULLS EXHUMED IN CITY HALL PARK.**—Yesterday, as the workmen were excavating for the laying of the water-pipes into the new Court-House, they turned up two human skulls and a large number of other bones. One of the skulls was like the ordinary skull, with a suture across the top, while the other had a suture running entirely over the top of the head, from between the eyes to the neck. It is known that the corner of Broadway and Chamber Street was used at the beginning of the present century as a negro burying-ground."

The second skull mentioned was an extraordinary one, *unlike* the ordinary human skull, according to the views of the writer of that item, because it had "a suture running entirely over the top of the head," etc. Our neighbor is evidently unacquainted with the condition of human skulls at the earlier periods in life. The frontal bone of a child's skull will be found to have a very distinct suture running from the root of the nose upward to the fontanel. At twenty, the union of the osseous plates in the forehead becomes so complete that very little trace of this suture can be found.

MR. JOSEPH LODGE, of Metuchen, N. J., has our thanks for the canine crania and specimens of peculiarly stratified pebbles. The notion which many entertain of the growth of rock is erroneous; where there is no vital organization, there can be no gradations of development.

THE Southern Cultivator, speaking of the *JOURNAL*, says, among other things, "How such a large, handsome, profusely illustrated and thoroughly edited paper can be got up at two dollars a year, passes our comprehension. Leaving out the Phrenological part, the other matter is worth the money." It can not be done without loss. We have decided to make it \$3 a year, commencing with the July number. The new rates will cover cost, and leave a small margin for profits.

THE DIFFERENCE.—We often receive applications like the following:

"**FOWLER AND WELLS.**—*Messrs.* With no other motive than a deep interest in the success of a young college, I venture to solicit a favor from you without long explanations or useless apologies. I will say we would be as proud of the name of Fowler and Wells on the list of our donors, as any of the numerous friends of education and progress who are represented there."

"Please have the kindness to send us a volume of useful information to put in our college library, or any specimen of useful art for our cabinet, and it shall be recorded in your name, and a special acknowledgment forwarded to yourselves."

"Yours, etc., J. H., Secretary."

But not often letters like the following:

"**DODGEVILLE, Wis.**
"Pub. PHRENO-JOURNAL.—I inclosed herewith \$2, for which please forward a copy of your *JOURNAL* for one year to the address of 'Dodgeville Literary Association.' Yours, respectfully,
"B. S., Secretary."

We are not behind any of our cotemporaries in zeal for the promotion of learning and educational institutions; but should

we respond to all the requirements of those who ask *donations* we would soon be obliged to suspend business. We are willing to supply our *JOURNAL* at a reduced rate, and we do so supply it to some needy institutions, but to go into a general *free* distribution, we could not think of it. Besides, phrenological science has become so well disseminated and so much appreciated that our publications find a ready market at fair prices, and there is no further need for broadcast gratuitous distributions.

MANY clergymen have our thanks for calling the attention of their parishioners to this *JOURNAL*. Whereas it was once feared that Phrenology led to materialism, it is now conceded that it is one of the most powerful aids to the understanding of a better life, and in keeping with *all* truth. There are cases not easily reached by the preacher which may be touched by these more direct and personal arguments, based on one's own temperament. It comes home with that emphatic charge—"Thou art the man!" and none can get away from its all-searching criticisms. Is the young man loose in his habits? Is he ill-tempered? Is he prodigal? Is he living without religion? Is he perverting his God-given gifts? Phrenology arrests, tries, convicts, and corrects him. Clergymen will find it useful in bringing home to the minds and hearts of all who read, a consciousness of duty to God and man, and be enabled to make the most of themselves.

PHONOGRAPHY.—Through the politeness of Mr. Burnham, of the firm of Ely, Burrett & Burnham, law reporters, Chicago, we have received the ninth annual address delivered before the Chicago Law Institute, by Elliott Anthony, Esq., President of the Institute, on Monday evening, November 5, 1866, in the course of which we find the following sensible remarks respecting the use of phonography in the law courts:

"It should be provided by law that each of the courts of superior jurisdiction in this country should have a shorthand reporter or phonographer, who should be a sworn officer of court, whose duty it should be to take notes of evidence, exceptions, and rulings of the court, etc., and preserve them for the benefit, not only of the courts and lawyers, but the parties themselves. They should be paid a liberal salary, and a portion of the expenses taxed as costs. I think that every judge and every lawyer of any experience will indorse what I say, that the taking of testimony by stenography, phonography, or shorthand is one of the greatest improvements of modern times. It saves time and labor, and is the only true and satisfactory mode of trying any case where the testimony of witnesses is required."

OUR PUBLICATIONS IN WASHINGTON.—A gentleman writes us from Washington, D. C., enclosing an order for books, and says: "It is a lamentable fact that your excellent works have no live agents here to bring their advantages to the notice of the public." We are not to blame for this state of things. There are both booksellers and periodical dealers in that city of magnificent distances, some of whom ought to consider their own interests sufficiently to keep a supply of that which would tend to straighten the minds of our crooked politicians. We hope to be able to send a delegation of phrenologists to that legislative center ere long, who will help sow the seed of truth.

General Items.

THE RULING OCCUPATION *STRONG ON SUNDAY.*—In a church in the north, not one hundred miles from Keith, a porter, employed during the week at the railway station, does duty on Sunday by blowing the bellows of the organ. The other Sunday, wearied by the long hours of railway attendance, combined it may be with the soporific effects of a dull sermon, he fell sound asleep during the service, and so remained when the pealing of the organ was required. He was suddenly and rather rudely awakened by another official, when, apparently dreaming of an approaching train, he started to his feet and roared out with all the force and shrillness of stentorian lungs and habit, "Change here for Elgin, Loxesmouth, and Burghhead!" The effect upon the congregation, sitting in expectation of a concord of sweet sounds, may be imagined; it is unnecessary to describe it; but the occurrence may give pause to the promoters of the organ movement in Presbyterian churches.—*Dumfries Scottish Courier.*

IRON ORE MADE BY INSECTS.—*The Medical News and Library* (Philadelphia) refers to a singular discovery made by a Swedish naturalist, with respect to the production of iron by insects. The insects in question are almost microscopic, and live beneath certain trees, especially in the province of Smaland. They spin, like silk-worms, a kind of ferruginous cocoons, which constitute the mineral known as lake ore, and which is composed of from 20 to 60 per cent. of oxide of iron mixed with oxide of manganese, 10 per cent. of chloric acid, and a small quantity of phosphoric acid. The deposits of this mineral are upward of 200 yards in length, 5 to 10 yards wide, and from 8 to 35 inches deep.

NEWSPAPER HEADINGS.—The face of a paper in this age must be emblematic of the future that is soon to come upon it; it must be typical of this age of progress. In picking up a paper with which we are unacquainted, we hastily glance at its face and title, and judge of it, as we do of mankind, by the appearance of their facial physiognomy. And as we read the lines there presented, so do we judge of the character that is shadowed behind it. It would be well that publishers look to the headings of their papers, and rightfully consider them as the outstanding index of the literary life and soul that they are to represent.—*Artisan.*

GEORGE FRANCIS TRAIN receives \$200 sterling royalty per mile on 2,000 miles of English street railways—about \$5,000,000 in gold.

WATERPROOF BOOTS.—A coating of gum-topal varnish applied to the soles of boots and shoes, and repeated as it dries, until the pores are sealed and the surface shines like polished mahogany, will make the soles waterproof, and also cause them to last three times as long as ordinary ones.

PAPER.—The quantity of paper used every year in England represents a weight of two hundred and twenty millions of pounds. France uses one hundred and ninety-five millions of pounds; while the United States of America, with a much smaller population, consumes more paper than England and France put together—namely, four hundred and forty millions of pounds.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

THE MOVEMENT - CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 88th Street, New York City.

HIGHLAND WATER-CURE.—H. P. Burdick, M.D. (Laughing Doctor. See PHRENOLOGICAL JOURNAL, December, '88), and Mrs. Mary Bryant Burdick, M.D., Physicians and Proprietors.

Send for a circular.

Address ALFRED, Allegheny Co., N. Y.

MRS. E. DE LA VERGNE, M.D.,
149 CARLTON AVENUE, BROOKLYN.

THE AMERICAN NATURALIST.—A popular illustrated Monthly Magazine of Natural History. Published by the Essex Institute. The object of this Journal is to supply a long existing demand for a popular illustrated magazine of Natural History, devoted to the exposition of scientific topics in a free and familiar manner, without those technicalities which often render the mass of such reading tedious and difficult.

The contents of the first number (March, 1867) will be as follows: Introductory; The Land Snails of New England (with a plate); The Volcano of Kilanga, Hawaiian Islands, in 1864-5 (with a plate); The Fossil Reptiles of New Jersey; The American Silkworm (with illustrations); Winter Notes of an Ornithologist; Reports of the Meetings of Scientific Societies; Natural History Miscellany; Reviews; Natural History Calendar; Answers to Correspondents; Glossary for the number.

TERMS.—\$3 per year; Clubs supplied at liberal rates. Single copies 35 cents.

EDITORS.—ALPHEUS S. PACKARD, Jr., in connection with EDWARD S. MORSE, ALPHEUS HYATT, and FREDERIC W. PUTNAM, Salem, Mass. The list of contributors embraces the best scientific talent in the country. Prospectus sent on application to the Editors.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODEONS, AND CABINET ORGANS, the best manufactured, to let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos at bargain, from \$60 to \$225. Old Pianos taken in exchange. Liberal discount to teachers and clergymen. Cash paid for second-hand pianos. Pianos tuned and repaired. New 7-octave Pianos for \$275 and upward. Warerooms, No. 481 Broadway, New York.

HORACE WATERS.

WANTED.—The services of a man who thoroughly, practically understands Concrete Building, as described in Fowler's "Home for All."

Address W. R. NORRIS, St. Albans, Vt. 1t*

1867.

"THE WORLD."

1867.

THE attention of the public is invited to the claims of "THE WORLD" as one of the leading public journals of the country. It is the chief organ of the Democratic Party of the United States, and the foremost advocate of the immediate restoration of the Union. Its highest merit consists in its character as

AN ENTERPRISING AND TRUSTWORTHY NEWSPAPER.

This year bids fair to be a more critical one in the history of our free institutions than even any of the eventful ones that have preceded it. The first requisite for an intelligent judgment of public affairs is a full and authentic account of facts as they transpire. These THE WORLD always aims to give with conscientious accuracy, and with equal fullness and fidelity, whether they make for or against its own views of public policy. Prompt activity in spreading before its readers every kind of news in which any part of the public takes an interest, is the first duty of a newspaper, and the facilities of THE WORLD for discharging this obligation are unsurpassed by those of any journal in the United States. Whatever else it may fail in, it certainly will not fail to furnish the news, nor to supply it with such promptitude, spirit, freshness, abundance, variety, accuracy, and candor, that no class of readers can miss anything of interest which they wish to find. THE WORLD will publish documents and arguments prepared by political foes just as freely as those prepared by political friends; making its own comments on them, of course, but never suppressing or garbling them because they are calculated to damage its own party. Adverse arguments which it can not refute, it is content to leave to make their full impression. THE WORLD adopts this rule because it believes no other is honest; because it conceives that its first duty to its readers is to keep them thoroughly informed on every passing subject of importance. In politics, THE WORLD will continue to be the bold advocate of

A LIBERAL, PROGRESSIVE DEMOCRACY.

the unflinching champion of Freedom, Justice, Order, and Constitutional Rights. The inspiration of its politics is Freedom restrained by Justice; or, to speak more strictly, Freedom pure and simple, in the largest collective measure; the office of justice being merely to protect freedom from encroachments: Freedom of the individual citizen in his rights of thought, speech, religion, and locomotion; in his Right to choose his own food and drink, in spite of meddlesome temperance laws; in his Right to make any money bargains he thinks proper, in spite of foolish usury laws; in his Right to buy and sell in all markets, domestic and foreign, in spite of unjust protective tariffs; in his Right to representation in the legislative bodies which tax him in spite of unconstitutional exclusions; Freedom of collective citizens to assemble for discussion of grievances; Freedom of all local communities to manage their local affairs without central interference; Freedom in every section of the country from the arrogant and unconstitutional domination of other sections; this large and comprehensive idea of Freedom sums up the politics of THE WORLD, which will never be found wanting to this capital interest of the country and of the human race.

IN ITS ACCURATE COMMERCIAL INTELLIGENCE

and careful, reliable market reports, THE WORLD will continue to maintain its present high reputation. A paper published in the commercial metropolis is naturally looked to for authentic information relating to trade, commerce, and finance; and this being a feature in which THE WORLD prides itself, it boldly challenges comparison with every journal in the metropolis.

EDITIONS.

THE WEEKLY WORLD, a large quarto sheet, same size as Daily, is now printed throughout in large type, and has the largest circulation of any weekly journal published, save one. Its extraordinary success since its union with the New York Argus has justified the most liberal expenditures, which will make it unrivaled in interest and value to farmers. Published Wednesday.

1. Its MARKET REPORTS embrace the New York, Albany, Brighton, and Cambridge LIVE STOCK MARKETS; the New York COUNTRY PRODUCE and GENERAL PRODUCE MARKETS; special and valuable HOP INTELLIGENCE; a department of Agricultural Reading; all together composing an unrivaled hand-book of current information for the Farmer, Live Stock or Produce Dealer, Country Merchant, etc.

2. A page or more will be reserved for ENTERTAINING FIRESIDE READING FOR THE FAMILY CIRCLE, embracing the freshest and best Stories, Poetry, Religious Reading, etc., and a page for the DISCUSSION OF ALL PROMINENT TOPICS of general interest, political, agricultural, financial, literary, etc., etc.

3. Its DIGEST OF THE NEWS is not, like most city weeklies, a mere waste-basket of the Daily; only matters of interest and importance are chosen from the Daily, while the mass of its contents are prepared especially for the Weekly.

In every post-office district there should be found some active, public spirited Democrat, who will confer a benefit upon us, his neighbors, and the cause, by counseling with his Democratic friends and making a determined effort to form as large a club as possible for the WEEKLY WORLD.

The SEMI-WEEKLY WORLD is a large quarto sheet, same size as Daily, which, by omitting a great mass of city advertisements from the Daily, contains all its news, correspondence, editorials, commercial and market news, cattle market, and provision reports, and a fresh and entertaining miscellany of literature. Published Tuesday and Friday.

The DAILY WORLD affords a complete compendium of, and commentary upon, the news of every day.

AMERICAN ARTISAN AND PATENT RECORD.—New Series.

The *American Artisan*, now in the second year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentes.

Each number contains numerous original engravings and descriptions of new machines, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

BROWN, COMBS & CO.,
Proprietors of the *American Artisan*,
11, No. 130 Broadway, New York.

DR. S. B. SMITH'S ELECTRO-MAGNETIC MACHINES.—The only ones where a true *uninterrupted* Direct Current with strong intensity and strong magnetic power is developed. Send for a circular wherein is exposed the trick of the "Stx current" contrivance, and where it is shown that there is *but one current* in electricity, and but one important modification in that current; as well as the falsity that the so-called "Six current machine has nearly double magnetic power." The book I allude to will be found interesting and instructive. No charge, and sent postage prepaid.

N.B. The Magnetic power of my *invented* Direct Current raises nine pounds.

"The arrangement in Smith's apparatus gives a much stronger physiological effect than I have seen from any other apparatus."

"B. SILLIMAN, Jr., Yale College."

Price, with single cup battery, \$18; double cup, \$20.

Address DR. S. B. SMITH, 309 Broadway, New York. 11

CHICKERING & SONS. Established 1823. Manufacturers of Grand, Square, and Upright Pianos. Ware-rooms, 652 Broadway, New York. Messrs. C. & S. have been awarded fifty-five Medals for the superiority of their instruments over all competitors, fourteen of which were awarded in the months of September and October, 1855.

DR. JEROME KIDDER'S High-est Premium Electro-Medical Apparatus.—New improvements patented in the United States, England, and France. Address DR. JEROME KIDDER, 450 Broadway, New York. 11

FOR THE DEAF.—Hasslam's Magnifying Tubes can be worn on the head and concealed from view by the hair, and enable persons to hear in church or other public assemblies. Send for a pamphlet to E. HASSLAM, 33 John Street, New York. 61

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[CONTINUED FROM FEBRUARY NUMBER.]

Go, wondrous creature! mount where science guides;
Go, measure earth, weigh air, and state the tides;
Instruct the planets in what orbs to run,
Correct old time, and regulate the sun;
Go, soar with Plato to the empyreal sphere,
To the first good, first perfect, and first fair;
Or tread the mazy round his followers trod,
And quitting sense call imitating God;
As Eastern priests in giddy circles run,
And turn their heads to imitate the sun.
Go, teach Eternal Wisdom how to rule!
Then drop into thyself, and be a fool!
Superior beings, when of late they saw
A mortal man unfold all nature's law,
Admired such wisdom in an earthly shape,
And showed a NEWTON, as we show an ape.

Could he, who rules the rapid comet, bind,
Describe, or fix one movement of his mind?
Who saw its fires here rise, and there descend,
Explain his own beginning or his end?
Alas, what wonder! man's superior part
Unchecked may rise, and climb from art to art;
But when his own great work is but begun,
What reason weaves, by passion is undone.
Trace science then, with modesty thy guide;
First strip off all her equipage of pride;
Deduct what is but vanity or dress,
Or learning's luxury, or idleness;
Or tricks to show the strength of human brain,
Mere curious pleasure, or ingenious pain?
Expunge the whole, or lop the excrescent parts
Of all our vices have created arts;
Then see how little the remaining sum,
Which served the past, and must the times to come!

II. Two principles in human nature reign;
Self-love to urge, and reason to restrain;
Nor this a good, nor that a bad we call,
Each works its end, to move or govern all;
And to their proper operation still,
Ascribe all good, to their improper, ill.

Self-love, the spring of motion, acts the soul;
Reason's comparing balance rules the whole.
Man, but for that, no action could attend,
And, but for this, were active to no end.
Fix'd like a plant on his peculiar spot,
To draw nutrition, propagate, and rot;
Or, meteor-like, flame lawless through the void,
Destroying others, by himself destroy'd.

Most strength the moving principle requires;
Active its task, it prompts, impels, inspires.
Sedate and quiet the comparing lies,
Form'd but to check, deliberate, and advise.
Self-love, still stronger, as its object's nigh;
Reason's at distance, and in prospect lie;
That sees immediate good by present sense;
Reason, the future and the consequence.
Thicker than arguments, temptations throng,
At best, more watchful this, but that more strong.
The action of the stronger to suspend,
Reason still use, to reason still attend.
Attention habit and experience gains;
Each strengthens reason, and self-love restrains.

Let subtle schoolmen teach these friends to fight,
More studious to divide, than to unite;

And grace and virtue, sense and reason split,
With all the rash dexterity of wit.*
Wits, just like fools, at war about a name,
Have full as oft no meaning, or the same.
Self-love and reason to one end aspire,
Pain their aversion, pleasure their desire;
But greedy that, its object would devour,
This, taste the honey, and not wound the flow'r.
Pleasure, or wrong or rightly understood,
Our greatest evil, or our greatest good.

III. Modes of self-love the passions we may call;
'Tis real good, or seeming, moves them all:
But since not every good we can divide,
And reason bids us for our own provide;
Passions, though selfish, if their means be fair,
List under reason, and deserve her care;
Those, that imparted, court a nobler aim,
Exalt their kind, and take some virtue's name.

In lazy apathy let Stoics boast
Their virtue fix'd: 'tis fix'd as in a frost;
Contracted all, retiring to the breast;
But strength of mind is exercise, not rest;
The rising tempest puts in act the soul;
Parts it may ravage, but preserve the whole.
On life's vast ocean diversely we sail,
Reason the chart, but passion is the gale;
Nor God alone in the still calm we find,
He mounts the storm, and walks upon the wind.†

Passions, like elements, though born to fight,
Yet mix'd and softened, in his work unite:
These 'tis enough to temper and employ;
But what composes man, can man destroy?
Suffice that reason keep to nature's road,
Subject, compound them, follow her and God.

Love, hope, and joy, fair pleasure's smiling train;
Hate, fear, and grief, the family of pain,
These mixed with art, and to due bounds confined,
Make and maintain the balance of the mind;
The lights and shades, whose well accorded strife
Gives all the strength and color of our life.

* Sectarian animosity more frequently grows out of Combativeness and Comparison, than Benevolence, Veneration, or Conscientiousness. If love of truth were the aim and end of discussion, there would be no acrimony, no ill-temper in it, but only kindness. A true Christian will be more zealous for the right and the good of mankind, than for the success of self, a party, or a sect.

† "Reason the chart." Man's intellect may be likened to the rudder of a ship; and his passions, including Combativeness, Destructiveness, Self-Esteem, Firmness, etc., the propelling powers. These are the same as steam to the engine; without them a person would be tame, timid, and inefficient. With strong propelling powers and intellect to direct, the person will accomplish something worthy of a man. The passions and the impulses need direction rather than restraint.

Pleasures are ever in our hands and eyes;
 And when in act they cease, in prospect rise;
 Present to grasp, and future still to find,
 The whole employ of body and of mind,
 All spread their charms, but charm not all alike;
 On different senses, different objects strike;
 Hence different passions more or less inflame,
 As strong or weak the organs of the frame;
 And hence one master passion in the breast,
 Like Aaron's serpent, swallows up the rest.
 As man, perhaps, the moment of his breath,
 Receives the lurking principle of death;
 The young disease that must subdue at length,
 Grows with his growth, and strengthens with his strength;
 So, cast and mingled with his very frame,
 The mind's disease, its ruling passion came;
 Each vital humor, which should feel the whole,
 Soon flows to this, in body and in soul;
 Whatever warms the heart, or fills the head,
 As the mind opens, and its functions spread,
 Imagination plies her dangerous art,
 And pours it all upon the peccant part.
 Nature its mother, habit is its nurse;
 Wit, spirit, faculties, but make it worse;
 Reason itself but gives it edge and power,
 As heaven's blest beam turns vinegar more sour;
 We, wretched subjects, though no lawful sway,
 In this weak queen some favorites still obey;
 Ah! if she lend not arms, as well as rules,
 What can she more than tell us we are fools?
 Teach us to mourn our nature, not to mend,
 A sharp accuser, but a helpless friend!
 Or from a judge turn pleader, to persuade
 The choice we make, or justify it made;
 Proud of an easy conquest all along,
 She but removes weak passions for the strong:
 So, when small humors gather to a gout,
 The doctor fancies he has driv'n them out.

Yes, nature's road must ever be prefer'd;
 Reason is here no guide, but still a guard;
 'Tis hers to rectify, not overthrow,
 And treat this passion more as friend than foe:
 A mightier power the strong direction bands,
 And several men impels to several ends;
 Like varying winds, by other passions tost,
 This drives them constant to a certain coast.
 Let power or knowledge, gold or glory, please,
 Or (oft more strong than all) the love of ease;
 Through life 'tis follow'd e'en at life's expense;
 The merchant's toil, the sage's indolence,
 The monk's humility, the hero's pride,
 All, all alike, find reason on their side.*

The eternal art, educating good from ill,
 Grafts on this passion our best principle:
 'Tis thus the mercury of man is fix'd,
 Strong grows the virtue with his nature mix'd:
 The dross cements what else were too refin'd,
 And in one interest body acts with mind.

As fruits, ungrateful to the planter's care,
 On savage stocks inserted learn to bear,
 The surest virtues thus from passions shoot,
 Wild nature's vigor working at their root.
 What crops of wit and honesty appear
 From spleen, from obstinacy, hate, or fear!
 See anger, zeal and fortitude supply;
 E'en avarice, prudence; sloth, philosophy;
 Lust, through some certain strainers well refin'd,
 Is gentle love, and charms all womankind;†

Envy, to which the ignoble mind's a slave,
 Is emulation in the learned or brave;
 Nor virtue, male or female, can we name,
 But what will grow on pride, or grow on shame.

Thus nature gives us, (let it check our pride)
 The virtue nearest to our vice allied;
 Reason the bias turns to good from ill,
 And Nero reigns a Titus, if he will.
 The fiery soul abhor'd in Catiline,
 In Decius charms, in Curtius is divine.
 The same ambition can destroy or save,
 And makes a patriot as it makes a knave.

IV. This light and darkness in our chaos joined,
 What shall divide? The God within the mind.

Extremes in nature equal ends produce.
 In man they join in some mysterious use;
 Though each by turns the other's bounds invade,
 As, in some well-wrought picture, light and shade,
 And oft so mix, the difference is too nice,
 Where ends the virtue, or begins the vice.

Fools! who from hence into the notion fall,
 That vice and virtue there is none at all.*
 If white and black blend, soften, and unite
 A thousand ways, is there no black or white?
 Ask your own heart; and nothing is so plain;
 'Tis to mistake them, costs the time and pain.

V. Vice is a monster of so frightful mien,
 As, to be hated, needs but to be seen;
 Yet seen too oft, familiar to her face,
 We first endure, then pity, then embrace.
 But where the extreme of vice was ne'er agreed;
 Ask where's the north? at York, 'tis on the Tweed;
 At Scotland, at the Orcades; and there,
 At Greenland, Zembla, or the Lord knows where.
 No creature owns it in the first degree,
 But thinks his neighbor farther gone than he;
 E'en those who dwell beneath its very zone,
 Or never feel the rage, or never own;
 What happier natures shrink at with affright,
 The hard inhabitant contends is right.†

[TO BE CONTINUED.]

* No one is "all bad." If one be a thief, he may at the same time be kind and even generous. One may be a gambler, and not without a feeling of devotion.

† A criminal should be judged according to circumstances. What is the degree of his accountability? Is he intelligent? Is he ignorant? Is he rich? or is he poor? Temperate or dissipated? Sane or insane? A fool or a philosopher? What, if any, are the extenuating circumstances? Did he inherit, from perverted parents, a natural tendency to this particular class of crimes? Reader, what are your besetting sins? Do they lie in the direction of wine, women, or money? or is your pride so absorbing as to lead you astray? Are you your own master? Can you say No to yourself, or to others, and hold to it?

* That is to say, each justifies himself in the course he pursues, not stopping to take counsel of God or his higher sense.
 † Lust is the perversion of pure spiritual love; emulation is noble; and envy is low selfishness.

LANDING OF SELKIRK ON THE ISLAND.

ALEXANDER SELKIRK.

We need hardly say that the "Life and Adventures of Robinson Crusoe" was founded upon the remarkable life of Alexander Selkirk. He was a Scotchman, born at Largo, Fifeshire, about the year 1676. Being of a romantic nature, nothing could satisfy him but the life of a sailor, which pursuit he adopted, and in 1703 went from England as sailing-master of a privateer called the "Cinque Ports." While on the voyage he got into a quarrel with the captain, and the consequence was that he asked to be put ashore. The first land sighted after this request was the island of Juan Fernandez, and there he left the vessel. He took with him his clothes and bedding, with a gun and some powder and bullets, some tobacco, a knife, a kettle, a Bible, with other books, and his mathematical instruments. Here he remained alone for four years and four months. He diverted himself as well as he could, but was very melancholy for the first eight months, but in time he grew reconciled to his strange position. When his powder was exhausted, he was obliged to procure his food by other means. His mode of living, with the continual exercise of walking and running, had cleared him of all gross humors, so that he could run with wonderful swiftness through the woods and up the hills and rocks, and in this way he was able to run down goats. He also tamed some kids, and, for diversion, would sometimes sing and dance with them and his cats, which had escaped from ships that had called at the island. When his clothes were worn out, he made others of goat-skins, using a sharpened nail for a needle, and stitching them together by thongs made of skins. When his knife was worn out, he made another out

of some old hoop-iron which had been left on shore, which he beat out thin between two stones and then ground to an edge on a smooth stone. The rats were so numerous on the island that they would gnaw his feet and clothes while he was asleep, and he was obliged to cultivate the friendship of all the cats he could procure, and he thus formed a large body-guard, which used to lie beside him, and soon delivered him from the rats.

On the 31st of January, 1709, he was rescued from his solitary confinement by two English vessels which had been sent out to cruise against the Spaniards. On the approach of the boats he directed the men where to effect a landing. He was clad in his goat-skins, and appeared more wild and rugged than the original owners of his apparel. He was taken back to England,

SELKIRK AND HIS GOATS

where he arrived on the 1st of October, 1711. For a few years after his return he lived in his native place, but subsequently eloped with a girl whom he married, and went with her to London. Afterward he entered the English navy, and served on the ship "Weymouth" until his death in the year 1723.

His life goes to show, that man, in whatever

position he may be placed, in whatever country he may find himself, can adapt himself to the conditions by which he happens to be surrounded; and illustrates very clearly the force of necessity and the benefit of exercise upon the development of the body. By his fleetness of foot solely he was enabled to secure his food.

THE SQUIRREL & THE MOUNTAIN.

BY RALPH WALDO EMERSON.

THE mountain and the squirrel
Had a quarrel;
And the former called the latter "Little Prig."
Bun replied,
"You are doubtless very big;
But all sorts of things and weather
Must be taken in together,
To make up a year
And a sphere.
And I think it no disgrace
To occupy my place.
If I'm not so large as you,
You are not so small as I,
And not half so spry.
I'll not deny you make
A very pretty squirrel track;
Talents differ; all is well and wisely put;
If I can not carry forests on my back,
Neither can you crack a nut."

NURSING TROUBLES.—Some people are as careful of their troubles as mothers are of their babes; they cuddle them, and rock them, and hug them, and cry over them, and fly into a passion with you if you try to take them away from them; they want you to fret with them, and to help them believe that they have been worse treated than anybody else. If they could, they would have a picture of their grief in a gold frame, hung over the mantle-shelf for everybody to look at. And their grief makes them really selfish; they think more of their dear little grief in the basket and in the cradle than they do of all the world besides; and they say you are hard-hearted if you say, "Don't fret." "Ah! you don't understand me—you don't know me—you can't enter into my trials!"

The above is a mirror in which certain persons may see themselves reflected. As though others had not trials! They lack hope; they give way to foolish fear; are cowardly, without faith or fortitude. They are poor things; will not amount to much. Still, it is our duty to help get them out of the rut, and encourage them to throw off cares.—*Er.*

THE
PHRENOLOGICAL JOURNAL,

S. E. WELLS, EDITOR,

Is devoted to The Science of Man, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in Choosing a Pursuit, in selecting a Wife or a Husband, and in judging of the dispositions of those around us, by all the known external "Signs of Character."

TERMS.—A New Volume, the 45th, commenced with January (1867). Published monthly, \$3 a year in advance. Sample numbers, 20 cents. Clubs of ten or more, \$1 50 each. Supplied by Booksellers and Newsmen everywhere. Address, Messrs. FOWLER AND WELLS, 839 Broadway, New York, U. S. A.

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

LOUIS AGASSIZ.

PHRENOLOGICAL CHARACTER.

WE have here a rather ponderous man—that is, a ponderous head on a ponderous body. His live weight must somewhat exceed 200 pounds. He is heavy ordnance—not light artillery. But what of him? Is he really great? Or, is he over-rated? In temperament, the vital principle is very strongly marked; the lamp of life is full up to the brim; there is no indication of dyspepsia or consumption here, but all the signs of a well-sustained vitality. What a chest! How ample the heart, lungs, and stomach! With him, food is readily converted into blood, lymph, and tissue; and he keeps an ample stock constantly on hand, to meet the heavy requisitions of his powerful mental machinery. Though a Swiss by birth and a Celt by blood, his general contour and make-up is Teutonic. His head is much larger than the average size, exceeding twenty-three inches in circumference; is broad at the base, and surpassing ordinary heads in height. Observe

PORTRAIT OF LOUIS AGASSIZ.

the distance from the ear to the top. It may be likened to a four-story house, with many apartments, all of good size and well furnished.

It is not a rattle-head, with empty rooms. Then observe the intellect. The entire forehead is large, especially the perceptive faculties, which

project considerably over the eyes. It is full in the middle, at Individuality, Eventuality, and Comparison, and rather large at Causality. Locality is immense, imparting a strong love for travel and adventure, especially when combined with moderate Cautiousness, and a mind naturally curious to investigate. The base of the brain is decidedly full, even heavy. The organs of Amativeness, Adhesiveness, Philoprogenitiveness, and Vitativeness are all prominent. He is not full in the crown; Self-Esteem and Firmness are not specially strong, hence he is inclined to be modest, sensitive, and even diffident. Neither is he as large in Combativeness and Destructiveness as might be considered necessary to give him great self-reliance, executive-ness, and force of character. More of these, perhaps, would indeed make him a power against which common men could not stand. But he is kindly, respectful, and sympathetic. He has inherited the mind and spirit of his mother, rather than the rougher and more masculine traits of the father. In the general conformation, his head is not unlike that of Audubon, or that of Herschel.

But what of his physiognomy? This: That is a quiet, calm, benign countenance. There is nothing belligerent in the expression; on the contrary, it has a friendly and inviting look. See how loving the lips, how meek the eyes, and how peaceful the whole! The nose, mainly, indicates culture and development of character. The eyes and the forehead indicate intelligence and availability of mind; the chin and the lips warmth and ardor of affection, and the whole vigorous health, a superabundance of vitality, with all the indications of long life, peacefulness, repose, happiness. Is there not just a touch of indolence in this temperament? He can not be altogether lazy; but he may seek for repose of body, if not of mind.

Such an organization can hardly fail to take a position, even in the front rank among men, and maintain it. It is true that there must necessarily be a powerful struggle here, between the flesh and the spirit; and when such persons give way to the appetite, resorting to stimulants as many do, they are very liable to go down. And it is no disparagement to this gentleman to state that his weakness or temptations lie in the directions of his appetite and his affections. Regulating and properly restraining these, he has little to fear and all things to hope for.

Professor Agassiz is no high-pressure engine, no race-horse, or greyhound; he is more like the low-pressure engine of a great manufactory which can exert a tremendous influence, and develop great power steadily and effectively. He considers the end—he looks to substantial and enduring results, and therefore would not be hasty in his conclusions. We see no indications of great precocity in this organization, but rather the steadiness of a studious mind, the diligence of which has been rewarded by the successful accomplishment of its undertakings. He may sometimes

require firing up, calling out, and urging on, but when in harness and fairly under way, he clears his own tracks. Had he been educated for law and for statesmanship, he could have stood in the front ranks. But it is known to all the world that he gave attention to the natural sciences, and he stands, to-day, at the head, in these studies and pursuits.

The biography annexed must conclude our description.

BIOGRAPHY.

Professor Louis John Rudolph Agassiz, the distinguished American naturalist, was born on the 28th of May, 1807. He is of French descent, his family having been among the Huguenots who were driven from France by the revocation of the edict of Nantes, some of whom afterward took refuge in the Pays de Vaud, Switzerland. Here, for six generations, the lineal ancestors of Agassiz devoted themselves to the ministry. His father became the pastor of St. Imier, a Protestant parish in the ancient bishopric of Basel, and subsequently took charge of the parish of Mottier, in the valley between the Lake of Neuchatel and the Lake of Morat, where Louis was born. His mother was a lady of uncommon intelligence and talent, the daughter of a physician in the canton de Vaud. As may be readily inferred, young Louis was early taught the precepts of holy living, which were carefully fostered and developed under the loving eye of a pious mother. It is said that, in his infancy, he exhibited the strongest love of knowledge, and would listen to the conversation of his father, and those friends who visited him, with a manifestation of intelligence quite remarkable in one so young, and when he had learned to read, the instruction books were rarely out of his hands. As early as ten years of age he evinced a decided predilection for natural history, and seemed never happier than when threading the intricate and dangerous passes of his mountain home, or when climbing some sharp acclivity in search of some new fern, or flower, or fossil; the finding of the least of which filled his heart with delight, amply repaying him for all the labor and fatigue experienced.

His father, appreciating the intellectual power exhibited by his son, determined to use every means within his reach for his proper development, and acting upon the principle, that a sound body is the only true basis for a sound mind, at the age of eleven sent him, with a younger brother, to the gymnasium at Vienne, a small town in the canton of Berne, where four years were passed in the study of ancient and modern languages, and in such muscular training, diversified by the amusements of fishing and collecting insects, as was fitted to develop his body. In the mean time his father had removed from Mottier to the little town of Orbe, at the foot of the Jura; and here, during the vacations, under the influence of a young clergyman named Fivaz, who is now himself in the United States, the young student's attention was first drawn toward the technical study of the natural sciences, especially the vegetable kingdom, but not yet with

the intention of making it a life-task. At fifteen he entered the college of Lausanne, where he passed two years of close application to his studies. Having chosen the profession of medicine, he went to Zurich in 1824, and two years after removed to the university of Heidelberg, where he continued his medical studies, giving some attention to zoology and botany, until 1827, when he entered the university of Munich.

While pursuing his studies at Munich, Agassiz formed intimate friendships with several of the most distinguished men of the day, among whom was Martius; under him he studied the organization of plants, and their geographical distribution; he lived in the house of Dollinger, with whom he studied the embryonic development of animals; he was intimate with Wagner; with Oken he discussed the principles of classification; with Fuchs he studied mineralogy; and for four successive years he attended all the lectures of Schelling on philosophy. He became the leading spirit in a select circle of young student who met to discuss scientific subjects. About this time Don Pedro of Brazil married an Austrian princess, and the Austrian and Bavarian governments seized the opportunity of sending to that country a scientific exploring expedition, to which was attached the distinguished naturalists Martius, Spix, Natterer, and Pohl. Martius, on his return from Brazil, set about the preparation of a report of his investigations there, and intrusted the zoological department to Spix, who had also the charge of the ichthyological part of the work. Spix dying, however, before the work was completed, Martius selected young Agassiz to elaborate, arrange, and classify the one hundred and sixteen species of fish which Spix had discovered, and so successfully was the task accomplished, that there has not yet occurred the necessity for a re-classification. This performance obtained for him good rank among naturalists. The study of medicine was now given up for the more congenial study of natural science. On the conclusion of his part of Martius' work, he applied for the degree of Doctor of Philosophy at Erlangen, which he obtained after sustaining with credit a severe examination, and in the same year he took at Munich the degree of Doctor of Medicine, on which occasion he maintained the superiority of woman, in a Latin dissertation entitled, *femina humana superior mari*. In the mean time he was engaged in collecting materials for a "Natural History of the Fresh-Water Fishes of Europe," which, through the liberal-mindedness of Cotta, a distinguished publisher, was shortly afterward issued, and which has since been pronounced a work of great thoroughness, and become a text-book for students in this department of science. Agassiz visited most of the rivers of Europe during the preparation of his work; and had his attention drawn to the fossil species, found in the fresh-water deposits of Oeningen and of Glaris in Switzerland, and of Solenhofen in Bavaria, the result of which was,

after several years' study, the publication of his "Researches on Fossil Fishes," and his "Descriptions of Echinoderms," which, continuing through ten years, was finally brought to a close in 1844. During the progress of this work, Agassiz formed a friendship with Humboldt, which lasted until the death of that distinguished man, and was of great service to him in his researches.

It was while engaged upon his "Researches on Fossil Fishes," that a friend sent him a fish scale, of peculiar shape, which had been exhumed from the chalk formations of Paris. It had once belonged to a race of fishes now extinct, and this was the only available testimonial that had come to the hands of any scholar. Nothing daunted, Agassiz set to work to give from these slender materials the exact position and relation of this antediluvian among his tribes. He first drew a profile of the extinct fish, placing the acquired scale in its proper place, and then gave it a name and described its habits, etc. He then sent the drawing, together with the description, to the *Journal of Arts and Sciences*, issued in Paris, where it was published at length. Five years subsequent to this publication, in which Agassiz had risked his reputation, his friend fortunately discovered a perfect fossil specimen of the defunct race of fishes, and sent it for his inspection. Upon examination, so accurately had he made his drawing, not a single line had to be altered!

It would be impossible in our limited space to give a sketch of each of Professor Agassiz's writings. His activity and enthusiasm always kept him busily employed. Among the products of his pen are his "Bibliotheca Zoologiæ and Geologiæ," "Critical Studies on Fossil Mollusca," "Memoirs on the Muscles in Living and Fossil Mollusca." He superintended a German translation of "Buckland's Geology," and revised the French and German translation of "Sowerby's Mineral Conchology." Another branch of inquiry in which Professor Agassiz took an important rank, was the study of glaciers, and their influence in geological phenomena, the result of his studies on this subject appearing in two works, entitled "Etudes sur les Glaciers," and "Systeme Glaciare."

From 1846, the biography of Professor Agassiz belongs to the scientific history of the United States. In the autumn of that year he arrived in Boston from Paris, his object being to make himself familiar with the natural history and geology of this country, in the fulfillment of a project suggested to the King of Prussia by the Baron Alexander Von Humboldt, as well as for the purpose of delivering a course of Lowell Lectures in Boston. He then visited New York, Philadelphia, and Charleston, with the view of comparing the animals of the northern with those of the more southern latitudes of this continent; and on his return to New York was offered, by Professor Bache, the Superintendent of the United States Coast Survey, the use of all the facilities afforded by the Government in the coast survey, for the further prosecution of his researches. An

offer so liberal, and of such vast importance in a scientific point of view, by means of which he could visit at will every point of the coast from Maine to Texas, and along the Western coast, made him exclaim, that this was enough to determine him to remain to the end of his days in the United States. In the summer of the same year he visited the coast of Nantucket and Martha's Vineyard; and in the same year he visited, in company with Mr. John A. Lowell, Niagara Falls and the White Mountains, the immediate result of which was papers on the medusæ of Massachusetts, and upon a coral found near Holmes' Hole. During the next three winters he lectured before the Lowell Institute upon comparative embryology, and upon the successive development of the animal kingdom, repeating them in New York, Philadelphia, and Charleston.

In 1847, Lawrence Scientific School was founded at Cambridge, Mass., and the professorship of zoology and geology was offered him, which he accepted, after having first obtained from his government an honorable discharge from his obligations to it. The Minister of Foreign Affairs, in granting his request, employed these words: "We well know that wherever you take up your abode, your time will be employed for the best advantage of science." He entered upon his duties in Cambridge in the spring of 1848, and at the close of the academic year started, with twelve of his pupils, upon a scientific exploration on the shores of Lake Superior, where they passed the summer months, the result of which is contained in a volume entitled "Lake Superior." In the same year, in conjunction with Dr. A. A. Gould, he published "Principles of Zoology," for the use of schools and colleges. To give an account of all that he has done would require a minute examination year by year, and often month by month. His time has been chiefly employed in delivering lectures in the winter, and in making scientific excursions during the summer. In this manner he has traversed the whole extent of the country from Lake Superior to the Gulf of Mexico, and from the Atlantic coast to the valley of the Mississippi, delivering courses of lectures in Savannah, Mobile, New Orleans, Cincinnati, and many other places. The winter of 1850 was spent upon the reef of Florida, in the service of the coast guard survey, with the view to ascertain the mode of growth and the direction of the increase of the reef. In 1852 he accepted a professorship of comparative anatomy in the medical college of Charleston S. C., but finding the climate injurious to his health, he again returned to the North. Since 1856 his chief employment has been the classification and arrangement of the immense amount of materials he has collected during his various and extended scientific voyages, and by the donations of friends and others interested in natural history. This collection forms the foundation for the most important of his works now in course of publication, entitled, "Contributions to the Natural History of the United

States," a work which is to be completed in ten volumes, and which has met with a more generous support than perhaps any publication of so purely scientific a nature and so expensive a form has ever before received. The subscription list reaches 2,500, an unparalleled number.

The most recent voyage of Agassiz was to Brazil. He organized a scientific expedition to the Amazon, the entire expenses of which were paid by Mr. Thayer, a banker of Boston. Some of the minor results of this expedition have appeared in the pages of the *Atlantic Monthly*, and it is probable that it will be the basis for a more complete and perfect work. Some of Agassiz's more recent popular publications have met with severe criticism abroad, upon the ground that he has not found in this country the constant friendly emulation which is especially necessary to keep a scientific man fresh and bright. It is feared that he is degenerating into the dogmatism and devotion to his own opinions, with a disregard, and perhaps contempt, for those of others, which is unfortunately too apt to characterize men who are almost isolated, and which is fatal to all real scientific progress. The real man of science seeks only the discovery and development of truth, and his personal aims and reputation are but secondary in this glorious pursuit. Whether such criticism is in this instance unfounded or not, can be decided only by our readers for themselves after a careful study of the evidence in the case. We simply notice it as a fact. The influence, however, of Agassiz in this country, in fostering and extending the accurate and liberal study of nature, which, followed in the right spirit is, *par excellence*, the liberal art, can not be too highly praised nor too gratefully remembered.

A POWERFUL MICROSCOPE.—The most powerful microscope ever constructed has been made by Messrs. Powell & Leland, and described in a paper read before the Royal Society of London, England. The power of this instrument is fully double any which has ever been constructed previously, and altogether surpasses what had before been considered the utmost attainable limit of perception in this instrument. This powerful microscope magnifies 3,000 diameters with its lowest eye-piece, and 15,000 diameters with its piece of the highest power—the latter being equivalent to magnifying no less than 1,575,000,000, or making an object appear that number of times larger than it really is! How immensely must such an instrument increase our knowledge of the lower organism; may it not even enable us, eventually, to determine the ultimate constitution of matter? Some of the most important discoveries in comparative physiology have been recently made with the assistance of the microscope, and many old theories have been exploded. But with the increase of its magnifying power, the *arcana* of nature appear to multiply, as if there were no limit to the domain of the infinitesimal.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

(CONTINUED.)

HARMONY WITH REVELATION.

THE common metaphysical expositions are almost always at war with revelation, while the phrenological one before given harmonizes with it in every particular, and also harmonizes with well-known facts in the history of man, and with what is known concerning his organization.

For instance, metaphysico-theological expositors, not knowing what other disposal to make of that carnal mind which could not become subject to the law of God, have taught us that it was destroyed. This common error can not be reconciled with revelation, for Peter writes, "Finally, my brethren, abstain from fleshly lusts, which war against the soul." Now how in the name of reason could individuals, whose carnal minds had been destroyed, feel any fleshly lusts? Neither can it be reconciled with the fact that the animal faculties present call for gratification until death. It is a clear case, therefore, that the common metaphysical expositions can not be in harmony with revelation or with facts. The discord between ordinary expositions and revelation is very grating on all ears not especially trained and educated to admire such music, and the ruin of thousands of souls is the disastrous consequence resulting from this false note in heavenly music. But when we sound the phrenological harp, sweet, soft music, in exact accord with the notes from the great Creator of harmonies, is heard, and not a mortal on earth will ever mourn the day he heard the strain.

There is a remarkable difference between the "spiritual man" and the "animal man." With the former all is peace; no two of the faculties can ever come in conflict. For instance, Benevolence can never war with Veneration, and so on through the whole group. On the other hand, with the "animal man" the various faculties are at war with each other, and not only at war with each other, but they war against the very existence of the physical system; for almost all the passions, if inordinately indulged, bring on premature decay and death. The following commentary, by the Rev. John Pierpont, admirably and truthfully portrays the turmoil and warring of the faculties of the "animal man." "But there may be perpetual discord—and if the moral sentiments do not sternly predominate, there will—between the animal propensities. See how Acquisitiveness resists Alimentiveness. How offended Amativeness goads on Combativeness and Destructiveness to do its bidding! How sharp the struggle between Philoprogenitiveness and Acquisitiveness! Indeed, what one of them all is there that may not be easily pricked on to do battle with all the rest?" And if we read the passage in 1 Peter ii. 11 more correctly rendered, both the text and the commentary will be found to possess more force and beauty than with the common rendering; *κατα* may be very properly rendered *in*, and the passage

will read, "Finally, my brethren, abstain from fleshly lusts, *αὐτὰς ἀρκεῖς κατὰ τὴν ψυχὴν*, which are marshaled in battle-array in the soul." Beautiful and harmonious phrenological language.

For fear of misapprehension, perhaps it may be better for me to notice the word *soul*. It has in Hebrew and English a very indefinite use, and if a man says it means anything, it would be quite easy to prove from the Scriptures (i. e., English) that it did not. For example, the term *soul* is frequently used to denote the immortal part of man, whatever that may be supposed to be, and yet in Numbers vi. 6 it is used to denote the body: "All the days that he separateth himself he shall come at no dead body"—in Hebrew, "dead soul." Hence it is quite evident that the term *soul* can not mean the immortal part of man. The same course of reasoning might be pursued with a great variety of other meanings; in fact, if it should be said that the term *soul* denoted any one of the following forty meanings, the thirty-nine others could be appealed to in proof that the meaning was erroneous. The Hebrew word for soul is said to be rendered in our common English Scriptures as follows: Breast, breath, dead, life in jeopardy, life, man, person, tablet, will, ghost, hath life, heart, her, fish, greedy, he, hearty, herself, myself, jeopardy of life, one, yourselves, self, appetite, body, creature, deadly, discontented, mortality, lust, me, pleasure, thyself, would have, things, themselves.

The Greek term *ψυχή*, *psuche*, is also rendered variously by soul, life, person, heart, and mind.

If to the above we add the frequent use of the words spirit, soul, and mind, as convertible terms by metaphysical expositors; and then again, their changing of the phrenological faculty of Firmness into a grand incomprehensible myth, named THE WILL, sometimes endowing it with the perceptive and reflective powers of the intellect, with the emotional faculties of the spirit, and the passions of the soul, we can very readily perceive the reason why there is so much mystification on the subject. If the reader has any ideas of spirit and soul derived from the above-mentioned mystifying sources, it is to be hoped that he will set them aside for a time, and not give to the words *spirit* and *soul*, as used in this article, the meaning he has previously adopted, for if he does he will have no more definite ideas of what is intended than he had before reading it. Supposing the reader is willing to examine patiently and impartially the views presented, we shall resume the consideration of the subject.

St. Paul, in speaking of the resurrection of our bodies from the dead, says, "It is sown an animal body, it is raised a spiritual body. There is an animal body, and there is a spiritual body." Our Saviour says, "In the resurrection, they neither marry nor are given in marriage, but are as the angels of God." When we enter the grave, we but enter the antechamber to change our robes for the bridal supper of the Lamb, and our Saviour furnishes the key to the door, so that we can examine

our cast-off robes, and take a partial view, at least, of them before we actually enter the grave. According to our Saviour, the organ of Amativeness, belonging to the animal group, will be found stricken from existence when we arise from the dead; we may, therefore, very logically conclude that, if Amativeness is stricken out, Alimentiveness, Combativeness, Destructiveness, etc., will also be stricken out, and that we shall arise, as Paul says, with a "spiritual body," better suited for the dwelling-place of the spirit.

As in this life, when we are paralyzed, we no longer use the part paralyzed—for instance, if the gustatory nerve be paralyzed, we taste not; if the auditory, we hear not; if the nerves of sensation, we feel not; or if the nerves of motion, we move not; and as paralysis frequently occurs without any perceptible change of structure, we may therefore logically conclude from our Saviour's remark, that our heavenly Father, by death, kindly lulls to sleep the faculties belonging to the animal group, so that we shall no longer be annoyed by their oft-repeated calls for gratification; while the faculties belonging to the spiritual group will enable us to enjoy, in their fullest intensity, the delights of heaven.

Cases occasionally occur of paralysis of nerves, without our being able to perceive any destruction or injury of the nerve paralyzed; if we say that in the glorious resurrection morn we shall arise with "spiritual bodies," the animal group of faculties having been paralyzed by death, we perceive that these changes can occur, without our personal identity having been in the least affected by death and the resurrection. Thus we learn from our Saviour that death merely disrobes us of garments which would render us unsuited for the realms of bliss. We hear also from Paul that our vile bodies shall be changed and fashioned like unto the glorious body of the Redeemer; Matthew informs us that on the mount of transfiguration "his face did shine as the sun." Now, we speak of death as a "grim monster," then, we shall view it merely as a dose of chloroform, which had lulled to an eternal sleep "the animal man," so that we no longer can feel hunger through Alimentiveness, a desire to marry through Amativeness, or to hoard treasures through Acquisitiveness, or grief for lost children through Philoprogenitiveness, and so on through the whole group. Not a single one of the old metaphysicians can possibly reconcile their expositions of man's organization with the Scriptures. Let a skeptic ask one of them the following questions, and he is perfectly nonplused, and must be silent: You, sir, say you think a man has a *πνεῦμα*, *pneuma*, a spirit, and a *ψυχή*, *psuche*, a soul, a life animal; that the spirit is from God, and the animal soul "the seat and center of the animal instincts." If so, then the soul must be extinguished at death and can not be revived at the resurrection, for the Saviour says, that in the resurrection there will be neither marrying nor giving in marriage, but we shall be as the angels of God. This, of

course, implies that animal instincts will not exist in the resurrection, and therefore there can be no soul to perish in hell. Yet that same Saviour, in Matt. x. 28, says, "Fear not them which kill the body, but are not able to kill the soul; but rather fear him who is able to destroy both soul and body in hell," and this, of course, implies existence of the soul after death, in punishment. Now, sir, how can you expect me to believe your Bible when it teaches on one page that the soul will not exist after death, and on another page implies the existence of that soul in endless punishment? I can not receive such contradictions. To such an address, the ablest of the old-school metaphysicians could make no reply without abandoning all their previous expositions and seeking the aid of Phrenology.

In this life, the spirit and soul are united in the body through the medium of the nervous system; the intellectual belonging exclusively to the spirit, which, as before shown, operates more especially through the cerebral portion of the nervous system; while the nerves of organic life are allotted exclusively to the department of the soul, while both spirit and soul are more particularly united in the cranio-spinal system of sensational and motor nerves. Hence, if we say that at the resurrection body, soul, and spirit are reunited again, the body changed, and better adapted to the use of the spirit, we can perceive that the intellectual, sensational, and motor powers of the nervous system may be carried on in full vigor in the new state of existence, while the animal group of organs may be paralyzed without any change of structure, and the whole can be accomplished without any change in our personal identity. This is not expressly declared in so many words, yet is clearly implied, and we are, therefore, perfectly justified in so concluding. It is clearly declared we are to be judged according to our deeds. It is evident, then, that no change can take place which will destroy our personal identity.

In the second place, it is expressly declared that one at least of the animal faculties or instincts will be stricken from existence in the resurrection. We may then logically conclude that the others also will be extinguished, lulled, or paralyzed, else Paul's declaration that it is raised "a spiritual body" will not be true. In the third place, it is expressly declared that the soul and body can be destroyed in hell, which implies existence after death, nor can we reconcile any other supposition with the clear declarations that the wicked shall be punished.

Just here, our anatomical, physiological, and phrenological knowledge comes into play, and the foregoing remarks show that all can be accomplished without any perversion or contradiction of the language of Scripture, and without any of that extraordinary confusion of ideas with which the common metaphysical expositions always abound; and we can readily remove every appearance of contradiction from the above-mentioned passages of Scripture, and remove a stumbling-block from the

path of a skeptic. And this exposition will present food for serious meditation to all evil-doers, for it will indeed be a fearful thing to be consigned to perdition with our nerves of sensation in full vigor, capable of feeling in full intensity the punishment inflicted.

We can thus readily perceive the very great advantages of phrenological expositions of man's organization over the common metaphysical expositions; the former are harmonious in themselves—harmonize with the Scriptures, and also with the well-known facts which come under our notice in everyday life—while the latter are generally contradictory in themselves, and are at war with the Scriptures, and with well-known facts which come under daily notice, and for many phenomena, they are candidly admitted as insufficient for their exposition. Ask one of them, "You, my good friend, have devoted years to the intense study of the great laws of mind, will you be so kind as to tell me why it is that neighbor A. is a fine musician, while neighbor B., who is equal to him if not superior in talents, can not 'turn a tune'?" This is a great puzzle to me, and I should like to know." The metaphysician gravely replies, it is owing to "a gift of nature" that A. has such fine musical talents. Ask again, why is it that Mr. C.'s son can make extraordinary progress in mathematical studies, while my son makes but a moderate progress? It is "a gift of nature," replies the metaphysician—one of the secrets of nature. Ask again, why is it that D. has learned to draw admirably without any teacher, while E. has never made much progress, though he has an excellent teacher? It is "a gift of nature," is the reply. Ask again, why is it that F. is an admirable painter, while G., with equal talents, can not paint well? It is "a gift of nature," is the reply. Ask again, why is it that H. has an extraordinary flow of language, and can speak well on almost any emergency, while I. is "slow of speech," and can not speak extemporaneously? It is "a gift of nature," is the reply. Ask again, why it is that J. can tell the time of day without any watch, while K. seems scarcely to notice the lapse of time? It is "a gift of nature," is the reply. Ask again, why is it that L. has extraordinary mechanical capabilities, and can make almost anything, while M. is but a "botch-workman," though he has worked much longer than L. has? It is "a gift of nature," is the reply of the metaphysician, and that is the length of his tether, through the thirty-five or forty faculties with which man is endowed; and to the fact that those very "gifts of nature" are so many faculties which have been properly classified and developed by the phrenologist, he still most obstinately closes his eyes.

It is a clear case, then, that the old-school system is entirely inadequate to throw any light on a vast number of peculiarities of individual character, and as each faculty has its own peculiar memory, the old-school system is likewise inadequate to explain to us many peculiarities of memory; while the phre-

nological system throws a flood of light on those very peculiarities of character.

[TO BE CONTINUED.]

GIVING WHILE LIVING.

A most worthy example for our men of fortune is seen in the wisdom and practical sagacity of Mr. Ezra Cornell. Read the following:

OPENING OF THE CORNELL LIBRARY AT ITHACA.—The founding of the Cornell University is only one of Senator Cornell's philanthropic schemes for building up his town, county, State, and nation. Another, recently set in vigorous operation, was duly set apart on the 20th of December last, by public exercises, which are thus described in an exchange:

"At the voluntary ringing of bells and firing of guns, about one thousand persons crowded into the beautiful and commodious lecture-room of the Cornell Library building, to behold one of the grandest ceremonies it could be their privilege to witness. Hon. John M. Selkreg presided. After prayer by the Rev. Wm. Searles, of the Methodist Church, Mr. Cornell, in a plain, unostentatious, but impressive manner, made over to the citizens of Ithaca and Tompkins County the Cornell Library Building and all its appurtenances, by presenting the deeds and keys to a board of trustees. B. G. Ferris, in an appropriate speech, accepted the princely gift, and, so far as words could, thanked Mr. Cornell in the name of the trustees and citizens. A hymn was sung, and the dedication prayer was offered by Rev. Thomas C. Strong, D.D."

Sensible Mr. Cornell. He will be his own executor, and thus save to the people that which otherwise would go into the pockets of quarrelsome attorneys. Such monuments as this, and the University now being erected by Mr. Cornell, will endure in the hearts of the people for all time.

The building, one hundred and four by sixty-four feet, and four stories high, is imposing in appearance, and cost \$61,000. It contains rooms let for the post-office, national bank, and other offices, the rents of which go to help the library and pay expenses. Also, an armory and drill-room, lecture-room, capable of seating eight thousand, ladies' and gentlemen's reading-rooms, besides the library and its appendages. In addition to this, Mr. Cornell placed upon the shelves four thousand dollars' worth of books, and pledged himself to add one thousand dollars' worth annually, until he should have furnished fifteen thousand dollars' worth of books for the library. In his presentation address he remarked, that years ago he became convinced that it was a folly to hoard up treasures on earth, and to bequeath them in one's last will and testament, to be disposed of, probably, by unwilling heirs or injudicious executors; and he decided that he would act the better part, and give while he lived, and reap in his lifetime, at least, the satisfaction and pleasure of seeing his benefactions do good to those for whom they were designed.

Two things there are indicative of a weak mind: to be silent when it is proper to speak, and to speak when it is proper to be silent.

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

WOMAN'S RIGHTS—AND WOMAN'S WRONGS.—No. 2.

BY JOHN NEAL.

THE heaven is working through and through the great unthinking masses, like subterranean fire. The earth is growing hot under the tread of our reformers. And now is the time of danger. We may be found going too fast and too far, if, in our hurry to reform an abuse, we do not weigh every word we utter, and calculate in advance, every step we take. To-day's paper contains the following:

"A memorial was presented to Congress on Saturday signed by Mrs. Stanton, Theodore Tilton, Frederick Douglass, and others, *praying for the removal of all restrictions of color or sex, in regard to suffrage.*"

A trumpet this, which gives no uncertain sound. Let us prepare for the battle which seems to be close at hand—portentous in all its bearings—inevitable—and likely to divide the whole nation, before it is decided.

The positions taken by Senator Morrill, in his late argument for suffrage in the District of Columbia, deserve to be treated with great respect. "Universal suffrage," says he, "is *affirmed* by its advocates, as among the absolute or natural rights of man, in the sense of *man-kind*; extending to females as well as to males, and susceptible of no limitation, unless as opposed to child or infant"—(or idiot or lunatic)—"It is *supposed* to originate in rights independent of citizenship. Like the absolute rights of liberty, personal security, and possession of property, it is *natural* to man."

And why not? we ask in all seriousness. If, when such rights are conceded, as *natural* to man, the right of governing himself is denied, and said to be "*dependent upon citizenship*," the question arises, Who shall say what constitutes citizenship? Are men to settle that question for women—without allowing women to be heard? Are majorities to determine, without regard to minorities?

If so, why may not a majority of men get together, and declare that the rights acknowledged by Mr. Morrill to be *natural* rights—the "rights of liberty, personal security, and the possession of property," are like the right of suffrage, dependent upon the will of a majority—and a majority of males—or in other words upon *citizenship*, of which they, and they only, are the judges?

How are *natural* rights to be distinguished from other rights—artificial rights—unless it be because they are inherent and essential to man's nature? something, without which man is no longer man, nor woman, woman? What is *liberty* worth to him, who has no hand in making the laws? What are "personal security" and the "rights of property" good for, where a people are not allowed to govern

themselves, nor even to help choose their law-givers and rulers?

If all government is derived from the consent of the governed, as they tell us—with what face can a part undertake to govern the whole, without the consent of the whole? How dare the majority take a single step, without the co-operation of the minority, signified by their suffrages? If there be any such thing as a natural right—any right even "to life, liberty, and the pursuit of happiness," independent of human concession, then the right of self-government is clear and conclusive; for what is the right of self-government, but the right of suffrage? all other rights being merged in that, all, however modified, and however changeable, being dependent upon that.

When a portion of the people have no other rights than such as are conceded to them by their lawgivers and rulers, how preposterous to talk about *natural* rights—they are slaves; and though theirs may be a qualified bondage, and somewhat more tolerable than other forms of human bondage, being dependent for all the rights they enjoy upon the will of their masters, like the woman of Turkey, or of Hindostan, or Timbuctoo, they are slaves. And if men were dealt with, in the same way, it would soon be understood, as a truth not to be questioned; and the debate of the Senate Chamber would be transferred to the battle-field, and there argued, with the shouting of the captains, and "with garments rolled in blood."

Is it not shameful—is it not astonishing—that under the present constitution of society, throughout the world, there can be no rights for women, but such as man, the lawgiver, may choose to allow?—no rights, in a word, which man is bound to respect?

"It exists of course," continues the Senator, speaking of universal suffrage, "independent of sex or condition, manhood or womanhood. To admit it in the adult, and deny it to the youth, would be to abridge the right and ignore the principle." That, we say, depends upon the definition of universal suffrage. It would seem but reasonable that a time should be fixed for the exercise of any acknowledged right—the right of ownership, or of marriage, for example. Men and women alike have a common interest in such limitations; and always concur in opinion, where they have the opportunity, as in household legislation, in guardianship, and trusteeship. There must be discretion; and the age of discretion, though differing so much in different individuals, that no two persons are altogether alike—has been determined from the first, and as if by universal consent, so that the only variation to be found, is in the Roman law, which fixes on twenty-five, while under British and American law, twenty-one is the age of discretion.

But nobody asks for unlimited—unqualified—universal suffrage—even the most thorough-going, like Bentham and Mill, when they come to the pinch, being always ready to acknowledge that they do not mean what their words appear to mean. There must always be ex-

ceptions; but for convenience, they employ the phrase, without mentioning the exceptions, believing they can not be misunderstood by anybody worth convincing. There are always qualifications, we see—such as residence—age—understanding—property—education—character; idiots—lunatics—and felons being almost always excluded, even in theory—and all these exceptions have their advocates among the most enlightened, zealous, and far-seeing minds of the day.

"And now, sir," continues the Senator, after having almost conceded the right, in theory, "and now, sir, in *practice*, its extension to woman would contravene all our notions of the family—put asunder husband and wife"—the very ground that was taken at first, and maintained to the last by the law-givers and judges—the magnates of British law, who refused, generation after generation, to allow married women the control of their own property, or to testify against their husbands, whose interests, according to their theory, were *always identical*!—"It would put asunder husband and wife, and subvert the *fundamental principles of family government*, in which," continues the Senator, "the husband is"—is what?—"is by *all usage and law*"—the law being made by men without the consent of women, and the usage being founded on that law—"is by *all usage and law*, human and divine, the representative head."

Granted. But what then? Because the husband is the representative head of his own household, for a season—that is, until the children set up for themselves—and of his wife, until she give up the ghost, is that a reason why he should be the representative head of all other women, married or unmarried, after they are of age? any more than he should continue to be the representative head of his family, after his sons and daughters are married off, and his grandchildren, and great-grandchildren—the males only—have begun to think for themselves? Have unmarried women no rights, after they reach maturity? must their pupillage continue forever? their infancy through consummate womanhood, and old age, up to the last hour?

"Besides, it ignores woman, womanhood, and all that is *womanly*," adds the Senator, "all those distinctions of sex whose objects are apparent in creation, essential in character, and vital to society." Just what the Chinese would say, and the enlightened Hindoos—or Senators—would say, if innovations upon established usage were attempted there; and the crocodiles would continue to be fattened on live babies, and widows roasted alive—"these all disappear in the *manly and impressive demonstration of balloting at a popular election.*" But why so?—why need it be so? Setting aside the notion that seems to prevail with so many of our best men, and is fast coming to a head in our Halls of Legislation, that woman was made "to suckle fools and chronicle small beer"—may we not ask why the balloting might not be had at private houses? or in

places set apart for women, exclusively? and the votes be taken by suitable trustworthy persons in a quiet, womanly, unpretending way? "Here," continues the Senator, as if no such idea had ever entered his head, "Here maids, women, wives, men and husbands promiscuously assemble to vindicate the rights of human nature"—And why not? They do all that, in our churches, and theaters, and concerts, and prayer meetings; and are found everywhere capable of managing our largest charities, when left to themselves. Time was when they were not allowed to go upon the stage—to sing in public, or to ride in a circus—to make speeches—to write books—or to preach, or to practice medicine; to save men, like Florence Nightingale, or Grace Darling, or to fight on horseback, or on foot, with the weapons of men; but how is it now? They do all these things now, and often as well as men—or better—though they are not half through with their apprenticeship, and are obliged to make their way through a host of prejudices, alike unmanly and obtrusive, clad "in golden panoply complete."

"Moreover," continues the Senator, "it associates the wife and mother with policies of state, with public affairs, with making, interpreting and executing the laws, with police and war"—And these are objections! As if women were not always so associated, though in a subordinate relationship—at second hand as it were—and, for that reason, perhaps, and for that reason only, are unequal to what we require of them, in shaping the minds and training the hearts of children. How much of our character depends upon the mother! Long before the father has much to do with the child, its temper is fixed for life, and its probable destiny shaped for life; and yet we would impoverish and enfeeble our mothers, and utterly disqualify them for teachers, under the miserable pretence that it would unsex them. But the Senator has not finished:

"And necessarily dissociates her from purely domestic affairs, the peculiar care for and duties of the family, and worst of all, assigns her duties *revolting to her nature* and constitution, and wholly incompatible with those which spring from womanhood." What are these other duties, we should be glad to know, which dissociate the wife and mother from her peculiar duties? and assign to her others *revolting to her nature and constitution*? What more revolting, what more repugnant to woman's nature than hospital service? what more trying to her constitution, her sympathies and her delicacy? Yet everywhere in the late war, women—delicate, frail, highly educated women—went about through the camps and hospitals, with hidden wings—laboring, toiling, and ministering, night and day, in the midst of pestilence and death, to rough, and oftentimes unthankful men. Did they forego their womanhood?—did they neglect their duties, to their husbands and children?—Oh, but they were unmarried, or widows, or childless! Very well—then your objection does not apply to these three large classes. And as to others—

we would ask, why a knowledge of public affairs should unfit them for the discharge of their household duties, any more than it would unfit men for the business they follow for a living? Men are not obliged to become lawgivers, and judges and soldiers; to cast their families upon the care of others, but when they do, it is counted to them for righteousness. Who ever thinks of objecting to a candidate for office, that he has a family to take care of? that he is of a feeble constitution, or that the people who choose him are beside themselves? Why not deal with women as with men? If the people are so infatuated as to choose for their representative, a person wholly unfit—whether man or woman—whose fault is it? They have the right; and no power on earth can dispossess them of that right, so long as they are free.

And then too, how preposterous to urge the disqualification of millions—their stultification, indeed—because a few thousands at the most, may be unfitted for law-making, and for office. Even if the objections were well founded, and women were *never* fitted for lawgivers, there would always enough men be found, to take such burdens off their hands—not more than fifty thousand or so, would be required to fill the Executive, the Judiciary, and the Legislative departments of this great commonwealth of nations; being less than two per cent. of their number, if all our women were emancipated to-morrow, and all of a proper age were allowed to ballot, as men are.

Why not object to men that they are unfitted for the discharge of these high duties?—most men are so—probably nine hundred and ninety-nine hundredths of every thousand who are selected. But when then? "Ask my constituents," John Randolph would say. If women are unfitted—and they are nevertheless elected, or appointed, who is to blame? And whose business is it? If the voting masses are so ignorant, or so besotted, as to choose incompetents and imbeciles—from among men—is there any help for it? "Where the monkeys are gods," says Voltaire, "what must the people be?" How much worse would it be, if they chose their representatives from among women? If the people may be trusted to choose their agents and proxies from the males, why not from the females of the land? If they are not to be trusted in the latter case, with all their experience and knowledge of the female character, why should they be trusted in the former? In a word, if the masses are capable of self-government, if they have wisdom enough to choose their rulers, and their lawgivers, why abridge the liberty of choice? Why not throw open all the resources of the country, and allow them to judge for themselves?—to pick and choose for themselves? Are you afraid to trust them?—or afraid to trust yourselves? You and they are one—what you are, they are. If they are unfitted to judge, so are you. Otherwise your pretensions are a ridiculous farce, and self-government—representative government—a sheer hallucination.

But let us return to the Senator. "Besides," he says, "the ballot is the *inseparable concomitant* of the bayonet"—Denied—"Those who practice the one must be prepared to exercise the other. To introduce woman at the polls, is to enroll her in the militia"—not true; but if it were true, what then? Multitudes of women in the late war proved themselves to be something better than the average male militia—there were no deserters, no bounty jumpers, no traitors among our women soldiery—"to enroll her in the militia," "to transfer her from the class of non-combatants to the class of combatants."

Observe with what evident seriousness the argument is urged—no qualification appears—no misgiving. And yet, so far from its being true, that "the ballot-box is the *inseparable concomitant of the bayonet*," or that "to introduce woman at the polls is to enroll her in the militia," it is absolutely without foundation—absolutely untrue. If women be what their adversaries pretend—and adversaries they are, whatever they may say to the contrary—though they were allowed to ballot to-morrow, they would neither be enrolled in the militia, nor be allowed to carry the bayonet. And why? Because *they would be classed among the exempts*. And they would no more be called upon, than our males over forty-five, and under eighteen, our judges, our clergymen, our public officers, and our physically or mentally incompetent or inadequate, the lame, the blind, the halt, the deaf, or the diseased. Without stopping to calculate or verify what we suppose to be the fact, we venture to say, that full two-fifths and perhaps one-half of our whole voting population are at this moment exempted from militia duty; and nobody thinks of complaining. But if the worse comes to the worst, and we should have to call upon our women to stand by us, even as the women of Saragossa stood by their champions—and as thousands and tens of thousands, in the old Hebrew commonwealth, in Greece and Rome, in the British Isles, in Poland, Switzerland, and along our frontiers carried off the wounded, served artillery, and manned the ramparts, to say nothing of the Amazons, nor of the ladies who have got to be so formidable and so unmanageable at the Court of Dahomey, with their shields and bucklers, and glittering spears and yataghans—depend upon it, our cry will be heard and answered, and women will be found, like the Polish mothers, lifting their children into the saddle, and charging with them upon the black hussars of the adversary.

But enough on this part of our subject. With two or three brief items, therefore, I shall conclude. In last week's *Home Journal*, I find a plausible communication from Prof. Taylor Lewis, entitled "Household Suffrage," wherein, after adopting the views of Aristotle, with regard to the sovereignty of man in the household, as of necessity, absolute and unquestionable, since there must be "*unity—unity of thought, feeling, and action*," he proceeds to show that "monarchy is the govern-

ment of the soul"—and that man is the monarch, woman the subject, everywhere and at all times—which is simply begging the question; and then reasoning in a circle. Why not oblige the wife to think and believe what her husband thinks and believes, upon every other question, as well as upon that of woman suffrage, or household government? Why not enact, under the severest penalties, that man is not only the head and front, but the *soul* of woman? Why not make it felony without benefit of clergy, for a woman to differ from her husband—or from her next neighbor, if he is a man, and she unmarried, upon any subject whatever?

And this reminds me of certain legal provisions, made by men—of course, in their affectionate solicitude and reverence for women, to keep them out of mischief.

For a wife to kill her husband, is *petit treason* under English law; while for a husband to kill his wife is only *murder*. Yet more, to show how profoundly sensitive, and how jealous of women's rights men are—and how generous they are in the exercise of their manly prerogative, and how unlikely they are to abuse the trust they have taken upon themselves, without her consent or knowledge, let us look at the law which professes to make them "one flesh," and all their interests *identical*.

The moment a man and woman enter into marriage (in some States), *all* her personal property goes to her husband—or to his creditors, and perhaps to pay gambling debts, or worse; and *all* the profits of her real estate: and at her death, her husband has *all* the rents and profits for life.

But how is it with the wife? Not a dollar of her husband's property, real, personal, or mixed, belongs to her without a marriage settlement; and she continues through coverture, as they call it, wholly dependent upon her husband for every mouthful she eats, and for every rag she wears; and when she dies, she has, instead of the *whole*, only *one-third* of his personal estate, provided he does not make a will and give it all away to others; and *one-third* only of the rents and profits of his real estate, instead of the whole, for life. But men make the laws—and the interest of husbands and wives being *identical*, women have nothing to complain of! Within the last week or two, the Supreme Court of Massachusetts have decided that a bequest to *secure the right of voting to women* is not a *legal charity*, and that five thousand dollars left by Francis Jackson for that purpose, shall be divided among his heirs. Not a *legal charity*, forsooth! But may it not be a legal bequest, nevertheless, being specific and for a specific purpose? Void for uncertainty, perhaps, though the grounds of the decision do not appear in the brief abstract I saw—nor was the language of the bequest given. And why call it a *charity*, unless it be for the very purpose of letting in the objection that it is against *public policy*, or that there is no such *charity*? Why not consider it as given for purposes of education—and not for education

in general, but for education within certain prescribed limitations? There being no organized, nor incorporated body, having that object in view, the application of the funds might be safely left with the executor, subject, of course, to the approbation of the judge of probate. The purpose of the testator being evident, the language clear, and the meaning clear, why set the act aside by calling it an *illegal* charity, and spilling it upon the sand? Is it against public policy?—then, why not say so, that the people may understand you? But, as men make the laws, and men administer the laws—being both lawgivers and judges, the decision is not to be wondered at. If women made the laws, and so administered the laws for men, how would the men like it?

But, as I have said before, the signs are portentous, and not only portentous, but propitious. A great change is at hand. Men feel it in their bones. Even the spoon-drift from over sea is full of significance. It shows that the wind is rising there. The *Westminster Review* has just broken ground afresh, and here, while the Rev. Mr. Beecher is urging at the Academy of Music, with a sound like that of Thor's hammer "closing rivets up," *universal and impartial* suffrage, "without distinction of color or race," according to the newspapers—meaning without distinction of color or sex, the Kentucky House of Representatives are listening to an address from Mrs. Blackwell, of New York city, asking the Legislatures of the Southern States to allow not only blacks, but black women and white women to vote; "for then," she says—and who shall gainsay her?—"then, the four millions of *Southern white women will counter-balance the four millions of negro men and women*, and the political supremacy of the white race *will remain unchanged*." Even so! The premises are clear—the result inevitable. But are the eyes of the South opened far enough to see the consequences? Can they cipher? Have they courage enough, and will they bid promptly enough, to forestall the North? If so, then will they have their destinies in their own keeping, and become, of a truth, a regenerated people—a people "redeemed, regenerated, and disenthralled"—and forever.

P.S.—But for the length of this paper, I should have something more to say about the alleged *inferiority* of the female; but, as it is, I must content myself with calling the attention of her calumniators and vilifiers to the fact that, among birds of prey, the female is the larger, stronger, and fiercer; that among the Arabs, who best know what horses are good for, the female is preferred for the severest work, and that the queen bee is more than a *match* for all her subjects put together; and among celebrated women there are—but enough—we need not waste words upon this part of our subject; for, instead of this alleged inferiority being self-evident, the *equality* of the sexes appears to be so, at least as much as the assumed equality of man with man, which nobody thinks of denying, so far as natural rights are concerned.

ALICE.

BY FRANCES A. BAKER.

ALICE is dead! As black clouds roll
Upon the brow of morning,
So fell these tidings on my soul,
Without a word of warning.

Stupor my senses did enfold,
And heart and brain grew weary.
I only knew 'twas dark and cold,
And life was very dreary,

Until the scenes of other years,
Traced out by memory's finger,
Brought forth the holy soothing tears,
And 'round my soul did linger.

I saw again her childish grace,
Her artless truth and beauty,
The soul that smiled out through her face,
That no one loved from duty.

For as her heart was full of love
For all below and 'bove her,
When and wherever she might move,
No one could help but love her.

And while from childhood fair she grew
Into a lovely maiden,
The pure, unselfish life she knew
With treasures rich was laden.

Treasures that sometimes cost a price,
Strong hearts alone can render,
And those who knew her sacrifice
Said, "Angels do attend her."

I saw her on that happy day
That smiled a blessing on her,
And in bright sunshine clothed the way
Of him whose worth had won her.

Time had just bidden merry May
Give up her crown and scepter,
And June in loveliest array
Of her sweet reign bereft her.

The modest flowers, so lately crowned
With all their charming graces,
Uplifted from the nurturing ground
Toward heaven their pure young faces.

The tall trees wavered to and fro
As sails upon the ocean,
The happy birds sang soft and low
To suit the gentle motion.

And bird-like was the voice that fell
"Death, death alone can sever
My soul from his who promised well
To love and cherish ever."

Another May had danced o'er earth,
New life and gladness bringing,
And to new beauty giving birth
While last year's birds were singing.

When God poured forth a greater good
From out love's golden chalice,
And placed the crown of motherhood
Upon the brow of Alice,

With trembling thankfulness and joy
She took the treasure given,
And prayed that God would bless her boy,
And keep him near to heaven.

I saw her while that holy love,
That seems far more than human,
Clothed her with garments from above,
And crowned her "blessed woman."

And last I saw her when her God
Had taken back her treasure;
She meekly bowed beneath the rod
That smote in fearful measure.

While with torn heart but tearless eye,
The pale, cold clay caressing,
Her heart was lifted to the sky,
To crave a Father's blessing.

And soon it came. Through one short year,
Her soul has nobly striven,
But grown too fair to linger here,
Is won at last by heaven.

Dear Alice! pure in life and death,
And strong in hope and sorrow,
Oh, let me from your own sweet faith
A little comfort borrow!

And when my earthly life shall glide
Out in the vast forever,
May I, loved Alice, from thy side
Be separated never!

**MRS. VAN DEUSEN
AND HER "THREE HUNDRED INVITATIONS."**

BY A. A. G.

"WRITE three hundred invitations. I owe two hundred and fifty, and there are as many as fifty people I've only called upon—very nearly fifty more than I should have called upon, if I had not been compelled to—and now they must be invited. That's the next thing, and the sooner it's done, the better. I do so want to get through the operation!"

A young man, with pen in hand, sat stroking his whiskers, while he waited patiently for his aunt, the celebrated Mrs. Van Deussen, to declare her will.

"Three hundred invitations!" he replied. "That's a great many. Suppose they should all come?"

"All come! May we be spared that infliction. Oh, dear! it's a dreadful thing to be in *our position*! We are always expected to give the largest and most brilliant party of the season. Everybody expects to be invited, and there are a great many people who are positive nuisances—new-comers, for instance. There's only now and then one in *our position*, but they all soon find their way into general society, so one might as well call upon them and invite them first as last. I might as well, certainly, so long as I have such a husband as Mr. Van Deussen."

"He's one in ten thousand," again spoke the young man.

"Ah, Frank, that is a standing compliment—one you always have ready for Mr. Van Deussen. I surely hope he is only one in ten thousand. It is fearful to think of there being nine thousand nine hundred and ninety-nine men just like him. Whoever comes to town must be called upon and invited by his wife, and

made to feel as happy and self-complacent as possible. The simple truth is, he rules me."

"He is thought to be perfect."

"Yes, I know it. I am forever hearing about his perfections, and I suppose he has a few, but where he keeps them I can't tell."

As Mrs. Van Deussen said this, she laughed heartily, and seemed very good-natured, although disposed to have a little fun at Mr. Van Deussen's expense.

This the young man, Frank, did not heartily relish, and he at once dropped the conversation, and began to write the invitations:

"Mrs. Van Deussen will be *happy* to see Mr. and Mrs. Granger on Thursday evening.

"Tuesday, August 10."

"Lie No. One," thought the writer of the invitation. Again the pen moved over the paper:

"Mrs. Van Deussen will be *happy* to see Mr. and Mrs. Tomlinson on Thursday evening.

"Tuesday, August 10."

"Oh, you've written the invitation to the Tomlinsons, have you?" interrupted Mrs. Van Deussen, just as the writer was saying to himself, "Lie No. Two." "Well, it's a good thing that those Tomlinsons don't know my opinion of them. Mrs. Tomlinson is a very vulgar woman. She knows considerable, I suppose, but she has such an abominable way of shaking herself when she walks. She has never been to Paris, that's certain—neither has Mrs. Granger. They are two as inelegant women as I have ever seen moving in society, and Mr. Van Deussen is to be thanked again that they are on my list of friends. But it's no dreadful thing, after all, to invite them once a year. I manage to endure it, and I do it quite gracefully, I imagine."

Mrs. Van Deussen might have said that she could not only endure inelegant women gracefully, but that she could lie gracefully. She didn't say it, but the young man said it—said it to himself, and wondered that a woman could be so deceitful. As he threw off one invitation after another, he thought: "I'm glad these are not *my* falsehoods that are accumulating so fast. They'll make a huge pile before I get through. What a pity it is they couldn't be hid away in some sly place where the eyes of the good God couldn't light on them! and what a pity it is that His 'eyes are in every place,' so that there isn't any *sly* place!"

"It's only people in *our position* who know what a burden society is," interrupted Mrs. Van Deussen again. "I am fond of the *beau monde*—at least, I wish to do what belongs to *our position*—but I sometimes envy the simple cottager, or any plain family, of whom society expects nothing. Mr. Van Deussen, however, feels very differently. He has a benevolent turn of mind, and positively likes to throw open his doors to everybody; but then he is not a very discriminating man, and not over-nice in his taste. Men have not, as a general thing, the fastidiousness of women—and then, too, they have no aristocratic feeling."

"Mr. Van Deussen's aristocracy is the aristocracy of the intellect," replied the young man.

"Well, he has a head of his own, I must admit."

"And a heart, too," added Mr. Frank. "Every one speaks of it."

"But he is a little too condescending, I must say, although he is my husband. He has a word and a smile, and an *invitation*, too, for everybody. He's no respecter of persons. I have many a good laugh at him, or did have, until I found it made family jars. Well, that's the last invitation, isn't it? Why, how fast you write!"

"Yes, this is the last one. I've told three hundred persons—or rather six hundred, for the husbands are invited, too—how *happy* you will be to see them."

"They'll never know that I'm not," answered Mrs. Van Deussen, "for I know how to entertain company. I'm not quite so gracious as Mr. Van Deussen, it's true, but then I don't tell my guests that half of them would have been welcome to stay at home."

"If they only knew what I know they certainly would stay there," said the young man, Frank, as he laid away the "*three hundred invitations*."

HOUSEWIFERY.

It is a sad defect when young ladies are incapable of directing their own servants—soles without shoes or wristbands without a shirt are not more useless than one of these. One day, shortly after his marriage, a young merchant went home, and seeing no dinner ready, and his wife appearing anxious and confused, asked—

"What is the matter?"

"Nancy went off at ten o'clock this morning," replied his wife, "and the chambermaid knows no more about cooking dinner than a man in the moon."

"Couldn't she have done it under your direction?" inquired the husband, very coolly.

"Under my direction? I should like to see a dinner cooked under my direction!"

"Why so?" asked the husband in surprise.

"You certainly do not think I could," replied the wife; "how should I know anything about cooking?"

The husband was silent, but his look of astonishment perplexed and worried his wife.

"You look very surprised," she said, after a moment or two had elapsed.

"And so I am," answered he, "as much surprised as I should be to find the captain for one of my ships unacquainted with navigation. You don't know how to cook, and the mistress of a family! Jane, if there is a cooking school anywhere in the city, go to it and complete your education, for it is deficient in a very important particular."

[A little less fashion and gossip, and a little more cookery and common sense, would be better, by way of fitting young ladies for wives and mothers. We sympathize with helplessness, and would entreat mothers to do their duty.]

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—*Sprachein.*

ABORIGINAL LEGENDS OF NORTH AMERICA.

[CONTINUED.]

BY E. G. SQUIER, M.A.

It has been well observed that he is little imbued with the spirit of philosophy who can perceive in the fables of antiquity, and the often rude traditions of primitive nations, only the extravagance of a fervid imagination. And it is not impossible that in the tradition of Manabozho and the great serpent there are some who will detect confirmations of Scriptural history. Others will see in the beneficent Manabozho only a character analogous to that discoverable in every primitive religion, who is the teacher of men, who instructs them in religion and the arts, and who, after a life of exemplary usefulness, disappears mysteriously, leaving his people impressed with the highest respect for his memory, and indulging the hope of his ultimate return among them. In all the mythological systems of America this demi-god appears with more or less distinctness. Among the savage tribes his origin and character are, for obvious reasons, much confused; but among the more advanced, semi-civilized nations he occupied a well-defined position. In Mexico he was called *Quetzalcoatl*, in Central America, *Cuculeau*, in New Granada, *Bohica*, and among the Peruvians he was known as *Manco Capac*. Among the Cherokees he was called *Wasi*; "he taught his people all that had been from the beginning of the world, what would be hereafter, and gave them in all things instructions what to do. He appointed their fasts and feasts, and the ceremonies of their worship. He directed the mode of consecrating their priests and choosing their chiefs, enjoining upon them to obey his instructions from generation to generation." The Iroquois had also a beneficent being, uniting in himself the character of god and man, who was called *Hiawatha*. He taught them hunting, planting, the knowledge of medicine and the arts. He imparted to them a knowledge of the laws of the Great Spirit, and established their form of government. After fulfilling his mission on earth, and consolidating the five tribes in one confederacy, he went up to heaven in his white magic canoe, which moved at his wish.

Among the Algonquins, this character appears under the names of *Manabozho*, *Nannibozho*, or *Michabozho*. In some of the accounts he is called *Mason*. The accounts are somewhat confused, but the character is easily recognizable in all. In all the traditions and assemblies, their songs turn upon some one or others of the fables connected with him. He altogether occupies so conspicuous place as to deserve the

designation of the "Great Incarnation of the Northwest."

Said the chief of the Potawatomes to the missionary De Smet: "Nanaboojoo is our principal intercessor with the Great Spirit; he it was that obtained for us the creation of animals for our food and raiment. He has caused to grow the roots and herbs which cure our maladies, and enables us, in times of famine, to kill wild animals. He has left the care of them to the great-grandmother of the human race; and in order that we shall never invoke her in vain, it has been strictly enjoined upon her never to leave her dwelling. During his different excursions over the earth, Nanaboojoo killed all such animals as were hurtful to us, as the mammoth and the mastodon. He placed four beneficent spirits at the four cardinal points of the compass, for the purpose of contributing to our happiness. He of the North procures for us ice and snow, in order to aid us in discovering and tracking animals. He of the South gives us maize and tobacco, and the seeds of melons and pumpkins. The spirit of the West gives us rain, and that of the East light, and causes the sun to make his daily walk around the globe. The thunder we hear is the voice of *Manitous* having the form of large birds, which Nanaboojoo has placed in the clouds. When they cry very loud, we burn some tobacco in our cabins as a smoke-offering, to appease them."

Some accounts represent Manabozho as the first-born son of a great celestial *Manitou*, or spirit, by an earthly mother; but all agree in assigning to him the character of the friend and protector of the human race. He instructed the Indians in the arts, instituted the rites and mysteries of their religion, taught them the cultivation of vegetables—in short, corresponded in his acts and attributes with the various personages already noticed. His terrestrial power was very great; he effected transformations and controlled the elements. The mountains are the piles of stones which he raised to mark the days of his journeyings over the earth, and the valleys are the prints of his feet. By some he is supposed to be dead and buried in an island in Lake Superior; by others, still to live in the distant regions of the North; and by others, to repose on a great flake of ice in the Northern Sea, which retreat some of the Indians fear the whites yet discover, in which case they suppose the earth will be brought to an end; for as soon as he shall put his feet on the earth again, it will burst into flames, and all living things will be destroyed.

Though the object of no particular worship, Manabozho is nevertheless highly venerated, and his adventures fill a conspicuous place in the lodge-lore of the Northwest. He is always placed in antagonism to a great serpent, a real *kakodemon*, or spirit of evil. This serpent corresponds very nearly with the Egyptian Typhon, the Indian Kaliya, and the Scandinavian Midgard. He is connected with the Algonquin notions of a deluge; and as

Typhon is placed in antagonism to Osiris or Apollo, Kaliya to Suyra or the Sun, and Midgard to Woden, so does he bear a corresponding relation to Manabozho. The conflicts of Manabozho with *Meshekenabek*, or the serpent, are frequent, and though the struggle is often long and doubtful, he is in the end always successful against his adversary.

One of these contests involved the destruction of the world by water, and its reproduction by the powerful and beneficent Manabozho. The tradition in which this grand event is embodied was thus related to the writer by an intelligent Ojibway chief; and though its substance has often been presented, it now appears in its full and perfect form.

MANABOZHO AND THE GREAT SERPENT.

AN OJIBWAY TRADITION.

One day, returning to his lodge from a long journey, Manabozho missed from it his young cousin, who resided with him; he called his name aloud, but received no answer. He looked around on the sand for the tracks of his feet, and he there for the first time discovered the trail of *Meshekenabek*, the serpent. He then knew that his cousin had been seized by his great enemy. He armed himself and followed on his track; he crossed the great river, and passed mountains and valleys to the shores of the deep and gloomy lake now called *Manitou Lake*, *Spirit Lake*, or the *Lake of Devils*. The trail of *Meshekenabek* led to the edge of the water.

At the bottom of this lake was the dwelling of the serpent, and it was filled with evil spirits, his attendants and companions. Their forms were monstrous and terrible, but most, like their master, bore the semblance of serpents. In the center of this horrible assemblage was *Meshekenabek* himself, coiling his volumes around the hapless cousin of Manabozho. His head was red as with blood, and his eyes were fierce and glowed like the fire. His body was all over armed with hard and glistening scales of every shade and color.

Manabozho looked down upon the writhing spirits of evil, and he vowed deep revenge. He directed the clouds to disappear from the heavens, the winds to be still, and the air to become stagnant over the Lake of the *Manitous*, and bade the sun shine upon it with all his fierceness; for thus he sought to drive his enemy forth to seek the cool shadows of the trees that grew upon its banks, so that he might be able to take vengeance upon him.

Meantime Manabozho seized his bow and arrows, and placed himself near the spot where he deemed the serpents would come to enjoy the shade. He then transformed himself into a broken stump of a withered tree, so that his enemies might not discover his presence.

The winds became still, the air stagnant, and the sun shone hot on the lake of the evil *Manitous*. By-and-by the waters became troubled, and bubbles rose to the surface, for the rays of the sun penetrated to the horrible brood within its depths. The commotion in-

creased, and a serpent lifted its head high above the center of the lake and gazed around the shores. Directly another came to the surface, and they listened for the footsteps of Manabozho, but they heard him nowhere on the face of the earth, and they said one to the other, "Manabozho sleeps." And then they plunged again beneath the water, which seemed to hiss as it closed over them.

It was not long before the Lake of the Manitous became more troubled than before; it boiled from its very depths, and the hot waves dashed wildly against the rocks on its shores. The commotion increased, and soon Meshekenabek, the Great Serpent, emerged slowly to the surface and moved toward the shore. His blood-red crest glowed with a deeper hue, and the reflections from his glancing scales were like the blinding glitter of a sleet-covered forest beneath the morning sun of winter. He was followed by all the evil spirits, so great a number that they covered the shores of the lake with their foul, trailing carcasses.

They saw the broken-blasted stump into which Manabozho had transformed himself, and suspecting it might be one of his disguises, for they knew his cunning, one of them approached, and wound his tail around it, and sought to drag it down. But Manabozho stood firm, though he could hardly refrain from crying aloud, for the tail of the monster tickled his sides.

The Great Serpent wound his vast folds among the trees of the forest, and the rest also sought the shade, while one was left to listen for the steps of Manabozho.

When they all slept, Manabozho silently drew an arrow from his quiver; he placed it in his bow, and aimed it where he saw the heart beat against the sides of the Great Serpent. He launched it, and with a howl that shook the great mountains and startled the wild beasts in their caves, the monster awoke, and followed by his frightened companions, uttering mingled shouts of rage and terror, plunged again into the lake. Here they vented their fury on the helpless cousin of Manabozho, whose body they tore into a thousand fragments; his mangled lungs rose to the surface and covered it with whiteness, and this is the origin of the foam on the water.

When the Great Serpent knew that he was mortally wounded, both he and the evil spirits around him were rendered ten-fold more terrible by their wrath, and they rose to overwhelm Manabozho. The waters of the lake swelled upward from its dark depths, and with a sound like many thunders, it rolled madly on his track, bearing the rocks and trees before it with resistless fury. High on the crest of the foremost wave, black as the midnight, rose the writhing form of the wounded Meshekenabek, and red eyes glared around him, and the hot breaths of the monstrous brood hissed fiercely above the retreating Manabozho. Then thought Manabozho of his Indian children, and he ran by their village, and in a voice of alarm bade them flee to the mountains, for the Great Serpent was deluging

the earth in his expiring wrath, sparing no living thing. The Indians caught up their children and wildly sought safety where he bade them. But Manabozho continued his flight along the base of the western hills, and finally took refuge on a high mountain beyond Lake Superior, far toward the north. There he found many men and animals who had fled from the flood that already covered the valleys and plains, and even the highest hills. Still the waters continued to rise, and soon all the mountains were overwhelmed, save that on which stood Manabozho. Then he gathered together timber and made a raft, upon which the men and women and the animals that were with him all placed themselves. No sooner had they done so, than the rising floods closed over the mountain, and they floated alone on the face of the waters. And thus they floated for many days, and some died, and the rest became sorrowful, and reproached Manabozho that he did not disperse the waters and renew the earth that they might live. But though he knew that his great enemy was by this time dead, yet could not Manabozho renew the world unless he had some earth in his hands wherewith to begin the work. And this he explained to those that were with him, and he said that were it ever so little, even a few grains of earth, then could he disperse the waters and renew the world. Then the beaver volunteered to go to the bottom of the deep and get some earth, and they all applauded her design. She plunged in; they waited long, and when she rose to the surface, she was dead; they opened her hands, but there was no earth in them. Then said the otter, "I will seek the earth," and the bold swimmer dived from the raft. The otter was gone still longer than the beaver; but when he returned to the surface, he, too, was dead, and there was no earth in his claws. "Who shall find the earth," exclaimed all those on the raft, "now that the beaver and otter are dead?" and they desponded more than before, repeating, "Who shall find the earth?" "That will I," said the muskrat, as he quickly disappeared between the logs of the raft. The muskrat was gone very long, much longer than the otter, and it was thought he would never return, when he suddenly rose near by, but he was too weak to speak, and he swam slowly toward the raft. He had hardly got upon it, when he, too, died from his great exertion. They opened his little hands, and there, closely clasped between his fingers, they found a few grains of fresh earth. These Manabozho carefully collected and dried them in the sun, and then he rubbed them into fine powder in his palms, and rising up he blew them abroad upon the waters. No sooner was this done than the flood began to subside, and soon the trees on the mountains were seen, and then the mountains and hills emerged from the deep, and the plains and the valleys came in view, and the waters disappeared from the land, leaving no trace but a thick sediment, which was the dust that Manabozho had blown abroad from the raft.

Then it was found that Meshekenabek, the

Great Serpent, was dead, and that the evil Manitous, his companions, had returned to the depths of the Lake of Spirits, from which for the fear of Manabozho, they never more dared to come forth. And in gratitude to the beaver the otter, and the muskrat, those animals were ever after held sacred by the Indians, and they became their brethren, and they never killed nor molested them, until the medicine of the pale-faces made them forget their relations and turned their hearts to ingratitude.

The late Mr. John Howard Payne, the author of "Home, Sweet Home," passed several months among the Cherokee Indians, and collected a number of their traditions and legends, besides making many observations on their manners, customs, and religious rites and notions. Some of these were communicated by him to the author in 1848, together with the following legend, which is now published for the first time. It differs widely from the Ojibway story of *Monda-min*, or the origin of the Indian corn, as presented by Schoolcraft, and is much more graceful. This, however, may be due to the better appreciation of the relator, and his superior skill in putting the legend on record.

[TO BE CONTINUED.]

CARBONIFEROUS AND GLACIAL PERIODS.

THERE are but two reasonable ways of accounting for the extreme heat of our globe in its now temperate and frigid latitudes during the carboniferous period, as evidenced in tropical plants and palms embedded in strata as high as Baffin's Bay, and the extreme cold prevailing over our now temperate regions during the glacial period, as evidenced in grooves and scattered boulders of enormous size, which nothing short of moving and transporting huge bodies of ice could have effected. The reason for the extreme heat may have been: much greater density of our atmosphere from vapors produced by internal heat of our globe causing a greater absorption of the sun's rays and the extreme cold of the glacial period from a less dense and purer atmosphere than now prevails in some latitudes, causing a less absorption of the sun's rays. The second reason is, that in our sun's translation through space carrying the planets through its immense path that our globe has thus passed through parts of space more or less thickly studded with suns, and thus encountering alternate regions of space of greater or less degrees of heat which is not an improbable circumstance.

Certainly this theory is much more likely than that the earth (which by the laws of gravitation must always have preserved the same relations to its primary, the sun) should have had its axis changed to produce tropical growth so near the pole as Baffin's Bay, or nothing short of solar light and heat can foster vegetable growth, however much carbon there may have been in the air; or again have undergone an opposite change of axis to render regions frigid, now belonging to temperate climates.

CHAS. E. TOWNSEND.

REPRESENTATIVE MEN OF MICHIGAN.

PHILO PARSONS.

MR. PARSONS is a representative business man—rising gradually, step by step, on the golden rounds of the ladder of independence and fortune. Leaving the State of New York soon after he attained his majority, he started for the West to seek a living and a competency. He had a few hundred dollars in his pocket, which he invested safely in Detroit, while he worked as a clerk for a small salary, always taking care to spend less than he earned and save something for a rainy day. In a few years he had money enough to start business on his own account, in partnership with an acquaintance. Discreet management and industrious habits were honored with prosperity, and every year fortune favored them with handsome profits. Being a man of courage and foresight, he purchased real estate, which rose very rapidly in value, and having more money than he required for present use, he loaned considerable sums on good security. "Good luck" is generally the result of forecast and prudence, and not the creature of accident. He who waits for a meteoric shower to fill his coffers with gold and silver, will likely find himself looking up at a star which shines upon a poorhouse, or on some home of pity which gives him charitable shelter. Mr. Parsons never trusted to luck, never waited for a miracle to make him rich, but worked on as though everything depended on his own exertions, while he trusted in that Providence which is sure to reward honest work. Relinquishing merchandise, he became a banker, and during the war he did everything in his power to give strength to the government securities. When the enemies of our common country endeavored to depreciate our currency, and urged him to get rid of his stocks and bonds, he patriotically stood by the government and exerted his best endeavors to encourage faith in our financial condition. A short time since, finding the burden of a public bank too great for his health, he gave it up and became a private banker—a business which leaves him leisure to go and come when and where he pleases. During the war he did a vast deal to support the army, and availed himself of every opportunity to encourage the brave and splendid regiments of Michigan. His purse was open and his house was a home for the soldier. While his gallant and noble brother, General Parsons, was in the field and at the front, the subject of this sketch was equally active in looking after the welfare of the sick and wounded men in our hospitals; and his amiable and accomplished wife devoted herself day after day, week after week, and month after month, to the care of the sick and suffering men in our hospitals.

Mr. Parsons has proved himself the friend of literary culture by his generous donations, and his pecuniary aid extended to churches is an example which many other rich men might

PORTRAIT OF PHILO PARSONS.

follow with advantage to themselves and the cause of truth.

Mr. Parsons is in the prime of a well-preserved manhood. His hair is somewhat frosted, his forehead high and square, giving him a "mathematical look." He is of the common size and stature—nervously active—doing three days' work in one. He is to all intents and purposes a worker, and he would have excelled in any calling of his choice.

[Phrenologically considered, Mr. Parsons is of superior mold. The quality of his organization is fine. He has a nobility of presence which impresses the beholder. He should be inclined to benevolence and philanthropy—naturally. His benevolence, co-operating with other mental evidences, should be of a practical character. He does not dwell much in the realm of Utopia, but is utilitarian and keenly appreciative of the actual. His taste is no doubt well cultivated; his appreciation of beauty, nature, and art is naturally strong. His Language is large, but he is not one to waste words. Socially considered—and it is evinced by the whole make-up of the features—he is warm, even ardent. His sympathetic feelings are strong, and operate upon his practical nature in the way of their material application. He is frank and cordial rather than close or reserved. He is sprightly, brisk, and energetic in whatever he undertakes. He is the opposite of a dull, sluggish person.]

AUSTIN BLAIR.

EX-GOVERNOR BLAIR is one of the prominent men of Michigan. He is distinguished as a lawyer and legislator whose unselfish devotion to his clients and his constituents has won for him the honorable title of "honest jurist and politician." During the war his zeal, patriotism, and excellent judgment enabled him to place his noble State in the front rank of national defense. Ninety-five thousand men

were equipped and sent to the front from Michigan, and their courage was exhibited on almost every battle-field. He commissioned Sheridan, the hero of the Shenandoah—and Custer, whose pluck was the pride of the army—and Pritchard, who captured Jeff. Davis; and he also commended and commissioned many others who won a grand renown during our struggle for national life. Governor Blair was equal to every task imposed upon him by the war. In the time that tried men's souls he was self-possessed and prepared for every emergency. He was popular, and his personal appeals always commanded the respect of the people. He was prudent in the management of the financial affairs of the State—hence its credit was not allowed to suffer, even when gold was at its highest premium; in a word, he did his work well, and left the gubernatorial

chair without any shadow of dishonor upon it. Mr. Blair returned to his profession five thousand dollars poorer than he was when he left it to govern the State. As a lawyer, Mr. Blair is conspicuous among the leading men of his profession; as a pleader, he has few equals and no superiors in the courts in which he practices. His nervous and impulsive eloquence has the power to sway his auditors and move them to tears or laughter at his will. He is an electric speaker—whose touch makes us all akin. His great command of language, his vivid imagination, his knowledge of human nature, his clear-ringing voice, his intellectual presence, and his splendid record place him in the fore-front of the noble men whose words have weight and whose advice is authority. There are many persons of superior ability themselves who unhesitatingly yield to him the palm as the off-hand orator of Michigan. If he has less power than Howard as a logician, he makes up in speed what he lacks in argumentative strength. He does not always stop to intrench himself, but leaps into the thickest of the fight and takes the enemy by storm.

Mr. Blair came from the East and settled in Eaton County about twenty years ago. He remained in that county a short time, when he moved to Jackson, where he now resides. He is a member elect of Congress, and in the Fortieth Session of that body he will be one of the most efficient workers and one of the most eloquent debaters. He is about forty-five years of age, of ordinary stature, rather slender in build, but his wiry vitality and enduring temperament enable him to perform a prodigious amount of work, writing, speaking, studying, traveling, etc. The reader must bear in mind that the same faculties and energies, ability and culture, which command the public ear and move the public heart at the West,

would accomplish the same ends at the East. No third-rate man need indulge the hope that he can "astonish the natives" at the West. They are among the most fastidious men in the world—more difficult to please than the residents of our Atlantic cities. They measure and weigh and analyze every public man who asks their support and their votes. Your feeble men of literature, and political cripples, and professional dwarfs are slain as mercilessly at the West as the deformed infants were slain by the ancient heathen. While it is true of the West, as it is of the East, that "mighty men" sometimes get office, they at least must be men of brains and force. When we look at the newspaper press of the West, and hear the eloquence of its pulpit orators and speeches of its statesmen, we find the ring of the true metal in them. If we glance at their libraries and the list of the publications they patronize, we see that they keep pace with the age of advancement. We see still further proof of this in their schools and colleges. The telegraph and the railroad have annexed Detroit, and Jackson, and Ann Arbor, and Kalamazoo, and Battle Creek, and Niles to the Atlantic cities and towns, so that the high civilization and culture of one belongs to the other—with the advantage of the wider area and more breathing room and fresher nature at the West. Such men as Howard and Blair, who commenced their career a score of years ago, had, at the very outset of their public efforts, to labor in the teeth of some of the most disheartening difficulties. The country was new and unsettled—railroads had not penetrated the country now swarming with a busy population, the telegraph was not there to translate the lightning into words, schools did not loom up and throw their shadows upon the temples of trade, churches did not everywhere lift their spires like the finger of faith toward heaven.

These men, with others of the same indomitable perseverance and decision, kept pushing on—moving nearer and nearer to the goal of their ambition. The world was their university—its inhabitants were the books they read—and they graduated masters of the science of human nature. The poetry of the West has the odor of violets, and the eloquence of the West has a wild-game flavor—pleasant to the unviated appetite.

The following is a brief synopsis of his life. Mr. Blair was born in New York, February 8, 1818; graduated at Union College in 1839; studied law at Owego, N. Y.; moved to Michigan in 1841; was a member of the Michigan Legislature in 1846; made a report from the Judiciary Committee in favor of striking out the word *white* from the suffrage clause. In 1848, he was a delegate to the

PORTRAIT OF AUSTIN BLAIR.

Buffalo Convention which nominated Van Buren in 1854; he helped to organize the Republican party of Michigan, and was elected to the State Senate the same year. In 1856 he canvassed Michigan in favor of Fremont for the Presidency, and in 1860 he was elected Governor of Michigan.

[Ex-Governor Blair is manifestly of the Mental-Motive temperament—the Mental being strikingly predominant. He is a man of strong purposes, vigorous enterprises, and thorough accomplishments. The whole physiognomy is characterized by intensity. He can not be said to be off-hand, in the true sense of the term, for the reason that purpose and earnestness are ingrained into the very warp and woof of his mentality. The high and expanded forehead indicates depth of thought; and the broad side-head, anteriorly, evinces brilliancy. The straight-cut mouth, with its almost rigid lips, betokens the firmness and steadfastness of his character. He is self-reliant, independent, yet not without a well-defined vein of ambition. Large Conscientiousness, well-indicated Benevolence, and rather strong Veneration impart to his character a religious tone, which serves to deepen the earnestness of his nature.]

ARTIFICIAL IVORY.—Artificial ivory is now being made in France, from a paste of *papier mache* and gelatin. Billiard balls formed of this material, though hardly a third of the price of those made from real ivory, are yet so durable and elastic that they can be thrown from the top of the house on to the pavement, or violently struck with a hammer, without injury. With this same paste, to which the name of Parisian marble is given, among many other things, the finest and most complicated molding for ceilings can be made, or capitals of columns can be constructed in any color so as to resemble the most valuable marbles.

On Physiognomy.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Chobaut.*

My people are destroyed for lack of knowledge.—*Isaiah lv. 6.*

SIGNS OF HEALTH.

It is an important requisite in a good physician that he should be able to detect quickly the relative condition of his patient from the hue of the skin and the expression of the countenance. In order to the skillful treatment of disease, the perception of functional improvement or depression in an approximate degree is necessary; and the success of a medicist is usually proportional to his diagnostic ability. With each change in the sanitary condition there is a corresponding variation in physiognomy. Therefore every man, woman, and child bears unmistakable superficial indications of his, her or its healthy or diseased organization. One of the principal physiognomical signs of health is **BEAUTY**. Quoting from "New Physiognomy" on this point, we have the following:

"The first and chief indication of a healthy state of the body is beauty. In what does beauty consist, if not in harmonious physical and spiritual development? and how is this harmonious development attained, if not through the agency of health? The healthiest plant or the healthiest animal is most beautiful, according to its own standard of beauty. So in man the complete development of all the parts, constituting the most symmetrically organized body, and thereby insuring the perfect performance of the bodily functions, is the highest order of human beauty. If we particularize with regard to the human organization, we find that head which combines the various organs in their highest condition of development, to be the finest in contour. That face which is made up of the finest physiognomical organs will be the handsomest. The healthier the organ the better it is adapted to perform its specific office. The finest and brightest eye sees best. The most regular and evenly balanced nose possesses the most delicate smell. The sweetest mouth is that which has the most nearly perfect teeth and the best formed lips. Those limbs, that arm or leg, is the finest and best fitted for its natural duty which has the best muscular development. We may therefore say that where perfect health is found, there also will be found perfect beauty, in the broadest and truest sense of the term, as its inseparable concomitant, and the most admirable adaptation of the part to its special office.

"The farther the departure from this standard of beauty, the less the harmony of the organization, the more incomplete the development, and the more marked the evidences of disease and premature decay."

There are individuals who scoff at and ridicule, so far as they may, personal beauty. But we hold it each one's duty to be beautiful, or by making use of all legitimate means, to attain "good looks." Beauty—attractiveness of

EMINENT AMERICAN CLERGYMEN. BIOGRAPHICAL SKETCHES WITH PORTRAITS.

The general outline of organization which appears to predominate among the clergy of the liberal school is a large development of the anterior brain, including the organs of Causality, Comparison, Benevolence, and Language. Marvelousness and Veneration, comparatively speaking, do not loom up so strikingly as these organs we have specified, although in the case of some of these so-called unorthodox Christians we have seen magnificent specimens of Marvelousness and Veneration. Intellectually, the leading men of these denominations are unsurpassed. There is an intellectual, or, to use their own words, "a rational religion," and in the maintenance of their peculiar doctrines they bring to bear all the argument and testimony of highly-cultivated intellectual faculties.

EDWIN HUBBEL CHAPIN, D.D., the eloquent pastor of the Fourth Universalist Society, New York, was born at Union Village, Washington Co., N. Y., December 29, 1814. He never received the benefits of regular collegiate training, but completed his formal education in a seminary at Bennington, Vt. At the age of twenty-four, after a due course of theological study, he accepted an invitation from the Universalist Society of Richmond, Va., and was ordained as their pastor in 1838. Two years afterward he removed to Charlestown, Massachusetts; in 1846 he was invited to assume the pastorate of the School Street Society, in Boston; and in 1848 he settled in New York, as pastor of the Fourth Universalist Society, the church of which was then located in Broadway. Here he labored for a period extending over eighteen years, drawing large congregations by the magnetism of his eloquence. The old church had become a landmark in the city, but yielding to the encroachments of trade, it was sold, and a new church was recently erected on the corner of Fifth Avenue and Forty-fifth Street, and dedicated on the 3d of December, 1866, wherein the Society now worship. Dr. Chapin is distinguished as an eloquent pulpit orator, as a public lecturer, and as an author. His literary labors are mostly of a moral and practical character. His chief works are the "Crown of Thorns," "Discourses on the Lord's Prayer," "Characters of the Gospel, illustrating phases of the present day," "Moral Aspects of City Life," "Humanity in the City," etc. Among Dr. Chapin's finest efforts as a speaker are his great speech in 1850, at Frankfort-on-the-Main, before the World's Peace Convention; at the Kossuth Banquet; at the Publishers' Association Festival, and at the opening of the New York Crystal Palace. As a temperance lecturer he has no superior, and he is undoubtedly one of the most eloquent and polished pulpit orators in America. His beautiful eulogies on our departed heroes, in his well-known lecture "The Roll of Honor," command universal admiration. The degree of D.D. was conferred upon him in 1856, by Harvard College, which had previously conferred upon him the honorary degree of A.M. Dr. Chapin has always been connected with the Universalist Church, and is one of the chief actors in what is called the "Broad Church Movement." His sermons are thrilling oratory; and his grand eloquence has thrown into the background

the former successful policy of doctrinal discussion. The influence of his overshadowing and just reputation is felt in every church of his denomination in the city, and he is now the acknowledged representative in the popular mind of Universalism in the United States.

Dr. Chapin has by nature a strong physical constitution. The brain, no matter how active, is fairly sustained by the nutritive processes. He should be buoyant, pliant, elastic in every sense of these terms. Following a pursuit eminently literary in its character, the mind in its manifestations evinces all the qualities specified. The organs of Perception, Reflection, Imitation, Construction, and lingual power are all extensively developed. He should be known for the versatility of his ideas, and for unusual capacity to adapt to those ideas original methods of expression. Comparison ranks among the largest of his reflective organs, rendering him

PORTRAIT OF EDWIN HUBBEL CHAPIN, D.D.

exceedingly critical and comparative. The essence of things is inquired into first, their application is the next feature of his *ratiocination*. The head is large, and developed mainly in the anterior cerebral portion. Self-Esteem is not strongly developed, therefore he has less dignity and assurance of manner than sympathy and cordiality. He is attractive, impressive, rather by the influence of the atmosphere of kindness which surrounds him, than by any exhibition of studied grace or *empressment*.

THOMAS JEFFERSON SAWYER, D.D., pastor of the Universalist Church, Woodbridge, N. J., was born in Reading, Windsor Co., Vt., January 9, 1804. He received the rudiments of an English education in the common district school of his native place, and prepared himself for college in an academy at Chester, and graduated from Middlebury College in 1824. Immediately after leaving Middlebury, he commenced

the study of theology, and entered the ministry in the spring of 1830, first assuming the charge of a small Universalist Society in New York, where he spent the greater part of his life. In the autumn of 1845 he resigned his pastorate and accepted the principalship of the Clinton Liberal Institute, Oneida Co., N. Y., but returned to New York in 1852, and in the following year again took charge of his old parish, with which he remained until the spring of 1861. In January, 1863, he was appointed editor of the *Christian Ambassador*, which position he held jointly for three years, his connection with that paper terminating last year. Dr. Sawyer is a frequent contributor to the periodical literature of his denomination; a work entitled "Discussion of the Doctrine of Universal Salvation," is the report of a debate with the Rev. Isaac Westcott, a Baptist clergyman, upon that subject. Dr. Sawyer was instrumental in calling

together the educational convention which resulted in the establishment of Tufts' College, Mass., the presidency of which institution was offered to him and declined; and subsequently, the same positions in Lombard University, Ill., and St. Lawrence University, N. Y., were proffered to him. He was efficient in founding the Theological School at Clinton, N. Y. As secretary of the Universalist Historical Society, becoming acquainted with several German theologians, he was, through them, made a member of the Historico-Theological Society of Leipzig. He received the degree of D.D. from Harvard College. In regard to Dr. Sawyer's standing in his denomination, Rev. G. H. Emerson thus speaks of him in the *Christian Ambassador*: "The man who can write the best octavo of Universalist divinity; who can write it in the best English; and make a book that shall have most durable fame; a book, too, that shall do most to command the attention and the respect of thinking and appreciative minds outside of our denomination, is Dr. Sawyer. In writing these words, we only repeat words that brethren in the East have heard us speak on many occasions; and this, too, though in some particulars his opinions and ours are by no means at agreement."

No one can look at this countenance without being impressed with the air of serenity, mildness, and benevolence which is blended in every feature. There, too, are ingrained all the indications of the well-cultivated mind.

There is also in the photograph from which we engrave, an unwonted freshness for one of sixty-three years of age. Decay has very slightly touched this frame. The fullness of the countenance, the poise of the head, the plumpness of the lips and chin could be well associated with fifty years. There is great scope of mental vision in this intellect. As a speaker, he would be profound, philosophical, perhaps elaborate as a theorist. As a writer he would be definite and full, precise and extended. The head is proportionately wide for its height and circumference, hence he should be executive, vigorous, and thorough. Comprehensiveness of mind, the ability to think deeply and profoundly is generally found associated with much tameness of action, in the way of adaptation, but in Dr. Sawyer we recognize the capability to do as well as to think.

SAMUEL OSGOOD, D.D., pastor of the Church of the Messiah (Second Unitarian Society), New York, was born at Charlestown, Mass., August 30, 1812.

He graduated at Harvard College in 1832, and completed his theological studies at the Divinity School in Cambridge in 1835. After two years spent in traveling and preaching, he was, in 1837, ordained as pastor of the Unitarian Church in Nashua, N. H., where he remained until 1841, when he was called to the congregation in Providence, R. I. In 1849 he accepted the pastorate of the Second Unitarian Society of New York, over which the Rev. Dr. Dewey ministered for many years. This Society is a large and important one, and is now building a spacious church on Park Avenue and Thirty-fourth Street. In 1857, the degree of D.D. was conferred upon Mr. Osgood by Harvard College.

Dr. Osgood's literary record is one of great activity and honor. His works have not been simply dry discussions upon sectarian theology. They belong to the active "living present." His first publications were translations from Olshausen and De Wette, followed by "The History of the Passion," and "Human Life." His original writings are "Studies in Christian Biography," "The Hearth-stone," "God with Men," "Milestones on our Life Journey," "Student Life." The chief of his later works are "Memorial of Edward Everett," "New York in the Nineteenth Century," "American Leaves," a work recently issued. This last work is a collection of fifteen essays upon subjects of daily interest. The articles therein entitled "American Boys," "American Girls," have been called for in separate form for general distribution. Dr. Osgood, in his writings, looks from the stand-point of the careful educator and the humanitarian, and he would have a system of education tending to benefit American youth physically as well as mentally. He would have boys be boys and girls be girls, laying up for themselves a good stock of vitality, which shall sustain them in mature age. Dr. Osgood has been a frequent contributor to the *Christian Inquirer*, which has published a series of letters of his during a period of seventeen years, and to the *Christian Register*, both organs of the Unitarian denomination; to the *North American Review*, and other periodicals. The *Christian Inquirer* he edited from 1850 to 1854. He also edited the *Western Messenger*, in Louisville, Ky., in 1836 and 1837.

Dr. Osgood is an ardent lover of nature, and generally passes the summer at his picturesque and quite unique residence in Fairfield, Conn. He has ever been active in literary and educational interests; and for several years has been domestic corresponding secretary of the New York Historical Society. He is deeply attached to the young, and especially interested in fostering their moral and religious character. As a preacher he announces boldly his own convictions on questions which enter into the daily life of his hearers.

This portrait evinces emotion, sympathy, and refinement in its every lineament. There is nothing cold or repulsive about the features; there is much of dignity, but no *hauteur*. A serene self-respect and a refinement of courtesy which imperceptibly command our esteem must accompany this gentleman in his various relations. Few countenances are more classic in expression. There is the unmistakable impress of the scholar, the man of close reading and of earnest thought. The forehead, beautiful in profile, exhibits harmony of balance between perception and reflection. The former feeds the latter amply; the latter suggests the proper fields for the exercise of the former; hence the whole intellect is employed upon those matters which have relation to utility, either personal or social. His language is fluent, graceful, and polished. The organs which supply sentiments of beauty, grandeur, and sublimity are large in this head, and conspiring with the strong moral qualities of his brain induce breadth and fervor of philanthropic sentiment and earnest sympathy with social progress.

FREDERICK WHITNEY HEDGE, D.D., was born in Cambridge, Mass., December 12, 1805, his father being professor of logic and metaphysics in Harvard College, and the author of a work on philosophy, which was quite popular in its day. In 1818, when thirteen years old, he was sent to Germany, and studied at Hildesheim and Schulpforte. Returning to America in 1823, he graduated at Harvard in 1825, and after a three-years' course of study in Divinity College, was settled over the First Congregational Church in West Cambridge. After a seven-years' ministry here, in 1835 he accepted a

call to the pastorate of the Unitarian Church in Bangor, Me., where he remained fifteen years, devoting far the largest portion of his time and thought to historical and philosophical studies. Worn down by his professional and scholarly labors, in 1847 he revisited Germany and made a tour of Europe. On his return, in 1850, he was invited to the Westminster Church in Providence, R. I., and maintained his connection with it until 1856, when he was called to the pastorate of the First Congregational Church in Brookline, Mass., where he still remains. The degree of D.D. was conferred upon Mr. Hedge by Harvard College in 1852, and in 1857 he was chosen Professor of Ecclesiastical History in Cambridge Divinity School, a chair which he still fills. In the same year he became editor of the *Christian Examiner*, the leading organ of liberal Christians in this country; his own contributions to its pages were numerous, and many of them were of a striking character. He was also president of the American Unitarian Association for several years, and has given a great number of discourses and addresses on public occasions; the last and most notable of these was delivered before the Alumni of Harvard College last summer on University Reform. Of Dr. Hedge's published works, the largest and best known is the "Prose Writers of Germany," which contains a biographical sketch and critical estimate of twenty-eight German authors, with appropriate selections from their works. His last published volume is "Reason in Religion," a work which has met with a gratifying welcome from thinking men in all denominations. Dr. Hedge is in many respects one of the leading and most remarkable minds in the Unitarian ranks. In quantity and quality of mind, and in intellectual discipline and scholarly acquirements, he has few superiors. His critical knowledge and appreciation of philosophical systems, his acquaintance with ecclesiastical history, his literary attainments, his logical power and rhetorical brilliancy, each notable in itself, together place him in the first rank of clerical minds. As a public speaker, his manner and enunciation, academical and almost Germanic, somewhat impair the pleasure and dispense the effect which his statements, often brilliant and bursting with thought, would otherwise produce.

Dr. Hedge has a strong face. The organs of the forehead are large—Firmness is the most prominent, giving decision. His well-defined and compressed lips evince determination and strength of will. He has much originality of opinion, yet his large organs of analysis and investigation incline him to explore all matters coming under his consideration before he decides. He is no imitator. He does not pursue the paths made by others, but strikes out a course of thought and action peculiarly his own. He is an individual thinker, a practical observer, and therefore the results of his examination may be in most cases relied on. There is something in the character of the face which reminds us strongly of the author of "Sartor Resartus," something of that indifference to external influences which is so striking a feature in the character of Carlyle. He is well calculated for leadership, not only in religious matters but in secular. Whatever might have been his chosen pursuit, Dr. Hedge would never have acted the part of an imitator.

HENRY WHITNEY BELLows, D.D., minister of All Souls Church, New York, was born in Boston, June 11, 1814. He graduated at Harvard College in 1832, and received the degree of D.D. from that institution in 1854. He was ordained to the ministry in this city, January 2, 1839, and has remained in charge of the First Congregational (Unitarian) Church ever since that time. In addition to his duties as minister, he started the *Christian Inquirer*—a religious newspaper devoted to Unitarian Christianity—in 1847, and for many years was its editor, and for fifteen years its constant correspondent. He also contributed many important and valuable articles to the *Christian Examiner* and *North American Review*, delivered a course of lectures on Social Science before the Lowell Institute in Boston, and has given a large number of addresses, lectures, and sermons on important public occasions. Perhaps the most striking and memorable of these were a discourse preached before the Alumni of Harvard Divinity School, entitled "The Suspense of Faith," and an address given in this city in defense of amusements generally and the theater in particular, entitled "The Drama." In 1853, at

the earnest request of parishioners and others, he published a volume of sermons setting forth the more important principles of Unitarianism, under the title of "Restatements of Christian Doctrines."

Dr. Bellows has always been profoundly interested in social problems, and in whatever pertains to public welfare and advancement, taking large and advanced views upon the great questions of our age, country, and civilization. By constitution, culture, and association a conservative, while he deprecated the existence of slavery as much as any one, he shrunk from what he deemed the inevitable consequences of immediate emancipation. But the moment the South fired upon the flag of the nation, he flung away his scruples and threw himself heart and soul into the national cause. Without a moment's delay he set at work to organize a commission which should assist the government in providing for the health and comfort of the soldiers in the camp and on the field, and completely systematize the immense charity of the nation. Of this sanitary commission, now so well and honorably known, he was the originator and animating soul as well as the president, and during the four years of the war gave himself up to the public service, traversing the entire country and even visiting California to raise necessary funds. During this period he still attended to his professional duties as minister of one of the most important parishes in the city; at its close turned his attention to the denomination with which he had always been identified, and sought to bring its hitherto unorganized elements into practical relations and a working, effective fellowship. His efforts in this direction resulted in the New York Convention of April, 1865, which formed the National Conference of Unitarian and other Christian churches, of the council of which he is president. As a writer, Dr. Bellows has a rich, almost florid style, abounding in beautiful imagery, yet always vigorous and grand. Some of his extemporaneous efforts are among the highest specimens of American oratory. In theology, he belongs rather to the conservative than to the radical school.

Dr. Bellows has a powerful mental organization. His head is wide, prominent in the forehead, and high in the crown; hardly so prominent at the perceptive ridge as indicated in our engraving, yet sufficiently so to render him a careful observer. He should be distinguished for practical thought, direct and thorough investigation in whatsoever subjects he conceives an earnest interest, and for that active humanitarianism which exhibits itself more in deeds than in words. His language is largely developed, and did not his strong perceptive furnish ample material as the subject-matter of discourse, his large Ideality and Sublimity co-ordinating with his well-marked moral sentiments could alone supply the fund of remark; only the feature of practical application, which is now his leading oratorical characteristic, would be lacking in a great measure.

WILLIAM HENRY RYDER, D.D., pastor of St. Paul's Church (First Universalist Society), Chicago, was born in Provincetown, Mass., July 13, 1822. He obtained his early education in his native town, and in Pembroke, N. H., and afterward studied classical literature with the celebrated Dr. Clowes, of Clinton, N. Y. His first settlement in his profession was at Concord, N. H.; he preached his first sermon at the age of nineteen; at twenty he had acquired quite a reputation, and at twenty-two was made minister of Concord Church. Not satisfied with his imperfect preparation for the great work of the Gospel, he determined to go to Berlin to complete his studies. There he spent eight months in close study, receiving the benefit of lectures by Neander and others. On his return, after he had made the tour of Europe and part of the Holy Land; visited Athens, Smyrna, Damascus, Jerusalem, and Cairo, he was called to the pastorate of the Roxbury Universalist Church, in Massachusetts, where he remained ten years. In Jan., 1860, he removed to Chicago, where he still resides. The degree of A.M. was conferred upon him in 1860 by Harvard University, and in 1863 Lombard University, at Galesburg, Ill., honored him with the degree of D.D. Dr. Ryder's chief literary productions have consisted of quarterly articles, pamphlets, and published sermons. He did good service all through the rebellion, both by his strenuous advocacy in the pulpit of the Government and the Union, by his spoken and printed discourses, and

by his generous labors in the field of practical Christianity. He was sent to Richmond in aid of the Sanitary Fair, and reached that city a few days after its evacuation. It was during this trip that he discovered the famous letter used by the Government in the assassination trial. Dr. Ryder is distinguished for a fine analytic mind, for high culture, and scholastic learning. He has an earnest and fervid nature, and is unremitting in the performance of all good works. As a clergyman, he is held in high esteem by the members of his own community, and by all, indeed, who know him. During the war he was an earnest advocate for the Union. "Traitors," he said, "must be put down. The Union must be upheld. The Government must be sustained. There can be but one America in America—one Union from the Lakes to the Gulf."

Dr. Ryder has always been a sincere friend to the slave and to general progress.

Dr. Ryder has a keen intellect, which looks out scrutinizingly from his deeply-set eyes. The whole countenance bodes forth a disposition to investigate and analyze. Theories must be based on sound premises to receive his indorsement. A cursory glance at any subject of importance does not content him, although the inference born of such a glance would be sufficient for most minds; so accurate is his natural insight, he would deliberately examine it and thoroughly determine its nature. As a friend and companion, he is inclined to be affectionate and cordial, generous in sentiment, and frank in expression. The temperamental conditions of Dr. Ryder are very favorable to the exhibition of power and endurance, both physical and mental, yet undue exercise of the nervous system may affect the harmonious relations of his body and brain, rendering the latter so active as to drain the vitality of the former. A little better condition of his physique would be an advantage to him.

REV. O. B. FROTHINGHAM, minister of the Third Unitarian Church, New York, is the son of Rev. N. L. Frothingham, for thirty years minister of the First Church in Boston, and one of the most polished preachers and writers of the Unitarian denomination, and a hymnist of the first order. He was born in Boston, November 26, 1822, into the most cultivated, classic circle of American society, with Edward Everett for his uncle, and a class of scholars and *litterateurs* for his associates. He passed through the Latin School, Harvard College, and the Divinity School, at an early age, with credit, and was ordained to the ministry in Salem, Mass., March 10, 1847. In May, 1855, he was invited to Jersey City, to take charge of a Unitarian Society that had just been formed there—a position which he held four years, when, at the urgent request of a great number of friends, he removed to New York, and commenced preaching in Ebbitt Hall. In February, 1860, the Third Unitarian Society was incorporated, and in 1863 a church was erected on Fortieth Street.

Mr. Frothingham has attracted considerable attention by his bold, eloquent advocacy of rationalistic views of religion, and his unflinching application of them to the great questions of the age. He is, perhaps, the leading representative and exponent of religious rationalism in America. He constantly affirms what he thinks is true, criticizing the old only to make room for a new and grander faith.

As a writer, his style is ornate, abounding in well-chosen images and metaphors, yet vigorous in thought, and often brilliant. As a public speaker, he is distinguished for elegance and earnestness. His manner is artistic, and somewhat restrained, conveying an impression of coldness and artificiality to the superficial observer; addressing himself almost entirely to the reason and conscience and imagination of his hearers, he seldom stirs those sentiments and emotions which are indicated by "the heart;" and though he deeply interests a class of intelligent, thoughtful minds, he is far less popular with the masses than many other less able preachers are. He has published a great number of sermons and articles in the magazines of the day; the most important of these are, "The Christ of the Jews," "The Christ of the Gentiles," "The Christ of the Apocrypha," "Scientific Criticism," "Unitarianism, Past, Present, and Future," "Imagination in Theology," "Mystics and their Creed," "The Drift Period in Theology," in the *Christian Examiner*; a notable article on Theodore Parker in the

North American Review; "The New Religion of Nature," in the *Friend of Progress*. He has also published "The Parables; Stories from the Lips of the Teacher, Retold by a Disciple," and "Stories of the Patriarchs," books for children; "Child's Book of Religion," a manual for Sunday-school and home use; besides a translation of the *Critical Essays of Renan*.

The finely-cut features of Mr. Frothingham, as seen in the photograph we have, are but imperfectly represented in the engraving before us. The closely compressed mouth, and the whole composition of the face, indicate the man of steadfastness. The perceptive faculties are large, and being complemented by the reflectives, indicate the ability to gather facts and to apply them to the elucidation of such questions as may come within the scope of his experience. The full-orbed eyes indicate power of language, the ability to give ready expression to the thoughts and experiences he gathers, and his force of character enables him to urge his convictions upon the attention of his hearers. His social nature is well indicated, which, together with Benevolence and the kindly expression of the face would make him always welcome in society. He would be kind-hearted, generous, and devotional, and quite strict in the performance of duty. The moral organs are large; it is, in fact, a good moral head.

REV. ROBERT COLLYER, pastor of Unity Church, Chicago, was born at Keighley, near Leeds, in Yorkshire, England, December 8, 1823. His parents were work-people and, unable to send him to school, put him at work in a factory when he was eight years old. Here he remained six years, picking up thoughts as well as threads, and learning to weave facts and fancies of his own, as well as yarns for his employers. At the age of fourteen he was apprenticed, according to the English custom, to a blacksmith, at Ilkley, in Wharfedale, Yorkshire, where he continued to work for a dozen years, acquiring a good capital of health and vital force, a well-developed and firmly-compacted body, and a good deal more—so much more that he longed for better air, more room, and opportunities than were possible there. Accordingly, in 1850, with a large outfit of discontent and faith and hope, but with little else, he came to America, and soon found employment at hammer-making in Shoemakertown, near Philadelphia. Naturally serious, his thoughts were early turned into religious channels, and during the last year of his English life he frequently exhorted in Methodist meetings. After his arrival here, he preached regularly in the Methodist pulpits of the circuit, receiving for ten years' services a large return of grateful affection and enriching experience—and \$7 50. During the last two years of his blacksmith life, Mr. Collyer became acquainted with Lucretia Mott, the gifted Quakeress, and Dr. Furness, the well-known preacher and philanthropist of Philadelphia. The words of the latter made a profound impression upon him, and opened up new views to his mind. Accepting an invitation to preach in the Unitarian pulpit, the Methodists refused to renew his license; and just at this time, 1852, receiving an invitation to the ministry-at-large in Chicago, he left the anvil for a more congenial field of labor. The mission prospered under his charge, and soon became a self-sustaining, influential society, and is now building one of the largest and finest church edifices in the city. Mr. Collyer has won public notice and a national reputation as preacher, philanthropist, and writer. His style is remarkably simple, but at the same time remarkably fresh and unique. It is thus happily described by Dr. Bellows:

"Mr. Collyer is a poet, artist, and singer, in spite of himself. His broad, sweet soul has dived into the deeper truth of things, and when he speaks, as he always does, out of his experience, his dainty lips refuse all superfluous or unfit words, while tender, Burns-like images cluster round his thoughts, and his voice melts into a kind of song that, without the periods and pauses of ordinary speech, flows into the ear and heart, with the effect of a fugue by Bach. It is not oratory—it is oratorio."

We have here a strong organization. The vital organs are evidently vigorous, supplying without stint a full measure of healthy nutrition to nerve and muscle. The framework is massive and powerful, and the temperament elastic and pliant, with little irritability or restlessness. Ease of thought and ease of action, the one complementary to the other, must characterize this well-

known minister. We can not wonder that Mr. Collyer has risen from a comparatively low position in society to one of eminence and dignity, when we contemplate the symmetry and superior quality of his whole "make-up." Our engraving furnishes but an outline of the face, recognizable, it is true, but divested of those soft touches of expression which are conspicuously marked in the original. The organ of Order is quite large, rendering him inclined to method in the disposition of thought and things. He should possess an easy flow of language, and that warmth of expression which is the parent of eloquence. He can be no strainer after effect, no sensationist as a speaker or writer; but easy, fervid, sympathetic, natural, he would speak to the purpose and according to the occasion. No special remark of ours is necessary to direct the reader's attention to the unwonted height of the forehead at Benevolence. This is an oratorical temperament, full of feeling and emotion.

JAMES FREEMAN CLARKE, D.D., minister of the Church of the Disciples, Boston, was born in Hanover, N. H., April 4, 1810. His grandfather, Dr. James Freeman, was the first minister who publicly preached Unitarianism in the United States. Mr. Clarke graduated from the Boston Latin School in 1829, and from Harvard College in 1832, in the same class with Oliver Wendell Holmes, Prof. Pierce, Chief-Justice Bigelow, and other distinguished men. He then studied theology in Cambridge Divinity School, and was ordained pastor of the Unitarian Church in Louisville, Ky., in 1833. He labored there seven years, dividing his time between professional duty and scholarly pursuits. In 1840 he went to Boston and gathered a church on what was considered at the time novel and impracticable principles. It was a free church, the pews being open to whoever would occupy them, each paying what he would or could to defray expenses. This church had a long and hard struggle, but finally became firmly established, and is now one of the most vigorous, prosperous, and influential churches in Boston, numbering among its members Governor Andrew and many other celebrities. Our readers may remember how pleasantly it is referred to by the Autocrat of the Breakfast Table as the church of the Gallians.

Mr. Clarke has kept up his studies, and has given the public a translation of De Wette's "Theodore the Skeptic," "Christian Doctrine of Forgiveness," "Christian Doctrine of Prayer," Haase's "Life of Jesus," and, together with W. H. Channing and R. W. Emerson, "The Memoirs of Margaret Fuller Ossoli," one of his early friends and admirers. He has also contributed a great number of articles to the *Christian Examiner* and other publications. His last work is "Orthodoxy, its Truths and Errors"—a work which aims to discover and state the essential truths of that great system of faiths which, under different modification of names, is held by the various evangelical sects. He has taken an active interest in all the great reforms of the age, and his name is particularly identified with the anti-slavery cause and that of education; at the present time he is member of the State Board of Education, and one of the overseers of Harvard College.

We would recommend to our readers a careful study of this countenance, especially of it as existing in the original mold, if accessible to any of them. The fineness, delicacy, and symmetry of the whole organization can not evince anything less than a harmonious and well-ordered mental constitution. There is thought, feeling, fancy, dignity, aspiration, and earnestness expressed in the artistic finish of the head and face. Perhaps the tendency to thought, to the consideration of things hoped for by some longing minds—a near approach to perfection in the ordinances of human society—is a predominant feature in his mental characteristics. He has much responsibility resting upon him for the rare gifts and graces bestowed by a bounteous Providence.

REV. GEORGE HOMER EMERSON, the editor of the *Christian Ambassador* (the New York organ of the Universalist denomination), was born September 3, 1822, in Roxbury, Mass. At the age of seven he was taken with his parents to Henniker, N. H., and four years after to Backsfort, Me., where he resided until he was sixteen years of age, receiving the advantages of a high school education, and the unusual facilities afforded by an excellent town library. When

the so-called "Madawaaka War," for the settlement of the northeastern boundary broke out, young Emerson started, at the age of sixteen, with the consent but against the wishes of his parents, for Charlestown, Mass., with a view to entering the navy; but to his bitter disappointment he was rejected on account of a lack of physical strength. He then went to Lowell, Mass., and became clerk in a clothing and hardware store, serving in that capacity three years. Here he came under the influence of Rev. Abel C. Thomas, a Universalist clergyman, a man of extraordinary eloquence, and very fascinating to young men, and under his instruction he prepared himself for the ministry, preaching his first sermon August 7, 1842, at the age of nineteen. The following winter he preached at Ellsworth, Me. Two years after he received a call to Cleveland, O., where he preached for the first time in the West, on the day of his majority; and subsequently took the editorial charge of the *Ohio Universalist*, then just started in that city. In 1846 he removed to Dayton, O., where he was instrumental in building and establishing a church, but his health failing he was compelled to leave, and sought the softer climate of the South. He preached one year in Louisville, Ky., traveling much during that time, one itinerant tour taking him as far as the southwestern part of Tennessee. With restored health he returned to his native Massachusetts in 1849. The four next years he served as agent of the State Missionary Society of his denomination, and then settled over a society in Somerville, which, as missionary agent, he had been successful in forming. He then succeeded the Rev. Dr. Ballou as editor of the *Universalist Quarterly and Literary Review*, where he published several elaborate papers on philosophy, theology, and history. His review of "Hildreth's History of the United States" drew from the author a letter in which Mr. Emerson was complimented as being the only critic, on either side of the water, who thoroughly comprehended the scope of his work. In 1863 the New England Publishing House purchased the *Trumpet and Freeman*, since called the *Universalist*, and Mr. Emerson was appointed editor, which post he occupied until the opening of the present year, when he was induced to fill a similar position on the *Christian Ambassador*. Under Mr. Emerson's management, this journal has rapidly assumed the character of a first-class religious weekly paper. Mr. Emerson is a clear and earnest speaker, and confesses that he owes much of his verbal perspicuity to an enthusiastic study of Combe's "Phrenology" and "Constitution of Man," which he read and re-read quite early in life. As a writer he is forcible and fearless. The study of Locke gave, early in his manhood, a strong materialistic character to his theology. He became an earnest believer in the doctrine of necessity; rejected all notions of the possibility of sin or punishment after death. He, in following many of his seniors, has sought to introduce what he calls a more spiritual kind of thought into the denomination. He probably represents in this particular the younger laity and ministry.

We feel inclined to say in the first blush of an examination of this countenance, that we should take him as a fair representative of the clergy of the Universalist Church. The face is that of the scholar, the investigator of metaphysical questions, the critical examiner of principles and ideas. He is not one to be satisfied with superficial statements. The gloss of plausibility does not so soothe and charm his mental apprehension as to prevent him from looking into the essential features of the subject presented for consideration. We can not think him remarkable for facility and copiousness of verbal utterance. He would be inclined rather to precise, pointed, direct statements of what were his views. Words to him have a meaning, and are not to be spoken or written without some definite purpose. He does not look so much to the persuasive influences of rhetoric as to the convincing and subjective power of solid argument. He looks more at genuine practicality of things than to style or plausibility.

REV. JOHN G. BARTHOLOMEW, pastor of the "Church of the Redeemer" (Universalist), Greene Avenue, Brooklyn, was born in Delphi, Onondago Co., N. Y., February 28, 1834. He received his education at the Clinton Liberal Institute, in Clinton, N. Y.; pursued his theological studies under a private tutor, with a view

to the Christian ministry, and entered upon the duties of his chosen profession in 1853, at the age of nineteen. His first settlement was at Upper Lisle, N. Y., in 1854, where he remained two years, then accepting a pastorate in Oxford, N. Y. Two years later he was called to the pastoral charge of the Universalist Society of Aurora, Ill. In 1869, a vacancy occurred in the pastorate of the Universalist Society of Roxbury, Mass., by the resignation of Rev. Dr. Ryder, and the appointment of his successor was by no means an easy task. It happened, however, that a member of that society, having heard Mr. Bartholomew preach at Aurora, recommended him as the man who would come fully up to the standard required by the Roxbury parish. Mr. Bartholomew was invited to preach in Roxbury, and in less than twenty-four hours after his first appearance was called to the pastorate. After a most successful ministry of six years in Roxbury, he was called to the position he now occupies, as pastor of the "Church of the Redeemer," Brooklyn, where his peculiar talents and power as a pulpit orator have attracted much notice.

During the rebellion Mr. Bartholomew was an earnest patriot. From the pulpit and the platform he always pleaded the cause of liberty. Pursuing the same independent course that he exhibited during the war, freely discussing the national problem, he has won the respect of many who do not sympathize with him in religious conviction, and few ministers stand firmer in the affections of their people than he.

Mr. Bartholomew possesses that ripeness and raciness of animal spirit which supply to a well-ordered mentality quickness of apprehension and vigor of thought. His temperament is an excellent specimen of the mental and vital elements in about equal proportions. There should be ingrained in the warp and woof of his entire constitution a marked degree of mobility and sprightliness. He has no sympathy with the hum-drum or torpid in life. Action, continuous action, is the aim and the natural tendency of his organization. He should possess much spontaneity and originality of idea, much inventive genius. Were he not a worker in the vineyard of truth and religion—seeking by direct effort as an accredited minister to improve the spiritual condition of his fellow-men, we would say that his labors in the cause of science or mechanical art would be attended with success. Those organs which appreciate the material and exact, those which discriminate, analyze, and construct, are conspicuously marked. The fineness and regularity of the features are fitting accompaniments of the symmetrical organization. We could not infer that harshness or bluntness of manner and expression were characteristic of this gentleman, as the indications, much stronger in the original than in the poor print before us, are all in favor of gentility, softness, and kindness.

REV. GEORGE H. HEPWORTH, minister of the Church of the Unity, Boston, was born February 4, 1838. On his mother's side he is of French descent, and some of his ancestors met the fate of the popular leaders in the French Revolution. From this stock Mr. Hepworth has inherited a joyous, hilarious spirit, and the genial good-humor which tempers his seriousness and gives his deeper sentiments a humane and attractive setting. He may be said to have "slipped in preaching," for almost as soon as he was out of the cradle he commenced his professional labors, gathering his playmates around him and exhorting them to be good. After graduating from the Boston Latin School, he studied theology at Divinity College, Cambridge, from which he graduated in 1855. He was first settled over the Unitarian Church in Nantucket, in the autumn of the same year, and after two years spent there among Quakers and their descendants, from whom he learned many valuable lessons, he returned to Cambridge, and studied several months as a resident graduate. In December, 1858, a few families residing at the south end of Boston made an effort to form a new society there, and invited Mr. Hepworth to preach for them. The society grew so rapidly that a spacious church edifice was soon erected on Newton Street, where the society continues to worship, sometimes fifteen hundred people crowding to hear the gifted and popular young preacher.

At the breaking out of the war, Mr. Hepworth threw himself with the utmost earnestness and enthusiasm into

the national cause, preaching, lecturing, and exhorting wherever he went to arouse the popular mind. In 1862 he joined the expedition of General Banks, and was appointed to a place on his staff in the celebrated Louisiana campaign, having charge of the free labor system. The efforts made by the planters to have him removed, and even to take his life, and the high estimation in which he was held by the freed people whose cause he so heartily espoused, furnished the best gauge of his services in this department.

On his return he wrote a popular account of his experiences, which was published under the title of the "Whip, Hoe, and Sword." His services were put in immediate requisition by loyal leagues and lyceums as lecturer, and ever since he has been a favorite of lecture audiences. As a speaker, Mr. Hepworth is exceedingly graceful and winsome. His naturally musical voice is finely modulated, and his style of utterance is easy and natural, varying constantly with the character of the thought. In theology, he is rather a liberal than a radical, his appreciation of and reverence for what is old and sacred restraining his reason and holding in close relations and active fellowship with the working mind of the denomination to which he belongs. He has the deepest interest in all social questions and reforms, caring more for humanity than for theology, for lightening the burdens of the poor and oppressed than for splitting metaphysical hairs or building up a sect.

This gentleman must be distinguished for sympathy, affection, suavity, humor, and intuition. The profile is striking with respect to the great predominance of the organs of Benevolence and Human Nature. Pertinacity in opinion and persistency in action can not be laid to his charge, for there are all the indications of frankness, liberality of sentiment, and respect for the opinions of others which are likely to be found in one organization. He has much sensitiveness and susceptibility; in fact, far more of these sympathetic characteristics than is usually allotted to men; hence he quickly apprehends those things which appeal to the finer feelings and responds cordially to their demand. He is evidently buoyant and exuberant in fancy and facile in expression.

REV. DANIEL BALLOU, pastor of the Universalist Society of Utica, N. Y., was born December 9, 1838, at Norwich, Chenango Co., N. Y. His youth was occupied chiefly in agricultural pursuits, and his education was obtained mainly at the district school, and through his own exertions during the intervals not devoted to labor on the farm. Naturally modest and diffident, he was nevertheless ambitious. The great name and world-wide reputation of his great uncle, the Rev. Hosea Ballou, of Boston, inspired him with a deep desire to become a minister of the Gospel, and to emulate, if possible, the deeds of his honored relative. At twenty years of age he had determined to enter the ministry, but a lack of education, and other serious obstacles, had to be met and overcome. But the embryo preacher was not daunted; the greater the difficulty the more necessity for conquering it, was his motto; and he earnestly set about preparing for the task which he had imposed upon himself, and such was his success, that in 1858 he was enabled to enter the Theological Department of St. Lawrence University, at Canton, N. Y., where he graduated in 1861, being a member of the first class graduated from institution. His first settlement was at Oxford, N. Y., soon after leaving the University. On October 1, 1864, he commenced his ministerial labors, having been ordained pastor of the Universalist Society of Utica, N. Y., to which place he removed. His labors there have been successful to a degree far beyond his most sanguine expectations. He is still young, being only a little over twenty-eight years of age, yet his voice is heard with respect by those greatly his seniors in age and experience.

This gentleman, the youngest in the group, possesses those elements which favor rapid advancement in intellectual development. He has a superior organization. The head is developed very considerably in the upper lateral portion. Those organs which underlie imagination, fervor, taste, wit, and elaboration of thought, are large. He has a good deal of poetical ability, and when his feelings are warmed by an earnest sympathy with his subject, his expressions should glow with the pathetic and figurative. He is evidently no stickler for

the precise. He does not look at things from the standpoint of fastidiousness, but he would be appreciative of beauty, ornament, and good taste. He enters heartily into the consideration of that which inspires mirth, cordiality, and good-will. He has a good deal of warmth in the way of social life; he believes in the domestic institution—the home, companions, friends. He would be careful in the disposition of his affairs, and carefully observant of justice in his dealings. He has an amount of mechanical talent which would render him successful in any pursuit requiring mechanical ability. And he possesses in a high degree that intuitive or instinctive apprehension which enables some men to form instantaneous and correct judgments.

DOCTRINAL FEATURES OF LIBERAL CHRISTIANITY.

The Unitarian denomination is unique in our American Ecclesiasticism. Its history is considerably obscure. The first settlers of New England were Puritans and Calvinists. But they laid more stress upon religious independence than upon any tenet of their creed, and contended for the liberty of each separate congregation more stoutly than a set belief. With liberty came inquiry, and a gradual modification of faith. To the end of the seventeenth century this process of modification went on almost silently in the Congregational churches, a few prominent preachers, like Dr. Gay, of Hingham, Mr. Mayhew, of Boston, avowing their Unitarianism. Rev. James Freeman, rector of the Episcopal church known as King's Chapel, Boston, became a convert to Unitarian views, and persuading his congregation of their correctness, in 1783 it became the first distinctively Unitarian Church in America. From that time the discussion became public, and for thirty or forty years the Congregational churches of New England were divided between the Unitarian and Trinitarian parties, the latter refusing to exchange pulpits and hold ecclesiastical fellowship with the former between the years 1806 and 1825.

The Unitarian body was a growth, a gradual formation in the ecclesiastical system of the country, and consequently its lines are not distinctly drawn. Its somewhat, as yet, indefinite theology was not formed by a council, nor elaborated by one master mind. It has grown up, and is still in a formative state. The cardinal principle of the body is individual liberty in matters of belief. Consequently there are the greatest differences of opinion among them, ranging all the way from Evangelicism to Rationalism, and embracing the entire theological district between Channing and Parker.

Unitarians all agree in holding that Christ was the Son of God, and not "God the Son;" that is, inferior to the Father in power, knowledge, authority, and goodness. They differ among themselves as to his pre-existence, authority, and rank, but all agree in regarding him as the head of our humanity, the most wonderfully gifted soul that has yet appeared on earth, the Providential teacher, leader, inspirer of men, the head of a new order of civilization. Rejecting the doctrine of total depravity, they also reject the current doctrine that Christ's death pays the penalty of man's transgression, or makes it possible for God to forgive those whom he could not forgive before; they hold that God loves every soul with a perfect love, and will forgive all who are truly penitent, and do all that infinite wisdom can devise and infinite power can effect to bring every child to Himself in holiness; but that in love He has ordained that every man must suffer the penalty of his own sins. They agree in rejecting the notion that the Bible is infallibly inspired, but rather regard it as the record of the sayings and doings of remarkable and inspired men, the history and remaining literature of a peculiar people, and above all, of inestimable value as containing our only authentic account of the life and teachings of Jesus Christ and his first apostles—a human book, with human errors and imperfections in it, to be read in the light of reason, with all the aids of history, science, criticism, and experience—a book unspeakably precious as a help to the soul, but not the master of the soul. They also agree in rejecting the prevalent doctrine of the endless punishment of all who die impenitent, and almost all of them believe that under the improved circumstances and holier influences of another world, all souls will recover from the sins and faults of this earthly life, and realize a

glorious destiny. They also agree in laying the greatest stress upon practical matters, and regard doing as of more account than believing, a life of Christian usefulness as the consummate flower, the blessed fruit, in comparison with which forms of worship and sectarian dogmas are trivial, if not impertinent.

The Universalist theology is, in many respects, similar to the views held by the Unitarians. Taking their rise in the early ages of the Christian dispensation, both these classes of liberal Christians have flourished side by side, if they have not been identified in interest. The leading features of Universalism are embodied in their "Profession of Belief," which was adopted at the General Convention of Universalists in the United States, held in 1803, and which is still regarded with satisfaction by the denomination. This "Profession" runs thus:

"ART. 1. We believe that the Holy Scriptures of the Old and New Testaments contain a revelation of the character of God, and of the duty, interest, and final destination of mankind.

"ART. 2. We believe that there is one God, whose

nature is love; revealed in one Lord Jesus Christ, by one Holy Spirit of grace, who will finally restore the whole family of mankind to holiness and happiness.

"ART. 3. We believe that holiness and true happiness are inseparably connected, and that believers ought to be careful to maintain order and practice good works, for these things are good and profitable unto men."

Universalists reject the doctrine of human depravity as degrading to the Deity, and, so to speak, impossible to Him. All men, they say, are formed in the image of God, which, though it may be disfigured by sin, can never be utterly depraved; that man is liable to sin, but it is through ignorance and unbelief, and not at all on account of any original corruption of heart transmitted from Adam. The Almighty is so just that He will assuredly deal out impartial justice to all. But the punishment will not be of infinite duration. God is infinite in mercy, and it is the office of mercy to forgive offenses, and this forgiveness is accorded in His appointed way, through the mediatorship of Jesus Christ, who was sent of God to be the Saviour of the world. It is Christ's final work to resurrect the soul into the glorified life of the angels; for human salvation, according to them, does not cease at death, but is passed over by death to Christ, who consummates it in the eternal world. All mankind is to be thus saved, and not a soul lost, or Christ died in vain, and did not redeem a world, but only a fragment of it. Like the Unitarians, the Universalists reject the orthodox doctrine of the Trinity, but they go further than the former in attributing to Christ qualities of a divine nature. He, say they, is subordinate to the Father, but possessed of power and spirit beyond all other intelligence. He is God made manifest in the flesh, and was sent of God to save the world. They believe also in the eternal progression of the soul, that it will retain forever its identity, clothed with a supernal body, and attain to heights of heavenly wisdom beyond all human conception.

There are in the United States over 750 Universalist societies, and 534 ministers. Some of these societies are small, having services only a part of the time. All the large societies have church organizations connected with them, with a good number of communicants; and within the year quite a number of churches have been formed in the smaller societies of the denomination. There are in the interest of this denomination in this country six newspapers, five monthly magazines, and one Sunday-school paper—the *Myrtle*—and the *Universalist Quarterly*.

The number of Unitarian societies in the United States is about 300, with nearly the same number of ministers. There are nine or ten newspapers and periodicals devoted to Unitarian literature and theology, the chief nuclei of which are Boston and New York, especially the former.

Our readers will perceive that the biographies of the group of divines published in this number are more elaborate than usual, our facilities for their preparation having been unusually good. We have published thus far the Presbyterians, Episcopalians, Methodists, Mormons, Unitarians, and Universalists, and there yet remain

other denominations to render justice to. It is our aim to be free from any sectarian scruples or prejudices in regard to these religious publications. Differences of opinion have given rise to the various religious societies existing, and so long as men are permitted to exercise their differently organized moral and intellectual faculties without restraint, so long these differences of opinion will continue. The essence of true religion among men is charity, and the only way by which the much-desired union or co-operation in Christian effort among the different churches can be promoted, is by a liberal exercise of that virtue "which is not easily provoked," but "suffereth long and is kind."

THE VISITATION.

LAST eve, while many mortals slept,
Alike indifferent to the claims of self and love,
An angel to our dwelling dipped
His golden wing, commissioned from the One above.

His message breathed a holy grace,
And with a radiant joy 'twas lovingly performed;
And his departure left a trace
Of beauty, which our hearts to higher instincts warmed.

A spirit pure that angel's gift
Enshrined within a casket delicately fair.
Oh, God! to Thee our hearts we lift,
And murmur forth our thankfulness in broken prayer.

May this young life, so spotless now,
Ne'er lose the impress of Thy consecrating love;
Before Thy throne as servant bow,
And closer weave the bonds by mercy knit above.

And touch our hearts, dear Saviour, too,
That we may rightly prize this precious, precious boon;
Give us of heaven a clearer view;
Our thoughts, our lives, to Thine in purity attune.

NEW YORK, Feb. 19, 1867. H. S. DRAYTON.

OUR ARMY AND NAVY.

WE give an instructive sketch of the Army in our present number, which should be read by all Americans. In our next issue we shall describe the Navy and its management. In these articles the public will get an exact view of the military and naval strength of the United States. We publish these as a matter of information to the general reader, who is not supposed to be specially interested in military science, but who ought, nevertheless, to know something of the defensive and offensive ability of his country. Need we ask for a careful perusal? Let the suggestions for improvement therein made be heeded. We are a progressive people. Let us improve our Army and our Navy as we improve our schools, our manufactures, our agriculture, and our commerce.

A HORTICULTURIST advertised that he would supply all sorts of fruit trees and plants, especially pie-plants of all kinds. A gentleman thereupon sent him an order for one package of custard-pie seed, and a dozen mince-pie plants. The gentlemen promptly filled the order by sending him four goose eggs and a small dog.

NEW YORK, APRIL, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Pte.*

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$2 a year in advance; single numbers, 20 cents. Please address, Messrs. FOWLER AND WELLS, 289 Broadway, New York.

CAN WE THINK OF TWO THINGS AT ONCE?

HERE is an old question, which has been long discussed among the metaphysicians, physiologists, and phrenologists, without satisfying themselves or anybody else, whether we are so anatomically constructed that the mind can act in two entirely different directions at the same moment.

If any of the learned parties who have been arguing the point, have the right of the matter, it must be the phrenologists. With a prodigious amount of industry, they have brought out such curious facts in regard to the functions of the brain, that those gentlemen who deal in such specific articles as mental phenomena, must concede to them very much more than they themselves expected to gain, when they commenced studying the contents of animal skulls.

Dr. Griffin, formerly president of Williams College, was also a teacher of the senior class. He was once asked the question—Can a man think of two things at the same instant of time? In a very logical discourse, he made it clear that it would be impossible, because such is the rapidity of thought, there is no appreciable measure of time between two thoughts, which—to a less critical philosopher, might seem like two thoughts emanating at one and the same instant. This was his theory.

Both anatomists and physiologists admit that each of us is duplicated—though really and truly but one individual being. That is, we have double organs of sense, two of each—as two ears, two eyes—and to leap off abruptly from them—two arms, two legs, two hearts, two lungs, and so through a chapter of double organs. All the while,

it is taken for granted we have only one brain.

There is no getting away from the fact, that every one has also two brains, and two large ganglions in the base of the head, called the little brain, or, technically, *cerebellum*.

All the upper region of the skull is occupied by that anomalous compound of matter which no one has been able thus far to fully comprehend, in which all mental operations are performed. A large brain indicates great intellectual power. A small one is the reverse, and the brain-force is diminished till animals are reached, where most of their acts result from what is defined instinct, and not from any process of reasoning.

Any man may instantaneously be stricken down with a palsy, to the utter loss of just one half of his body. He can exercise no volition over the muscles of one side. Not only the arm and leg on the smitten side, but even one half the tongue can no longer be made obedient to the behests of the mind, because the battery from whence volitions emanate is out of order. On the unaffected side, all the cerebral functions remain in full activity. One brain, therefore, has ceased to act. In the meanwhile the other half of his body remains intact—all the vital processes go on as formerly. Fortunately, one set of digestive apparatus suffices for a double set of motive machinery. But the individual thus smitten still thinks, reasons correctly, and makes his wishes clearly known.

In this case, one half of the brain, as we are accustomed to conceive of that poorly understood organ—or, rather, in a truer statement—one of his two brains has ceased to operate. It no longer transmits its mandates through the nerves arising from it, to the voluntary muscles. Therefore, in this condition of an invalid, there is conclusive evidence of the actual existence of two brains occurring in a normal condition of all parts of the system, in giving energy and completeness in the formation of thought, through impressions from without.

A student intensely engaged with a book is annoyed by a fly on his face. The chain of his mental engagement is not broken, although without relaxing from the page, he raises a hand and

brushes away the insect. Two brains are thus in action in widely different directions, in this particular instance.

No more conclusive demonstration of the real independent functions of the two brains need be cited, since anatomy exhibits them as entirely distinct as the two arms, but acting ordinarily in perfect concert. The suspension of the vital force of either settles the question as to the office of each. And it follows, therefore, as a law, impressions may be recognized in one and not in the other, or they may be simultaneous in both.

Then, with two brains, is it difficult to prove by numerous experiments, we can think of two things at the same instant? Impressions on the retinae of both eyes call up but one idea in the mind. If one eye is destroyed, the remaining one accomplishes precisely what it did before; but with two eyes, the impression conveyed to the sensorium is stronger than when made by only one. Such is precisely the case in regard to the harmony of the two brains.

By a paralysis of one brain, life is not destroyed. We do very well with the remaining one. We lose one ear, and still hear with the other; lose one eye, and see distinctly with one; lose a leg, then an arm, and even several other organs, yet live on. If with the loss of one brain, we had not another for an emergency of this kind, thousands upon thousands would be in their graves who are now useful members of society, conducting complicated affairs; and yet there is, *de facto*, but just half of the man, instead of the whole one, remaining.

Thus a beneficent Creator has provided for a contingency that the records of medicine show to be very frequently occurring. Then who can doubt of man's ability to think of two things at once?

A CORRECTION.

THE *Methodist Home Journal*, a weekly newspaper, devoted to religious intelligence, news, literature, and art, published by Adam Wallace, Philadelphia, at \$2 50 a year, is an outspoken, independent sheet, with a liberal advertising patronage; it is handsomely printed, and, in the main, well edited. In its own proper field we doubt not the M. H. J. is well posted; but we observe a few inaccuracies of statement in regard to Phrenology, which we feel in duty bound to correct, and will ask the editor of that journal to publish the same.

The M. H. J. says: "The creators of Phrenology were two physicians of Germany, John Joseph Gall, 1758—1828, and Gaspard Spurzheim, 1776—1832."

[We had supposed, till now, that it was the ALMIGHTY who "created" Phrenology, and that Messrs. John Joseph Gall, M. D., and J. G. Spurzheim, M. D., simply discovered the location and functions of some of the organs of the brain. "Creating" is *one* thing, discovering what God has created, quite another.]

"The following are the main points of their system: 1st. The brain [including the nervous system] is the great organ of life and of the mind, animal and intellectual. [All but the animal.] 2d. It is composed of organs, each of which is appropriated to some special faculty. 3d. The size [and *quality*, if you please] of these organs determines the power of the faculties inhering in them. 4th. The contour of the brain, shaped by the size and disposition of the organs which compose it, itself shapes the contour of the cranium, so that the elevations and depressions on the surface of the former are reproduced on the surface of the latter. [That is to say, the skull is the servant of the brain, and that the shape of the brain determines and corresponds with the shape of the skull. The editor goes on to say:]

"That the brain, in some sense, is the organ of thought, is generally allowed (but, that it is the organ of thought in such a sense that the thought is *entirely* determined by it, is a position which it is impossible to support). [We know nothing of thought, or of mind, being manifested apart from body or brain.] We know not the intrinsic nature of mind, or its relations to matter. If it is substantially independent of the body, it may contain *within itself* forces largely controlling its action. Organization may be the least operative factor in the production of mental phenomena.

"The composition of the brain by different organs is maintained by Spurzheim to have been taught long before Dr. Gall. 'The Arabs placed common sense in the anterior cavity of the brain, imagination in the second, judgment in the third, and memory in the fourth ventricle.' Albertus Magnus, in the thirteenth century, Haller, Van Swieten, Platner, Tiedmann, and others, are enumerated as agreeing in the same general doctrine. 'Thus it follows,' says Spurzheim, 'that the idea of the plurality of the seats or organs is very ancient.'

"But it is not pretended that the separation of the brain into its organs can be accomplished through an anatomical process simply. The mass of the brain is continuous. It observes no termini in its several parts correspondent with the difference of function attributed to these several parts. The only evidence producible, then, for the hypothesis of the composite character of the brain is the observation which is supposed to locate certain mental manifestations in different sections of the encephalon. Two tasks here arise: the classification of the mental manifestations, and the distribution of the classes to fixed places on the brain.

"In the classification, Drs. Gall and Spurzheim meet with great difficulties. They do not take the general division into imagination, memory, judgment, reasoning; but they contend that 'every *peculiar* memory, imagination, and judgment, as of space, number, form, color, time, etc., have their peculiar organs.' They look on the mind, not from an intrinsic, but an extrinsic stand-point. The faculties are separated, not in accordance with their *internal quality*, but their *objects*. Memory for *space* and memory for *color* are two memories. [Two kinds of memory.]

"Now, objects are infinite in number, and the special faculties that relate to them would likewise be infinite. But the human skull admits but a small number of distinct protuberances. [Phrenologists are not governed by "protuberances," but by the general form of the head—temperment, quality, etc., being duly considered.] Hence Dr. Gall was obliged to limit to thirty-three the number of the faculties. And he succeeds in comprising in them the great multitude of mental operations by an artificial enlargement of the application of their names. [He simply discovered the location and function of a few of the organs.] One of Dr. Gall's fellow-students possessed so excellent a memory for places, that he 'never forgot the spot where he had found a bird's nest.' He had a protuberance toward the middle of the forehead which reached nearly half way on each side of it. It was therefore evident that this protuberance indicated the organ of local memory. Subsequently, Dr. Gall met an old woman of Munich, who had been all her life haunted with a most violent propensity to travel. She had a protuberance on her forehead exactly similar to the one on the boy's head. The faculty, then, of *local memory* and the *disposition to travel* are the same. Its name is 'space!' [Its name is Locality.]

"In the assignment of faculties to parts of the brain a formidable trouble appears. There is scarcely any part of the encephalon which has not, in one case or another, been found defective. Large masses of brain may be extracted. Gall mentions himself a clergyman who had lost *one half* his brain by suppuration. Yet in none of these cases do the intellectual powers appear to have suffered the slightest injury or interruption. We have, in such cases, mental action, without the cerebral organs supposed essential to it. [Indeed! How *smart*! Some folks can think and work without *much* brain. But the brain is double, and though one half be taken away, the other half remains to perform the function, as one eye may see, or one ear may hear, though *not quite* so well as two.]

"Gall and Spurzheim maintain that nature has 'furnished us with *double sets of faculties*, one on one side of the head and another on the other.' [And so she has.] But the two sides of the brain do not coincide in any one respect. [What a whopper! Is not the eye on one side very much like the eye on the other? and so of ear, hand, foot, ribs, etc.? Then why not of the two sides of the brain? The M. H. J. fired at random, and hit nothing that time.]

"Comparative anatomy was employed to determine the location in the cerebral masses of the organs of particular faculties. 'Dr. Gall,' says Spurzheim, 'observed in animals which have a great propensity to elevated situations, as in the chamois and wild goats, a protuberance which he identifies with the organ that, in mankind, produces *pride* and *haughtiness*. 'The instinct of physical height is confounded with the moral sentiment of self-love and pride.' What science can stand on such a fanciful basis? [This was among the earliest of Dr. Gall's observations, and was only an inference, not now maintained.]

"*Size* is made the criterion of *strength*. Phrenology knows nothing of quality of organism. Quantity is everything. But to state this is to refute it. It is without evidence; it is contrary to evidence, that the mere bulk of a cerebral segment should determine the intensity of the function suspended upon it. [This is a falsehood. The statement is either an intentional falsehood or the result of inexcusable ignorance. Our readers one and all will bear testimony to the fact that we make "quality" an important matter.]

"The last and essential claim of Phrenology is, that the peculiarities of the encephalon impress themselves upon the cranium. [Well, do they not?] The outer surface of the cranium is presumed to afford an indication of the development of what lies beneath it. [Yes, the same as the shell of a clam presupposes that it *had* something in it.] But against such position we have the insuperable anatomical fact, that the contour of the brain does not accord with that of the skull. [But it *does*.] There are often elevations on the one accompanied by depressions on the other. [We should like to see one instance in support of this bold assertion.] The brain is not, as the system of Gall assumed, the sole condition, determining the shape of its envelope. [But it is—except in abnormal excrescences, of which any one with a little experience can readily judge.]

"Phrenology, then, is entitled to no position as a science. ["How you talk!"] Like alchemy and astrology, it is the birth of a few obscure facts, which have given impulse to speculation, under the guise of the utilitarian spirit. [Dew tell!] To transmute all materials into gold were a great benefit. To foretell the future would confer immense good on man. So to pierce within the sanctum of the spirit, and see the history of that spirit prior to its actual unfolding, were a boon scarce to be refused when any promise, however faint, was made of it. But we have no power, as yet, to pierce it. Drs. Gall and Spurzheim, with their successors, have not induced the soul to fling off from itself the eternal mystery." [Nor is it likely to do so to those who, having eyes, see not, or having ears, hear not. To some minds, with small brains, but little can be comprehended, and even *that* but faintly. It takes *mind* to appreciate Phrenology. It is palpable that the writer of the article commented on has very little acquaintance with Physiology, Anatomy, and Phrenology. He certainly has treated the subject from the stand-point of hypothesis—not of reality.]

THE NATIONAL MILITARY SERVICE. THE ARMY.

THE military system of the United States is founded upon the proposition, that every citizen is bound to do service for the safety of his country, and is limited by the maxim, that a large standing army is likely to become a dangerous political power. The entire population of the United States able to bear arms is, therefore, organized in a militia force, which is controlled by the several State governments. That this duty is not properly performed by the State governments is notorious, and it is this part of our military scheme that needs reform.

The regular army is proportioned to the requirements of the public service. There is a long frontier to be guarded, with numerous tribes of Indians who reject civilization, and constantly harass the settlers and gold seekers, and threaten the military posts. There are fortifications placed for the defense of our principal cities, inland and on the sea-coast, which must be guarded, preserved, and multiplied; and besides the troops required for these purposes, others are needed, so that, in case of invasion or threat from foreign powers, the country shall not be defenseless, but have at hand a force strong enough to meet the first advance of the enemy.

THE ORGANIZATION OF THE ARMY.

This scheme, which was formed by our ancestors in their strong desire to establish a state where peace with all men should be the guiding principle of government, has been proved, in the history of other nations, as well as our own, to be sound and sufficient for the defense of any nation, however important. The Prussians have lately proved how excellent their military law is, a law which, like our own, keeps a comparatively small army in times of peace, but has its citizens trained and organized in regiments and brigades ready for a quick reply to a call to arms. The Prussians carry out their system more carefully than we do ours. Their Landwehr have had better drill, and are more available than the majority of our militia. This is said in full knowledge of the fact, that in our late war 60,000 men were sent to the Peninsula in one month; and again, that 80,000 were mustered and sent to the field from five States in one month, as the Secretary of War showed, in his report for 1865. But this was done after one or two years of warfare had enabled the various departments for raising troops to get into an activity and method that in peaceful times they could not be expected to approach. With more attention to our militia organization, the United States would, undoubtedly, stand at the head of all nations for the rapidity with which she could raise very large armies. The proof of this is contained in the example of what she could do, with a very imperfect militia system, given in the early part of the war, when President Lincoln's call for 75,000 men was overflowed by many thousands, merely by the surplus energies of the people.

THE REGULAR ARMY AND THE WAR.

When the war came upon us, our regular army consisted of about 18,000 men, who were disposed at such distances from the national capital that it was with difficulty that a few troops were thrown into Washington. Immediately after the opening of hostilities, the authorities began to recruit it up to the maximum allowed by law. During the war some changes were made in the army, and at the end of the rebellion it numbered 24,919 officers and men. A greater force had been authorized, but the difficulty of procuring recruits for the regular regiments, in the face of the various inducements offered to enlist in the volunteers, had prevented the organization of more than fifteen regiments—153 companies.

The old army was composed of nineteen regiments of infantry, of which ten were made up of ten companies each, and nine had each twenty-four companies, distributed in three battalions; six regiments of cavalry; and five regiments of artillery. In addition to these, at the close of the war, were nearly a hundred thousand soldiers of all arms, white and colored, who were the remains of the first volunteer organizations and the veteran reserve corps. The first steps taken were to recruit the regular army, and to muster out gradually the miscellaneous troops which had been added to the regular force. Difficulty had been experienced, while the war was in progress, in filling the regular regiments, because the volunteer organizations offered more tempting inducements in the way of bounties. But when the time of disbandment came, a great many volunteers naturally desired to be transferred to the regulars; and in eleven months, from December 1, 1864, to October 1, 1865, 19,555 men enlisted, a greater number than the whole army was composed of in 1861. The army on the 1st of January, 1866, numbered 1,124 officers and 23,795 men, its authorized strength being 952 officers and 41,819 men.

THE NEGROES IN THE ARMY.

The employment of colored men in our service, and the emancipation of the slaves, was a measure which has been of great importance in the past, and is likely to be of still greater value in the future. Before the emancipation proclamation of Mr. Lincoln, this class of persons was not liable to military duty, as they had no citizenship, and we were justly deprived of the aid of more than 4,000,000 able and willing helpers because we denied them the protection of our laws. The number of colored troops in our service in the war was 178,975, and they fought gallantly on many fields. But this valuable assistance was small to what we would have had if the blacks had been situated so as to be within our reach. In future they will be more available. The number of men sent to the field from the North was as nearly as can be estimated one in fifteen of the population. The negroes furnished only one in twenty-three of their numbers, and they belonged to a class of persons in which there were few exemptions. Had they been able to enlist as readily as the Northerners, they would have sent about 800,000 men to the war for the North instead of 180,000. It is very creditable to the colored troops that the prejudice which in the early part of the war existed against them among the officers of the army entirely disappeared before the last year of the struggle. In 1865 there were more than 9,000 applicants for the vacant commissions, although less than 4,000 officers were needed. This improvement in reputation was not at all dependent on political favor, but was obtained by the good conduct, both in the discipline and in the fighting of the troops. The officers who succeeded in obtaining the appointments saw fighting to their hearts' content, for the battles before Nashville, the attacks upon Fort Fisher, and

the operations against Mobile witnessed their valorous exertions. At the close of the war we had 123,156 of these men in the service, disposed in 120 regiments of infantry, 12 regiments of heavy artillery, 10 batteries of light artillery, and 7 regiments of cavalry. The present law authorizes the maintenance of two regiments of cavalry and four of infantry, composed of colored men, forming together less than 5,000 men.

DISPOSITION OF THE ARMY.

The country is divided in two divisions, of which Lieutenant-General Sherman commands the division of the Missouri, and Major-General Halleck the division of the Pacific; and thirteen departments, commanded by Generals Meade, Hooker, Canby, Schofield, Sickles, Thomas, Sheridan, Ord, Hancock, Cooke, Terry, McDowell, and Steele.

The President of the United States is *ex officio* Commander-in-Chief of the Army and Navy. The Secretary of War is his adviser, and, especially in time of war, has delegated to him a part of the authority of his superior. He is then Adjutant-General, Judge-Advocate-General, and Paymaster-General all in one, and, in short, partakes of the duties of all the departments, exercising a more vigorous authority than any of the heads of sub-departments. These two officers form a sort of executive office in our military service. The highest military commander is styled a General, and is now Ulysses S. Grant. His pay in peace is \$10,098, besides \$50 a month commutation for forage if he desires. In war, or when on active duty, he receives \$15,078, his rations being doubled. The second in command is styled Lieutenant-General, now William T. Sherman. His pay, when on duty, is \$13,518 a year, and \$50 a month commutation for forage. When on leave, or not actively engaged in his duties, he receives \$9,138 a year, and \$50 a month commutation. There are five Major-Generals, ranking in the following order: Henry W. Halleck, George G. Meade, Philip H. Sheridan, George H. Thomas, and Winfield S. Hancock. Their pay is \$5,800 50 a year. They are allowed four horses, but can not commute their forage. When commanding a separate army actually in the field, or a military geographical division or department, their rations are doubled, which adds \$8 70 a day to their compensation. The lowest general officer is styled a Brigadier-General, and we have ten in the service. They receive \$3,940 50 a year, and double rations when on duty in the field or in command of a geographical department. This increases their pay \$6 75 per day. These officers rank in the following order: McDowell, Rosecrans, Cooke, Pope, Hooker, Schofield, Howard, Terry, Ord, and Canby. The various executive departments, as the Adjutant-General's, the Inspector-General's, the Quartermaster's, and others, have at their head an officer who takes the rank and pay of a Brigadier-General. The subordinate officers mostly take rank and pay in the army—assimilated rank it is called—but two have a special regulation of salary. These are: medical storekeepers, \$1,490, and paymaster's clerk, \$1,200 a year. Some of those who draw their pay by virtue of assimilated rank have an additional allowance of \$24 or \$20 a month, less one ration (80 cents), a day.

THE ADJUTANT-GENERAL'S OFFICE.

The Adjutant-General is the principal organ of the commander of an army in publishing orders, and takes charge of the correspondence with administrative departments in regard to the wants of the troops, publishes the commander's orders, receives reports and returns, and from them regulates the details of service. In the field he has to establish camps, visit outposts and guards, muster and inspect troops, form parades and lines of battle, make reconnaissances, arrest deserters, and receive prisoners. He also has the important charge of keep-

ing up the strength of the army by enlistments. Recruiting officers are established in cities throughout the country, and before the war considerable exertion was necessary to obtain men enough. At present the work is much easier, and recruiting is very brisk. About 15,000 enlistments expire this year, but in the four months succeeding October 1, 1866, the new recruits numbered 12,000, and if this rate keeps up, the minimum strength authorized by Congress will soon be reached. In consequence of the discontinuance of the Provost-Marshal-General's office, which, during the war, had charge of the innumerable enrollment offices established in all the States, the Adjutant-General now has charge of the immense and perplexing accounts of the Government with the State governments relating to volunteers and drafted men. To perform these responsible duties, there are the following officers: one Adjutant-General, Brigadier-General Lorenzo Thomas; six Assistant-Adjutants-General, Colonels E. D. Townsend and W. A. Nichols, and Lieutenant-Colonels Williams, Drum, Fry, and Hartsuff, and thirteen Assistant-Adjutants-General who rank as Majors of cavalry.

THE PROVOST-MARSHAL-GENERAL

was an officer of great importance during the war, but his duties have now been transferred to the Adjutant-General's department, where they properly belong. But as an account of the United States Army in peace would give no idea of the military powers and real military organization of the nation, the operations of this bureau, which will doubtless be re-organized in a new war, require consideration. Congress passed the law creating the office, March 3, 1863, and operations were commenced March 17. The principal duties were the arrest of deserters, the enrollment of the national forces (that is, all the people) for draft, and the enlistment of volunteers. The first step was to make lists of all persons liable to military duty, who numbered 2,254,000 besides 1,000,516 who were under arms at the close of the war. When the bureau was established, nearly four hundred thousand troops were needed for the field. When it had got well at work, the Government never called for men without receiving all it asked for, promptly, and of good quality. The latter improvement was of great importance. In the early part of the war great losses and dangers were incurred by the acceptance of thousands who were physically incapable of service. Before the time of the bureau, the cost of recruiting 1,356,593 men was \$34 per man. The bureau enlisted 1,120,621 at an expense of \$9.84 per man. The deserters arrested and returned to duty numbered 76,526. Besides these duties the bureau did a vast amount of statistical work, which will be of great value to the Government in future times. The physical condition of more than a million citizens has been ascertained and tabulated, the casualties by sickness, wounds, and death in the war have been ascertained, and above all a sound system has been derived and thoroughly tested for marshaling the immense military powers of our country in their greatest development. The casualties in the entire military force, as shown by official returns, are 5,221 officers and 90,868 men killed in action or died of wounds; 2,321 officers, and 182,329 men died from disease or accident; total 280,739, which does not include deaths after the men left the army.

THE INSPECTOR-GENERAL

is an officer whose duty is to ascertain the condition of the troops at frequent intervals, and note whether the army is kept in a state of efficiency. The inspection ascertains the discipline of the troops and their proficiency in their duties, the condition of their camps, quarters, and all offices used by them or for

them; of the food, arms, and equipments supplied to them; of the management of the funds of the post, regiment, or company; of the fidelity of the officers, in discipline, and upon court-martial. In short, everything that is done or which exists in the army is subject to inspection. There are four Inspectors-General, Colonels Marcy, Packet, Schriver, and Hardee, and five Assistant-Inspectors-General, Lieutenant-Colonels Davis and Totten, and Majors Jones, Baird, and Ludington.

THE BUREAU OF MILITARY JUSTICE,

as its name imports, has the charge of the records of courts-martial and military commissions, which are sent to the bureau and there reviewed and filed. The pardon of military offenders, the remission or commutation of sentences, letters of instruction upon military law and usages, and similar subjects, occupy the labors of the officers. This department, in short, is designed to determine the regularity of military judicial proceedings, and to secure the equal administration of law throughout the army. It also acts as an advisory branch of the War Department in reference to questions of military discipline. The effect of war is to give officers in the field a wide latitude of decision in all cases of discipline, an authority which is removed by a return to peace. Cases of importance, then, have to be referred to the Executive, which depends very much upon the counsel of this bureau. While most departments have been shrunk to smaller dimensions by the finishing of the war, the bureau of Military Justice suffers little diminution. The officers of the department are: one Judge-Advocate-General, Brigadier-General Joseph Holt; one Assistant-Judge-Advocate-General, Colonel W. M. Dunn, and ten Judge-Advocates. During the last year, the records of more than 8,000 military courts and commissions were received and reviewed, and more than 4,000 special reports made by this department.

THE QUARTERMASTER'S DEPARTMENT

is charged with the duty of providing the supplies of clothing, animals, equipage, forage, fuel, buildings, etc.; quarters and transportation for the army, storage and transportation for the supplies, and has charge of all means of transport, from the building of a railway and stocking it with locomotives and cars to supplying buckets in which to carry water. It has its pay department, where certain incidental expenses are paid, as the expenses of military commissions and courts-martial, burial of officers and soldiers, postage and telegraphing on public business, the hire of extra duty men, of spies, guides, interpreters, escorts, horse-surgeons, and purchase of horse medicines, and a host of other duties which, like the occupations of Dickens' begging letter-writer, may be said to have one-hundred-and-one other terminals. Its work is as necessary to success as eating is to life, and often becomes as dangerous and onerous as the service of the most active body of troops. On the march, the Quartermaster selects the camping-ground, and all the bedding, tents, and other furniture of the camp are supplied by him. In retreat, the labor that was great before becomes doubly difficult. The trains have to be drawn off with great skill, or the animals will break down and leave the supplies in the road. In sieges, the quartermaster establishes the hospital, and at all times furnishes a great part of the hospital supplies. The organization of the department with the names of the present officers is as follows: one Quartermaster-General, Brigadier-General M. C. Meigs; six Assistant-Quartermasters-General, of whom three—Colonels Thomas, Swords, and Crosman—have been appointed; ten Deputy-Quartermasters-General, of whom four—Lieutenant-Colonels Vinton, Babbitt, Cross, and Clary—have received ap-

pointment; fifteen Quartermasters, and forty-four Assistant-Quartermasters. This was the staff organized by the bill passed last July, but it was then provided that no vacancies occurring should be filled till the numbers of Quartermasters and Assistant-Quartermasters fell to twelve and thirty respectively. The greater number was authorized, because in breaking up there was a great deal of extra duty to be performed. Military storekeepers are appointed as required, not to exceed sixteen in number. During the war, the business of this department was as great as the entire commerce of a large empire. Lines of railway and steam-shiping on the ocean and on rivers, running with regularity, and wholly employed by the department, are the greatest items in its long list of works performed. Many of the enterprises undertaken were new to armies, and all were carried on with an energy which has not been witnessed in military movements since the time of Napoleon.

THE SUBSISTENCE DEPARTMENT

provides the food for the army. The daily ration is fixed by the President, and is at present $\frac{1}{2}$ lb. of pork or bacon, or, in its place, $\frac{1}{4}$ lbs. of salt or fresh beef, 18 oz. of flour or soft bread, or 12 oz. of hard bread, or $\frac{1}{4}$ lbs. of corn meal, for each man; and for each 100 men, 15 lbs. of beans or 10 lbs. of rice, 8 lbs. of coffee or $\frac{1}{2}$ lbs. of tea, 15 lbs. sugar, 1 gallon of vinegar, $\frac{1}{4}$ lbs. of adamantine candles or 1 lb. of sperm candles, 4 lbs. of soap, $\frac{3}{4}$ lbs. of salt, and 4 oz. of pepper. Of course, the influences of climate and the requirements of special service sometimes dictate a change in the food of the soldiers, and officers, therefore, have a certain latitude allowed them in making requisitions. The men can, also, when they desire, call for desiccated vegetables for making soup in the proportion of 1 oz. of mixed vegetables per man, or for $\frac{1}{4}$ oz. of desiccated potatoes. The best ration is a subject of great importance, and armies which are well fed with fresh meat and vegetables have a great advantage in health and vigor. It is fortunate that fresh beef transports itself, while salt meat requires a large provision of wagons and trains. There is not often, therefore, a good excuse for keeping an army on salt rations, which invariably keep the hospitals full. The head of this department is Brigadier-General A. B. Eaton, styled Commissary-General, who is assisted by four Assistant-Commissary-Generals, Colonels Shiras and Kilburn and Lieutenant-Colonels Simpson and Clarke, and twenty-four Commissaries or Subsistence, of whom eight are majors and sixteen captains of cavalry.

THE MEDICAL DEPARTMENT

has at its head a Surgeon-General, Joseph K. Barnes, an Assistant-Surgeon-General, R. C. Wood, one chief and four assistant medical purveyors. These are assisted by sixty surgeons, one hundred and fifty assistant-surgeons, and five storekeepers. The duties of the medical department begin when the recruit presents himself for acceptance, and continue, under all circumstances, in camp, on the march, and in the field, often under fire, till the soldier throws off the blue coat and returns to his home. Surgeons did not hold rank in the army till the Mexican War, when the necessity of having them form part and parcel of the army, and not be civilian additions to it, became manifest. At present, their position is peculiar. While they are, of course, entitled to direct the men in case of need, their orders are not of force against the contrary directions of the immediate commander. There is need of defining their position, as by the present uncertainty some are led to deny them privileges which are certainly their right. But the practice is, that the surgeon is supreme in his hospital, and that a wounded or sick man once in

his charge is not subject to the command of any one short of the highest officers, until the surgeon gives him his discharge. So positive is this power, that in the recent war a regimental surgeon successfully interdicted his colonel from entering the hospital.

THE PAY DEPARTMENT

is organized with one Paymaster-General, now Brigadier-Gen. Benj. W. Brice, two Assistant-Paymasters-General, two Deputy-Paymasters-General, Lieutenant-Colonels H. W. Leonard and N. W. Brown; and sixty paymasters of the rank of major of cavalry. They settle all accounts with the officers, except certain commutations for quarters and fuel, which with some other expenses are paid by the Quartermaster. Army accounts are proverbially perplexing. Large amounts are disbursed in a multitude of small payments, and besides the ordinary risks of handling large sums of money, there are various dangers peculiar to the army. Besides the innumerable individual accounts with their drawbacks, allotments, fines, and debts to the sutler or the commissary, the method of increasing the regular pay of officers by extra rations is a source of great trouble. An inspector-general, for instance, has six rations a day and two servants. He may choose to live at home or at a hotel when he can, and commute all his rations and his servants at a certain rate fixed by law. This is a fruitful cause of difficulty, and as the officer has to certify that he has employed so many servants and used so many rations, there is a legal fiction—that is, a legal white lie—introduced, which has a tendency to make officers think that it is fair to get all they can out of the Government. In some cases reprehensible practices have grown out of this, but, to the honor of the service, they are rare. The pay of officers is small enough when commutations are counted in, and no one wants to see them smaller. But there is no reason why we should retain in our service practices which have grown up in foreign countries, where it is the fashion to invent roundabout ways for increasing the pay, instead of securing an outright parliamentary vote to pay higher salaries. There is no reason why such methods should be resorted to in our army, and the time will come when they will be abolished.

The dealings of this department in the war were so great that, at one time, more than \$55,000,000 were in the hands of the paymasters in the field and at the various rendezvous. This was while the army was disbanding. The money then paid out, mostly in June, July, and August, 1865, was \$270,000,000. In spite of the numerous reports in the newspapers of "enormous defalcations in official circles," the losses in this way were but \$541,000, of which one half will probably be made up by the sureties. Including this, the cost of disbursing \$1,029,239,000 since July 1, 1861, has been but seven-tenths of one per cent. The work of the department includes a great deal of searching of rolls, records, and other documents, and an infinite amount of checking off the demands of one department by the reports of another. This kept 350 paymasters and 400 clerks busy for four years and four months.

THE CORPS OF ENGINEERS.

The engineers occupy the highest grade in the service. They are selected, as to the officers, for proficiency shown as cadets in the Academy at West Point, the highest students in the graduating class being attached to this corps whenever vacancies occur. The enlisted men are chosen for strength, size, and intelligence, and are subjected to a very careful drill. By law the corps consists of the officers of engineers, ninety-five in number at present, the battalion of engineer troops, and the military academy. Their duties are of the most import-

ant kind. They have the charge of fortifications in regard to their planning, construction, and repair, perform topographical and surveying duties in the field, and present plans for the attack and defense of works; lay out field-works, roads, etc.; in the advance they form part of the vanguard to remove obstructions and lay bridges; in retreat, they form part of the rear-guard, to destroy bridges and works and erect obstructions. Their functions being generally confined to the most elevated branch of military science, they are not allowed to assume, nor can they be ordered upon, any other duty, except by special order from the President. They are charged with the disbursement of all money connected with their corps. In times of peace, they are often employed on important works, such as railroads, canals, etc. Topographical engineers are a branch of the service which makes surveys and maps of the country through which an army is to pass. The officers of the corps are: Brigadier-General Richard Delafield; Colonels Bache and Brewerton; Lieutenant-Colonels Cram, Bowman, Barnard, Cullum, Benham, Humphreys, Macomb, Simpson, Sitgreaves, and Woodruff.

THE ORDNANCE DEPARTMENT

has charge of all artillery, large and small, used in the service. It inspects and proves all pieces of ordnance, shot, shell, small-arms, side-arms, and equipments; directs the construction of all cannon, carriages, and their equipments, and the forges and traveling workshops, for their repair; inspects and proves the powder and other ammunition, and establishes arsenals for the manufacture and store of arms. To this department is committed the important charge of the weapons of the army. It carries on a constant course of experimenting, with a view to the perfecting of arms, which has become so important a question in late years. The officers of the department are: Brigadier-General A. B. Dyer; Colonels W. Maynadier and W. A. Thornton; Lieutenant-Colonels R. H. K. Whiteley, P. V. Hagner, and R. A. Wainwright; six majors, and nineteen captains.

THE CHIEF SIGNAL OFFICER

of the Army is Colonel Benjamin F. Fisher. At present, the duties of his office are confined to translating and recording the signal messages sent by telegraph and otherwise, during the war. In active times, this bureau becomes a very important branch of the service. Not only are the officers employed to transmit messages from the commander to distant stations, but they occupy the front of the army, and keep a constant watch upon the enemy. Great vigilance and shrewdness are necessary; they often engage in battle, and their service, even in times of quiet, are dangerous, from their exposure in advance of the army.

THE MILITARY ACADEMY

was located at West Point, in 1802, after the subject had been discussed for many years. So early as 1776, the establishment of a military academy was advised by a board of officers appointed to inquire into the state of the army. It suffered at first from a lack of organization and concentration, and has suffered almost every year since by unwise legislation. Even with the great lesson of the war before them, Congress for years systematically refused to adopt the recommendations repeated from year to year by different boards of visitors, and there have even been strong efforts to do away with the school entirely. With great exertions the number of students was raised from 150 to 292, a year ago. The last board of visitors recommended the increase of the cadets to 400, and the introduction of competitive examinations as a means of obtaining cadets, in place of the present political method of giving a certain number of appointments to each Congressional district, to

be disposed of by the Members of Congress. The competitive plan—the only one worthy of an intelligent and liberal people—will undoubtedly be adopted in time, if not by the present Congress. The admission to the Academy has been and still is absurdly easy—for a long time nothing but reading, writing, and arithmetic being required. A ward school in the city, or a district school in the country, is capable of fitting candidates for the highest school of science in the United States. The consequence of this is, that the course of study, covering four years, is overcrowded, and yet the officers are not satisfied with the character of the studies, but unable to lessen the unnecessary minor branches, are still forever trying to crowd in more of the difficult sciences. The number of students since the commencement is about 5,000, and the number graduated is 2,150. It is a popular notion that the discipline and tasks imposed at the Academy are tyrannical and injurious. But the contrary is true. The labor required is severe, but the care taken of the cadets' health is such that they are almost certain to leave West Point in a condition of bodily vigor which can not be matched by any other school in the country. The five head students in each class are attached to the army register, and when vacancies occur in the Engineer or Cavalry corps, they are offered to the highest men in the graduating class. The remaining students go into service as second lieutenants of infantry.

CAVALRY.

Of the ten regiments now in service, six were in the old army, and to these were added two white and two colored regiments. The first and second lieutenants of the new regiments were selected from officers and soldiers of the volunteer cavalry, who had served two years with a good reputation. Two-thirds of the higher grades were filled in the same way, and one-third by officers from the regulars who had served two years in the war. A cavalry regiment consists of twelve companies, organized in three battalions. It is commanded by one colonel, one lieutenant-colonel, and three majors. The colonel's staff consists of two surgeons, one adjutant, one quartermaster, one commissary, one chaplain, seven regimental sergeants, musician, and veterinary surgeon. The company is organized with one captain, one first and one second lieutenant, eleven non-commissioned officers, and fifty privates. The strength of a company is 64 men minimum, and 84 men maximum. The total strength of a regiment is 786 minimum, and 1,186 maximum. The term of enlistment is five years.

The President has authority to call out one thousand Indians to serve as scouts in the Territories, and these, when employed, receive the pay of cavalymen.

INFANTRY.

There are forty-five regiments in the service, of which nineteen belonged to the old army. Nine of these had twenty-four companies each, and these, by adding six companies to each regiment, became twenty-seven new regiments of the uniform standard of ten companies each. A regiment is officered by one colonel, one lieutenant-colonel, one major, one adjutant, one quartermaster, and six non-commissioned officers. The company organization is one captain, one first and one second lieutenant, nineteen non-commissioned officers, and fifty privates minimum, or one hundred maximum. A company contains 72 officers and men at its minimum strength, and 122 at its maximum. The regiment contains 731 minimum, and 1,231 maximum.

[In our next we shall complete our sketch of the Army, and give an account of the United States Navy.]

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indorsing either the opinions or the alleged facts set forth.

THE ATLANTIC GOLD FIELDS.— CANADA MINES.

THE truth that "distance lends enchantment," is forcibly demonstrated by the fascination which remote enterprises exert over ambitious minds. Ventures of trade often seem desirable to the daring merchant just in proportion to the interval through which they extend; and foreign conquest has always found its strongest incentive in this romantic cause.

The quest for the precious metals is no exception to this principle. Distance has never failed to magnify the wealth of mines since the early days when Ophir became a word to kindle the imaginations of men. Peru and Darien were long ago able, respectively, to dazzle the eyes of European peoples, the most diverse in character and purpose; and Mexico, within our own immediate knowledge, had a charm sufficient to draw dangerously from their cautious path the feet of the most impulsive of European rulers.

The history of our own wonderful colonization of the Pacific slope of our continent is still being made; and a most curious feature of it is the fact, now rapidly being demonstrated, that the Atlantic slope is itself rich in the very wealth that tempted its citizens away from comfort, safety, and family ties, to found golden states in the midst of distant wildernesses, at a fearful cost of time, and toil, and money, and often of life itself.

The precise value of the Atlantic gold mines is not yet known, so amazingly have they been neglected; but enough is learned to show them to be of great extent and surprising richness. That a formation of gold-bearing rock reaches from the Gulf of Newfoundland to that of Mexico is as certain as the existence of the auriferous strata of California and Montana; and numerous *foes* have already been discovered, where the volcanic forces have collected the gold in such quantity and position as to warrant its extraction. This is true of the extremes in Nova Scotia and Georgia; the official reports from the former showing a large and steadily increasing profit from the aggregate of its mines already wrought; and private accounts from the latter rendering it sure that only capital and skill are needed to make the enterprise there equally remunerative.

So far as known, however, the golden ore is found most abundantly in Canada. The De Léry gold mines, near Quebec, have long been known, in a dim and indistinct way, as giving great promise; but, till quite lately, this impression has rested on the alluvial gold incidentally found in the soil, and not at all on any knowledge of deposits in rock. The abundance of this alluvial gold, however, has been something extraordinary, and was proven over twenty years ago; but the interest created by the discovery, and which reached as far as Paris, had no more important result than to secure for Charles De Léry, Esq., the seignior of the tract, and his heirs, a cession from the crown of all the minerals contained in the soil. This Royal Patent became an immediate barrier to private enterprise; and the mining interest of the entire region suffered an almost total eclipse, which seems to have endured to a very recent period. It is but little more than a year since the control of the property passed into the hands of a strong corporation known as the "De Léry Gold Mining Company," organized under Royal Letters Patent, and composed of the best men in Canada and New York.

This Company had a large amount of slow work to do, in negotiation, etc., before commencing operations on the property; but they have already extensively prospected their field, finding gold to be present nearly everywhere in the soil, often in startling abundance; and discovering immense veins of auriferous quartz, assaying very richly. They have also constructed one of the best quartz mills on the continent, with crushing and amalgamating machinery complete, which they propose to put at work experimentally in the spring, in order to test by working process the qualities of their vari-

ous ores, preliminary to the erection of others more extensive and efficient. The infancy of practical gold-mining in Canada may be judged by the fact, that *this is the first quartz mill ever erected in that province*; but so well are the Canadians themselves becoming convinced of the value of the mines, that other parties are already preparing to follow this example, and it can not be long before other mills will be at work in the same neighborhood, and practical results be attained, which, if they justify the confidence of the investors, will make the *Chaudière* gold mines the focus of an excitement quite unparalleled on the Atlantic coast. When it shall once be demonstrated that mines, practically as rich as those of California or Australia, can be had on favorable terms, within twenty-four hours of New York, nothing can restrain a flow thitherward of American capital, which will stir the valleys of Canada with unprecedented activity, and startle the quiet *habitans* from their slumbers among the traditions of two centuries brought by their forefathers from the banks of the Seine and the Loire.

Mining, like any other business, can be prosecuted either as an industry or a speculation. When prosecuted legitimately, and with caution and judgment, probably no other industry pays so richly or so surely, in spite of the unnecessary dangers encountered in rash and distant operations which merit the disaster they provoke. It is this legitimate industry on which we must rely to develop the mineral wealth of the Atlantic slope; and we are assured that it may be done so safely as to make it desirable to use domestic capital, and retain the profits at home.

MODE OF CREATION.—No. 2.

THE argument was used, in the first paper on this subject, that "all forms of creation, organic and inorganic, are by gradual stages of accretion, from the simple to the complex, *i. e.*, from a single cell, germ, nucleus, or atom, with gradual additions made to each cell, germ, nucleus, or atom, before a compound organized system or inorganic mass is produced; or, in other words, nothing is made instantly whole, but always in parts accreted."

Such must, necessarily, have always been the mode of creation, since in the very nature of things no other method was ever possible, as that which is compounded of parts could never have been made instantly whole, as there must have been time required in the accretion of each part; thus giving positive age to the matured compound—whether organic or inorganic. Thus we observe of the blood, which is different from all other liquids, as the microscope shows it distinctly to be composed of individual globules, which roll over each other, like round shot, in circulating through our system. Now it is patent that there was a time, in the animal fetus, in which the very first globule of blood was acquired, then a second, third, and so on, through all the stages of development, until the matured form was acquired, when millions upon millions of such accretions of globules compose the whole body of blood. Will any one say that time was not, necessarily, required for all such accumulations? and that in the very nature of all compounded things, being made up of parts, that the accretion of the parts (one added to another) is not an absolute subdivided time for each accretion, and the measure of these times added, as requisite for the matured mass?

The same inevitable rule applies to all cells, gradually accreted to form bones, muscles, tissues, etc., ere the matured animal, compounded of many organs, each with their myriad parts, could be acquired. And this same rule applies, with equal force, to all compound matter, being composed of once separate parts drawn together and assimilated, whether for organic or inorganic accumulations.

It must now be apparent that all compounds, being made up of parts, must have acquired time in the compounding; therefore an organized body could not be made instantly whole, no more than a rock strata, a mountain, an ocean, or a world could be produced without accretions of the once separate parts, each with its minutely subdivided time in compounding, for the eventual production of the mass, with its corresponding accumulation of time; therefore no animal or tree, or even minutest detectable object (all evidently com-

pounded and capable of further division, as science can not yet detect the ultimate atom) ever was created instantaneously whole.

Now it follows, as a corollary, since no types, animal or vegetable, were ever created instantly whole, that they must have all derived their being from previous organisms; and thus by divergence, by varying accretions, must the different types have attained their existing forms; and so, retrospectively, have each derived theirs from preceding forms, successively back to the first derivative organized germ, cell, or globule. An organized being could not have its parts accreted unless sustained by another organization (nourishment from without being the individual source of accretion within), however much variation or divergence may have taken place, in the form of accretion, to produce a new variety by such changes. Thus our progenitors must have passed through the lower grades of creation.

It must not be inferred that I necessarily mean the passage of one type into another type by gradual development or divergence, as each type (four only being recognized) may have had its original formative germ; but that the development from their respective germs has by gradual divergence produced all the existing varieties of each; and therefore, retrospectively, that the present complicated varieties have each arisen by divergence from the lower or less complicated forms down to the original germ of each type, as the only means of sustentation for individual growth.

None, I suppose, will dispute with Prof. Agassiz that the four primary types of animal organization had each their low scale of representation in very early fossiliferous strata, and perchance co-existing; but these early representative forms, particularly the vertebrata, were so simple in construction as but very remotely to be classed with the advanced and highly complicated forms of existing mammalia, and finally of man. As Prof. Agassiz admits of only four types, does he also admit that the present highly organized representatives of the type, vertebrata for instance, have ascended by divergence from their lower forms, successively from their lowest representative? or does he definitely claim that each new form or variety has had a separate origin or creation? If the latter, the world of investigators would like to be informed how he imagines an instantaneous creation of a matured individual capable of reproduction; or the creation of a complicated individual in any way short of parentage? How was it ever possible to create the first specimen of a warm-blooded animal, in full maturity, out in the cold, without parental sustentation for his gradually accreted parts? The many organs and myriad parts of each, comprising a complicated individual form, are, necessarily, the growth, in time, by accretions from food originally furnished by vegetation, and always assimilated by mastication, heat, and digestion first supplied by the parent, and afterward continued by acts of the individual.

By this same process must all individuals have received their early growth by parentage, in each of the four types, retrospectively, through their inferior or less complicated forms, down to the lowest organism or simple formative germ of each type; hence, in the ascending scale, divergence must have been the order of progression to existing forms, or else the types could not have become more complicated; and so derivatively has man a distant relation, in order of time and events, with all the lower forms of his type of organization.

Such conclusions do not admit the carping questions assumed to divide scientists, as reported by Prof. Agassiz in his recent Brooklyn lecture, "Whether the world grew out of itself, or was the work of an Intelligent Creator," but thus concedes a higher formative power and forethought in creating all existing forms from a law of development governing a primary germ of each type, than creative superintendence of each individual production could possibly imply. There must have, also, been a nucleus for every globe, by which attraction upon the ultimate atoms of space has by accretion alone compounded their masses, through varying but always absolute subdivided time in each accreting atom. Herein consists that wondrous formulating law of creation, attraction, by which a single atom, as a nucleus, has accreted atom upon atom, to form a mass, a cell, and a germ, each with its ordained-like accretions (as a general fact), with occasional trivial variations, to the end of producing, in the lapse of incalculable ages, all existing masses and varied forms of animate and inanimate objects, through Almighty Forethought, Beneficence, and Power.

CHAS. E. TOWNSEND.

SHAKER COMMUNITIES.

THE Society of Shakers originated in England in 1770; but now they are exclusively confined to the United States, where, in 1860, they had eighteen Communities, with some 4,000 adherents. These are located in five of the States, as follows: New York, three; Massachusetts, four; Connecticut, one; Ohio, four; Kentucky, two; Maine, two; New Hampshire, two. These communities are subdivided into families of from two to eight, each of which is distinct, having and managing its own pecuniary and temporal interests; so that the families in a Society do no more have their property "in common" than do the Societies themselves, except as they are bound together by the strong ties of a common faith.

Shakers may (in some sort) be considered an offshoot from the Society of Friends. About the year 1747, some members of the Society of Friends, who had become subjects of the extensive religious revival that followed the last great advent of Spiritualism which occurred in the beginning of the eighteenth century, formed themselves into a Society, of which James and Jane Wardley were the leaders. Of this little Society Ann Lee and her parents were members. Their worship was remarkable for great physical manifestations and spiritual illumination—"going forth in the dances of them that make merry," even on the Sabbath-day. This excited the opposition and persecution of the orthodox professors of the Established Church, who imprisoned Ann Lee as a Sabbath-breaker.

In 1770, while in prison, Ann professed to have received special revelations, by the inspiration of the same Christ-Spirit that had inspired Jesus at the time of his baptism by John.

In virtue of this manifestation, her followers have ever since termed her *Mother Ann*, and they call Jesus *Father Jesus*; this (with them) being the "marriage of the Lamb," Ann being the "wife who had made herself ready" for the spiritual conjunction.

In 1774, Mother Ann and eight followers, by the direct instruction from spirits to each one of the company, emigrated to America, and settled at Watervliet, seven miles from Albany, N. Y.; and, in 1779, a violent religious excitement added greatly to the number of her converts, and Mother Ann instituted the Shaker Order, as now existing.

Between 1787 and 1793 eleven Shaker settlements were made; and since that time seven additional churches have been organized. Generally two or three families, of from fifty to two hundred persons each, live near together.

Everywhere their gardens and buildings are models of neatness. A large dwelling-house, divided through the center by wide halls, is erected for each family; the males occupying one side and the females the other. They have one excellent notion—that idleness is a sin.

In their extensive gardens, they raise nearly all kinds of herbs, fruits, flowers, and vegetables. They are especially famous for their brooms and garden-seeds, ketchup, and apple-sauce. They like fat cattle and handsome horses; and each Community has a school-house for the education of the children they adopt.

They believe in spiritual manifestations, and exhibit their inspiration in a most striking manner, which has given them the appellation of *Shakers*.

They have a ministry, composed of two brethren and two sisters, who have the oversight of one or more Societies; and each family in every Society has four elders, two brethren and two sisters, who have the charge of the family. The temporalities of each family are cared for by two deacons and two deaconesses. The property of a family is held in common. The members of the Society are not permitted to marry.

The Shakers hold that God is dual, there being, in the Deity, an Eternal Father and Mother, the Heavenly Parents of man; and that the revelation of God is progressive. That God was first known as a Great Spirit, to Abraham; then, to Moses as the "Great I Am," the God of Abraham, Isaac, and Jacob; and finally, to a select few, in the Holy of holies, as "Jehovah"—He, She—Father and Mother. That the revelation of Christ was also progressive, being first known only as "the Lord from heaven, a quickening Spirit," visiting Jesus; then as his guardian Spirit, making him known as Jesus

Christ, Jesus the Anointed. But that, in the second appearing, or second influx of the Christ-Spirit, to Ann and her followers, Christ is known as the Resurrection *Order of Angels*, who dwell in the high and holy heavens, where no generative man or woman ever penetrated, or ever will, except as they pass through the valley of the shadow of death, as did Jesus and Ann. By this, they mean that the reproductive spirit in male and female, beginning in childhood and ending in marriage, is crucified, and a heavenly spiritual union, like that of Jesus and Ann, is formed.

Thus Christ, or a Christ-Spirit, was manifested in Jesus as Father, and in Ann as Mother; "the Two Anointed Ones that stand by" (as mediators between God and man) "the Lord of the whole earth."

The doctrines of celibacy, non-resistance, non-participation in earthly governments, salvation from sin, community of goods, present revelation, and eternal progression, they claim to have received from the Christ-Spirits, with whom all true Shakers are in perpetual rapport.

They believe in the existence of four heavens and four hells, in the spirit-world, as having stood, and still standing, like the substance to the shadow, in juxtaposition to the four grand Dispensations, by which they distinguish one period of the religious spiritual progress of the race from another. The first three, the Antediluvian, the Mosaic, the first (or *Male*) Christian Dispensations, have been and are in full tide of life, on the outward and inward earths; and these are all states and places of probation.

Not so the fourth, or non-generative heaven, where all good Shakers go; as will also all those in the other three heavens and hells, who shall ultimately receive the Resurrection or Christ-faith, of "forsaking all" the rudimental principles and elements of those three Dispensations, which are of the "lusts of the flesh, of the eye, and of life"—the family relation of private property, of parents, brothers, sisters, kith and kin—for a celibate and a celestial property relation in the inner heavens with them.

Spiritualism has encouraged the Shakers to hope for abundant accessions to their ranks; but in this hope they have been disappointed, and their growth is very slow. But it is a fact worthy of note, that they are the only people on this continent, if not in the world, who have maintained for more than eighty years a system of living one of the fundamental principles of which is *Community of Property*.

P. S. by a Shaker. The writer of the above is mistaken. We are not "disappointed" in regard to the increase to our Order from among the Spiritualists. We feel more certain now than ever before of that as a final result.

F. W. EVANS.

MOUNT LEBANON, COL. CO., N. Y.

OPRESSED WOMAN'S SOLILOQUY.

[ALL questions have at least two sides, and many have more. Witty persons, who love the ludicrous, will have their fun, no matter whom they hit. Here is the expression of a Buckeye on a political question. Just hear the saucebox talk:]

To vote, or not to vote, that is the "question."

Whether 'tis better for the sex to submit

To be ground down by the "lords of creation,"

Or don the trowsers, go forth to all labor,

And thus gain a chance to "vote?"

To vote; to work;

ENOUGH! And by that work to say we reach

The "ballot-box." That is more, aye, far much more

Than we bargained for. We merely wished to "vote,"

But not to do your labor. To vote; to work;

To work! to take man's place—aye, there's the rub;

For in that place of his what trials come,

When we shall have shuffled on the trowsers,

Must make us pause. There's the respect

That renders our fate so *endurable*;

For who could bear the task of providing

The clothes for youngsters, the false hair for mothers—

The bills of milliners, the laundress' bills,

The vermilion for her cheeks, and a thousand

Other things that none but patient husbands know,

When he would his own leisure buy

With a bare ballot? Who would office bear,
To groan and sweat under a weary life,
While "man," the theme of all our preaching,
Would take our places in the drawing-room
And at the piano, puzzles the will,
And makes us rather bear our petticoats,
Than fly to trowsers and their labors!
Thus "equality" makes cowards of us all;
And thus our native *seal* for "female suffrage"
Is calm'd by "equality of labor;"
And brilliant visions of our destiny,
With this regard, fall again to earth,
And leave us at our "stations."

C. T. L.

A GOOD LETTER.—One of our recent graduates, a young man from Wales, now residing in Pittston, Pa., sends us the following:

DEAR FRIENDS: I feel very thankful to you for your kindness—you have tied me in bonds of friendship; and whether I shall have the honor to be a co-worker in the phrenological field or not, I shall remember you on the lecture-platform, or wherever my lot of labor may be cast through life.

I am also very thankful to all the members of the class for their kindness toward me. My English is too cold to express my gratitude, yet I am not able fully to do it in Welsh. I have nothing but best wishes with which to repay them, nor do I desire to see any of them in need of sympathy; my hope is picturing a life of success to them all in spreading the good seeds of truth, and I hope all of us shall be congratulated as faithful servants. Let us be honest, faithful, earnest, and industrious, having a desire and spirit to do good, and faith in God for progress.

Yours, in a spirit of thankfulness and love,

H. W. EVANS.

WILD FLOWERS.

BY FRANCES LAMARTINE KEELER.

I LOVE the wild flowers that grow everywhere;
They are chilled not by sorrow nor touched by despair;
They bloom on the hill-top, o'er meadow and plain,
And keep us not searching forever in vain.

I love the pale lily, the violet blue,
The wind-flower's frail blossoms of delicate hue;
The frost-flower that's kissed by the autumn's cold breath,
That fades not through tempest and yields not to death.

I love the dear wild flowers so lowly and meek,
My eyes see their lips move, my soul hears them speak;
They are sadly neglected by haughty and cold,
And left in the silence to wither and mold.

But dearly I love them! they lighten earth's gloom,
And strew the dark pathway that leads to the tomb;
And if in yon bright land they bloom fresh and fair,
I will love heaven better because they are there.

SUFFERING IN THE SOUTH.—The following to our address explains itself.

LANCASTERVILLE, S. C. This district is in a state of starvation, and unless immediate relief is afforded from out the State, numbers must perish. Moreover, the few horses left them by the desolating army must die, and leave our people the horrible picture of a famine in the coming year.

I have written to "the Southern Relief Committee," and referred them to you for character. Do, if you please, call on these gentlemen, and direct their attention especially to our case, and advise them to direct whatever they may please to send us as I have advised in my letter to them. I have also written to the Rev. H. W. Beecher and Peter Cooper to exercise influence in our behalf. Please confer with them.

I have much to say on science, but the surrounding troubles suppress my scientific studies. You know from this that our people must be in great distress.

Yours, etc.,

J. F. G. M.

[Measures have been adopted all through the North to send aid and comfort to the sufferers in the South. All who wish to contribute may do so, through the various reliable committees, and thus avoid falling into the hands of begging impostors who flood the country.]

METAPHYSICS.—The term metaphysics originated with the followers of Aristotle. They collected his treatises on natural science and called them *τα φυσικά*—physics. Then they arranged other treatises on philosophical subjects and entitled them *τα μεταφυσικά*—beyond physics or not included in them.

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THE BROTHER SOLDIERS. A Household Story of the American Conflict. By Mary S. Johnson. New York: N. Tibbals. Cloth, \$1.

A very well-written story. No attempt at glittering or passionate description, but a clear, unvarnished portrayal of such natural events as occurred with multiplied frequency during our recent struggle. The book is fitted for the Sunday-school library, being written with sufficient simplicity to convey to the juvenile mind some correct impressions of the nature of the great conflict.

MARSHALL'S LINE ENGRAVING OF PRESIDENT LINCOLN. Boston and New York: Ticknor & Fields.

It is not difficult to find words of approval when a subject demanding consideration possesses genuine merit. The portrait mentioned challenges us to point out a defect either in the likeness or the style of execution. We must pronounce the India proof sent us the best portrait, in all respects, that we have seen of the lamented chief magistrate. Though the honest features of Mr. Lincoln are delineated with all the ruggedness which was theirs in life, yet the mastery hand of the artist has invested them with a wonderful softness which is indescribable. We have the honest, sturdy Abraham Lincoln, and also the genial, affectionate, sympathizing President; the varied expressions of countenance for which he was remarkable are admirably blended in this portrait by Marshall. Those who are in want of a truthful picture of President Lincoln will find this entirely satisfactory.

TEMPERANCE CATECHISM, for Bands of Hope and other Temperance Societies. By Rev. James B. Dunn. New York: National Temperance Society. Price, 12 cents.

A capital thing, worthy the perusal of all. If our authorities would place a copy on the reading table of every family in the nation, it would be a good operation.

THE AMERICAN HORTICULTURAL ANNUAL FOR 1887. Illustrated. New York: Orange Judd & Co. Price, 75 cents.

This beautifully illustrated compilation of useful agricultural and horticultural information arranged in concise paragraphs, deserves a cordial welcome from every agriculturist. The many suggestions with which the ANNUAL abounds, founded on the experience of some of our best florists and frutifiers, constitute it a little encyclopedia in its way.

COUNTRY QUARTERS. A Love Story. By the Countess of Blessington. Three volumes in one. Philadelphia: T. B. Peterson & Bros. Paper, \$1 50; cloth, \$2.

Some publishers in American literary circles seem to apply their energies and means to the reproduction of cis-Atlantic literature of a character, in our opinion, ill adapted to the tastes of the educated. We see to see good foreign books reproduced in this country, but we would avoid the use of the European publishers. Peterson & Bros. have lately republished in a neat and several English novels of considerable merit, and "Country Quarters" is by no means the poorest. The "Countess of Blessington" has long enjoyed a reputation as a powerful portrayer of social life, and a child of her pen well evinces her ability

in that department. The locale of the story is Ireland, and the representations of Irish character are very natural, not to say amusing.

WOODBURN GRANGE. A Story of English Country Life. By William Howitt. Philadelphia: T. B. Peterson & Brothers, 308 Chestnut Street. Price, \$2. English country life has seldom been so successfully portrayed in its quiet beauty and simplicity as Mr. Howitt has exhibited it in "Woodburn Grange." The story has its scene in that part of Nottinghamshire through which flows the beautiful Trent, and which includes Sherwood Forest, famed as the retreat of the outlawed Robin Hood. Among this romantic scenery the author lived for many years. He deprecates the unhappy influences of the detested game laws, by which, in England, a man's liberty is estimated as of less value than the life of a pheasant. This subject is called up by the extensive game preserves which abound in that locality—to be found in which is often a matter of years of imprisonment, or even transportation. In pleasant apposition to this are the descriptions of a *felé* at a Quaker's villa in the country, of Quaker life in London, and of a Quaker wedding.

The mental deterioration of the English aristocracy, caused by a life of idleness, luxury, and rank through generations, is strikingly shown; and all through the book the antagonism between hereditary noodleum and honest labor rising into wealth is well defined. In short, it is a picture of English country life, as interesting and instructive as it is truthful.

THE POSTHUMOUS PAPERS OF THE PICKWICK CLUB. By Charles Dickens. With original illustrations, by S. Eytinge, Jr. Boston: Ticknor & Fields. Diamond edition. Cloth, \$1 50. Post-paid, \$1 75.

This, by some critics considered the best creation of the wonderfully fertile brain of Dickens, comes to us in a shape and at a price well calculated to increase its popularity. When we look at the numerous engravings by which the edition is enlivened, although they possess not the highest artistic merit, but are nevertheless executed in fair keeping with the text, and at the large amount of composition, we feel ourselves inwardly commiserating Messrs. Ticknor & Fields for putting forth the volume at so low a figure. We suppose, however, that they think the demand for it will be heavy, and the ultimate result to their pecuniary advantage. Well, so mote it be.

FRENCH WITHOUT A MASTER. In six easy Lessons, on the "Robertsonian Method." By A. H. Monteith, Esq. Philadelphia: T. B. Peterson & Brothers. Price, 40 cents.

This text-book contains approximations in English orthography to the French pronunciation. It is said to be highly esteemed in England as a vehicle toward that very difficult attainment, a correct pronunciation of the French.

CANNON FLASHES AND PEN DASHES. By Clara Martenza. New York: W. H. Kelley & Co. Cloth, \$1 50.

Poetic language is generally considered or allowed to be beyond reason. It is more or less fervid, extravagant, or gorgeous, according to the frenzy of the poet. This volume is made up of philosophy, speculation, legend, and narrative, all neatly and pleasantly invested with poetry's tripping measure. We have glimpses of the recent war from the loyal side; sharp, moral thrusts at society; a legend of an old New England colony five hundred or more years before Plymouth Rock was

heard of, and other interesting features. Our poet, like many of his class, evidently has Ideality and Marvelousness large, with moderate Continuity and Perception.

RECORDS OF FIVE YEARS. By Grace Greenwood, author of "History of my Pets," "Recollections of my Childhood," "Merric England," etc. Boston: Ticknor & Fields. Price, \$1 50.

Mrs. Lippincott's pleasant pictures of home-life are always attractive, but in this recent volume she gives us glimpses of life as she caught them in various conditions and circumstances. Childhood, maturity, town, country, peace and war, receive the attention not simply of her intellect in cold abstract theorizing, but the inner regard of her heart, and are dealt with from the stand-point of the mother, the friend, the benefactor, who would have all things conducive to happiness.

"A Few Plain Words," although written on the "situation" in the early progress of the war, is still fresh, sprightly, and enjoyable, showing that some women can appreciate great political questions, and write understandingly about them. "A Taste of Camp Life" is an admirable picture of soldier fare and soldier comfort.

GARDENING FOR PROFIT. A Guide to the Successful Cultivation of the Market and Family Garden. Illustrated. By Peter Henderson. New York: Orange Judd & Co. Price, 75 cents.

Mr. Henderson, a gardener and horticulturist well known to the horticultural world, has in this interesting volume given us the results of practical effort. The work is no compilation of dry recipes and indeterminate theories, but a ripe exhibit of the author's own experience. He has been a successful gardener, and he is not unwilling, as most successful men are, to impart the real sources and essence of his success to others that they may be profited. Let every man who has garden room keep this volume on his table for perusal and reference.

APPLETON'S MATHEMATICAL SERIES. Of these text-books we have received:

A PRIMARY ARITHMETIC. By G. P. Quackenbos, A.M., the well-known author of "School Text-Books." Price, 40 cents.

AN ELEMENTARY ARITHMETIC. By the same author. Price, 60 cents.

A PRACTICAL ARITHMETIC. By the same author. Price, \$1.

The features which chiefly recommend these instruction-books to us are simplicity and thoroughness. The progress of a child in the study of arithmetic is exceedingly slow and tedious at the best. Mr. Quackenbos has endeavored to accommodate his books to the respective grades of intelligence exhibited by the child, the boy, and the youth, making advancement sure but almost imperceptible. The numerous examples for practice are interesting in themselves, and serve to fix all the more firmly the principles involved. In fact, the subject is even made attractive, being invested with pleasing illustration and witty remark, and that, too, in perfect keeping with the nature of the subject. Such are the text-books we want in every department of education, commencing with complete ignorance and very gradually rising to complete mastery.

It seems to us that Mr. Quackenbos has so simplified the study of arithmetic, that the veriest child can take hold of it with genuine zest.

THE COACH-MAKERS' MONTHLY for March comes out with a new feature, a serial on English carriage-horses, by Charles Dickens. Besides this, there is

the usual quota of interesting vehicular matter. Price 50 cts. specimen numbers.

THE CATHOLIC WORLD, a magazine of general literature and science, completed its fourth volume with the March number. The fifth volume commences with the April number. It is edited by the Rev. I. T. Hecker, and published, at \$5 a year, by Lawrence Kehoe, 145 Nassau Street, New York. This is the leading Roman Catholic magazine in America. Those who may wish to be informed as to the present state of that religious body, may find such information in the *Catholic World*.

DEMOREST'S YOUNG AMERICA is a handsomely printed little magazine, amply illustrated, and filled with just such matter as will please young folks. It is published at \$1 50 a year, single numbers 15 cents. Address W. J. Demorest, 473 Broadway, New York. Send for a sample number.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

IN THE WORLD, NOT OF THE WORLD. Thoughts on Christian Casuality. By Wm. Adams, D.D. Cloth, extra, 50 cts.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS AND CULTIVATOR ALMANAC FOR 1887. With 120 Engravings. By J. J. Thomas. 35 cts.

THE METHODIST ALMANAC FOR 1887. 16mo, pp. 53. Paper, 15 cts.

MIRACLES OF HEAVENLY LOVE IN DAILY LIFE. By A. L. O. E. 16mo, pp. 197. Cloth, \$1 10.

INSTRUCTIONS IN THE PREPARATION, ADMINISTRATION, AND PROPERTIES OF NITROUS OXIDE, PROTOXIDE OF NITROGEN, OR LAUGHING-GAS. By G. T. Barker, D.D.S. 8vo. pp. 61. Cloth, \$1 25.

AN INTRODUCTION TO PRACTICAL CHEMISTRY, including Analysis. By John Bowman, F.C.S. Edited by Charles L. Bloxam, F.C.S. With 107 Illustrations. Fourth American from the Fifth Revised London Edition. 12mo, pp. 351. Cloth, \$2 50.

A TREATISE ON THE PRINCIPLES AND PRACTICE OF MEDICINE. Designed for the use of Practitioners and Students of Medicine. By Austin Flint, M.D. Second Edition, revised and enlarged. 8vo, pp. 957. Cloth \$7.

STORIES OF MANY LANDS. By Grace Greenwood. Illustrated. Sq. 16mo, pp. viii, 208. Cloth, \$1 75.

ANNALS OF A QUIET NEIGHBORHOOD. By George Macdonald. 12mo, pp. 381. Cloth, \$1 75.

THE HISTORY OF A MOUTHFUL OF BREAD, and its Effect on the Organization of Men and Animals. By Jean Macé. Translated from the Eighth French Edition, by Mrs. Alfred Gatty. First American Edition, revised from the Seventeenth French Edition. 12mo, pp. 398. \$2 25.

AMERICAN LEAVES: Familiar Notes of Thought and Life. By Samuel Osgood. 12mo, pp. 380. Cloth \$2.

THE WAR CLAIMANT'S GUIDE: a Manual of Laws, Regulations, Instructions, Forms, and Official Decisions relating to Pensions, Bounty, Back Pay, Prize Money, Salvage, Property Lost or Destroyed, etc.,

etc., and the Prosecution of all Claims against the Government, growing out of the War of 1861-1865. By George W. Raff. Large 12mo, pp. viii., 477. Sheep, \$4 50.

THE AMERICAN PRINTER: a Manual of Typography, containing Complete Instructions for Beginners, as well as Practical Directions for Managing all Departments of a Printing-office. With several useful tables, etc., etc. By Thomas MacKellar. 12mo, pp. 336. Cloth, \$1 75.

THE DEAD LETTER: an American Romance. By Seeley Regester. Illustrated. 12mo, pp. 308. Cloth, \$1 75.

THE BRIDE OF LLEWELLYN. By Mrs. E. D. E. N. Southworth. 12mo, pp. 550. Paper, \$1 75.

HISTORY OF THE UNITED STATES, from the Earliest Period to the Administration of President Johnson. By J. A. Spencer, D.D. Illustrated with Steel Engravings. 4to, pp. 2,000. New York: Johnson, Fry & Co. In Numbers, Monthly. Per No., 50 cts. (By subscription only.)

THE MODERN PRACTICE OF AMERICAN MACHINISTS AND ENGINEERS. Including the Construction, Application, and Use of Drills, Lathe Tools, Cutters for Boring Cylinders and hollow Work generally, etc., etc. Together with Workshop Management, Economy of Manufacture, the Steam-engine, Boilers, Gear, Belting, etc. By Egbert P. Watson. With 86 Engravings. 12mo, pp. 278. Cloth, \$2 75.

THE CHURCH ALMANAC for the year of our Lord 1887. 16mo, pp. 64. 25 cts.

THE FAMILY CHRISTIAN ALMANAC. 10mo, pp. 60. Paper, 15 cts.

THE AMERICAN GARDENER'S ASSISTANT. In three parts. Containing Complete Practical Directions for the Cultivation of Vegetables, Flowers, Fruit-Trees, and Grape-vines. By Thomas Bridgeman. New Edition, revised, enlarged, and illustrated. By G. Edwards Todd. 12mo, pp. 152, 211, 166. \$2 75.

THE CHILDREN OF THE FRONTIER. 16mo, pp. 290. Cloth, \$1 50.

THE CRITERION: a Means of Distinguishing Truth from Error, in Directions of the Times. With four letters on the Eirenicon of Dr. Pusey. By A. Cleveland Cox, Bishop of Western New York. 12mo, pp. 130. Cloth, 85 cts.

CONSERVATIVE SURGERY, as exhibited in Remedying some of the Mechanical Causes that Operate Injuriously both in Health and Disease. With Illustrations. By H. G. Davis, M.D. 8vo, pp. 314. Cloth, \$3 50.

A COMPLETE LIST OF BOOKSELLERS, STATIONERS, AND NEWSDEALERS IN THE UNITED STATES AND THE CANADAS. By John H. Dingman (with C. Scribner & Co). 8vo, pp. 118. Cloth, \$5 50.

STUDIES, by John A. Dorgan. Third Edition. 12mo, pp. viii., 223. Cloth, \$1 75.

THE DRAYTONS AND THE DAYNANTS. A story of the Civil War in England. By the Author of "Chronicles of the Schonberg-Cotta Family." 12mo, pp. 509. \$2.

TESTS OF TRUTH. Replies to Letters of a Skeptical Friend, on the Teachings of Nature and Revealed Religion. By David Dyer. 12mo, pp. 209. Cloth, \$1 50.

GILBERT STARR and HIS LESSONS. By Glance Gaylord, 16mo, pp. 383. \$1 75.

SERMONS, Experimental and Practical. An Offering to Home Missionaries. By Joel Hawer, D.D. 12mo, pp. 407. \$1 75.

HEAVENWARD; a Collection of Hymns and Poems of Consolation. 8vo, pp. 516. Cloth, gilt, extra, \$4 50.

How to BE BEAUTIFUL. 18mo, pp. 44. Cloth, 30 cts.

THE KETTLE CLUB. Christmas Tales for Children. By Cousin Virginia. 16mo, pp. 159. Cloth, \$1 25.

THE LITTLE BOOK AND ITS TRAVELS. 18mo, pp. 24. Half leather, 85 cts.

READING WITHOUT TEARS; or, A Pleasant Mode of Learning to Read. Part Second. By Mrs. Mortimer. Sq. 18mo, pp. 292. Cloth, \$1 50.

MY SCARLET SHAWL. A Wife's Story. 18mo, pp. 68. Cloth, 40 cts.

THE PSALM KING: a Collection of Sacred Music, consisting of Hymn Tunes, Anthems, Chants, etc., etc. Including also a full Elementary Department, with sprightly and animated Glee and Choruses for convention and singing-school practice. By T. E. Perkins. Music 8vo, pp. 368. Boards, \$1 75.

NUTS FOR BOYS TO CRACK. By Rev. John Todd, D.D. Sq. 16mo, pp. 287. Cloth, \$1.

THE PLAY-GROUND; or, Out-door Games for Boys. A book of Healthy Recreations for Youth. With 124 Wood-cuts. 16mo, pp. 120. Boards, 60 cts.

THE BOOK OF COMMON PRAISE; a collection of Music adapted to the Book of Common Prayer. By the Rev. W. Staunton, D.D. Music 8vo, pp. 386. \$2 25.

THE STORY OF A STOMACH. An Egotism. By a Reformed Dyspeptic. 12mo, pp. 60. Flex. cloth, 75 cts.

FAITH UNWIN'S ORDEAL. By Georgina M. Craik. Sq. 16mo, pp. 331. \$1 50.

THE HUDSON, from the Wilderness to the Sea. By Benson J. Lossing. Illustrated by 326 Engravings on Wood, from drawings by the Author, and a Frontispiece on Steel, 8m. 4to, pp. vii., 464. Cloth, gilt, \$11.

THE GIFT OF THE FATHER; or, Thoughts for the Weary. By Rev. C. Battersby. 18mo, pp. 122. Cloth, 90 cts.

FIRST YEAR IN EUROPE. By George H. Calvert. 12mo, pp. 303. Cloth, \$2.

STUDIES OF OUR ENGLISH; or, Glimpses of the Inner Life of our Language. By M. Schele de Vere, L.L.D. 12mo, pp. vi., 365. Cloth, \$2 75.

PHILIP II. OF SPAIN. By Chas. Gayarré. With an Introductory Letter by George Bancroft. 8vo, pp. iv., 306. \$3 50.

THE MAGNOLIA. By T. W. Parsons. 4to, pp. 58. Cloth, \$5.

A NEW GUIDE TO THE SHEET-IRON AND BOILER-PLATE ROLLER: containing a Series of Tables showing the Weight of Slabs and Piles to produce Boiler Plate, and of the Weight of Piles and the Sizes of Bars to produce Sheet-Iron, etc., etc. Estimated and Collected by C. H. Perkins and J. G. Stowe. \$2 75.

HISTORY OF THE CHRISTIAN CHURCH FROM CONSTANTINE THE GREAT TO GREGORY I. Completing the History of Ancient Christianity. In Two Vols. 8vo. Cloth, per vol., \$4.

OBSERVATIONS ON THE SCIENTIFIC STUDY OF HUMAN NATURE. A Lecture before the London College of Preceptors, Oct. 10, 1886. By E. L. Youmans, M.D. 16mo, pp. 41. Paper, 30 cts.

A YANKEE IN CANADA, with anti-slavery and reform papers. By Henry D. Thoreau, Author of "Cape Cod," etc. 12mo. Cloth, \$1 50.

THE GIRAFFE HUNTER. By Captain Mayne Reid, Author of "The Desert Home," etc. With illustrations. Price, \$1 50.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc., must be written on a sheet by itself. Questions for this department—To CORRESPONDENTS—and communications for the Editor, must be written on SEPARATE SLIPS.

SPECIAL NOTICE—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

EGG SHELLS AND CHICKEN BONES.—From what source does the chick in the egg derive material for its bones? and how does it accomplish the necessary and proper arterIALIZATION of its blood?

Ans. The shell of the egg is principally composed of phosphate of lime, the material which forms the bulk of the bones of all animals. The shell is porous to a limited extent. During the earliest stages of incubation, thousands of minute follicles are formed on the inner surface of the shell, constituting media of communication between the body of the chick and the shell. These absorbents take up the microscopic atoms from the internal surface of the shell and convey them to the interior of the body, where they are built up into the bones forming the skeleton. In this way, as the chick increases in size and strength, and requires more oxygen, and consequently more air, the porosity of the shell is gradually increased; so the shell which forms the prison-house of the little chick is made weaker and weaker, while the chick is increasing in strength, till finally, having taken the material which forms his prison-walls to add to his own strength, he bursts from his prison, and enters the world of life and light.

POLITE MANNERS.—Will you please state the proper manner of introducing and being introduced to strangers—especially to ladies?

Ans. The answer to this question, and a thousand others that are useful and interesting, will be found in our work entitled "How to Behave." Price 75 cents.

APPETITE.—Can the organ of Alimentiveness, when unusually large, be wholly restored to its natural condition by abstinence?

Ans. We think any abnormal development, and any abuse of any power of mind or body, so changes one's nature and destiny, that there is no such thing as thoroughly eradicating the influences. For instance, any wrong act is a fact, and it produces some effect, and that effect must modify the man's life and being. But this is an abstract idea. Practically, one can give up rum, coffee, or tobacco, and appear to recover entirely, and even come to dislike with extreme disgust that which he

once was crazy to enjoy. Organs, by proper abstinence, will become weakened and changed.

HEAD MEASUREMENTS.—In measuring heads, say from ear to ear, over Firmness, where do you begin, and where do you terminate?

Ans. We begin and end in the very openings of the ears. In measuring around the head, we begin about an inch above the root of the nose, and pass across the most prominent part of the middle of the back head.

SOLDIER.—What organs are required to make a good soldier?

Ans. A good soldier should be a good man, well organized in body, and have a strong will, strong energy, and good sense. A man could be what would be denominated a good soldier, with good, fair common-sense intellect, and the fighting element strongly marked. But the soldiers that live in history are men of high-toned moral feeling, and fight only for glorious principles.

GARDEN OF EDEN.—Where was the Garden of Eden supposed to have been located?

Ans. The description given in Genesis is brief, obscure, and, in appearance, legendary. The story of Eden has generally been accepted literally by scholars, but many writers are of the opinion that the Garden of Eden is only a figurative expression, not intended to indicate any actual locality on earth. In the Septuagint it is called Paradise—that is, a park or pleasure garden. The Bible says it was watered by a river, which, issuing forth, branched into four streams, named Pison, Gihon, Hiddekel (or Tigris), and Euphrates. These rivers water a considerable extent of country, so that the geographical position of Eden has never been positively determined. Josephus and several of the fathers conceived that Eden was a term denoting the entire region between the Ganges and the Nile. Calvin, Huet, Bochart, and Wells have concluded in favor of Kormah, in Babylon, not far from the Persian Gulf; Reland, Calmet, Hales, Faber, and J. Pye Smith, in favor of Armenia; Le Clerc, in favor of the region of Damascus; while the modern German school or biblical critics have sought the cradle of the human race in Bactria, or Cashmere, or the region lying to the north of it, a part of which is to this day called Indiana; the "Garden." It may be mentioned here, that the Mohammedans believe Eden to have been in one of the seven heavens—some say the moon—and that the expulsion from Paradise consisted in Adam being cast down upon the earth. In the course of four thousand years, however, the course of rivers existing there has been so materially altered, that any hope of locating Eden is now past. It has become a general opinion, that the spiritual significance of this story is what principally concerns Christians.

ARE THERE ANY ORGANS WHICH a man can cultivate, by which he can improve or make steady a fickle mind?

Ans. Yes; Firmness and Continuity minister to this result.

IN LOVE.—Inquiries like the following are usually answered privately; but in the hope of setting other young men right, we publish this, with answer:

"Can you tell me any way or cure, to set aside a chronic longing for the society of women? My Adhesiveness is excessively large, and there is one woman in my mind I can never cease thinking of—not even for a single hour. My thoughts are pure—so is she. Mutual love animates us. I am not at present in a pecuniary condi-

tion to make her my wife. As the matter stands, what can I do to turn my mind in another channel? I believe actually if I can't find other subjects to think of, a lunatic asylum will be the ultimate result. Oh, horrible! Give me advice, and send on your bill. Truly yours, etc.

Ans. No harm can come from pure, unselfish, well-directed affection. But when love becomes idolatrous, when it is "all-absorbing," and threatens to dethrone the reason, it is dangerous, and no longer pure or spiritual. Lust is love perverted. The way to manage such feelings is to bring them into subjection to the moral sense, and under religious influences. With Christ for one's guide and constant soul-companion, the social feeling or affections will not monopolize the man. The affections are to be sanctified by godliness, and subordinated to the religious and the spiritual nature. The above is inordinate.

MONOMANIA.—Nothing, perhaps, is stronger proof of the truth of that phrenological principle which recognizes an organ in the brain for each mental power than the manifestation of monomania. Some are insane through fear, some through Hope, some through Self-Esteem and Approbation, some through Acquisitiveness, some through the love element, some through the intellectual faculties, others through the religious feelings; and each specific kind of mania is referable to some organ or class of organs, one of which may be deranged, while all the rest are comparatively healthy. No other system of mental philosophy explains all these singular though very common phenomena.

GIFT ENTERPRISES.—To half a hundred inquirers, we beg to state that all such concerns are "not to be trusted." So of lotteries. Gamble in these games of chance if you will, but we beg of you not to ask our agency in this slippery, tricky work. We can not, must not, *will* not do it.

DRUNKEN PHRENOLOGISTS.—A correspondent writes us from Warren, Ohio, inquiring about the reputation of a person calling himself a phrenologist, who recently visited that place, remarking that he was charged with drunkenness, and with something even worse than that. Who was he? We trust no one will hold this office responsible for such conduct.

Why is it that Phrenology must be cursed with some of the worst characters among men? Why do impostors, who fail in everything else, put "Prof." to their ugly names, and go forth to swindle unsuspecting people? It is said, "the better the bank, the more numerous the counterfeiters." And the more difficult the profession, the more numerous the quacks dabbling in it. It is certainly so in medicine, and it is so in Phrenology. Nor is the Church exempt. There are black sheep in all the flocks, just as there was a Judas among the twelve. We are in the receipt of letters daily, asking us what of this, that, and the other vagabond—such as the filthy fellow, self-styled "Prof." Livingston, recently turned out of Barnum's monkey show—and of "Prof." somebody else, who cheated a poor printer out of his pay for advertising, and a hotel keeper out of his board. But we can not publish the names of these scamps who sell under false colors, and practice piracy on an over-credulous people. It will be a safe rule to count every phrenologist who dishonestly puts "Professor" to his name, an impostor. Boot-blacks, clowns, and chimney-sweeps may play the jackdaw, but honest men will not attempt to shine in borrowed plumes.

Publishers' Department.

GETTING READY.—Our engravers are at work on portraits for future numbers of the A. P. J. We are getting ready for the new volume to commence in July next, when we shall enlarge our borders, give more matter, and increase our subscription rates. The editor is determined to make this not only a first-class magazine, but a **MODEL MONTHLY** in every sense. We would lead other publishers in mechanical execution, as well as the people in new ideas. Of course we shall keep economy in view, in all our projects; we should like to make a JOURNAL worth \$4, \$5, or \$6 a year, but at present will try to be content with \$3, which will be the subscription price after the first of June next, for vols. 46 and 47.

EUROPEAN GUIDE-BOOKS.—See a list, on another page, of the best works for travelers and tourists through the Old Country. These works are all printed in the English language, and may be received by return mail, at any post-office in the United States or the North American British Provinces. If preferred, the books will be forwarded by express. No one should go abroad without these works. Ignorance in a foreign country is most expensive, while knowledge is economy.

ADVERTISEMENTS.—It is gratifying to be able to serve ourselves, our friends, and the public at the same time. The large circulation of our JOURNAL renders it a very desirable medium through which to reach intelligent, enterprising, go-ahead people. We try, by exercising considerable vigilance, to exclude from our pages anything calculated to mislead or deceive the reader. Of course, we can not hold ourselves in any way responsible for the promises of advertisers, or for the quality of the articles advertised. But we will not, knowingly, insert anything of a fraudulent character, like lotteries, gift enterprises, patent medicines, etc. The thing must, at least, be useful or ornamental to get into this JOURNAL. Readers will discriminate. It affords us special pleasure to fill the orders of our patrons with really useful articles, including good books.

WE are indebted for many of the excellent photographs of eminent Universalist clergymen, engraved in our present number, to Mr. R. A. Lewis, photographer, 160 Chatham Street, New York, as well as for those of other distinguished clergymen, whom we may, at a future time, take pleasure in presenting to our readers.

IN an early issue of our JOURNAL an article, by our friend and contributor Hon. John Neal, on the "Study of Languages," will be given to our readers. The perspicuous and convincing series of papers on the "Phrenological Theory of Man's Organization" will be continued until the subject has received a thorough handling from the theological, physiological, and metaphysical points of view. In the course of this series it will be seen by the careful reader that the chief objections to Phrenology are dispassionately considered, and their errors exhibited in the light of sober reason and common sense. Very many questions addressed to us from interested correspondents have already found, or will find, definite answers in the substance matter of these papers.

We have also in preparation "Contrasted Sketches of Benjamin Franklin and Andrew Jackson," which will appear in our next number.

MR. PETER KELLY, a young lawyer—formerly of New York, now of Iowa—is lecturing on Phrenology. The papers speak of him as an orator of great promise. He is too sensible to permit himself to be dubbed "Dr." or "Professor," before having these honors conferred on him by the properly constituted authorities.

THE American Institute have resolved to hold an exhibition in 1876—the one hundredth year of American Independence—of American industry and art. They hope that by that time there will be a suitable building in the city for such a purpose. At present there is none, but nine years may produce great changes for the better in this fast country.

CORRECTION.—Messrs. Boyer and Ancona, of Pa., in our last number should have been classed as Democrats instead of Republicans.

READERS are referred to the list of CHOICE BOOKS announced in our present number. We commend them as among the best of their class. Copies will be sent by return post or express, at prices annexed.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

WHAT IS A SEWING MACHINE?

It is a machine for making clothing and doing Sewing of all kinds.

Does it make the same kind of stitch that a lady makes with her needle?

No; it makes other kinds.

What are they called?

"Lock Stitch," "Chain Stitch," and "Double Chain Stitch."

What is the difference?

Here is a picture of the Lock Stitch, as the thread looks when stitched into the cloth, only this is made larger and coarser than you may see it better:

No. 1.—LOCK STITCH.

It is made with two threads, one on each side of the cloth, and "locked" together in the center. Hence it is called the "Lock Stitch." It can not be pulled out, nor raveled, and there is only a single line of thread on each side of the seam.

Is the seam strong and firm?

Yes; just as firm as the cloth when properly made. It is the principal stitch made by sewing machines since their first invention.

How much thread does it take for a yard of seam?

About two yards and one half.

What is the principal machine that makes the Lock Stitch?

THE WHEELER & WILSON MACHINE.

What is the "Chain Stitch"?

Here is a picture of it.

No. 2.—CHAIN STITCH.

It is such a stitch as the ladies make in knitting and crocheting, and it can be raveled in the same way.

Is it much used in Sewing?

No; because the seams made with it pull out so easily. Think of garments coming apart when one is in the street.

How much thread does it take for a yard of seam?

About four and a half yards, or nearly twice as much as the "Lock Stitch."

What is the principal machine making this stitch?

The Wilcox & Gibbs.

What is the "Double Chain Stitch"?

It is very much like the Single Chain Stitch, but is made with two threads.

Here is a picture of it.

No. 3.—DOUBLE CHAIN STITCH.

Can it be raveled?

Yes; and shows a ridge on one side.

What makes that ridge on the under side of the seam?

It is the looping and knotting of the two threads used.

Does that do any harm?

Yes; it wears off when garments are washed and ironed. It does not look well unless as embroidery. No one would like a handkerchief hemmed with it, or any seam made that shows. A handsome stitch, you know, only shows a single line of thread.

How much thread does it take for a yard of seam?

About six and one half (6½) yards. The most of any machine.

What machine makes this stitch?

The Grover & Baker.

Who use Sewing Machines?

The Wheeler & Wilson are used by Seamstresses, Dress Makers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Boots and Shoes, Linen Goods, Umbrellas, Parasols, etc. They work equally well upon silk, linen, woolen and cotton goods, with silk, cotton, or linen thread. They will seam, quilt, gather, hem, fell, cord, braid, bind, and perform every series of sewing, making a beautiful and perfect stitch, alike on both sides of the article sewed.

How many Wheeler & Wilson's machines have been sold?

Nearly 300,000.

How fast can the machine work?

The Wheeler & Wilson Company has prepared tables showing, by actual experiments of four different workers, the time required to stitch each part of a garment by hand, and with the Wheeler & Wilson Sewing Machine. Subjoined is a summary of several of the tables:

	BY MACHINE.	BY HAND.
Gentlemen's Shirts	1.16	14.36
Frock Coats	2.38	16.35
Satin Vests	1.14	7.19
Linen Vests	0.48	5.14
Cloth Pants	0.51	5.10
Summer Pants	0.38	2.50
Silk Dress	1.18	8.37
Merino Dress	1.4	8.37
Calico Dress	0.87	6.37
Chemise	1.10	10.31
Moreen Skirt	0.35	7.37
Muslin Skirt	0.30	7.1
Drawers	0.36	4.6
Night Dress	1.7	10.9
Silk Apron	0.15	4.16
Plain Apron	0.9	1.36

NUMBER OF STITCHES MADE PER MINUTE.

	By Hand.	With Machine.	Ratio.
Stitching fine Linen	33	640	36
Stitching Satin	34	529	23
Stitching Silk	30	550	18
Seaming fine Cloth	18	504	15
Patent Leather, fine			
Stitching	7	175	35
Fitt'g Ladies' Gaiters	38	500	18
Stitching Shoe Vamps	10	310	31
Binding Hats	35	274	11

When the machines are driven by power, the ratio is much higher—1,500 and 2,000

stitches per minute not being an unusual average.
Think how much time is saved by using the machines.

MATHEMATICAL PROBLEMS.

The proportion of thread used in making the various stitches is as follows:

"Lock Stitch," 1; "Chain Stitch," 1 8-10ths; "Double Chain Stitch," 2 5-10ths.

Prob. 1. If a "Lock Stitch" machine uses 10 cents worth of thread and silk in a day, how much would it use in a year of 300 working days? Ans., \$30 worth.

Prob. 2. How much would a "Chain Stitch" machine use in doing the same amount of sewing? Ans., \$54 worth.

Prob. 3. How much would a "Double Chain Stitch" machine use in doing the same amount of sewing? Ans., \$75 worth.

Prob. 4. There will be ultimately at least a million of sewing machines used in the country; at the above rate what value of thread and silk would be used annually if all of one kind were used? Ans., "Lock Stitch," \$30,000,000; "Chain Stitch," \$54,000,000; "Double Chain Stitch," \$75,000,000 worth.

Prob. 5. What value of thread would be wasted by the "Chain Stitch"? Ans., \$24,000,000.

Prob. 6. What value would be wasted by the "Double Chain Stitch"? Ans., \$45,000,000.

Prob. 7. If there be 6,000,000 of families in the United States, how much would it cost to send each a weekly newspaper at \$1 50? Ans., \$9,000,000.

Prob. 8. How much to send a monthly magazine at \$2? Ans., \$12,000,000.

Prob. 9. How much would remain of the \$45,000,000 of waste for Missionary, Educational, and Charitable purposes? Ans., \$24,000.

Is it wicked to waste things? Yes.
Then, what sewing machine should be used? Ans., "WHEELER & WILSON'S LOCK STITCH SEWING MACHINE."

FOR THE LADIES.—The Fashion Magazines are all recommending Bradley's celebrated Duplex Elliptic or Double Spring Skirt as the most graceful and elegant as well as the most durable and economical skirt made.
See advertisement.

OUR SCHOOLDAY VISITOR.

A first-class Illustrated Magazine. 32 large double-column pages every month. Some of the ABLEST AMERICAN WRITERS contribute regularly. "A most valuable aid in the cause of juvenile education."

N. Y. TRIBUNE. "We take pleasure in commending it."—*N. Y. Independent.*

"A sound, healthful magazine for the family and school."—*S. S. Times.* "One of the most attractive and cheapest periodicals published."—*PHRENOLOGICAL JOURNAL.*

"Variety enough to suit every shade of juvenile taste."—*Pittsburg Commercial.* "The most sprightly and interesting of the magazines for the young."

—*Christian Standard,* Cleveland, O. "It has no equal to our knowledge."—*Rural New Yorker.* "The names of its contributors alone give it character."—*Ulster (N. Y.) Evening Telegraph.*

"It is calculated to instruct and amuse without filling the mind with worthless fancies."—*Philadelphia Evening Telegraph.* "The music is worth the subscription price."—*Canada Christian Advocate.*

Terms \$1 25 a year. To clubs \$1. Valuable premiums for clubs. Rare inducements to agents. Specimen numbers, ten cents. Agents wanted in every school, and at every post-office in the United States. The attention of teachers is particularly invited!

Address J. W. DAUGHADAY & CO., Publishers, 424 Walnut Street, Philadelphia, Pa.

THE MOVEMENT - CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 36 cents. Address 67 West 30th Street, New York City.

QUACKENBOS'S TEXT-BOOKS.

The only books for progressive teachers.

"The singular excellence of all Quackenbos's School-books is well known to the educational community. They are generally admitted to be the best manuals on the subjects of which they respectively treat."

—J. W. BULELEY, City Sup't of Schools, Brooklyn.

Quackenbos's Arithmetics.

PRACTICAL, \$1. ELEMENTARY, 60 cts.

PRIMARY, 40 cts.

The best Arithmetics before the public. The fullest on all the branches of Commercial Arithmetic, teaching the methods actually used by business men. The briefest in their rules and analyses, and the most practical and varied in their examples.

The only Arithmetics that recognize the recent important changes in financial matters—the only Arithmetics in all respects up to the times.

Quackenbos's Grammars.

ENGLISH GRAMMAR, \$1 20. FIRST BOOK

IN GRAMMAR, 50 cts.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

DR. JEROME KIDDER'S GENUINE SIX CURRENT MACHINE received the highest premium at the American Institute. All others pretending to have six currents are only the old trick revived, of the torpedo principle of one current taken over and over from the different metallic parts.

Dr. Hammond, late Surgeon-General of U. S. Army, in speaking of my improved apparatus, says that it is "the best yet devised in any country, for the treatment of disease."

The magnetism of the current A B is far greater in power than the so-called "direct and to and fro" current machine, which latter is proved by the records filed at Washington, to be only an abortive attempt to get a patent for a new name applied to the common machine, with two coils. Send for circular.

Address DR. JEROME KIDDER, 480 Broadway, New York.

TEMPERANCE CHIMES.—The National Temperance Society have just published a new Temperance Hymn and Tune Book, of 128 pages, comprising a great variety of New Music, Glee, Songs, and Hymns designed for the use of Temperance Meetings and Organizations, Bands of Hope, Glee Clubs, and the Home Circle. Many of the Hymns have been written expressly for this book, by some of the best writers in the country. The Odes of the Sons of Temperance and Good Templars are given in full, and set to appropriate music. The book is Edited by Wm. B. BRADBURY and J. N. STEARNS, and contains over 150 Hymns and Tunes, which will be found worthy of the great and noble cause they are intended to advance. Price, in paper covers, 30 cents, single copies; \$25 per hundred. Price, in board covers, 35 cents, single copies; \$30 per hundred. J. N. STEARNS, Publishing Agent, 173 William Street, New York.

HERALD OF HEALTH. ANNOUNCEMENT No. 1. Mrs. R. B. Gleason, M.D., is writing a series of LETTERS TO LADIES, for the *Herald of Health*. ANNOUNCEMENT No. 2. Moses Colt Tyler is furnishing a series of papers, called MINUTES OF AN ATHLETIC CLUB, for the *Herald of Health*. They are exceedingly fascinating and valuable.

ANNOUNCEMENT No. 3. Professor Rufus King Browne is furnishing a series of illustrated papers, called the PHYSIOLOGICAL ANATOMY AND PHYSIOLOGY OF MAN.

ANNOUNCEMENT No. 4. Henry Ward Beecher is furnishing an article monthly, and the one in the April number is his discourse on the duties of medical men, preached to medical students by request.

Besides this, each number contains more than fifty other articles of great merit and value. See full prospectus, February *Phrenological Journal*. Address MILLER, WOOD & CO., 15 Lighthouse Street, New York.

TO BOOK BUYERS!!! To Sunday-Schools. Our stock of Sunday-school books includes all the latest and best books from all the publishers.

School District, Family, and General Libraries—many times these Libraries can be made up for half the price usually paid.

THEOLOGY is a specialty with us. We do not hesitate to say that ours is the place for the Theologian to buy his books, and also stationery. *Sermon Paper*, every style and price.

N. TIBBALS & Co., 37 Park Row, New York.

AN ILLUSTRATED CIRCULAR, showing the facts in regard to the many different qualities of electricity, as now recognized by scientific men, will be sent to any address, free of expense.

Address DR. JEROME KIDDER, 480 Broadway, New York.

GOOD BOOKS BY MAIL.—Any book, magazine, or newspaper, no matter where or by whom published, may be ordered at publisher's price, from FOWLER AND WELLS.

THE LIBERAL CHRISTIAN, FOR 1867.

THE LIBERAL CHRISTIAN, a weekly religious paper, contains a large amount and variety of original matter contributed by the most eminent writers in the Unitarian, Universalist, and other liberal communions; correspondence from various parts of the country and Europe; occasional discourses by the best liberal preachers; criticisms and abstracts of new books and current literature; the best family and children's reading which can be purchased or selected; discussions of the most important and interesting questions of the day in an independent, fearless manner, but always in the light of Christian principles and in a Christian spirit; a summary of the religious intelligence most interesting to Liberal Christians generally, and a review of the principal events of the week.

THE LIBERAL CHRISTIAN takes the place of the *Christian Inquirer*, which was established in 1847, and for twenty years was regarded as one of the best religious papers in the country. The new and enlarged paper is established to represent and advocate the ideas and principles of liberal Christianity in their intellectual breadth, spiritual catholicity, and practical applications; and also to urge the claims of political and social reform, and whatever relates to human welfare and advancement. It will set forth the great principles in which liberal Christians generally agree, and cultivate friendly relations, a fraternal spirit and co-operative action among the various branches of the liberal household—endeavoring to bring into practical and effective union all who believe in Christianity, "pure and undefiled," as a rational faith and a working power for the redemption of the world.

The *Hartford Post* says of THE LIBERAL CHRISTIAN: "In typographical appearance, in its literary finish, and in the general run of its contents, both in its selected and original matters, it is unquestionably one of the ablest papers published in the United States." This high estimate is indorsed by the *New York Tribune*, *Evening Post*, *Boston Transcript*, *Norfolk County Journal*, and other leading papers of the country.

TERMS, \$3 PER YEAR, PAYABLE IN ADVANCE. Specimens sent free when asked for. NEW YORK, February, 1867.

Published by the
NEW YORK UNITARIAN PUBLICATION SOCIETY,
82 and 84 Nassau Street, New York.

Address "LIBERAL CHRISTIAN,"
Box 6095, P. O., New York.

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[CONTINUED FROM MARCH NUMBER.]

VIRTUOUS and vicious every man must be,
Few in the extreme, but all in the degree;
The rogue and fool by fits is fair and wise,
And e'en the best, by fits what they despise.
'Tis but by parts we follow good or ill,
For, vice or virtue, SELF directs it still;
Each individual seeks a several goal;
But Heaven's great view is one, and that the whole;
That counterworks each folly and caprice;
That disappoints the effect of every vice;
That happy frailties to all ranks applied,
Shame to the virgin, to the matron pride;
Fear to the statesman, rashness to the chief,
To kings presumption, and to crowds belief;
That, virtue's ends from vanity can raise,
Which seeks no interest, no reward but praise;
And build on wants, and on defects of mind,
The joy, the peace, the glory of mankind.

Heaven, forming each on other to depend,
A master, or a servant, or a friend,
Bids each on other for assistance call,
Till one man's weakness grows the strength of all.
Wants, frailties, passions, closer still ally
The common interest, or endear the tie;
To these we owe true friendship, love sincere,
Each home-felt joy that life inherits here;
Yet from the same we learn, in its decline,
Those joys, those loves, those interests to resign;
Taught, half by reason, half by mere decay,
To welcome death, and calmly pass away.*

Whate'er the passion, knowledge, fame, or pelf,
Not one will charge his neighbor with himself.
The learn'd is happy, nature to explore;
The fool is happy that he knows no more;
The rich is happy in the plenty given;
The poor contents him with the care of Heaven.
See the blind beggar dance, the cripple sing,
The sot a hero, lunatic a king;
The starving chymist in his golden views
Supremely blest; the poet in his muse.

See some strange comfort every state attend,
And pride bestow'd on all, a common friend;
See some fit passion every age supply;
Hope travels through, nor quits us when we die.
Behold the child, by nature's kindly law,
Pleas'd with a rattle, tickled with a straw;
Some livelier plaything gives his youth delight,
A little louder, but as empty quite;
Scarfs, garters, gold, amuse his ripper stage,
And beads and prayer-books are the toys of age;
Pleas'd with this bauble still, as that before;
Till tired he sleeps, and life's poor play is o'er!
Meanwhile opinion gilds with varying rays,
Those painted clouds that beautify our days;
Each want of happiness by hope supplied,
And each vacuity of sense by pride;
These build as fast as knowledge can destroy;
In folly's cup still laughs the bubble joy;

* For a treatise on the process of dying see "New Physiognomy." The author takes the ground that it is not hard for the good man, full of years, ripe with good works, and a settled faith in God, to die. That both the physical birth and death are natural, and in accordance with His plans and purposes.

* Playthings to the child are equivalent to property to the man; and it is a true saying of most of us, that we are "once a man and twice a child." Dotage is a second childhood. But man ripens into the spiritual. It is his *body*, not his mind or spirit, that grows old. The immortal part knows nothing of time but of eternity.

One prospect lost, another still we gain;
And not a vanity is given in vain;*
E'er mean self-love becomes by force divine,
The scale to measure others wants by thine.
Soft and confess, one comfort still must rise—
'Tis this, though MAN'S A FOOL, yet God is wise.

EPISTLE III.

OF THE NATURE AND STATE OF MAN WITH RESPECT TO SOCIETY.

The whole universe one system of society. Nothing made wholly for itself, nor yet wholly for another. The happiness of animals mutual. Reason or instinct operate alike to the good of each individual. Reason or instinct operate alike to society, in all animals. How far society is carried by instinct, how much farther by reason. Of that which is called the state of nature. Reason instructed by instinct in the invention of arts, and in the forms of society. Origin of political societies. Origin of monarchy. Patriarchal government. Origin of true religion, and government, from the same principle of love. Origin of superstition and tyranny, from the same principle of fear. The influence of self-love, operating to the social and public good. Restoration of true religion and government on their first principle. Mixed government. Various forms of each, and true end of all.

HERE then we rest: "The universal cause

Acts to one end, but acts by various laws."

In all the madness of superfluous health,
The train of pride, the impudence of wealth,

Let this great truth be present night and day,

But most be present, if we preach or pray.

I. Look round our world; behold the chain of love

Combining all below and all above.
See plastic nature working to this end,
The single atoms each to other tend,
Attract, attracted to, the next in place
Form'd and impell'd its neighbor to embrace.
See matter next, with various life endued,
Press to one center still, the general good.
See dying vegetables life sustain,
See life dissolving vegetate again:
All forms that perish, other forms supply,
(By turns we catch the vital breath, and die.)

* We repeat, "really" grows out of Approbation, when in excess. It is akin to self-love, but differs much from dignity or true manliness. It gives only temporary enjoyment, little or no real happiness.

Like bubbles on the sea of matter borne,
 They rise, they break, and to that sea return.
 Nothing is foreign; parts relate to whole;
 One all-extending, all-preserving soul
 Connects each being, greatest with the least;
 Made beast an aid of man, and man of beast;
 All served, all serving: nothing stands alone;
 The chain holds on, and where it ends, unknown.
 Has God, thou fool, worked solely for thy good,
 Thy joy, thy pastime, thy attire, thy food?
 Who for thy table feeds the wanton fawn,
 For him as kindly spread the flowery lawn.
 Is it for thee the lark ascends and sings?
 Joy tunes his voice, joy elevates his wings.
 Is it for thee the linnet pours his throat?
 Loves of his own, and raptures, swell the note.

The bounding steed you pompously bestride,
 Shares with his lord the pleasure and the pride.
 Is thine alone the seed that strews the plain?
 The birds of heaven shall vindicate their grain.
 Thine the full harvest of the golden year?
 Part pays, and justly, the deserving steer:
 The hog, that plows not, nor obeys thy call,
 Lives on the labors of this lord of all.

Know, nature's children all divide her care;
 The fur that warms a monarch, warm'd a bear.
 While man exclaims, "See all things for my use!"
 "See man for mine!" replies a pampered goose:
 And just as short of reason he must fall,
 Who thinks all made for one, not one for all.

Grant that the powerful still the weak control;
 Be man the wit and tyrant of the whole:
 Nature that tyrant checks: He only knows,
 And helps another creature's wants and woes
 Say, will the falcon, stooping from above,
 Smit with her varying plumage, spare the dove?
 Admires the jay, the insect's gilded wings?
 Or hears the hawk when Philomela sings:
 Man cares for all: To birds he gives his woods,
 To beasts his pastures, and to fish his floods:
 For some his interest prompts him to provide,
 For more his pleasure, yet for more his pride:
 All feed on one vain patron, and enjoy
 The extensive blessing of his luxury;
 That very life his learned hunger craves,
 He saves from famine, from the savage saves;

Nay, feasts the animal he dooms his feast,
 And, till he ends the being, makes it blest:
 Which sees no more the stroke, or feels the pain,
 Than favor'd man by touch ethereal slain.
 The creature had its feast of life before;
 Thou too must perish, when thy feast is o'er!
 To each unthinking being, Heaven a friend,
 Gives not the useless knowledge of its end:
 To man imparts it; but with such a view,
 As, while he dreads it, makes him hope it too:
 The hour conceal'd, and so remote the fear,
 Death still draws nearer, never seeming near.
 Great standing miracle! that Heaven assign'd
 Its only thinking thing, this turn of mind.*

II. Whether with reason, or with instinct blest,
 Know, all enjoy that power which suits them best;
 To bliss alike by that direction tend,
 And find the means proportioned to their end.
 Say, where full instinct is the unerring guide,
 What pope or council can they need beside?
 Reason, however able, cool at best,
 Cares but for service, or but serves when prest,
 Stays till we call, and then not often near;
 But honest instinct comes a volunteer,
 Sure never to o'ershoot, but just to hit;
 While still too wide or short is human wit;
 Sure by quick nature happiness to gain,
 Which heavier reason labors at in vain.
 This too serves always, reason never long;
 One must go right, the other may go wrong.
 See then the acting and comparing powers,
 One in their nature, which are two in ours!
 And reason raise o'er instinct as you can,
 In this 'tis God directs, in that 'tis man.†

Who taught the nations of the field and wood
 To shun their poison, and to choose their food?
 Prescient, the tides or tempest to withstand,
 Build on the wave, or arch beneath the sand?
 Who made the spider parallels design,
 Sure as De Moivre, without rule or line?
 Who bid the stork, Columbus like, explore
 Heavens not his own, and worlds unknown before?
 Who calls the council, states the certain day;
 Who forms the phalanx, and who points the way?

III. God, in the nature of each being, founds
 Its proper bliss, and sets its proper bounds:
 But as he framed the whole, the whole to bless,
 On mutual wants build human happiness;
 So, from the first eternal order ran,
 And creature linked to creature, man to man,
 Whate'er of life all quickening either keeps,
 Or breathes through air, or shoots beneath the deeps,
 Or pours profuse on earth, and nature feeds
 The vital flame, and swells the genial seeds.
 Not man alone, but all that roam the wood,
 Or wing the sky, or roll along the flood,
 Each loves itself, but not itself alone,
 Each sex desires alike, till two are one.

[TO BE CONTINUED.]

* In early youth, when the animal propensities predominate, we think little of the spiritual, and less of death. In middle age, our minds seem to balance between the material of the earth and the ethereal of the spiritual. But in old age, if the spiritual eyes have been opened, we naturally tire of earth and its interests, and yearn for "a house not made with hands, eternal in the heavens." It is not hard for a good man to let go of earth. He contemplates the change with serenity and hope. It is only the skeptic, the infidel, and the animal part of man that shrinks, fears, and trembles at the thought of his inevitable change.

† It would be blasphemy to attempt to teach a dog to pray. His instinct could not comprehend its significance. He has no moral sense.

‡ We claim, on phrenological grounds, that reason is at least a step higher than mere instinct. But we also claim that man possesses all the instincts common to the lower animals, even in a higher degree than the animals themselves: that reason is superadded, and that the moral sentiments make man by nature a religious being—for are not all nations and tribes inclined to worship?—and is not man, by virtue of his reason and his moral or spiritual sense, rather than by size or physical strength, lord of all created things? and who can place limits on the possibilities of his mental reach, or of development and improvement?

"OLD ABE," THE VETERAN EAGLE.

Who of our young readers has not heard of "Old Abe," the Veteran Eagle? We suppose nearly all have heard something about him; but for the benefit of those who have not, we present the following short account of the gallant bird, showing how nobly he did his duty in our late war in cheering on our brave boys to victory.

"Old Abe" is a native of Lake Superior, and when quite young was taken from his nest by O-g-e-mah-we-ge-zhig, a wild Indian in Upper Wisconsin, in the month of July, 1861. The Indian children called him "Mee-ke-zeen-ce" (Little Eagle). In the same year the eaglet was sold to a farmer for a bushel of corn, and who finding "Old Abe" grew very "fast and saucy," and was given to many belligerent freaks among his domestic animals, conceived the idea one day that his eagle should go to the war. Acting on this idea, he took him to Eau Claire, where he was sold. Subsequently he was presented to Company C, Eighth Wisconsin Volunteers, who made a standard for him, upon which he was carried beside the regimental flag. For three years he was in all the marches of the regiment, and in all their battles, cheering on his soldier comrades, and valiantly doing good service in his way. So, in one sense, the brave bird became the leader of his regiment.

A correspondent, who witnessed his appearance in battle, wrote:

"When the regiment is engaged in battle, 'Old Abe' manifests delight. At such a time he will always be found in his appropriate place at the head of Company C. To be seen in all his glory, he should be observed when the regiment is enveloped in the smoke of battle. Then the eagle, with spread pinions, jumps up and down on his perch, uttering such wild, fearful screams as an eagle alone can utter. The fiercer and louder the storm of battle, the fiercer, wilder, and louder the screams. What a grand history he will have—what a grand eagle he will be a hundred years hence! Pilgrims will come from all parts of the world to see the eagle that was borne through this, our second war for Independence."

Colonel J. W. Jefferson, who led the valiant Eighth in the Red River expedition, thus happily describes the eagle on parade and in battle:

"'Old Abe' was with the command in nearly every action (about twenty-two), and in thirty skirmishes. He enjoyed the excitement; and I am convinced, from his peculiar manner, he was well informed in regard to army movements, dress parade, and preparations for the march and battle. Upon parade, after he had been a year in the service, he always gave heed to 'attention!' With his head obliquely to the front, his right eye directly turned upon the parade commander, he would listen and obey orders, noting time accurately. After parade had been dismissed, and the ranks were being closed by the sergeants, he would lay

"OLD ABE," THE VETERAN EAGLE.

aside his soldierly manner, flap his wings, and make himself generally at home. When there was an order to form for battle, he and the colors were first upon the line. His actions upon those occasions were uneasy, turning his head anxiously from right to left, looking to see when the line was completed. Soon as the regiment got ready, faced, and put in march, he would assume a steady and quiet demeanor. In battle he was almost constantly flapping his wings, having his mouth wide open, and many a time would scream with wild enthusiasm. This was particularly so at the hard-fought battle of Corinth, when our regiment repulsed and charged, or, you might say, made a counter-charge, on Price's famous Missouri brigade."

At the close of the war "Old Abe" was publicly presented to the Governor of Wisconsin, and accepted by him on behalf of the State. He was the people's idol for a long time. Thousands came to see him from afar, and it became necessary that he should have a suitable residence for the reception of his numerous friends. So the noble bird was placed upon the retired list; a beautiful residence was appropriated to his use, and now he lives at Madison, Wisconsin, and is one of the "lions" of that city.

Not only was "Old Abe" of great service on the field of battle, but he has also been the means, through the instrumentality of Mr. Alfred Sewell, the editor of the *Little Corporal*, Chicago, of aiding very much our sick and wounded soldiers left in the trail of the war. When the great Sanitary Fair was held in Chicago, that gentleman procured a likeness of the brave eagle, and organized a corps of boys and girls throughout the whole of America to sell his photograph. These he called "The Army of the American Eagle," and they numbered nearly twelve thousand loyal children, and so

great was their success that Mr. Sewell was enabled to pay over sixteen thousand dollars to the committee of the Fair!

But Mr. Sewell had become so deeply interested in the success and happiness of his little children's army, and disliked to relinquish the hold he had gained on their affections so much, that he started the *Little Corporal*, through which he might correspond with them, and work with the children whom he loved; and to that gentleman we are indebted for this pretty little story, and the beautiful likeness of "Old Abe," the Veteran Eagle.

A NEGRO DISCUSSION ABOUT EGGS.—In the fairest village of Western New York, the "culled pussens," in emulation of their white brethren, formed a debating society for the purpose of improving their minds by the discussion of instructive and entertaining topics. The deliberations of the society were presided over by a venerable darkey, who performed the duties with the utmost dignity peculiar to his color. The subject for discussion on the occasion of which we write was, "Which am the mudder ob de chicken—de hen wot lay de egg, or de hen wot hatches de chick?" The question was warmly debated, and many reasons *pro* and *con*. were urged and combated by the excited disputants. Those in favor of the latter proposition were evidently in the majority, and the president made no attempt to conceal that his sympathies were with the dominant party. At length an intelligent darkey arose from the minority side, and begged leave to state a proposition to this effect: "Spouse," said he, "dat you set one dozen duck's eggs under a hen, and dey hatch, which am de mudder, de duck or de hen?" This was a poser, was well put, and nonplused the other side, even staggering the president, who plainly saw the force of the argument, but had committed himself too far to yield without a struggle; so, after cogitating and scratching his wool a few minutes, a bright idea struck him. Rising from his chair in all the pride of conscious superiority, he announced: "Ducks am not before the house; chicken am de question; derfore I rule de ducks out!" and do it he did, to the complete overthrow of the opponents.

THE PHRENOLOGICAL JOURNAL,

S. R. WELLS, EDITOR.

Is devoted to **The Science of Man**, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in **Choosing a Pursuit**, in **selecting a Wife or a Husband**, and in **judging of the dispositions of those around us**, by all the known external "Signs of Character."

TERMS.—A New Volume, the 45th, commenced with January (1867). Published monthly, \$2 a year in advance. Sample numbers, 20 cents. Clubs of ten or more, \$1 50 each. Supplied by Booksellers and Newsmen everywhere. Address, MESSRS. FOWLER AND WELLS, 889 Broadway, New York, U. S. A.

THE IMMENSE PROFITS OF THE TEA TRADE.

THE PROPRIETORS OF THE GREAT AMERICAN TEA COMPANY became fully convinced, several years ago, that consumers of Tea and Coffee were paying too many and too large profits on these articles of every day consumption, and therefore organized THE GREAT AMERICAN TEA COMPANY, to do away, as far as possible, with these enormous drains upon the Consumers, and to supply them with these necessities at the smallest possible price.

To give our readers an idea of the profits which have been made in the Tea Trade, we will start with the American Houses, leaving out of the account entirely the profits of the Chinese factors.

First: The American House in China or Japan makes large profits on their sales or shipments—and some of the richest retired merchants in this country have made their immense fortunes through their Houses in China.

Second: The Banker makes large profits upon the foreign exchange used in the purchase of Tea.

Third: The Importer makes a profit of 30 to 50 per cent. in many cases.

Fourth: On its arrival here it is sold by the cargo, and the Purchaser sells it to the Speculator in invoices of 1,000 to 2,000 packages, at an average profit of about 10 per cent.

Fifth: The Speculator sells it to the Wholesale Tea Dealer in lots, at a profit of 10 to 15 per cent.

Sixth: The Wholesale Tea Dealer sells it to the Wholesale Grocer in lots to suit his trade, at a profit of about 10 per cent.

Seventh: The Wholesale Grocer sells it to the Retail Dealer, at a profit of 15 to 25 per cent.

Eighth: The Retailer sells it to the Customer, for ALL THE PROFIT HE CAN GET.

When you have added to these EIGHT profits as many brokerages, cartages, storages, cooperages and waste, and add the original cost of the Tea, it will be perceived what the consumer has to pay. And now we propose to show why we can sell so very much lower than other dealers.

We propose to do away with all these various profits and brokerages, cartages, storages, cooperages and waste, with the exception of a small commission paid for purchasing to our correspondents in China and Japan, one cartage, and a small profit to ourselves—which, on our large sales, will amply pay us.

Through our system of supplying Clubs throughout the country, consumers in all parts of the United States can receive their Teas at the same price (with the small additional expense of transportation) as though they bought them at our warehouses in this city.

Parties getting their Teas from us may confidently rely upon getting them pure and fresh, as they come direct from the Custom House stores to our warehouses.

We warrant all the goods we sell to give entire satisfaction. If they are not satisfactory they can be returned at our expense within 30 days, and have the money refunded.

The Company continue to sell at the following prices:

COOLONG (Black), 70, 80, 90, best \$1 per lb.
MIXED (Green and Black), 70, 80, 90, best \$1 per lb.
ENGLISH BREAKFAST (Black), 80, 90, \$1, \$1 10, best \$1 20 per lb.
IMPERIAL (Green), 80, 90, \$1, \$1 10, best \$1 25 per lb.
YOUNG HYSON (Green), 80, 90, \$1, \$1 10, best \$1 25 per lb.
UNCOLORED JAPAN \$1, \$1 10, best \$1 25 per lb.

COFFEE DEPARTMENT.

Our Coffee Department is very extensive—the largest perhaps, in the country. We run three engines constantly, and sometimes four and five, in roasting and grinding our Coffee. Our Coffee buyers are experts, who examine most of the Coffees imported, and select the best and finest flavors for our trade. We employ the most experienced and skillful roasters, who exercise the greatest care that it shall be cooked in a perfect manner. It is always fresh, for our orders crowd our facilities to their utmost capacity. A considerable portion of the Coffee put upon the market of late years is picked while the pods are green, and subjected to artificial heat to open the pods. This is not so good as that which ripens in the natural way upon the plant. Our Coffee buyer thoroughly understands this business, and can readily distinguish the naturally ripened from the artificially cured; and he only buys the Coffee which is naturally ripened. We examine the cargoes as soon as they arrive, and our trade is so large that it requires all the finest lots. This is what gives our Coffee a superior flavor to many others, and the same flavor it used to have in days long gone by. It is a common saying that most Coffee does not taste as well as it formerly did. The reason for it is, that a considerable portion of it is picked before it is fully ripe. We sell none but the fully ripe, rich flavored Coffee.

Coffee Roasted and Ground Daily.

GROUND COFFEE, 20c., 25c., 30c., 35c., best 40c. per pound. Hotels, Saloons, Boarding-House Keepers, and families who use large quantities of Coffee, can economize in that article by using our FRENCH BREAKFAST AND DINNER COFFEE, which we sell at the low price of 30c. per pound, and warrant to give perfect satisfaction.

Consumers can save from 50c. to \$1 per pound by purchasing their Teas of

THE GREAT AMERICAN TEA COMPANY.

No. 81 and 83 VESEY ST., corner of Church St.
No. 640 BROADWAY, corner of Bleeker St.
No. 461 EIGHTH AVE., north cor. Thirty-fourth St.
No. 299 SPRING ST.
No. 205 FULTON ST., BROOKLYN, cor. Concord St.
No. 188 GRAND ST., WILLIAMSBURG.

COUNTRY CLUBS, Hand and Wagon Peddlers, and small stores, (of which class we are supplying many thousands, all of whom are doing well), can have their orders promptly and faithfully filled, and in case of Clubs can have each party's name marked on their package and directed by sending their orders to Nos. 81 and 83 Vesey Street.

Our friends are getting up Clubs in most towns throughout the Country, and for which we feel very grateful. Some of our Clubs send orders weekly, and some not so often; while others keep a standing order to be supplied with a given quantity each week, or at stated periods, and in all cases, (where sufficient time has elapsed), Clubs have repeated their orders.

Parties sending Club or other orders for less than \$30 had better send Post-Office drafts, or money with their orders; to save the expense of collecting by express; but larger orders we will forward by express, to collect on delivery.

We return thanks to parties who have taken an interest in getting up Clubs; and when any of them come to New York we shall be happy to have them call upon us and make themselves known.

Hereafter we will send a complimentary package to the party getting up the Club. Our profits are small, but we will be as liberal as we can afford. We send no complimentary packages for Clubs of less than \$30.

N. B. All villages and towns where a large number reside, by *clubbing* together can reduce the cost of their Teas and Coffees about one-third by sending directly to the

GREAT AMERICAN TEA COMPANY,

Nos. 81 & 83 Vesey St., Cor. Church.
Post-Office Box, No. 5,649, New York City.

GETTING UP CLUBS.

Some parties inquire of us how they shall proceed to get up a Club. The answer is simply this: Let each person wishing to join in a Club say how much Tea or Coffee he wants, and select the kind and price from our Price List, as published in the paper or in our circulars. Write the names, kinds and amounts plainly on a list, and when the Club is complete send it to us by mail, and we will put each party's goods in separate packages, and mark the name upon them, with the cost, so there need be no confusion in their distribution—each party getting exactly what he orders and no more. The cost of transportation the members of the club can divide equitably among themselves.

The funds to pay for the goods ordered can be sent by drafts on New York, by Post-Office money orders, or by express, as may suit the convenience of the club. Or, if the amount ordered exceeds thirty dollars, we will, if desired, send the goods by Express, to "collect on delivery."

We publish some of our Club lists to show how it is done, and as matter of reference.

After the first Club we send blanks. Direct your orders plainly, THE GREAT AMERICAN TEA COMPANY, Nos. 81 and 83 Vesey street, Post-Office Box, 5,649—as some parties imitate our name as near as they dare to.

NOTICES OF THE PRESS.

From the *Methodist*, New York City.

THE GREAT AMERICAN TEA COMPANY.—In noticing the operations of this large and enterprising establishment, it may be proper for us to offer a remark in explanation of the reasons which induce us to call the attention of the community to a concern which has reached its eminence in public favor. It is our undeviating rule to exercise a scrupulous judgment in relation to business enterprises—never recommending any except such as we believe have been proved worthy and reliable, and whose system of business, uprightness of dealing with their customers, and ample capital to fulfill their engagements, are fully established. Upon these principles we call attention to the advertisement of the GREAT AMERICAN TEA COMPANY, published in our advertising columns. The Company have several very large stores, located in different parts of the city, stocked with the best and most ser-

vicable goods, which they are content to sell at merely living profits, as they have proved by their prices for the past five or six years. They have but *one price*, which is no small consideration to those who are dependent on any considerable degree upon servants or children to make purchases, or to those who wish to order from the country. By these rules alone the Company propose in the future to conduct their vast and rapidly augmenting trade. Believing that the ability and disposition of the Company are ample to perform all they promise, warrants us in calling special attention to them in our columns. It is a trite saying "that the honest strivings of honest men are sure to be commended, their business efforts encouraged and ultimately adequately compensated."

COMPLIMENTARY LETTERS FROM CLUBS.

Xenia, Dallas Co., Iowa, Nov. 8, 1866.

Great American Tea Company.

Sirs: The order that I sent to your house the fore part of this Summer gave universal satisfaction, and all of the Club have been trying for some time to get me to make up another. The complimentary package which I received was the best tea I have drank in Iowa. Please fill the following order, and Express me at Boonsborough, Iowa.

ZERAH E. COTTRELL.

Franconia, N. H., Nov. 10, 1866.

The Great American Tea Company.

Gentlemen: My last order for Tea of 59 pounds came to hand in due time all right, and has given entire satisfaction, and if you continue to send us as good Teas as you have sent, you are sure of a permanent trade in this place. The Imperial was the best of anything we have had in this place. Several of the Clubs have told me that it was better than the Tea they had paid \$2 a pound. I send you another order for \$68 65. Please forward, as before, by Express, to Franconia, N. H., Grafton County, I thank you for the complimentary package. Address

PRIEST YOUNG, Franconia, N. H.

Elk Horn, Wis., Nov. 10, 1866.

Great American Tea Company.

My order for Tea was filled and the Tea arrived safely, promptly, good weight, and good quality. We are all well satisfied, and others wished they had joined us. I shall doubtless send another order before long, for we have paid large profits to small traders long enough.

Respectfully yours, &c.,

O HAND.

Fairmount, Ill., Nov. 12, 1866.

Great American Tea Company.

GENTLEMEN: Your Advocate fell into my hands yesterday morning, and I at once opened a Club in my shop, and hasten to send it now, as it has reached the required size, (\$30) and it will take faster and easier after we receive the first bill. I have cut out and posted up in my shop the price list and some other items, and shall keep a Club open perpetually. My shop is in a public place and adjacent to the depot, and I can, ere long, buy of you about all the Tea that is used in this town and vicinity. I shall aim to keep some Tea on hand to supply such persons as cannot wait for return bill, and also that I may keep the Club open longer, and thereby increase the size of the bill. I would say that we are all heartily glad that your enterprise is in actual success.

Yours truly,

H. M. ROBINSON.

CLUB ORDERS.

Triumph, Ill., Jan. 7, 1867.

To the Great American Tea Company.

Nos. 81 and 83 Vesey St., N. Y.

GENTS: My last order came to hand in good condition, and gave entire satisfaction. I herewith send you another order, all new names, and all farmers. Please send as good Tea as you sent before, and you will hear from us again. Many thanks for the complimentary package.

Yours truly,

H. H. WORSLEY;

Please ship to Mendota (by Express) Laclede Co., Ill.

- Constitution of Man.** By Geo. Combe. Authorized Ed. Illustrations. \$1.75
- Complete Works of Dr. Gall on Phrenology.** 6 vols., (Very scarce.) net. \$15
- Defence of Phrenology; A genuine and Testimony.** By Boardman. \$1.50
- Domestic Life, Thoughts on, its Concord and Discord.** By N. Sizet. 25c.
- Education Complete.** Embracing Physiology, Animal and Mental, Self-Culture, and Memory; One large vol. By Fowler. 4.00
- Education, founded on the Nature of Man.** By Dr. Spurzheim. Muslin. 1.50
- Illustrated Chart of Physiognomy, in map form.** 25c.
- Matrimony, or, Phrenology and Physiology applied to the Selection of Congenial companions for Life.** By Fowler. 50c.
- Memory and Intellectual Improvement; applied to Self-Education.** 1.50
- Mental Science, Lectures on, according to the Philosophy of Phrenology.** By Rev. G. S. Weaver. Muslin. 50c
- New Physiognomy, or, Signs of Character.** As constituted through Temperament and External Forms, and especially in the Human Face. By S. R. Wells. Fifty illustrations. In one large volume, handsomely bound. In muslin. 1.00 Heavy calf, with gilded edges. 1.60 Turkey morocco, full gilt. 1.60
- The Treatise of Mr. Wells, which is admirably printed, and profusely illustrated, is probably the most complete Hand-Book on the subject in the language. — N. Y. Tribune.
- Phrenology Proved.** Illustrated and Applied. Thirty-seventh edition. A standard work on the Science, muslin. 1.75
- Phrenology and the Scriptures.** By Rev. John Pierpont. 20c
- Phrenological Guide.** Designed for the use of Students. 25c.
- Phrenological Bust.** Designed especially for Learners, showing the exact location of all the Organs of the Brain fully developed. Price, including box for packing (Not marshallable). 1.75
- Phrenological Specimens for Societies and Private Cabinets.** 40 casts net. (not marshallable). 30.00
- Self-Culture and Perfection of Character.** Muslin. 1.50
- Self-Instructor in Phrenology and Physiology.** Illustrated with one hundred engravings. Paper. 50c. The same in muslin. 75c.

HYDROPATHY; OR, WATER CURE.

- Accidents and Emergencies.** By Alfred Smees. Notes by Trall. Illustrated. 25c.
- Children, their Hydropathic Management in Health and Disease.** Dr. Shew. 1.75
- Consumption, its Causes, Prevention and Cure.** By Dr. Shew. Muslin. 1.50
- Cook Book, Hydropathic.** With New Recipes. Illustrated. By Dr. Trall. 1.50
- Diseases of the Throat and Lungs, including Diphtheria.** By Dr. Trall. 25c.
- Domestic Practice of Hydropathy, with 15 engraved illustrations of important subjects.** By F. Johnson, M. D. \$2.00
- Family Physician, Hydropathic.** By Dr. Shew, a large and valuable work for home practice. Profusely illustrated. 4.00
- Hydropathy, or, Water-Cure. Principles and Modes of Treatment.** Dr. Shew. 1.50
- Hydropathy for the People.** With observations on Diet, Air, and Exercise. Notes by Dr. Trall. 1.50
- Midwifery and the Diseases of Women.** A practical work. By Dr. Shew. 1.75
- Philosophy of Water-Cure.** By J. Babinette, M.D. A work for beginners. 50c
- Practice of Water-Cure.** By Drs. Wilson and Gully. A handy popular work. 50c.
- Hydropathic Encyclopedia:** Illustrated. A Complete System of Hydropathy and Hygiene, embracing Anatomy illustrated; Physiology of the Human Body; Hygienic Agencies, and the Preservation of Health; Dietetics and Cookery; Theory and Practice of Treatment; Special Pathology and Hydro-Therapeutics, including the Nature, Causes, Symptoms, and Treatment of all known Diseases; Application to Surgical Diseases and to Hydropathy, to Midwifery and the Nursery. With Three Hundred Engravings, and nearly One Thousand Pages, including a Glossary, Table of Contents, and Index, complete. By R. T. Trall, U.D. 4.50
- Of all the numerous publications which have attained such a wide popularity, as issued by FOWLER & WELLS, perhaps none are more adapted to general utility than this rich, comprehensive, and well-arranged Encyclopedia. — N. Y. Tribune.
- Water-Cure in Chronic Diseases.** An exposition of the Causes, Progress, and Terminations of Various Chronic Diseases. By Dr. J. M. Gully. An important work. 2.00
- Water and Vegetable Diet in Scrofula, Cancer, Asthma, etc.** By Dr. Lanib. Notes by Dr. Shew. Muslin. 1.50
- Water-Cure in Every Known Disease.** By J. M. Hauke. Muslin. 1.50
- Water-Cure Manual.** A Popular work on Hydropathy. Muslin. 1.50

WORKS ON PHYSIOLOGY.

- Alcoholic Controversy.** A Review of the *Washington Review* on the Physiological Errors of Teetotalism. By Dr. Trall, Sec. 50c.
- Anatomical and Physiological Plates.** Those Plates were arranged expressly for Lecturers on Health, Physiology, etc. By R. T. Trall, M.D., of the New York Hydropathic College. They are six in number, representing the normal position and life-size of all the internal viscera, magnified illustrations of the organs of the special senses, and a view of the principal nerves, arteries, veins, muscles, etc. For popular instruction, for families, schools, and for professional reference, they will be found far superior to anything of the kind heretofore published, as they are more complete and correct in artistic design and finish. Price for the set, fully colored, backed and mounted on rollers. (Not marshallable). 20.00
- Combe's Physiology, applied to the Improvement of Mental and Physical Education.** Notes by Fowler. Muslin. 1.75
- Digestion, Physiology of.** The Principles of Dietetics. By Dr. Combe. 50c.
- Family Gymnasium.** With numerous illustrations, containing the most important method of applying Gymnastic Exercises, of Kinesiotherapy, and Vocal exercises to the development of the bodily organs, the invigoration of their functions, the preservation of health, and cure of diseases and deformities. By R. T. Trall, M.D. 1.75
- Family Dentist, A Popular Treatise on the Teeth.** By D. C. Warner, M.D. 1.50
- Food and Diet, containing an Analysis of every kind of Food and Drink.** By Dr. J. Pereira. Edited by Dr. Lee. 1.75
- Fruits and Farinacea the Proper Food of Man.** With Notes and engraved illustrations. By R. T. Trall, M.D. Muslin. 1.75
- Human Voice, its Right Management in Speaking and Reading.** 50c.
- Hereditary Descent, its Laws and Facts applied to Human Improvement.** 1.50
- Infancy, or, the Physiological and Moral Management of Children.** Illustrated. By Dr. Combe. muslin. 1.50
- Natural Laws of Man.** By Dr. Spurzheim. A good work. 75c.
- Philosophy of Sacred History.** Considered in relation to Human Ailment and the Wines of Scripture. By Sylvester Graham. 3.50
- Physiology, Animal and Mental, applied to Health of Body and Power of Mind.** By Fowler. muslin. 1.50
- Sober and Temperate Life, with Notes and Illustrations by Louis Cornaro.** 50c.
- The Science of Human Life.** By Sylvester Graham, M.D. With a Portrait and Biographical sketch of the Author. 3.50
- Tea and Coffee, their Physical, Intellectual, and Moral effects.** By Alcott. 25c.
- Teeth, their Structure, Diseases and Management, with Engravings.** 25c.
- Special List.** We have, in addition to the above, Private Medical Works and Treatises on subjects which, although not adapted to general circulation, are invaluable to those who need them. This Special List will be sent on pre-paid application.

MISCELLANEOUS.

- Aims and Aids for Girls and Young Women.** By Rev. G. S. Weaver. 1.25
- Esop's Fables.** People's edition, beautifully illustrated. 1.00
- Chemistry, applied to Physiology, Agriculture and Commerce.** By Liebig. 50c.
- Fruit Culture for the Million, or, Hand-Book for the Cultivation and Management of Fruit Trees.** Illustrated with Ninety Engravings. By Thomas Greig, muslin. 1.00
- Father Mathew, the Temperance Apostle.** Portrait, Character, and Biography. By S. R. Wells. 12c.
- Human Rights, and their Political Guarantees.** By Judge Hurlbut. 1.50
- Home for All.** The Gravel Wall, a New, Cheap, and Superior Mode of Building, with Engravings, Plans, Views, etc. 1.50
- Hopes and Helps for the Young** of both sexes. By Rev. G. S. Weaver. An excellent work. mus. in. 1.50
- Horace Mann's Works, his Lectures on various subjects, comprising many of his best addresses, with portrait.** 3.00
- Immortality Triumphant.** The Existence of a God, with the Evidence. By Rev. J. B. Dods. muslin. 1.50
- Movement-Cure.** Embracing the History and Philosophy of this System of Medical Treatment. Illustrated. By G. H. Taylor, M.D. 1.75
- Notes on Beauty, Vigor and Development.** Illustrated. 15c.
- Physical Perfection, or, the Philosophy of Human Beauty; showing how to Acquire and Retain Bodily Symmetry, Health and Vigor; Secure Long Life, and avoid the Infirmitates and Deformities of Age.** An excellent work. By D. H. Jacques. 1.75
- Saving and Wasting, or, Domestic Economy.** Illustrated by Susan Robinson. 1.50
- Three Hours' School a Day.** Useful for Parents and Teachers. 1.50
- The Christian Household,** embracing the Christian Home—Husband, Wife, Father, Mother, Child, Brother, and Sister. By Rev. G. S. Weaver. Read it. 1.00
- The Right Word in the Right Place; a Pocket Dictionary of Synonyms, Technical Terms, Abbreviations, Foreign Phrases, etc.** 7c.
- Ways of Life, the Right Way and the Wrong Way.** By Rev. G. S. Weaver. A capital work. muslin. 1.00
- Weaver's Works for the Young.** Comprising, "Hopes and Helps," "Aims and Aids," and "Ways of Life," 3.00

NEW HAND-BOOKS.

- How to Write, A Pocket Manual of Composition and Letter-Writing.** Invaluable to the young. 75c.
- How to Talk, A Pocket Manual of Conversation and Debate, with more than Five Hundred Common Mistakes in Speaking Corrected.** 75c.
- How to Behave, A Pocket Manual of Republican Etiquette and Guide to Correct Personal Habits, with Rules for Debating Societies and Deliberative Assemblies.** 75c.
- How to do Business, A Pocket Manual of Practical Affairs, and a Guide to Success in Life, with a Collection of Legal and Commercial Forms, Suitable for all.** 75c.
- Hand-Books for Home Improvement (Educational):** comprising, "How to Write," "How to Talk," "How to Behave," and "How to do Business," in one large volume. Indispensable. 2.25 (More than 100,000 copies of this work have been sold. A capital Book for Academics.)
- Rural Manuals,** comprising "The House," "The Farm," "The Garden," and "Domestic Animals." In one large vol., 2.25
- Library of Mesmerism and Psychology.** Comprising the Philosophy of Mesmerism, Clairvoyance, and Mental Electricity; Fascination, or the Power of Charm; The Mesmerism, or the World of Sens; Electrical Psychology, the Doctrine of Impressions; The Science of the Soul, treated Physiologically and Philosophically. Complete in two illustrated vols. 4.00
- The Emphatic Diaglott, or, the New Testament in Greek, with a Literal Interlinear Translation, and a new Version in English.** An interesting and valuable work. Plain. 4.00 In Fine Binding. 5.00
- The book furnishes evidence of purposed faithfulness, more than usual scholarship, and remarkable literary industry. It cannot fail to be an important help to those who wish to become better acquainted with the revealed will of God. For these reasons I wish the enterprise of publishing the work great success. — From THOMAS A. ARMITAGE, D. D., Pastor of the Fifth Avenue Baptist Church, New York.

Agents, Booksellers, and others, would do well to engage in the sale of these Works, in every State, County, Town, and Village throughout the country. They are not kept by Booksellers generally. The market is not supplied, and thousands might be sold where they have never yet been introduced. For Wholesale Terms, and "Special Lists," please address Messrs. FOWLER & WELLS, 389 BROADWAY, NEW YORK, U. S. A.

WHAT IS PHYSIOGNOMY?

"In nature all is connection and harmony. Each external appearance is the sign of an inherent quality; each point on the surface of a body indicates the condition of the internal parts of the structure."—DE LA SARTHE.

In its most general sense, Physiognomy (from *phao*, nature, and *gnomikos*, knowing) signifies a knowledge of nature; but more particularly of the forms of things—the configuration of natural objects, whether animate or inanimate. But it is mainly to the human form that physiognomy as a science or system, and as an art, is usually applied; though animal, and even vegetable and mineral forms may be referred to in illustration of principles or of facts. In this narrower application we may define it as—a knowledge of the correspondence between the external and the internal man—between the physical system and the spiritual principle which animates and controls it—between the manifest effect and the hidden cause—and of the signs by means of which this correspondence is expressed in the face and other parts of the body. As an art it consists in reading character by means of its indications in the developments of the body as a whole, but more particularly of the lines of the face.

We say, more particularly of the face, because it is there that the great number of the signs of character are most clearly and legibly inscribed; but physiognomy, as we expound it, embraces the whole man. It takes into account the temperament; the shape of the body, the size and form of the head; the texture of the skin; the quality of the hair, the degree of functional activity, and other physiological conditions, as well as the features of the face. It embraces, in fact, in its practical application, the wide domains of ethnology, physiology, phrenology, and their kindred sciences.

THE FACE OF A WATCH.

As the face of a watch presents to the eye signs of the movements going on within, and ceases to tell the hour whenever those movements cease, so the "human face divine" is an index of internal emotions and loses all power to change its expression so soon as the vital powers are withdrawn. Behind the face of the watch is the machinery—which is the watch. Behind the human countenance are the complicated apparatuses of bones, muscles, and nerves, which form the human machinery; but behind this machinery there is what the watch has not, a controlling intelligence, which precedes the living organism to which it gives rational activity.

O wad some power the giffle gie us,
To see ourselves as others see us!
It wad frae mony a blunder free us,
An' foolish notion.—BURNS.

BENEFITS OF PHYSIOGNOMY.

"To find the mind's construction in the face."—SHAKESPEARE.

But, *cuius homo?* This question is sure to come up, and may as well be answered here as elsewhere. What good will it do?

"Know thyself!" is the injunction of the ancient philosopher; and wise men in all ages have considered self-knowledge as the most useful and important of all learning. Physiognomy furnishes us with the key to this knowledge. It enables us to read our own characters, as legibly recorded on our physical systems, to judge accurately of our strength and our weakness, our virtues and our faults; and this self-knowledge is the first step toward self-improvement. Without a knowledge of our physical, mental and spiritual nature, we must go blindly about the work of developing or disciplining ourselves in either department. One might as well undertake to repair a steam-engine or a watch without any knowledge of mechanism. Knowing ourselves aright, we can, as it were, reconstruct ourselves on an improved plan, correcting unhandy deviations, moderating excessive developments, supplying deficiencies, molding our characters, and with them our bodies, into symmetry and harmony.

Next to a knowledge of ourselves is that of our fellow men. We are social beings. We are brought into daily and hourly contact with other social beings. Much of our happiness and success in life depends upon the character of the intercourse we hold with them. To make it pleasant and profitable we must be able to read men as an open book. Physiognomy furnishes the alphabet, which, once thoroughly learned, "he who runs may read."

MATRIMONIAL HINTS.

"Mark you when you but speak to her,
The amorous movement of her chin—
That fair round chin!" OLD PLAY.

Would you choose a wife or a husband? It is too important a matter to be left to chance. If Love be blind, Reason should lead him. The head should guide the heart. Knowing ourselves, and having at command the means of knowing those around us, it will be our own fault, if we make an unwise choice, and wreck our happiness on the rocky headlands of conjugal discord.

All the young women who present themselves before the wife-seeking bachelor in society, bear their "characters" about with them, plainly written on their faces. Were we all well instructed physiognomists, Margaret, the kitchen maid, would not find it necessary to carry hers in her pocket also.

"The flame of the life to be,
We weave with colors all our own
And in the field of destiny,
We reap as we have sown."

SIGNS OF CHARACTER,

As manifested in Temperament and External Forms, and especially in the Human Face Divine. Large 12mo, 768 pages. With more than 1,000 Engravings. New York: FOWLER & WELLS, Publishers. Price, prepaid, muslin, \$5; calf, marble edges, \$8; turkey morocco, gilt, \$10.

FROM THE PREFACE.

We know how widely mankind differ in looks, in opinion, and in character, and it has been our study to discover the causes of these differences. We find them in organization. As we look, so we feel, so we act, and so we are. But we may direct and control even our thoughts, our feelings, and our acts, and thus, to some extent,—by the aid of grace—become what we will. We can be temperate or intemperate; virtuous or vicious; hopeful or desponding; generous or selfish; believing or skeptical; prayerful or profane. We are free to choose what course we will pursue, and our bodies, our brains, and our features readily adapt themselves and clearly indicate the lives we lead and the characters we form.

It has been our aim to present this subject in a practical manner, basing all our inferences on well-established principles, claiming nothing but what is clearly within the lines of probability, and illustrating, when possible, every statement. Previous authors have been carefully studied, and whatever of value could be gleaned we have systemized and incorporated, adding our own recent discoveries. For more than twenty years we have been engaged in the study of man, and in "character-reading" among the people of various races, tribes and nations, enabling us to classify the different forms of body, brain, and face, and reduce to method the processes by which character may be determined. Hitherto but partial observations have been made, and of course only partial results obtained. We look on man as a whole—made up of parts, and to be studied as a whole, with all the parts combined.

Contents of

Introduction.—Physiognomy Defined, A Historical Sketch, Advent of Lavater, Modern Writers, Physiognomy To-day, Universally Practiced, Emerson on Physiognomy, Solomon, Benefits of Physiognomy, Matrimonial Hints, Its Application to business, Self-Improvement, Harmony of Physiognomy with Phrenology.

An Account of Previous Systems.—System of Lavater, General Rules, The Forehead, The Eyes, The Eyebrows, The Nose, The Cheeks, The Mouth, The Chin, The Forehead and Mouth, Stridility, Folly, Sophistry, Knaves, Women, Caution, The Smile To be Avoided, Thinkers, Cautious, Manly Character. Alexander Walker's System, General Rules, The Mouth, The Nose, The Eye, The Ear, The Chin and Jaw, Dr. Redfield's System, Analysis of Man, The Twelve Qualities, Names of Physiognomical Signs according to Dr. Redfield, Classification of Faculties, Practical Examples, with Illustrations.

Structure of the Human Body.—The Mechanical System, The Bones, The Ligaments, The Muscles, Thorax and Pelvis, Vital System, The Lymphatics, The Blood-Vessels, The Glands, The Heart, Mental System, The Organs of Sense, The Cerebrum, The Cerebellum, The Spinal Cord and its Connections, amply illustrated with Engravings.

General Principles Stated.—Law of Correspondence, Law of Homogeneity, Law of Special Development, Law of Quantity, Law of Quality, Law of Temperament, Law of Form, Law of Distinct Functions, Law of Latency.

The Temperaments Defined.—The Ancient Doctrine, Modifications, Brain Left Out, Dr. Spurzheim's Description, The New Classification, The Motive Temperament, The Vital Temperament, The Mental Temperament, Nervous, Bilious, Sanguine, and Lymphatic. (Illustrated.)

Man and Woman Compared.—Size, Venus and Apollo, General Form, Sex in the Features, Phrenological Differences, Physiognomical Distinctions, Lavater's Antithesis, Let Man be Manly and let Woman be Womanly.

General Forms of Faces.—The Oblong Face, The Round Face, The Pyramidal Face, Profiles, Facial Angles, with illustrations, an interesting study.

Outlines of Modern Phrenology.—Phrenology Defined, As an Art, Basis, First Principles, Names, Numbers and Location of Organs, Symbolical Head, Definition of Organs, Domestic Propensities, Selfish Propensities, Aspiring and Governing Organs, Moral Sentiments, Perfective Faculties, Perceptive Faculties, Literary Faculties, Reasoning Faculties.

Anatomy of the Human Face.—Framework of the Face, Muscles of the Face, Bones of the Head and Face, Sinuses of the Face, Muscles of the Eye and Eyebrows.

The Human Chin, What it Indicates.—Chin and Cerebrum, Love or Amativeness, Chin Classified, The Pointed Chin, The Indented Chin, The Narrow Square Chin, The Broad Square Chin, The Broad Round Chin, Will or Determination, Scorn and Contempt, Economy Indicated in the Chin.

The Jaws and the Teeth.—Comparative Anatomy, Heads of the Wolf and the Sheep Compared, A Sign of Animality, The Jaws and Diet, Destructiveness, Love of Overcoming, Signs of Physical Degeneracy.

The Human Mouth Indicates Character.—The Mouth Tells Tales, General Remarks, The Lips and the Affections, Philosophy of Kissing, Friendship, Hospitality, Love in the Lips, Jealousy, The Lips of Contempt, Approbation, Love of Distinction, Firmness and Self-Esteem, Gravity and Gloominess, Mirthfulness, Animals and Savages, Complacency, Self-Control, Enjoyment, Dissatisfaction and Hate, Other Signs.

All About Noses, With Illustrations.—Some General Remarks, The Nose as a Sign of Development, Noses Classified, The Roman Nose, Executiveness, The Greek Nose, Refinement, The Jewish Nose, Commercialism, The Snub Nose, Undevelopment, The Celestial Nose, Inquisitiveness, Tristram Shandy on the Nose, What is a Cognitive Nose, The Apprehensive Nose, The Inquisitive Nose, A Topical Nose, Combative Noses, The Defensive Nose, The Irritable Nose, The Aggressive Nose, Contrasted Noses, The Tameful Nose, Memory of Names, Intellectual Noses, Front Views, Secretive Nose, The Confiding Nose, Acquisitive Nose, The Economical Nose, Feminine

New Physiognomy, OR SIGNS OF CHARACTER

AS MANIFESTED IN
TEMPERAMENT AND EXTERNAL FORMS,

AND ESPECIALLY IN

"The Human Face Divine."

BY SAMUEL R. WELLS.

Editor Phrenological Journal and Life Illustrated.

NEW YORK:

FOWLER & WELLS.

One Large Vol. nearly 800 pages, with more than 1,000 Illustrative Engravings, in three styles of binding—handsome embossed muslin, \$5; heavy calf, with marble edges, \$8; rich turkey morocco, full gilt, elegant, \$10. A beautiful presentation book suitable for the center-table.

Noses, National Noses, The American Nose, The German Nose, The English Nose, The Irish Nose, The French Nose, Miscellaneous National Noses, Indian Noses, Negro Noses, Mongolian Noses, Noses of the Pacific Islanders, Noted Noses, Photographed Noses, The Noses of Sculpture, Lord Brougham's Nose, Some Poetical Noses, A Double Nose, The End of the Nose.

About the Eyes—Language, Color, and Character.—Size of the Eye, Prominence of the Eye, Language, Width of the Eye, Impossibility, The Uplifted Eye, Prayerfulness, The Downcast Eye, Humility, Rapture and Wonder, The Eyelids, Mirthfulness in the Eye, Probity, The Eye of the Drunkard, The Color of the Eye, What it Indicates, Effects of Climate, Blue Eyes, Black Eyes, Daniel Webster's Eyes, Brown Eyes, Hazel Eyes, Gray Eyes, Green Eyes, Opinions about Eyes, Expression, Children's Eyes, Educating the Eye, Eyes of Celebrated Persons, The Eyebrows.

The Cheeks and the Complexion.—Temperament and Health, Complexion, Blushing, Dimples, Supposed Discoveries of Dr. Redfield, Protection, Hurling, hedeiae, Wave Motion, Watchfulness, Rest and Repose, Sleep.

What the Forehead Indicates.—The Blending of Phrenology and Physiognomy, Intellectual Capacity, Perception, Memory of Events, Reasoning Power, Wit or Mirthfulness, Ideality, Benevolence, Conscientiousness.

Signs of the Neck and Ears.—Vitality, Tonsality of Life, An Indian's Opinion, Masculine Energy, Children, Firmness, Self-Esteem, The Ear, Tone.

The Hair and Beard—Their Color, Quality, and Character.—Form and Structure, How the Hair Grows, Color of the Hair, Dyeing the Hair, National Peculiarities of the Hair, Remarkable Length, Modes of Wearing the Hair, The Church on Long Hair, Absurdities of the Female Coiffure, Natural Curiousities, Mixed Races, Cutting the Hair, Wigs, Quality of the Hair, Gray Hair, Baldness, Physiognomical Indications, Hair, Wool, Fur, Political Significance of Long Hair, The Beard, The Modern Oriental, Greek and Roman Beards, Long Beards, The Church on the Beard, How Duprat Lost his Bishopric, A Modern Bull against the Beard, Beards Classified, Peter the Great, The Beards of To-day, Ethnology of the Beard, Uses of the Beard, Physiognomical Indications, Bearded Women.

Human Hands and Feet—Varieties.—Structure of the Hand, Manual Movements, Why the Fingers are of Different Lengths, How we hold a Ball, The Ring-Finger, The Nail, Why are we Right-handed, Physiognomy of the Hand, Hands Classified, The Long Hand, Activity, The Thick Hand, Vivacity, The Small, Slender Hand, Delicacy, Hand and Heart, Tux Foot, Bones of the Foot, The Arch of the Foot, Ligaments, Muscles of the Foot and Leg, Walking, Positions in Walking, Forms of the Feet.

Signs of Character in Action, in Walk, and in Voice.—Shaking Hands, Why do we Shake Hands, Character in the Walk, The Walk of Animals, The Voice, its Physiology, Differences in the Voice, The Voice and Character, The Nasal Twang, Music and Character, The Voice of Devotion, Remembering Voices, Stammering, Dress Indicative of Character, Temperaments and Colors.

The Physiognomy of Insanity.—What is Insanity, Varieties of Insanity, Celebrated Maniacs, Causes of Insanity, Treatment of Insanity, Prevention, Physiognomical Signs of Insanity, Insanity is Discordance, Cranial Deformities, The Hair, The Skin, The Eyes, The Eyebrows, The Nose, The Mouth, The Mad-House, A Stretch of Insane Thought.

Idiocy—Its Causes and Peculiarities.—Natural Idiots, Idiocy from Disease, Causes of Idiocy, The Brains and Skulls of Idiots, Education of Idiots, Signs of Idiocy, Dementia Illustrated, Idiots Classified.

Fighting Physiognomies, with Examples.—Fighting Preachers and Preaching, Fighters, Broad Heads, Courage of the Narrow Heads, Fighting Noses, Strong Jaws, Prominent Temples, Decided Chins, The Sign of Command.

Effects of Climate on Character.—The Temperate Zones Best, The Man of the Tropics, Man of the Ice, The Men of Temperate Climates, Climate and Crania, Examples, Plants and Animals, Southern Improvidence, Northern and Southern Civilization, Climate and Poetry, Thought vs. Feeling, Summing Up, How far is Man Cosmopolitan, Per Contra, Complexion, The Blondes Disappearing, A Theory of Complexion.

Ethnology, or Types of Mankind.—The Races Classified, The Caucasian Race, The Mongolian Race, The Malay Race, The American Race, The Ethiopian Race.

National Types, with Portraits.—The Teuton, The German, The Scandinavian, The Englishman, Ancient Types Preserved, The Anglo-American, Are We Deteriorating, The Future American, The Lowland Scot, The Highlander, The Welshman, The Irishman, The Frenchman, The Italian, The Spaniard, The Slavon, The Russian, The Finn, The Magyar, The Ancient Greek, The Græco-Egyptian, The Roman, The Semite, The Arab, The Jew, The Assyrian, The Ancient Egyptian, The Phœnician, The Hindoo, The Sioux Indians, An Indian War Talk, The Esquimaux, The Tchuktchi, The Kamtschatkans, The Samodeas, The Calmuck, The Patagonians, The Negro in America, The Papuans, The Sandwich Islanders, The Tahitian, Other Polynesians, The Australians, The Siamese and the Siamese Twins.

The Physiognomy of Classes Illustrated.—Divines, Pugilists, Warriors, Surgeons, Inventors, Discoverers, Philosophers, Statesmen, Orators, Actors, Poets, Musicians, Artists, with Twelve Groups of Portraits.

New Physiognomy.

Contrasted Faces—How w Change.—Size vs. Quality, The Ignorant and the Cultivated, Frailty vs. Benevolence, The Two Poets, Tennyson and Beranger, History in the Human Face; Mr. Lincoln in 1860, 1862—The Two Paths.

Transmitted Physiognomies Illustrated.—The Bourbons, The Austrian Lip, Charles Edward Stuart, Mary Queen of Scots, Queen Victoria and Prince of Wales, The Franklin Face, Remarkable Resemblances, "Like Produces Like."

Love-Signs in the Lips, Chin, and Eyes.—Matrimonial Mistakes, Phrenological Organ of Love, Modifying Conditions, Temperament and Love, Love on the Chin, Loving Lips, How to Judge of Compatibility and Adaptation.

Signs of Health and Disease.—Signs of Health, Beauty, Strength, Activity, Happiness, Signs of Disease, Aspect of the Face, Paleness, Expressions.

Curious Changes of Countenance.—Assuming a Character, Can a Villain look like an Honest Man? Emma Stanley in Different Characters, Differences of Expression.

Grades of Intelligence, Human and Animal.—Lavater's Remarks, The Chain of Being, An Ascending Series, from the Infusoria to Man, A New Facial Angle, Man and Animal Compared, Instinct and Reason, The Phrenological View.

Animal Heads, with Remarkable Contrasts.—Broad Heads vs. Narrow Heads, Strength vs. Cunning, Cats and their Characteristics, The Grass Eaters, The Wild and the Cultivated, Some Bad Heads, Individual Differences, Breaking Horses.

Comparative Physiognomy Illustrated.—Animal Types in the Human Race, A Gouey, Foxy, A Great Bear, A Donkey, Hogish, Dog Types, Rat and Cat.

Graphomaney and Chiromaney.—Styles of Handwriting, and what they Mean, Practical Suggestions, Illustrative Autographs, Chiromaney or Palmistry.

Exercises in Expression Illustrated.—Astonishment, Wonder, Curiosity, Contempt, Fury, Rage and Fear, Despair, Hope, Terror and Vexation, Love, etc., Expression in Animals, all appropriately illustrated.

The Great Secret of Human Beauty.—What is Beauty, Styles of Beauty, How to be Beautiful, The Rationale of Physical Changes, Effects of Intellectual Culture—Love as a Cosmetic, Spiritual Beauty, A Sweet Temper Essential, Beauty Begets Beauty, How to Improve the Complexion, Beauty of Age.

Childhood—Remarkable Effects of Training.—The Right Way and the Wrong, The Two Boys, and How they grew Up, Hints to Parents, The Rod of Correction Explained.

Character-Reading, Illustrative Examples.—Two Historians, A Poet in Youth and in Age, Two American Poets, The Preacher and the Writer, A Traveller and a Legislator, The Artist and the Woman of the World, The Great English Reformers, The Observer and Man of Facts, The Thinker, The Lecturer and Reformer, The Magazinet, The Merchant, The Politician, The Philanthropist, The Man of Will and Energy, The Agitator, The Ambitious Revolutionist, The Christian Gentleman, The Experimenter, The Religious Metaphysician, The Brutal Murderer, The Humorist, The Engineer, The Traitor, The Eccentric Preacher, The Journalist and Author, A Modern Philosopher, The Romance Writer, The Essayist and Poet, An Art Writer, A Preacher and Poet, The Woman of Genius, The Dress Reformer, The Great Historian, "The Old Man Eloquent", The Scotch Philanthropist, The Man of the People, The Great Lawyer, The Eminent Jurist, The Father of his Country, The Ambitious Ruler, The Religious Reformer, The Priest and Diplomatist, The Pulpit Orator, The Friend, The Philosophical Historian, The Delineator of Life and Character, The Physiognomist, The Founder of Phrenology, The Practical Religionist, The Theologian, "Sartor Resartus", The Great Prussian.

Interesting Miscellaneous Addenda.—Aristotle, An Ideal Head, Head of St. Paul, Eyebrows, Life as Seen from Opposite Stand-points, Physiognomical Anecdotes.

A Brief Recapitulation or Summing Up.—A Synopsis of the Work, New Illustrations Introduced, Additional Hints, A Group of East Indians, The Shapes of Heads Illustrated, How to Observe and How to Read Character. It may be called an Illustrated Encyclopedia of Physiognomy, Biography, and Signs of Character.

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

RULERS OF SWEDEN.

It is seldom that we are enabled to lay before our readers so complete a collection of crowned heads as is here presented in the *Swenska Regenter*, which is, in fact, a pictorial representation in miniature of the history of the Swedes from the fifteenth century to the present time. Shakspeare has very truly said:

"There is a history in all men's lives,
Fig'ring the history of the times deceased."

By which, he continues, one may prophecy events based on the data of the past. It is not our intention, however, to make any predictions, but merely to present the picture, that people may see for themselves some reflection of "the history of the times deceased," in the biographies and in the countenances of those represented.

In the United States, where the people rule, the present history and prosperity of the country may be read upon the faces of the citizens; but in despotic and monarchical countries, where the king rules, the state of the kingdom

19.—CHARLES XV.

fluctuates with the personal standing of its ruler, and may be said to be impressed upon his countenance. The immortal Vasa said, when his son, Eric, was spoken of as his suc-

cessor to the throne of Sweden, "Alas, poor Gustaf! a soul in rebellion, a land in rebellion!"—meaning, of course, a rebellious-hearted king makes a country in rebellion—a prophecy which afterward proved true.

Space does not permit us to say much about each individual portrait of the group, but enough to indicate an outline of their history and their influence upon the welfare of their country. We have but a slight foundation for any phrenological remarks, and therefore can give but bare outlines. Our readers can amuse themselves *in extenso*, if they will, in estimating the characters of the kings and queens represented.

It takes no philosopher to see in the face of Vasa the absolute monarchist, yet guided by a fine intellect; hence the comparatively happy condition of his country while he reigned. The low-headed Charles IX., cruel and despotic, obeyed only the behests of his vanity and propensities; but a Gustavus Adolphus, influenced by high-toned moral feeling and courage, brings up his country to the pinnacle of a glorious fame, and buries himself deep in the hearts of his people. The gay and frivolous Christina, the Cromwellian Carl IX., the incautious but brave Carl XII., the weak Ulrika, the stubborn Gustaf IV., the resolute Carl XIII., his prudent and warlike adopted son, the polished and gentlemanly Oscar, have each left their mark upon the pages of history, which will be found upon examination to correspond with their various degrees of phrenological development.

The character of the Swedes as a nation has ever been marked with great depth of feeling, strenuous self-reliance, and ardent endeavor, together with great love of liberty. The basis of society there is the "allodial right of property acquired by labor," for Swedish soil was never won by foreign conquest. The early history of Sweden is full of mythology, legends, and tradition. But little of a reliable nature is known of the country before the ninth century, when the raids of the Norsemen, or Northmen, who appear to have been closely allied with the Vikings, or Sea Kings of Denmark, were a terror to the nations of southern Europe; but the heroic age of Sweden is not found in the days of barbarous anarchy, when the wild warrior-worshippers of Odin followed the fortunes of their rude leaders, but in the glorious deeds of the great Gustavus Vasa, who rescued his country from a foreign vassalage, established the Protestant religion, and raised his country to an honorable position among the civilized nations of Europe.

1.—GUSTAVUS VASA.

Gustaf Ericsson Vasa, called Gustaf I., was born at the castle of Lindholm, in Roslagen, Sweden, May 12, 1496, his father being Eric Johansen Vasa, and his mother Cecilia of Eka, both descendants of the ancient kings of Sweden. After finishing his education in the academy of Upsala, he lived at the palace of Sten Sture, who was Regent of the kingdom—for Sweden was then a dependency of Denmark, under King John. But the yoke of Denmark

soon became hateful to the Swedes. Christian II. of Denmark had ascended the throne of Sweden, and took as hostages for his safe arrival in the capital six young noblemen, among whom was Gustaf Ericsson, who shortly after made his escape. Sten Sture, the Regent, had been murdered by Christian, together with the father of Gustaf, and a great number of peasants, the consequence of which barbarities was the open resistance to Danish authority by the Swedes, under the leadership of young Gustaf, who succeeded in establishing the Swedish independence, and was, in 1523, elected king. He found a kingdom desolated by war, an empty treasury, a haughty nobility and clergy, a people burdened with taxation and a bad government, and divided in regard to religion; yet on his death he left a well-organized country; the power of the nobles had been circumscribed, Romanism abrogated, and the Reformed Lutheran Church firmly established. His moral character was good, though he was despotic and arbitrary in will. He possessed great natural gifts of body and mind, and was highly accomplished. Trade, manufactures, arts, learning, and science owed their advancement in Sweden to him. He was thrice married, leaving by his first wife, the Princess Catharine of Saxe-Lauenburg, Eric XIV., his successor. He died at Stockholm, September 29, 1560.

We need not say much about Vasa's phrenology. His own history and his phrenology are one. Will power and force of character are strikingly shown. He had energy, he had determination, but he had also the reasoning faculties well developed, rendering him thoughtful and sagacious as well as executive.

2.—ERIC XIV.

Although we trace the lineaments of Gustaf I. upon the countenance of his eldest son and successor, and much the same characteristics of feature, we also find a look of vanity and of pride. He inherited his father's intellect; he was handsome, intelligent, and a great lover of art, but had a passionate and suspicious disposition. He was born Dec. 13, 1533; and ascended the throne in 1560. He made overtures of marriage to Mary Stuart, afterward Queen of Scots, and to Elizabeth of England, but was refused, and finally married Katrina Mansdotter, the daughter of a petty officer of the guards. She was a person of great beauty and rare virtue, but the marriage offended the nobles, by whom he was never afterward respected. His whole reign was occupied in wars with Denmark and Poland, in the course of which the Swedes acquired the Baltic provinces of Livonia and Revel. His trouble with his nobles inflaming his naturally suspicious nature, at length led him to surrender himself up to a career of tyranny and excesses. He killed sixty persons with his own hand, many of them being nobles, and for several days he wandered alone in the forests in a state of insanity, and was finally deposed by the Swedish Diet, in the year 1568. His brother, Johan, who then became Regent, immediately obtained from the Senate permis-

sion to take his brother's life, and gave Eric the choice of being poisoned, choked, or having his veins opened. He chose the former, and died, it is said, after a pious preparation, February 26, 1577, and was buried, without any ceremony, in a little city named Westeraa. He left two children, who were driven into exile, and died in Russia.

3.—JOHAN III.

Johan III. ascended the throne February 26, 1577, immediately after his brother's death. Wars with Denmark and quarrels with the nobles marked his reign. His conscience was his constant accuser. He sought relief in religion, in pleasure, in vanity of every description, but in vain. He attempted to force Romanism on the people, but unsuccessfully. His disposition was much like that of his brother Eric. He was a splendid linguist, speaking the Latin, Italian, German, English, and Slavonic languages, and understood Greek and French. But his extravagance and love for show brought his country into great difficulty. He married for his first wife Catharine of Poland, and had two children, Sigismund and Princess Ann, and for his second wife Gunhida Bzelke, a Swedish lady, by whom he had one son, John, Duke of Sodermanland. He died, heart-broken, November 17, 1592, having, with his brother, rendered the colossal labors of Gustavus Vasa almost useless.

4.—SIGISMUND I.

Sigismund, the eldest son of Johan III., who had been elected King of Poland through the influence of his Polish mother, now succeeded Johan III. as King of Sweden and Poland. His reign lasted through eight stormy years, and was spent mainly in attempting to restore Roman Catholicism. His uncle, Prince Carl, the youngest son of Gustaf I., placed himself at the head of affairs, looking upon Sigismund as one who had forfeited the right to rule, and so managed affairs that his nephew, who was in Poland, had to resign the crown, and Carl became King of Sweden. Sigismund ruled in Poland thirty-two years, and made many unsuccessful attempts to obtain his lost rights in Sweden. He was born in 1566, and died in the year 1632.

The pointed beard and sharp features indicate something of the ascetic in this organization. There is not much in this face to command our respectful consideration.

5.—CHARLES IX.

Carl IX. showed himself during his nephew's reign to be both artful, shrewd, and revengeful. After compelling the resignation of his nephew, he capped his career by what is now known as the "Butcher's Bench of Carl IX." On the 20th of March, 1600, he invited his nobles to a dinner. Tradition and history say "that every one went to the dinner reluctantly, not knowing that he should return." Their suspicions were not unfounded, for thirteen of the nobles were soon afterward beheaded, and many others were imprisoned. He was crowned in 1604. He

was a tyrant, self-willed and ambitious. He warred with Russia, Denmark, and Poland. Not obtaining the love of his subjects, he endeavored to work upon their fears, and it is said that during his reign one hundred and forty persons were led to the scaffold; besides, many distinguished men were imprisoned. His word was law—he was a despot. Still he was economical in all things; he was successful in establishing eleven cities, and did much to encourage the trade, develop the mineral resources of his country, and retrieve many errors of his predecessors. He was twice married, leaving two sons and one daughter, the eldest of whom was Gustavus Adolphus, his successor. He died October 30, 1611, aged sixty-one years.

Although Carl is said to have inherited a good share of his father's legislative and administrative talents, unfortunately he did not receive any of Vasa's great intellect. He had large perceptive, making him a practical ruler; but he was devoid of kindness, of sympathy, or forbearance. Destructiveness, Secretiveness, and Cautiousness were largely developed, while Veneration, Benevolence, and all the moral organs were considerably wanting. He was vain, petulant, cruel, and deceptive.

6.—GUSTAVUS II. ADOLPHUS.

Gustaf II., better known as Gustavus Adolphus, surnamed the Great, was born at Stockholm, December 9, 1594, being the son of Carl IX., and grandson of Gustavus Vasa. He assumed the scepter at the age of seventeen—though by his father's will he was not of age until twenty-four—Sweden then being engaged in war with the Poles, the Russians, and the Danes, a war which lasted thirty years. The country needed a guide and a leader, and Gustavus, who had already shown his bravery and his benevolence, soon secured the love of the people. He knew how to heal the wounds left by his cruel father; he gained the affection of his nobles; he united his kingdom, and then prepared to do battle for his country. For thirty years he was the fond favorite of his soldiers, ever leading them onward to victory, until peace was secured with Denmark and Russia, and finally with Poland in 1629. The Protestants were engaged in a hard struggle against the Roman Catholic League in Germany, and Gustavus with 15,000 men set sail in 1630 to aid them. Success followed the Swedish arms, and the Catholics soon ceased to despise the "snow king and his body guard" as they were called. In the spring of 1632 Gustavus crossed the Danube and marched in a continued triumph to Munich, and on the 6th of November the two forces came face to face at Lützen. The Swedes began by singing Luther's hymn, *Eine feste Burg ist unser Gott*, and a hymn composed by the king. Gustavus addressed his army, and swinging his sword above his head, he gave the word of command, and with the cry of Onward! rushed forward, followed by his eager troops. Victory was already on the side of the Swedes, when a strong reinforcement of Imperialists came up, and Gustavus, seeing the troops waver, rode

hastily forward, when, having come too near a squadron of Croats he received a shot in his arm, and as he was turning aside, another in the back, which caused him to fall from his horse. The sight of the riderless horse spread dismay and fury among the Swedes. A party of Croats had thrown themselves between the king and his army, and it was not till after many hours' hard fighting, and the loss of ten thousand dead and wounded, that they recovered his body, which had been plundered, stripped, and covered with wounds. But the Swedes were finally victorious, having fought with an impetuosity that nothing could resist. The spot where he fell on the field of Lützen was long marked by the *Svedenstein*, or Swede's Stone, erected by his servant, Jacob Ericsson, on the night after the battle. Its place is now occupied by a noble monument erected to his memory by the German people on the occasion of the second centenary of the battle held in 1832. His victories were gained, not merely by his strict discipline, but by his moral courage, his deep-seated piety, and the unconquerable valor with which he inspired his soldiers. His death would have proved an irreparable calamity to Sweden, had not Oxenstiern, to whom Gustavus had charged the care of the kingdom during his absence in the field, maintained the renown of the Swedish arms abroad, and the political reputation of the country among other states. Gustavus married Maria Eleonora of Brandenburg, and left one daughter—Christina.

Large Benevolence, Veneration, reflective and perceptive organs are shown in the head and face of Gustavus. Caution appears to have been but moderately developed. He gained the love of all, and died deeply lamented, not only by his own country, but by the whole Protestant world.

7.—CHRISTINA.

Christina, the only child of Gustavus Adolphus, was but six years old when her father died, having been born December 8, 1626, at Stockholm. Count Oxenstiern still managed the affairs of the government until 1644, when Christina assumed the rights of sovereignty. Sweden was in a most prosperous condition; her army was victorious, and France had become her ally; but the queen's love of pleasure soon plunged the country into debt and trouble. She had received a splendid education, was well versed in the classics and modern languages, yet most of her time was spent in gay frivolity. She was fond of the sports of the chase. Her sleep occupied only five hours a day, and her toilette only a quarter of an hour. In her religious views she was skeptical; she scoffed at church services; grew reckless; embraced the Roman Catholic religion, and abdicated the throne June 6, 1654, in favor of her cousin, Prince Carl Gustaf. She afterward traveled through Germany in the dress of a man, and subsequently tried to regain possession of the Swedish crown. But her people despised her. She died in Rome in 1689, and was interred in the church of St. Peter's.

There is much of voluptuousness stamped

upon this engraving of Christina, small and imperfect as it is.

8.—CHARLES X. GUSTAVUS.

Carl X. Gustaf ascended the throne of Sweden in 1654, having been chosen by Christina as her successor. In him, Sweden found an Oliver Cromwell; like him, he was brave, fearless, and true to his principles. He had extraordinary strength. His reign of six years was marked by brilliant battles and acts of great personal bravery, one of which, his crossing the Great Belt on the ice, is unrivaled in military daring, and enabled him to dictate terms of peace to the Danes at the gates of Copenhagen. His victories, however, brought no advantages to Sweden, and only wasted her resources. He died in 1660, after a short illness, leaving his son, Carl XI., as his successor. His phrenology indicates great natural force and will power, but not much of the reasoning faculties. His moral organs appear to be fairly developed, though without the height of those of the Protector.

9.—CHARLES XI.

Carl XI., born November 24, 1655, was four years old when his father died, and was crowned at seventeen. His education was neglected in his youth, but he obtained a good knowledge of most branches of industry. He made himself beloved and respected by his subjects, relieved the country from debt by his prudence and economy, invited strangers and manufacturers to settle in Sweden, built schools, and cared in many ways for the moral good of the people. Only one war occurred during his reign. He brought the nobles and peasantry nearer together by settling their existing troubles, and prevailed upon them to make the regal power absolute. He ruled from 1660 to 1697, and died on Easter Sunday, 1697. He married Ulrica Eleonora, Princess of Denmark, by whom he had two daughters and one son, Carl XII., who succeeded him. His phrenology shows more intellect than his father had, but less force. The features are relaxed and softened, while Mirthfulness is prominent. The moral and spiritual faculties were all quite large.

10.—CHARLES XII.

With the birth of Carl XII. it was predicted that Sweden would have a hero for king, and time proved the truth of the prediction. He was born in Stockholm, June 27, 1682. His father, Carl XI., feeling the disadvantages of a lack of education, determined that his son should not suffer from the same cause. His tutors were commanded first of all to make him thoroughly acquainted with his own country, its resources, its wants, its laws, and its prospects; but above all they were commanded to give him a true reverence for religion; every day his instruction began with prayer and reading of the Bible, and this habit, inculcated in youth, he practiced during his whole life. He was a bold and daring youth, a fearless rider, and possessed a warlike nature, and at the age of twelve is said to have killed a bear with his spear. When but fifteen his father died, and he received a kingdom powerful and

without debt; the army and navy were in excellent condition; peace reigned in the land. In the second year of his reign a league was formed between Russia, Denmark, and Poland, and taking advantage of the quarrel of Sweden with Livonia, they determined to humble Carl, and to that end they occupied the shores of Finland with their forces. The Senate was greatly alarmed, but young Carl showed a degree of energy and courage in this crisis that astonished even the brave Swedes. He put himself at the head of his army, invaded Denmark, besieged Copenhagen, and forced the Danish sovereign to sue for peace. He then turned to his other enemies, and at the head of eight thousand followers defeated eighty thousand Russians at Narva, under the command of the Czar Peter, and then marched across Livonia and Courland into Poland, and for nine years gained a succession of victories almost unequalled in the annals of the world; but with the unfortunate battle of Pultowa, with the Czar, began a series of reverses which ended in the total defeat of the Swedes. Charles escaped with difficulty from the field, and sought refuge in Turkey, where he was hospitably received and sheltered during the five years he remained an exile, while his enemies were conquering his best Swedish possessions in Germany and on the east of the Baltic. At last he managed to join his struggling forces, and reached his native land in December, 1715. His people rallied round him, and soon he was at the head of a new army, and besieging the fortress of Fredericshall, in Norway, where unfortunately he met his death on the 30th of November, 1718. He was leaning at night on a breastwork, watching the operation of the siege by moonlight, when he was shot in the temples, and instantly died. With him the male line of the Vasas expired, and with him, too, Sweden declined from her high position into that of a second-rate power. His death was supposed to have been premeditated by conspirators, his own sister being suspected to be in the plot, but it was never proven. Charles was a hero in the true sense of the word. He detested vice in every form, and his name is venerated by every true Swede. His great deficiency was a lack of Cautiousness, which is not well shown in our engraving. (In our "Self-Instructor" this lack is well indicated.) His ambition, unchecked by sufficient prudence during his warlike and almost reckless career, well-nigh reduced his country to ruin.

11.—ULRICA ELEONORA, the sister of Charles XII., was crowned in 1718, but after reigning two years resigned in favor of her husband, Frederic of Hesse Cassel. Her face is indicative of indecision, irresolution, and weakness. She died childless, after having suffered great humiliation for her supposed connection with the plot against her brother, Charles XII.

12.—FREDERIC I.

Frederic I. had an amiable disposition, but, like his wife, was too weak to govern his country firmly. Under his rule, the great polit-

ical struggle between the two factions of the "Hats," or French party, and the "Caps," or Russian party (the aristocracy and the people), prevailed and demoralized all ranks of society. He recovered Pomerania from Denmark in 1720, on the payment of 600,000 crowns, but the following year was forced to cede Livonia, Ingria, Esthonia, part of Kariela, Viborg, and the islands of Dago and Oesel to the Czar. He died in 1748.

13.—ADOLPHUS FREDERIC.

After the death of Charles XII., the last of the Vasas, Sweden up to this time was disunited by the weakness of its kings. Dissension and misrule were rampant. The Empress of Russia had great control over the Senate, and through her influence, Adolf Frederic, bishop of Lubeck, was made successor to the throne of Sweden. His reign was one of disaster; he was even more weak than his predecessor; his nobles made of him a mere puppet, and through French influences in the Senate he was compelled to take part in the seven years' war against Frederick the Great, of Prussia, whose sister he had married. After a turbulent reign of twenty years he died, Feb. 12, 1771, leaving his eldest son, Gustaf III., as his successor. The same marked indecision of character seems to cling to his facial expression of countenance as to his two predecessors. Still, he was haughty and proud.

14.—GUSTAVUS III.

Gustaf III., called the "Illustrious," son of Adolphus Frederic and Ulrica Louisa, Princess of Prussia, was born in Stockholm, January 24, 1746. Gifted with extraordinary talents, his intellect rapidly developed itself, but unfortunately outward elegance was more valued by him than either gentleness or goodness of heart. This, doubtless, was imbibed in the French court, where he lived on terms of great intimacy with Louis XVI. He was a great lover of the arts and sciences; his eloquence was very persuasive, but he was vain and fond of fashion; still, he was amiable and full of life; and when, on the death of his father, he hastened to Stockholm, he was hailed with joy by the people, and crowned in 1772. France and Russia were then at war, and Gustaf hoped to retrieve the character of Sweden. His first step was to destroy the faction of the "Hats" and "Caps," to reconcile the two great classes, the nobles and the people, and skillfully recover the lost absolute power of the crown. The first six years of his reign were devoted to the interests of the country; manufactures were established, and literature, poetry, and the fine arts cultivated. But Gustaf's love of display and desire to emulate the King of France in extravagance and magnificence led him into embarrassment, and created discontent among his nobles. He engaged in war with Russia, with Turkey, and Denmark, which lasted for three years, terminating in an honorable peace after the Swedish naval victory at Swenksand. On the breaking out of the French Revolution he attempted to assist the restoration of the Bourbons, and for that purpose applied to the Diet for funds; but they rejected his applica-

tions, and taking advantage of his general unpopularity, caused him to be assassinated while at a masked ball held in an opera-house which he had erected in Stockholm. He lived thirteen days after receiving the shot wound, and died March 29, 1792. His queen was Sophia Magdalena, Princess of Denmark. He was succeeded by his only son, Gustaf IV. He was a man of varied learning, and the author of several dramatic works and poems of considerable merit. He had by nature an erratic temperament, a combination of his mother's greatness and the weakness of his father. He was talented, but improper training and gay habits tended to demoralize him.

15.—GUSTAVUS IV. ADOLPHUS.

Gustaf IV. Adolf was born November 1, 1778, and was but fourteen years old when his father died; his uncle, the Duke of Sudermania, brother of Gustaf III., being appointed regent. Headstrong, impetuous, and stubborn, as his physiognomy shows him to have been; fitter subject to be governed than king to rule, he soon showed his incapacity to manage the affairs of Sweden. He was married to Princess Frederika of Baden, but was divorced from her soon afterward. Deep-set hatred of Napoleon appears to have been his policy. He involved his country in wars with France and with Russia, losing the possession of Finland. He had England for an ally, but quarreled with Sir John Moore when he arrived with troops, and who accordingly returned. Tyrannical; dreaded by his people; despised for his inability, he was dethroned by the nobles, and subsequently left Sweden and retired to an humble abode at St. Gall, in the Canton of Basel, where he lived as a private citizen, despised by all who knew him, an object of compassion, yet glorying in his privations and poverty. He died February 17, 1837.

16.—CHARLES XIII.

Carl XIII. was crowned King of Sweden June 20, 1809, immediately after the deposition of Gustaf IV. He was born October 7, 1748; received a naval education; made several cruises in his youth, and subsequently defeated the Russian naval fleet in the Gulf of Finland, for which service he was raised to the governorship. During his regency he preserved the kingdom internally and externally at peace, and united with the Danes for the protection of navigation on the northern seas. The early part of his reign was troubled by domestic and foreign intrigues to regulate the choice of an heir, he being childless, but was at last settled by the election of Marshal Bernadotte, one of Napoleon's most celebrated warriors, to the rank of Crown Prince, who was adopted by Carl XIII. as his son, under the name of Carl Johan. Carl XIII., already feeble and old, now deputed the management of affairs to Carl Johan, who guided Sweden with an unerring hand through the critical first years of the eighteenth century, and was successful in leading the army victoriously through Norway, which now became united to Sweden. Carl XIII. died February 5, 1818 beloved and re-

gretted. In comparison with his predecessor, Carl's face has much of dignity and manliness, while Gustaf's is that of comparative imbecility.

17.—CHARLES XIV. JOHN.

Carl XIV. Johan's life was an eventful one. Originally, Jean Baptiste Jules Bernadotte, born at Pau, the capital of Bearn, France, January 26, 1764, the son of a lawyer, designed for the bar, he entered the French army as a common soldier; became an ardent partisan in the Revolution; greatly distinguished himself in the wars of Napoleon, and soon attained the highest military rank; but Napoleon becoming jealous of him, caused him to resign his position and return to Paris; and when he was elected Crown Prince of Sweden, the only condition imposed on him was that of joining the Protestant church. His regency during Carl XIII.'s later years was a decided success; and when he was crowned King of Sweden and Norway in 1818, his foreign extraction was not looked upon unfavorably by the nobles of the land. The breach between him and Napoleon widened; their interests opposing, especially in regard to trade with England, which finally resulted in war, ending in the defeat of Oudinot at Grossberon, and Ney at Deunewitz, which victories Carl failed to follow up, showing great reluctance to join in the invasion of France. He died March 8, 1844, in his eightieth year. He married Desirée Clary, the daughter of a rich Marseillaise merchant, and sister-in-law of Bonaparte, and left his son Oscar to rule. During his reign Sweden prospered. Commerce, arts, and manufactures made rapid progress, and the moral and social condition of the people was greatly advanced. He won for himself the character of a wise and good king, and did much for the welfare of his adopted country.

18.—OSCAR I.

Oscar I. was born July 4, 1799, while his father was still in Paris, his name then being Joseph Francis Bernadotte, and after the election of his father as Crown Prince of Sweden, received the title of the Duke of Sudermania. In 1818, after a course of private instruction, he entered the university at Upsala, where his education was completed, the effect of which was seen in his remarkable proficiency in science, literature, and especially the fine arts. For a time, he gave himself up almost entirely to the study of music, and composed various pieces, including an opera, several marches, waltzes, etc., besides composing several songs and hymns which have been very popular in Sweden. He also imbued a thoroughly national feeling; and when he was admitted to a share in the administration, he made himself immensely popular by his anti-Russian policy—Russia at that time having gained an almost overwhelming influence by the policy of his father—and when on March 8, 1844, he ascended the throne, he was hailed with rapture by nearly all his subjects. Liberality and justice distinguished his reign; he introduced many tolerant measures, such as the removal of Jewish disabilities, freedom of manufactures, of schools and commerce. But all these changes were introduced with great caution and gentleness, and in most cases his prudence was crowned with the most gratifying success. When the Crimean war broke out, Oscar, in concert with the King of Denmark, issued a declaration of armed neutrality, but would doubtless have engaged in a war with Russia, had not the Paris treaty so rapidly succeeded. His attitude toward Russia added greatly to his popularity with the Swedes, and enhanced the character of his nation in the eyes of the world. The cares and anxieties of government soon led him, however, to seek

retirement, and on September 25, 1857, he resigned his authority into the hands of Carl, his eldest son, who took the title of regent. Oscar was married in 1823 to Josephine Beauharnais, the granddaughter of the Empress Josephine, and died at Stockholm July 8, 1859.

Oscar possessed a finely cultivated and expansive mind, and had large Ideality, Sublimity, and Caution, hence he was prudent in the exercise of his prerogative; fond of the ideal and the beautiful, music, literature, and the fine arts being his chief delights. He was somewhat fastidious perhaps, yet he was dignified, polished, and commanding in appearance and manner.

19.—CHARLES XV.

Carl XV., the eldest son of Oscar I., was born May 1, 1826, and succeeded his father as King of Sweden and Norway July 8, 1859, having for many years previously acted as regent during his father's illness; and is now the ruler of that country, and is said to be more highly esteemed than either of his ancestors, being "simply and plainly the idol of the people." In person he is a most manly figure, with dark complexion, dark hair and eyes, and a beard of glossy blackness. He is a kind and genial gentleman, whose resentments are not lasting, and whose friendships are sincere, firm, and unexacting. His manners are entirely democratic. He makes no ostentation of his royalty, but speaks with perfect freedom to all, requiring the like frankness from others. He is courteous and agreeable. In the palace it is said that he greets his friends with the ordinary salutations, "How are you, sir, to-day? I am glad to see you; take a chair here, and let us talk a little;" listens patiently to all applicants, and then answers promptly and fully without the slightest reservation. On the street he rides right on to his destination, but returns heartily all the civilities offered him by the citizens; if he wants anything, as he rides or walks, he will not always send a footman to procure it for him, but will frequently run into a store himself, examine the articles presented, and buy what he desires, like any other gentleman.

An American merchant gives the following account of a recent visit of the king to his store in Stockholm:

"It was only yesterday that the king came into my store with a single servant. He desired to look over my stock, but declined going behind the counters, when I requested him to do so, probably because he knew it was not the custom for merchants to allow such privileges to be taken with their establishments. But he inquired for everything he wanted; he examined everything himself, and twice stepped back from the counter to give room to ordinary people, who did not seem to know him. When examining the goods handed him, he asked a great many questions, and wished to know when such and such articles first came into use in America. He thus ran into quite a chat about the United States, eulogized the people, and hoped to see many more of them coming to do business within his dominions. The goods selected by him were packed in a basket; his Majesty took out his pocket-book and paid for them like any customer. He told the servant to take them to the palace, and in what room to leave them; then, lifting his hat to the merchant, according to the Swedish manner, he stepped into the street, and thence hastened along the pavement, as if he had a score of similar things to do before his business ramble should be finished."

The king generally spends the summer in a beautiful palace known as Ulriksdal, about seven miles from Stockholm, which is considered one of the finest places of the kind in Europe; here he may be often seen, when the burdens of government are thrown off, rambling among the grounds and park *incognito*,

taking great pleasure in conducting visitors around the palace and gardens, and surprising them, when about taking their departure after regretting "that they had not seen the king," by saying "I am the king," in a most condescending and good-natured style, leaving them bewildered and amazed.

Carl XV. has a well-balanced head, supported by an excellent physical constitution. Firmness and force of character are well marked, but much softened by large Benevolence, Human Nature, Mirthfulness, and Agreeableness. He has a finely developed intellect, and looks as he is, a courtly and gentlemanly king.

NATIONAL AFFAIRS.

In conclusion, we give a few statistics relative to Sweden and her standing at the present time. Her government is a hereditary and constitutional monarchy, the succession following in the male line, who must profess the Lutheran faith. The king is assisted in the administration by a council of ten, consisting of three privy councilors, and seven others who act as ministers of justice, war, the marine, finance, religion, foreign affairs, and internal affairs respectively. The Diet formerly was composed of four chambers of the four different estates, viz.: nobles, clergy, burghers, and peasants or yeomen, which met once in three years in separate halls, sitting for three or four months. The king had the power of vetoing all acts of the chambers, which, in turn, controlled the supreme courts of justice, regulated the liberty of the press, supervised the national banks, and the administration of the public debt, and of the treasury. This, however, in May, 1866, was modified. The legislative system has been made to approximate nearly to that of Great Britain, the four chambers being amalgamated into a parliament as of lords and commons, with more definite and distinct features.

The Lutheran church is predominant in Sweden; although all sects are tolerated, none but Lutherans can hold any office of the state. Education is almost universally diffused among the people, not only by the agency of the regular national schools, which are well organized, but to a great extent in consequence of the national habit which prevails among the peasant and agricultural classes, of parents employing themselves, in the long winter nights, in teaching their children. The universities at Upsala and Lund give instruction to the higher classes, besides numerous military, polytechnic, agricultural, and other special schools in Stockholm and Gottenborg.

Sweden keeps nominally an army of 130,000 men, but these consist principally of cantoned or quartered soldiers, being much like our militia system. Every Swede between the age of twenty and twenty-five years is also bound to serve in the *betaring*, or national guard. In addition to these, there are companies of volunteer free-shooters, who are commanded by officers appointed by the crown. Her fleet consisted in 1864 of 171 vessels of war, including 24 steamers and 28 sailing vessels of war, carrying, in all, 989 cannons and 9,620 men. In time of war, a coasting merchant fleet of 3,200 vessels can be called into requisition, together with a reserve of 25,000 men.

Next to commerce, wood-cutting and mining constitute the most important branches of national industry, the finest quality of iron being procured there, which is usually shipped to England or the United States—in the procurement of which about 10,000 men are engaged. Ship-building is also an extensive branch of local industry. Sweden is now considered the fourth maritime power of the world, coming after Great Britain, the United States, and France. The estimated area of Sweden is 170,129 square miles, containing a population of 4,000,000 inhabitants.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

(CONTINUED.)

MENTAL PHENOMENA EXPLAINED.

CARPENTER repudiates Phrenology and says, "It appears to the author, however, to be a fundamental error to suppose that the entire intellect can be split up into a certain number of faculties; for each faculty that is distinguished by the psychologist expresses nothing else than a *mode of activity* in which the whole power of the mind may be engaged at once—just as the whole power of the locomotive engine may be employed in carrying it forwards or backwards, according to the direction given to its action. And if this be true, it must be equally erroneous to attempt to parcel out the cerebrum into distinct 'organs' for these respective faculties; the whole of it (so far as we can form a judgment) being called into operation in every kind of intellectual process which occupies the attention at the time." (P. 589, § 639.)

PRINCIPLES OF HUMAN PHYSIOLOGY.

We have affirmed that old-school expositions are frequently contradictory in themselves; now let us turn to p. 587, and we find the following: "We seem justified in proceeding further, and in affirming that the cerebrum may act upon impressions transmitted to it, and may elaborate results such as we might have attained by the purposive direction of our minds to the subject, *without any consciousness* on our own parts. * * * One of the simplest instances of it is to be found in a curious phenomenon which, though most men are occasionally conscious of it, has been scarcely recognized by metaphysical inquirers, namely, that when we have been trying to recollect some name, phrase, occurrence, etc., and after vainly employing all the expedients we can think of for bringing the desiderated idea to our minds, have abandoned the attempt as useless, it will often occur spontaneously a little while afterwards, suddenly flashing (as it were) before the consciousness; and this, although the mind has been engrossed in the mean time by some entirely different subject of contemplation, and can not detect any link of association whereby the result has been obtained, notwithstanding that the whole train of thought which has passed through the mind in the interval may be most distinctly remembered. Now it is difficult, if not impossible, to account for this fact upon any other supposition than that a certain train of action has been set going in the cerebrum by the voluntary exertion which we at first made; and that this train continues in movement after our attention has been fixed upon some other object of thought, so that it goes on to the evolution of its result, not only without any continued exertion on our parts, but also without our consciousness of any continued activity." Now if each faculty, distinguished by the psychologist, expresses nothing more than "a mode of activity" in which the whole power of mind may be engaged at once—the whole of it, so far as we

can form a judgment, being called into operation in every kind of intellectual process which occupies the attention at the time, how in the name of reason, when "*the whole power of the mind* has been engrossed in the mean time by some entirely different subject of contemplation," can there be any possibility for "a certain train of action to be set going in the cerebrum which will go on to the evolution of results without our consciousness of any continued activity?" In other words, he makes an Irish bull by affirming that while the *whole power* of the mind has been "engrossed by a different subject," a *part* has been engaged in carrying on "a certain train of action in the cerebrum which goes on to the evolution of results," and finally flashes the "desiderated idea" in the mind.

According to phrenological exposition, there is no difficulty about the subject; while the other faculties were engrossed about other subjects, the faculty to which the "desiderated idea" properly belonged, was busily engaged in examining everything preserved in its own storehouse of memory, and as soon as the "desiderated idea" was found, it was announced by that "flashing" of it into the mind. Say, for instance, we are trying to remember *where* we saw a certain individual, but can not, and having given it up, turn our attention to something else; the faculty of Locality will examine all the tablets in its storehouse of memory, and the very moment the picture of the exact spot is arrived at, the fact is "flashed" into the mind at once, though our other faculties may have been engrossed on other subjects. Or we may have forgotten the words of a passage, and while engaged at some other subject, the faculty of Language will search out the "desiderated idea," and when arrived at, will flash it into the mind at once, and so on with the other faculties.

The phrenological exposition is consistent throughout, and harmonizes most admirably with the facts of the case, while Carpenter, in his expositions, contradicts himself, betrays the weakness of the old-school metaphysics, and furnishes an argument in favor of the phrenological exposition.

Carpenter, when treating of awakening from sleep, also furnishes an excellent argument in favor of Phrenology, and also, as usual with the metaphysicians, contradicts himself. He says, "It is not requisite, however, that the sound should be one habitually attended to during the hours of watchfulness; for it is sufficient if it be one on which the *attention has been fixed* as that at which the slumberer is to arouse himself. * * * To this influence of previous impressions, whether habitual or but once forcibly made, we are also to refer the spontaneous termination of the state of sleep at particular times, without any sensorial excitement from external impressions. Thus many persons who are accustomed to rise at a particular hour, wake regularly at that hour, whether they have gone to rest early or late; so that the act of spontaneously awakening is no proof that the desirable amount of repose

has been obtained. But what is more remarkable, is that many individuals have the power of determining, at the time of going to rest, the hour at which they shall rise, so as to wake from a profound sleep at the precise time fixed upon. In this, however, the desire to arise at a particular hour only induces a state of restlessness throughout the night, destroying the soundness of the slumbers; the individual awakes many times in the night, with the belief that the hour is past, and very possibly oversleeps it after all, the system being worn out by need of repose." (Human Phys., p. 614.)

The last two sentences mention two facts, for the exposition of which the old metaphysical system is entirely inadequate, and Carpenter has to content himself with the simple statement that one of them at least is "*remarkable*," he has stepped forward to enlighten us, and especially in relation to the "remarkable" points in human physiology, and we presume he would have given us an exposition if his system of mental science would have enabled him to do it.

The phrenological system, however, gives a clear, rational exposition, harmonizing admirably with the facts of the case; the first class of individuals who can rise at any hour they may decide upon, have the organ of Time largely developed, and when they fall asleep, they are under no anxiety about the hour, knowing that they ~~can~~ will wake at the appointed hour, and they can sleep soundly. The second class of persons who can not wake at an appointed hour, have the organ quite small, and they have to rely upon their faculty of Cautiousness, and the consequence is, their Cautiousness being confined to its own peculiar function of warning, and knowing nothing of the lapse of time, keeps jogging them every half hour, hence, frequently they are so worn out, they oversleep themselves.

This is a beautiful and rational exposition of facts, harmonious within itself and with the facts, while the old-school metaphysician is "headed," and has to content himself with the exclamation "remarkable!"

Carpenter, while treating of the subject of awakening from sleep, says, "To this influence of *previous impressions*, whether habitual or but once forcibly made, we are also to refer the spontaneous termination of sleep at particular times, without any sensorial excitement from external impressions;" and then follows on with a statement of a "remarkable" fact which contradicts his exposition. "In others, however, the desire to arise at a particular hour only induces a state of restlessness throughout the night, destroying the soundness of the slumbers; the individual awakes many times during the night with the belief that the hour is past, and very possibly oversleeps it after all, the system being worn out by the need of repose." The supposition that the awakening at a particular hour without any "sensorial excitement from external impressions" depends upon "previous impressions," whether habitual or but once forcibly made, covers the

case of those who have the organ of Time very large, and in the absence of any better might be set down as plausible. But then, as usual with the metaphysicians, Carpenter contradicts himself by stating that there are others in whom that "previous impression" is perfectly worthless so far as enabling the individual to arise at an appointed hour is concerned, for those in whom the organ of Time is small, may have a very strong impression made upon them, so much, perhaps, as to be certain to lose money or "lose the connection," by their failure to awake, and yet they can not awake at an appointed hour, and their sleep is broken because their faculty of Cautiousness can not know anything of the lapse of time, and warns them so frequently that they are restless and oftentimes oversleep themselves. Neither can the metaphysicians explain the play of the faculty of Time while the individual is awake. While practicing in Kentucky, we directed a negro woman to give her child medicine every hour; at the expiration of the first hour we stepped into the cabin and found her with the child in her lap, just putting the spoon to its mouth; upon looking at my watch, it wanted but half a minute to the exact completion of the hour; the second and third hours passed with not more than a minute's variation. Supposing she had seen me approaching the cabin, and had thus ascertained the time (my watch being the only time-piece running on the place), about twenty minutes before the expiration of the fourth hour we walked off into the woods and approached the cabin, keeping a stable between us, so that she could not see us until we stepped into the door, and when we did so, we found the medicine already mixed, and she was in the act of taking up her child, and as in the previous administrations, with not more than a minute's variation. Now if, as Carpenter affirms, it is a "fundamental error to suppose that the entire intellect can be split up into a certain number of faculties—for each faculty that is distinguished by the psychologist expresses nothing else than a *mode of activity* in which the whole power of the mind may be engaged at once, just as the whole power of the locomotive steam-engine may be employed in carrying it forward or backward, according to the direction given to its action"—then, when the metaphysician is asked why can not another individual of superior abilities so engage "the whole power of his mind" that he also can readily tell the hour without a watch? all that he can say in reply is the ever ready answer, "a gift of nature," or he can take a pinch of snuff and exclaim "remarkable;" beyond that he can not go.

The phrenological exposition that the mind is split up into so many faculties, each of which has its own peculiar functions to perform, and that the peculiarities of individual character depend in a great measure on the varied developments of those faculties, is a clear, rational exposition, throwing great light on the subject, and admirably harmonizing with the facts of the case. The metaphysicians prefer maintaining that it is "a fundamental error to sup-

pose that the entire intellect can be split up into a certain number of faculties," and prefer that facts should not be explained at all, to their being explained by the aid of Phrenology.

We recollect having read a story of an old Saxon king who kicked over the bowl of water from which he was about to be sprinkled by a Catholic priest, and said he would prefer going to the infernal regions with his old friends and companions, to going to heaven with his new friends who had unfolded to him a new way; so the old metaphysicians prefer to grope their way in darkness with their old friends and teachers, to leaving them for new phrenological friends who would unfold to them a better way. We much admire their devotion to friends, but certainly can not commend the discretion of either the king or the metaphysicians.

Thus we find numberless peculiarities of character, as many peculiarities of memory, and likewise many of insanity, all of which are inexplicable by the metaphysicians of the old school, while they are all readily explicable by the phrenological system of mental science, and no good reason can be possibly assigned why we should still continue to receive the hypotheses and chimeras of the old metaphysicians.

Man, or, as Paul more appropriately expresses it, "the spirit of man that is in him," has the power of volition or will: the old metaphysicians have ignored the possessor of the attribute, and have personified the attribute itself under the title of WILL, and have spoken of it as the spirit itself ought to be spoken of, i. e., as the responsible entity, and have promulgated a vast number of crudities concerning the WILL in consequence of their confounding the attribute with the possessor of the attribute. The play of the faculty of Firmness in enabling a man to stand firm to his determinations was entirely beyond the reach of their philosophy, and instead of making the faculty of Firmness an attribute of the spirit of man, as it really is, they make it an attribute of their personified attribute, the WILL, and from the misconception many errors have originated. The play of the faculty of Concentrativeness in enabling a man to "fix his attention" on any desired subject was not clearly developed in their philosophy, and not knowing what better disposal to make of it, they suppose it to be a purely automatic operation, to be put in the same category with the secretion of bile, etc.

Sometimes the will is properly spoken of merely as an attribute, but most frequently it is as before mentioned, personified, printed in capitals, and spoken of as the responsible entity in man, and from this, with their confused ideas of the faculties of Firmness and Concentrativeness, many confused and verbose expositions have originated, which serve as a setting of black to the diamond light of Phrenology. On p. 543, § 588, Carpenter personifies the "WILL," and speaks of it as a responsible, controlling entity as follows: "On the other hand, in the control and direction which the WILL has the power of exerting over the course of the thoughts, we have the evidence of a new

and independent power which is entirely opposed in its very nature to all the automatic tendencies, and which, according as it is habitually exerted, tends to render the individual a *free agent*."

As the will, properly speaking, is nothing more than the power to determine, control, or direct, and is not the responsible entity, let us substitute for the word WILL its meaning, and we shall have the following sentence: "On the other hand, in the control and direction which the power to control and direct has the power of exerting over the course of the thoughts, we have the evidence of a new and independent power which is entirely opposed in its very nature to all the automatic tendencies, and which, according as it is habitually exerted, tends to render the individual a *free agent*," which is quite an absurd sentence.

Now let us make another change, and instead of a personified attribute of the spirit of man, insert the spirit *in propria persona*, and we shall read as follows: "On the other hand, in the control and direction which the spirit of man has the power of exerting over the course of the thoughts, we have the evidence of a new and independent power which is entirely opposed in its very nature to all the automatic tendencies, and which, as it is habitually exerted, tends to render the individual a *free agent*," and we shall leave it to the judgment of every reader to decide which is the most sensible sentence.

Again, on page 637, we have the following phrase: * * "and the determining power of the WILL in producing volitional movements is exercised through the same channel." Let us change the sentence, and insert the meaning for the word WILL, and we have the following sentence: "And the determining power of the power to determine in producing volitional movements is exercised through the same channel:" quite an absurdity. Now let us strike out the personified attribute, and insert the term spirit, as follows: "And the determining power of the spirit of man in producing volitional movements is exercised through the same channel"—a very decided improvement on the metaphysical phraseology.

Again, on page 601, we have the following: "The importance of the directing power of the WILL may be best appreciated." Let us change as before, and we read: "The importance of the directing power of the power to direct"—just as absurd as any of the other sentences; but if we insert the proper word, spirit, we shall have, "The importance of the directing power of the spirit of man may be best appreciated," etc. Supposing the confusion of thought arising from confounding the personified attribute of the spirit of man with the spirit itself is sufficiently demonstrated by the above sentences, we shall quote no more, though we could readily fill a volume with such phrases by examining other authors. An article, entitled "Man Tripartite," published in the JOURNAL not long since, very clearly showed, at some length, the distinction we have here drawn.

[TO BE CONTINUED.]

MARK LEMON, EDITOR OF PUNCH.

THE fame of *Punch*, or the *London Charivari*, is almost co-extensive with the English language. Who has not read its witticisms? And we in America may inquire, Who has not felt the sting of its sarcasm? But we now have its "bell-wether" under our hands, and "Revenge, oh, how sweet!" for the course he has taken in regard to America and Americans. We owe him nothing.

Mr. Lemon is eminently "a jolly good fellow," and is a fair representative of that class of Englishmen who are fond of good living, who count eating and drinking among the fine arts, who go into ecstasies over roast beef and plum-pudding, with plenty of ale to wash them down, and puff fragrant cigars as an after-dinner solace.

Mr. Lemon has a broad head, heavy at the base; a stomach equal to any task; and a brain large enough for the ordinary purposes of obtaining the means of supplying the bodily wants, and to make fun for pay. We should never approach a man of such a temperament on a mission of reform or charity. His motto would be, "Take care of yourself;" and his plans would all have reference to the present life. It is just possible that he may have some slight psychological intimations as to a future, but he would be entirely satisfied could he remain here always. There is so much of the animal and so little of the spiritual, that the inclinations would be all in one direction. He would not be likely to quarrel with himself, or debate a question where physical enjoyment, as against his moral sense, was concerned.

He possesses Self-Esteem sufficient to give him a happy consciousness of his own importance; a very comfortable degree of assurance which would make him feel everywhere perfectly at home. If you think well of him, all right; if you think ill of him, it is a matter of not the slightest possible consequence to him.

Intellectually, the perceptive faculties predominate. He is a good looker, has a practical cast of mind which enables him to acquire knowledge easily, and to communicate to others all he knows in a somewhat magnified form. A story would lose nothing in passing through his mill, but rather gain something.

Were it not for the surplus beef on his bones, he might have been a good speaker. But his throat is too small, and it is a task for him to speak. High living and a somewhat indolent life will tend to make him still more corpulent; and his danger lies in the direction of apoplexy and gout. We should prescribe moderate diet and more hard work. If he would turn a grindstone a few hours per day, or wheel a barrow, climb a ladder with brick and mortar, or engage in other laborious and useful labor, it would tend to reduce the surplus adipose and bring him into trim.

His sympathies are entirely with John Bull; and our "Bowery Boy" would call him a "bully bhoys." Of course he claims to be a gentleman, and no doubt observes the rules of etiquette in his country. But he has alto-

MARK LEMON, EDITOR OF THE LONDON PUNCH.

gether too good an opinion of himself to care "shucks" for the opinions of others. His motto would be, "Success to the strong," and "Hurrah for our side!" There would be little compunction for the sins of omission or commission; little sympathy for the vanquished. Let us come back to the temperament. According to the old nomenclature, that is chiefly Lymphatic and Bilious, with a touch of the Sanguine, and less of the Nervous. In the modern nomenclature it is the Vital and Motive combined. The mental is less distinctly marked. The sensuous tendencies predominate. There is nothing specially original indicated in this organization, but it is such a one as would make itself available on all ordinary occasions. He is more imitative than original; more perceptive than reflective; more showy than profound.

Let us look at the features. The nose is more Greek than Roman. The features generally are somewhat Jewish in expression; the eyes dark and deep set; more piercing than inviting; the mouth ample and the chin large, corresponding with the heavy cerebellum. His Self-Esteem, Firmness, Approbativeness, Combaticiveness, Destructiveness, Alimentiveness, Secretiveness, Acquisitiveness, and Amativeness are all large. So is Individuality, Eventuality, Comparison, Constructiveness, Human Nature, and Imitation; and he is what would pass in America for a smart man—capable of running a hotel or a first-class eating-house. His epitaph should be—

He lived for his body and the senses, and received such reward as they could give; he had a sharp eye and a sharper pen for the follies, frailties, and sins of others, and a jocund leniency toward his own.

BIOGRAPHY.

Mark Lemon, the well-known editor-in-chief of the *London Punch*, a prolific dramatic writer and lecturer, was born in London in the year 1809, and received his education at a grammar-school in Cheam, Surrey. He early evinced an aptitude for dramatic writing; and he devoted himself entirely to the rapid construction of a series of pieces, most of which were successful at the time of their production, and many of which are still acted. He has produced, either singly or in partnership with others, upward of sixty plays, farces, melodramas, and other species of dramatic composition. Of these, the best known and most popular is probably "The Serious Family." He has also written considerably for the periodical literature of the day, and

some of his contributions have been republished under the title of "Prose and Verse," which obtained great reputation in England. Mr. Lemon's connection with *Punch* began in 1841, when he became its joint editor and a regular contributor; and two years later he was appointed sole editor, a position which he has continued to fill down to the present time. In this capacity he has displayed a tact and an abundance of resource which has materially aided in sustaining the reputation of that journal.

The mode of conducting *Punch* is somewhat singular. The selection of "matter" does not rest entirely with the editor, although his decision is always final. Almost from the foundation of that paper it has been the habit of the contributors to dine together every Wednesday. This is called the Weekly Dinner, and is usually held in the business offices of the proprietors. During the summer months, it is customary to have ten or twelve of these dinners in the neighborhood of London, at Greenwich, Richmond, Blackwall, or elsewhere, and once a year they attend the annual dinner of the firm, at which composers, readers, printers, machinemen, clerks, etc., dine. This dinner is called the "Way Goose," and is often referred to in *Punch*. At the weekly dinner the contents of the forthcoming number of *Punch* are discussed. When the cloth is removed and dessert is laid on the table, the first question put by the editor is, "What shall the Cartoon be?" During the lifetimes of Jerrold and Thackeray, the after-dinner discussions ran very high, owing to the constitutional antipathy existing between these two; but Jerrold being the oldest, as well as the noisiest, generally came off victorious. In

these discussions it required all the suavity of Mr. Lemon to calm the storm. His award, however, was always final.

The third edition of Wednesday's *Sun* is generally brought in to give the latest intelligence, so as to bring the cartoon down to the latest date. On the Thursday morning following, the editor calls at the house of the artists to see what is being done. On Friday night all "copy" is delivered and put into type, and at two o'clock on Saturday proofs are revised the forms made up, and with the last movement of the engine the whole of the type is placed under the press, which can not be moved until the Monday morning, when the steam is again up. This precaution is taken to prevent waggish tricks on the part of practical-joking compositors.

As an illustration of the benefit arising from these meetings, we may mention that Jerrold used to say: "It is no use any of us quarreling, because next Wednesday must come round with its dinner, when we will all have to shake hands again." By means of these meetings the discussions arising in all questions helped both caricaturist and wit to take a broad view of things, as well as to enable the editor to get his team to draw well together and give a uniformity of tone to all the contributions.

We have somewhat digressed in our biographical sketch of Mr. Lemon, but the *modus operandi* of *Punch* really gives more insight into his position, standing, and character than anything else that can be said of him. As the editor of *Punch*, Mr. Lemon has been eminently successful. He possesses considerable ability as an actor, and has frequently participated in dramatic performances. A few years ago he appeared before the London public as a lecturer, where he met with a most hearty welcome. In appearance, Mr. Lemon is of middle size, and inclined to corpulency. His hair is dark, almost black, and curly, now, however, tinged with gray. His lectures consist chiefly of selections from his contributions to *Punch*. His witticisms are not so patent as those of Jerrold or Hood; he does not aim so much at the follies of society as base his witticisms upon the play of words. He is a select rather than a popular lecturer.

A SONNET.

BY NATHAN UPHAM.

TELL me, ye messengers of light,
That dwell within the magic dome,
And pour your silvery radiance down
On many a happy home,
What is this pure and calm delight,
That warms the cot and gilds the crown,
And seems an effluence from above?
Oh, tell me what is love?
With joy the deep cerulean rang,
As stars, in happy concord, sang—
Attuned in love—
"The mystic gem, that glows a shrine
In many a heart, is love divine;
For 'God is love!'"

Religious Department.

CHARITY.

"Let us look into our bosoms
For the key to other lives,
And with love toward erring nature,
Cherish good that still survives;
So that when our disrobed spirits
Soar to realms of light again,
We can say, 'Dear Father, judge us
As we judged our fellow-men!'"

Who, after a calm, honest, earnest searching of his own heart, after noting its weakness, waywardness, and sin, its burdens, temptations, and sorrows, pausing for a moment to think that every other heart is burdened, tempted, and wounded, too, and merits the same consideration in his judgment that he holds due to himself, will not see the great necessity of a command written in that Book which should be the guide of every life—"Follow after charity." And who, after such self-examination, will not be ready to confess that it is easier to see the mote in his brother's eye, than the beam in his own eye?

There are certain kinds of applications of sermons, not made by the preachers, to which it is often amusing to listen. They are something like these: "I wonder what Mr. A. thought of that?" "Mr. B. looked as though the coat fitted him." "That hit Mr. C. pretty close!" "It does seem as though that sermon was preached on purpose for Mr. D.," and so on Mr. E. and F. and G. and H. and all the rest except Mr. I. have their allotment. Mr. I is never hit.

But there is a sermon, containing only a few words, too plain to be misunderstood, which was meant for every human heart, because prone to sin, falling from the lips of Him whose name and life were love, in behalf of a poor criminal, trembling with her guilt, surrounded by her persecutors, ready at a bidding word to take her life—"He that is without sin among you, let him first cast a stone at her!" Every hand was arrested, every heart self-condemned, and they went out one by one, till the woman was left alone with Jesus. The command was not, "Let him that is without the same sin," else the brutal law might have been fulfilled; but it was clear, positive, searching, "Let him that is without sin among you."

Could a human heart be perfectly pure, it would not even then have the right to condemn another human heart, unless with its purity it had the All-seeing eye to know every circumstance of life, every motive and passion, every temptation and trial, every sorrow and its cause. Only the All-just, the All-merciful, the All-pitiful can see into the depths of a tried, suffering, sinning soul. He alone knows what thorns the tired feet have had to press, what pangs the aching heart has had to bear. He alone can see the "grape in the flower, can hear the life-blood dripping in the merriest, maddest hour." There is not a heart beating to-night, this side of childhood, but has experienced pangs of anguish and disappointment, blighting of hopes and stings of despair;

not a heart but has had pure motives and aspirations, unknown to any but to Him who knoweth all things; and unless these can be weighed in the balance, there can be no just judgment of actions.

"If we knew the cares and crosses
Crowding round our neighbor's way,
If we knew the little losses
Sorely grievous day by day,
Would we then so often chide him
For his lack of thrift and gain,
Leaving on his heart a shadow,
Leaving on our lives a stain?
If we knew the silent story
Quivering through the heart of pain,
Would our womanhood dare doom it
Back to haunts of guilt again?
Life hath many a tangled crossing,
Joy hath many a break of woe,
And the cheek's tear washed are whitest—
This the blessed angels know."

"Charity never faileth," and the man who truly loves his brother, thus proving love for his God, will never strive to raise himself by ruining him. He who tempts another downward in the dark, for the purpose of crushing him more effectually in the daylight, so that on his ruins he can exalt himself, has but little of the charity that never faileth, and stands not upon a sure foundation. "With what measure we mete, it shall be measured unto us again."

"Charity suffereth long and is kind." If a brother trespass against her, she goes and tells him of his guilt, between him and her alone, and does not proclaim it from the house-tops. If a man be overtaken in a fault, she restores such a one in the spirit of meekness, considering herself lest she also be tempted. She asks the wanderer, not "whether he has a name, but whether he has a sorrow;" not whether he has riches, but whether he has a burdened heart; not whether he has a home, but whether he is weary; not whether he has friends, but whether he is hungry and thirsty; not whether he has sinned, but whether he has a yearning in his soul for something better and holier than he has ever known.

Every society has its galley slaves, but few have their bishops. Misfortune and poverty are the yellow passports that have sent many to worse than the galleys, and no good bishop in all the dreary way to say "my brother" or "my sister."

There are too many devoted followers of the self-righteous "Mistress Glenare," the chief object of whose life it is "to expose in poor sinners the faults and bad traits which she fears that the Lord may not happen to see." She passes coldly by the fallen one, with holy fear, lest by a touch of the hand, a word, or a look she may pollute herself, or show that she countenances sin, when it may be that the look of sympathy, the word of love are the very things for which the hungry soul is reaching out and crying to save it from deeper ruin.

She fears to give a word of honest, well-earned praise to the heart, worn, weary, and discouraged in its work, lest she may possibly make some one think that he is a little smarter than he really is, when perhaps this encouraging word is the only thing that can save the

despondent heart from utter despair. If she ventures a word with the sinner at all, it is not to point the sick soul to the Great Physician, or the care-burdened heart to Him who carcth for it; but it is, in her own words, to give him a "sound talking to," after which she thinks her duty done, and washes her hands forever of all obligation.

Charity does not strive to make wrong appear right, does not excuse sin, nor lessen justice; but with gentle hand she *does* pour balm into the wounded heart, lifts up the fallen, strengthens the tempted and the weak, gives joy to the sorrowing, hope to the despairing, courage to the faint, thus removing the *cause* of much sin, for which, alas, those who most loudly condemn are too often guilty.

The man or woman who holds a young soul in the iron grasp of tyranny, depriving it of the light and warmth and love and sympathy which must be its food and drink and very life, till, goaded to madness with its fetters, it bursts them and plunges out into the darkness alone, only to be bewildered, only to faint and to fall, such a man or woman, though never stained by a touch of the hand, or even a brush of the garments, will some time be roused to the memory of a very sad mistake, if not to that of a bitter crime.

The man who turns away from the pleadings of a young heart, for something that the slender hands can do to earn the daily bread, who afterward refuses from his abundance a crust of bread to the same little pleader because he does not like to harbor beggars, and who, a little later, as an officer of justice (*abused* word), sends the boy to prison for stealing, bears a far greater stain of guilt upon his soul than the little criminal whom he condemns; and yet it may be that God, who knows all the circumstances which surround each human heart, is looking with pity and compassion upon even this cold, hardened one.

We know that while our own souls are in closest communion with the Great Spirit, while our feet are walking most humbly and obediently in the path of duty, we have even then reason to cry, "God be merciful to us, sinners." Then let us, while we commend ourselves to His love and mercy, forget not the love and mercy that we owe to others.

The purest motives of the heart may be misunderstood by men, but to Him who frameth it, all is known.

Comfort, comfort, sweet and holy,
In this precious thought is found,
Courage for the fainting spirit,
Healing for each sore heart-wound.

There are motives back of actions
Which the world may fail to read;
But the Judge of earth and heaven
Sees the thought more than the deed—

Sees each silent inward struggle,
Hears the soul's most feeble cry,
Knows each trying, strong temptation,
In the conflict waiteth nigh;

Every hidden pang of sorrow,
Every wound from envy's dart,
Every sting of slighted friendship,
Every bitter, cruel smart.

Scorn and pride know how to waken,
And the poor know how to feel;
All is seen of God our Father,
And He has the power to heal.

Every earnest, true endeavor,
Though by men misunderstood,
Gains from him a quick approval,
And by Him is counted "good."

Truth to self, to man, to heaven,
Often brings the scourging rod;
Inward peace costs outward conflict—
Scorn of men earns praise of God.

HOPE ARLINGTON.

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their for ones, and their beings blend.—*Thomson.*

ROSALINE.

BY MAURICE BINGHAM.

WHILE musing oft in solitude,
O'er life's past sunny hours,
When free from care we wandered forth
To cull the simplest flowers,
As fertile mem'ry paints the scene,
Again I'm with thee—Rosaline.

In happy days from present bliss
We drew a future bright,
But Time hath drawn aside the veil
That erst bedimm'd our sight.
Yet in thy gentle breast, I ween,
Dwells sympathy—sweet Rosaline.

Then what though stern, unyielding fate
Decreed that we should part,
Let hope and faith in One above
Still cheer thy weary heart.
The journey through life's closing scene
Shall reunite us—Rosaline.

THE THEORY OF SHOPPING. (INTENDED FOR WOMEN TO READ.)

BY MRS. GEORGE WASHINGTON WYLLYS.

Is there not some kindly mathematician who would undertake to compute the number of hours, days, we may even say months, that the women of America spend in stores, looking at bright-colored fabrics, discussing the comparative merits of silk and grenadine, and trying to make their purses stretch out to an indefinite extent? Of course nobody would believe his estimate, until its not-to-be-contradicted facts were placed in solid columns of figures before the very eyes of the incredulous! Nobody has any idea how much time she spends in shopping—nobody has ever paused to think whether it was a good investment of the precious moments. Our women don't systematize much.

Men have their billiard saloons, their reading rooms, their political meetings. Women "shop!" Men throw out their wide-spreading nets of trade, commerce, and speculation to draw in the golden weight of dollars. Women industriously go forth with *their* appropriation of the harvest to scatter it abroad again as fast as possible. Money should be kept in circulation, says the political economist, and no one is better calculated to carry out this theory than a tolerably enterprising woman.

We would not for an instant have it understood that we depreciate the practice in itself. By no means. Shopping is an institution! If it is a standing joke among mankind, then so much less brains have mankind. Do flannel drawers, hosiery, and new shirts spring up like mushrooms by the domestic hearthstone, we should respectfully like to know? What would become of the men, poor, helpless beings that

they are, if the women left off shopping? Sometimes we have known solitary and melancholy instances of men's going shopping, but they invariably returned depressed, victimized, and reduced to their own proper level. Such men usually regard their wives and sisters with marvelous respect and appreciation for a few days, until the keen edge of the thing is worn off!

Therefore don't let us hear a word against shopping, unless the cavalier is prepared to take up the gauntlet in good earnest, and fight the question through à l'outrance! Either it is right or it is wrong, and *we* say it is right!

Right, we mean, to "put money in our purse" and go out *really* intending to buy something that we *really* need. That is our idea of the correct theory of shopping. As the cast-off-clothes dealers say in their advertisements, "All others are humbugs!"

But, ladies, beware how you allow yourselves to be tempted into going shopping, unless you are actually obliged. If the day happens to be beguilingly fine, let it beguile. If you need exercise, go out and take a brisk walk round the block. If a sister woman comes and invites you to go with her, answer her (only in a more courteous form of words), "Get thee behind me, Satan!" Don't be over-persuaded. A woman who gets adrift on Broadway, without a clear and definite idea of what she wants to buy, is like a ship without a compass. If she gets wrecked, financially speaking, whom has she to blame but herself?

And when you sally forth to purchase dry goods for the work room, or crockery for the kitchen, or toys for the nursery, don't dress as if you intended to call on the Empress of Russia or shine at a morning reception in Fifth Avenue. Turn the key on your best silk and cashmere shawl. Lock up your diamonds, if you happen to have any. Dress like a lady, but not like a Sandwich islander who imagines the more wampum she can pile on, the more charming her toilet becomes. A dark dress, an unobtrusive shawl, a pair of nice kid gloves, and feet, as the French say, *bien chaussée*, signify the lady, in these days, much more than gaudy colors or expensive accessories.

Don't take a man with you! If you have a husband, it were better that a millstone should be tied around his neck than that he should accompany you, swinging your bag, and treading ruthlessly on your skirts, and asking in loud whispers "if you aren't almost ready to go," and "why the mischief you don't buy that plaid stuff, and done with it?" and "if this sort of thing isn't about played out?" A man on a shopping excursion always seems to have left eyes, ears, and common sense at home. If one article is ten cents a yard cheaper than another article, he loses sight of all inferiority of quality, all inappropriateness of material, and urges you with irritating whispers and maddening nudges to "buy it!" If the clerk tells you black is white, and grass-green scarlet, he blindly believes the clerk, and "thinks you must be mis-

taken, my dear, because isn't it the man's business to know about such things?"

Moreover, while you are calculating the number of yards and half yards required, in all the fervor of mathematical absorption, he is certain to break in upon your reverie with, "Just look at that girl by the door, isn't she a clipper?" or, "I should really like to know, my dear child, how much longer you intend to keep a man waiting in this hot hole!" Then he is sure to whistle ominously when the sum total is reckoned up, and deny that he meant anything when you turn upon him; "Can't a fellow whistle without being called to account for it? He thought this was a free country, since the Emancipation Proclamation!"

Do not forget that the people behind the counter are human, not mere automats, placed there for your convenience. Speak to them with an intonation of courtesy in your voice, avoid the imperative accent of command that is sometimes, almost unconsciously, assumed. A little kindness or consideration goes a great way with these overworked, worn-out machines, and it costs you nothing. Of all this world's rates of exchange, nothing is cheaper than a courteous manner and a pleasant word! Pity 'tis, people do not deal in them more!

If clerks are bold and obtrusive, trying to talk you into foolish purchases, and obviously speaking falsely for the benefit of their business, you are justified in a manner which will repel. But, on the other hand, a quiet, respectful clerk who shows you all that you desire to see, and then stands by without a word while you make your own selection, deserves some degree of credit!

But we do not blame a clerk, nor any one else, for losing all respect for the females—she hardly deserves the name of *woman*—who comes into a store as the Alabama cruised into Federal ports, and when she is told such and such a ribbon is a dollar a yard, exclaims, promptly, "I'll give you seventy-five cents a yard for it!" Cheapening is her greatest pleasure—haggling her forte. She wants the shopman to "throw in" a paper of needles because she has bought a paper of pins; she parleys an hour, and then perhaps buys half a yard of lining cambric, perhaps nothing at all, telling the wearied-out clerks "she will call again!"

Not much better than this feminine freebooter is the young lady who comes languidly in, tumbles silks and baréges about, looks at this, and inquires for that, and has no more idea of buying anything than she has of contracting for the Pacific Railway! She only wants to pass away her time, and get an idea of the new spring fashions!

It is strange, however, how quickly a clerk can detect whether ladies are shopping in all good faith; or only making believe! "I never will go into —'s again," says the ruffled fair one, "they are so impertinent." But did it never occur to you, my friend, that you were guilty of some little impertinence toward them? Is it nothing to impose new labor on their already over-tired frames, to take up their time,

and try their patience when you do not intend to buy the least thing?

Therefore, having gravely and thoughtfully considered the important question of shopping, we may reduce its theory and practice into sundry brief rules, as follows:

RULE I. Go shopping only when you are actually necessitated so to do!

RULE II. Dress appropriately for the occasion.

RULE III. Never take a man shopping with you!

RULE IV. Treat clerks like ladies and gentlemen, until they themselves give you sufficient reason to consider them otherwise.

RULE V. Buy only what you need for present use.

RULE VI. Avoid bargains and "cheap stores" as you would avoid the plague!

RULE VII. Never buy an article without considering how it is going to correspond with the rest of your wardrobe.

RULE VIII. Don't "cheapen!"

With some people an innate talent for shopping, like poetry, is born! For those who are less favored, these rules may be worth considering and acting upon! Having tried them ourselves, we can warrant them!

NATIONAL SALUTATIONS.

FRENCH.—*Comment vous portez vous?*—which literally signifies, "How do you carry yourself?"

GERMANS.—In some parts of their country they invariably kiss the hands of all the ladies of their acquaintance whom they meet.

GREEKS.—The salutation among the ancients was, *χαίρε*—"Rejoice!" Among the modern, "What doest thou?"

HOLLANDERS.—With their proverbial love of good living, salute their friends by asking, "Have you had a good dinner?"

ITALIANS.—On meeting, kiss the hands of ladies to whom they are related, with the strange inquiry, "How does she stand?"

JAPANESE.—They remove their sandals when they meet a superior, exclaiming, "Hurt me not!"

LAPLANDERS.—When they meet on the ice, press their noses firmly together.

MOHAMMEDANS.—"Peace be with you!" to which the reply is, "On you be peace!" to which is added, "And the mercy and blessings of God."

MOORS.—They ride at full speed toward a stranger, suddenly stop, and then fire a pistol over his head.

PERSIANS.—They salute by inclining the head over each other's necks, and then bending cheek to cheek, with the extravagant greeting, "Is thy exalted high condition good?" and "May thy shadow never be less!"

POLES.—They bow to the ground with extreme deference to friends they meet, with the significant inquiry, "Art thou gay?"

ROMANS.—In ancient times exclaimed, "Be healthy!" or "Be strong," when it was customary to take up children by the ears and kiss

them. The Pope makes no reverence to mortal, except the Emperor of Austria, by whom he is kissed.

RUSSIANS.—The ladies permit not only their hands, but their foreheads to be kissed by friends. The men salute by inquiring, "How do you live on?" "Be well!"

SIAMESE.—They prostrate themselves before superiors, when a servant examines whether he has been eating anything offensive; if so, he is kicked out; if not, he is picked up.

SPANISH.—The grandees wear their hats in the presence of the sovereign, to show that they are not so much subject to him as to the rest of the nation. When the royal carriage passes, it is the rule to throw open the cloak, to show that the person is unarmed.

SWEDES.—They are by no means demonstrative in their courtesies. On meeting they simply inquire, "How can you?"

TURKS.—They cross their hands, place them on their breasts, and bow, exclaiming, "Be under the care of God!"—"Forget me not in thy prayers!"—"Thy visits are as rare as fine days!"—an ancient greeting, as it is by no means applicable to their present country.

WASHOE.—People here no longer say, "How d'ye do?" when they meet. It's "How's your suit progressing?" and the reply, "Pretty well, thankee, how's yours?" A man without a lawsuit is looked upon as a vagrant in the State of Nevada.

ARABS.—They are very ceremonious. If persons of distinction meet, they embrace, kiss each other's cheeks, and then kiss their own hands. Women and children kiss the beards of their husbands and fathers. Their greetings are marked by a strong religious character, such as "God grant thee His favors!" "If God will, thy family enjoy good health!" "Peace be with you," etc.

BENGALESE.—They call themselves the "most humble slaves" of those they desire to salute.

BOHEMIANS.—They kiss the garments of the person whom they wish to honor.

BURMESE.—They apply their noses and cheeks closely to a person's face, and then exclaim: "Give me a smell!" attributable to their great use of perfumes.

CEYLONESE.—On meeting superiors, they prostrate themselves, repeating the name and dignity of the individual.

CHINESE.—They are most particular in their personal civilities, even calculating the number of their reverences. Of equals they inquire, "Have you eaten your rice?" "Is your stomach in order?" and "Thanks to your abundant felicity."

EGYPTIANS.—They kiss the back of a superior's hand, and as an extra civility, the palm also. Their fevered country is strikingly portrayed by asking, "How goes the perspiration?" "Is it well with thee?" and "God preserve thee."

ENGLISH.—An old salutation in polite society was, "Save you, sir!" an evident abbreviation of "God save you, sir!"

ETHIOPIAN.—They take the robes off the friends they meet and place them round their own waists, leaving the new-comers almost nude.

TOTAL DEPRAVITY OF INFANTS.

I do not like children as an institution, not even babies, about whom so many falsehoods have been said and sung, but look on them as little pink, pulpy abominations whom nothing but strong maternal instinct implanted for the preservation of the species, could induce any one to undergo the vexation of rearing.

As to the total depravity of these little specimens, I leave that to be decided by innocent outsiders who have been annoyed by the unearthly yells of a petted darling in public places, and looked on with a strong desire of complying with Solomon's prescription, while the mother tried to hush and coax into silence a kicking, screaming, dirty-nosed, wide-mouthed abomination who could by no means be reduced to quietness.

Can any one enjoy a friendly visit at a house infested by these small sinners? If a lady receives you as company in the parlor, have you not often had the mortification to perceive that a description of something where you prided yourself on, your style, brilliancy, and so on, has been delivered to deaf ears, while your hostess was listening to the suppressed cries of Master Johnny, who has been fished out of the tub of rinsing water by Biddy—bad luck to her for the same.

Who ever saw a house in a neat or comfortable condition where children were not strictly prohibited? If you find rooms littered and unsightly, destitute of plants, books, and ornaments, the furniture finger-marked, and the Holland covers sticky with sweets, does not mistress smilingly account for it by the one word, Baby?

ANON.

[The author of the above did well to sign his execrable remarks Anon(ymous). He must be some fussy, nervous, sour old *bach*—one whom the ladies can not endure, and for whom those dear little lights of the household he affects to despise, entertain a natural antipathy.

Poor fellow! no social sweets can ever be his; exiled from the domestic penetralia, he must spend his weary days and nights in dreary, hopeless bachelorhood. But can not something be done for him, ladies? Must he be left out in the cold?]

A WISCONSIN POETESS,
MISS ALLIE ARNOLD.

At Fond du Lac, Wis., there is a young lady sixteen years of age, the daughter of a widow in humble life. She has been in the habit of writing verse and prose for private reading and for the press for four or five years. Some of her efforts would be creditable to men and women of mature life who have won distinction in the world of letters. The following extracts from poems written by her will give the reader a better idea of her talent—shall I say genius?—than any comments I can make. They were read at the closing ex-

MISS ALLIE ARNOLD.

ercises of the Fond du Lac High School, June 29, 1866.

"HOW MANIFOLD ARE THY WORKS!"

O Thou, in whose Almighty hand
The earth's foundations firmly stand,
And heaving oceans rise and fall,
Thee, the Creator, man shall fear.
So manifold Thy works appear!
In wisdom hast Thou made them all!

The heavens are Thine—stars speak Thy praise,
Point with a thousand trembling rays
The pathway where Thy feet have trod!
They roll along the deep blue arch,
And seem in their eternal march
The glittering armies of our God!

How grand the ever-drifting clouds!
How beautiful those snowy shrouds
That float along 'twixt earth and heaven!
And yet—how fearful in their wrath,
When lurid lightnings mark their path,
And they by tempest winds are driven!

But when Thy hand hath hushed the storm,
And thrown the sunbeams bright and warm
Upon the tearful earth again,
How like an emblem of Thy love
The bright-hued rainbow bends above,
And spans the misty veil of rain!

VALEDICTORY.

Life hath its partings—when the ties
That years have bound together, break—
And slowly, in their sad surprise,
Hearts from their quiet dreaming, wake.
Such is our parting, and to-day
We feel the loos'ning clasp of hands,
And sadly hear the farewell lay
That our long friendship here demands.
Now, from these long familiar walls,
Whose very echoes have been dear,
We must depart—while severed falls
The silver cord that bound us here.
Now on the threshold, we, in thought,
Look back along the chain of years
Whose every mystic link seems fraught
With lights and shadows, smiles and tears.

Who will forget when morning bright
Streamed through the eastern windows there,
How oft it fell like wings of light
On youthful heads here bowed in prayer!
How oft at morn, the playful call,
The much-loved greeting met the ear,
The laughter ringing through the hall
With all its music and its cheer.
All visions of the sunny Past
Cling lovingly about the heart,
To cheer the loneliness and cast
Their sunshine 'round, as we depart!

Miss Arnold has a brother who is a printer and newspaper carrier, and the following lines are extracts from an address she recently wrote for him:

As the silver from the fire,
Came she from her past ordeal
Purified, with purpose higher,
Strong to battle with the real.
Stronger are the hearts of men,
Building up her temples shattered—
Gathering to themselves again
All that war hath rudely scattered.

Stretched out in thy valleys, the ripe bearded grain
Has nodded in thick golden ranks to the breeze,
Has caught the rich sunshine, and faded again
Like quivering waves in the warm Southern seas.

The corn-fields have risen like crowns on the hills,
And covered broad prairies with mantles of green,
Whose light rustling folds as they waved in the wind
Disclosed the bright ears that the autumn would glean.

The strong hand of labor still steadily moves,
With vigor that even a nation may feel;
In the stroke of the anvil, the rush of the stream,
The clash of the engine, and roll of the wheel.

Miss Arnold is a flower of the prairie, but she has not "blushed unseen," nor "wasted her sweetness on the desert air." She is appreciated by a constantly increasing circle of friends and admirers, who point with pride to her literary efforts. A school-girl, she has had no opportunity to improve her mind by general reading, and the productions of her pen are not modeled after the patterns which the masters have left in our libraries; they are rather the results of her own thought and emotion. She is *petite* of stature, finely formed, and she has a well-balanced womanly head crowned with soft brown hair. Her eyes are large and spiritual, and seem to have a telescopic glance into the future. I hope our literati will afford this young lady a chance to win her way to public favor. As a people we are now beginning to acknowledge the fact, that whatever a woman can do well without sacrificing her womanly nature, she has a right to do. If she can carve like Harriet Hosmer, carving marble is her sphere; if she can paint like Rosa Bonheur, painting pictures is her sphere; if she can write a "Principia," the starry heaven is her sphere; if she can write a "Paradise Lost," in her society paradise is found again. G. W. B.

It is related that when Emma, Queen of the Sandwich Islands, visited Dublin Castle, during her recent tour in Great Britain, the Lord Lieutenant ordered the leader of the regimental band to play the Hawaiian national air, when he at once struck up with the soul-stirring strains of "Hokey-pokey Winky-wang, King of the Cannibal Islands!" the effect of which can be better imagined than described.

OPEN YOUR EYES.

BY C. S.

OPEN your lovely eyes!

Chameleon-like, they seem to take the hue
Of all the passions in your soul that rise.

Joy makes them like the skies, serenely blue;
Love purples them with those delicious dyes
The modest violet wears, when with the
spring

She breaks abroad from winter's icy ties,
And crowns the woods with her bright blossoming.

Sweet meditation fills

Their inmost depths with a subdued light,
Like the brown current of the aldered rills,
That rolleth on unto perpetual night:
Or the dim shadows underneath the hills,
Where sober evening broodeth like a dove,
And the charmed air to sudden silence stills
By the repeated story of her love.

I would not know your face,

Did not those eyes, like stars, light up its
heaven

With a serenest and diviner grace

Than marks the planetary orbs of even.
Oh, how I love the various thoughts to trace,
That from its soft horizon slowly rise,
As clouds we see preceding clouds displace
Upon the changing but eternal skies.

Open your eyes for me!

Lift the long lashes from your crimsoned
cheek;

Vail not their luster, for I long to see

The passionate 'hopes that in their glances
speak.

Were not these lips a murmuring melody;

Did not this forehead flush beneath my kiss—

Your eyes were still a matchless joy to me,

A world of beauty, and a heaven of bliss!

THE ACTIVE AND THE PASSIVE.

—O—

IN modern society there are two orders or classes the line of distinction between which is so clearly drawn that no mistake can be made as to their respective composition. One is the *active* class, the other the *passive* class.

They might also with correctness be termed respectively the *radiant* or *reflectent* class, and the *absorbent* class.

The first class is composed of those who are the originators, leaders, and agents in all enterprises, whether progressive, reformatory, or opposed to the true interests of the community, and clogging the wheels of civilization under a false device of "onward!"

It is thus seen that the active class is constituted of very different and discordant elements, and that there is much violent contention for the supremacy among them; yet out of all this agitation, disorder, and strife there is a resultant, the influence of which is happy for the community, for the nation, and for the world. There was a period in the history of Greece when she was free and prosperous; but the strifes between Athens and Sparta,

between blatant aristocracy and determined democracy, were frequent, and sometimes severe in results to one or both. The agitations between states developed resources previously unknown; and even those arts, like painting and sculpture, which are thought to accompany peaceful legislation, flourished in a surpassing degree. Greece, Rome, and other proud nations had their eras of progress and glory and then declined, to instruct those who came after them—us—by their examples, and by the epitaphs written upon a thousand prostrate monuments, to communicate the *esprit* which animated their founders—the desire to advance. Successive ages down to the present have caught this *esprit*, and the active men of each have wrought out fold by fold its tendencies and made advancement.

The *passive* or absorbent class, by far the larger numerically, is composed of those who from choice, from circumstances, or by necessity merely look on as the world moves, and tacitly receive the impressions of their active fellow-mortals. They are the wax of humanity, the soft tablet upon which are inscribed the succession of public events. On the long roll of the passive may be read the names of men and women who, for natural talents and education, stand not a whit behind the foremost of the active. "They should be on the other side," you will say. Yes, they should; but they have long been waiting for a good opportunity to assert themselves—waiting, like the redoubtable Micawber, "for something to turn up" worthy of their sympathy and hearty co-operation. Now and then one of these talented laggards is roused into life by some unlooked-for disturbance, and becomes one of the most vigorous champions of the active party. It may be for principle, integrity, justice; it may be for wrong, falsehood, tyranny.

The *passive* operate as a clog upon the wheels of progress, because their slow sensibilities can not appreciate the favorable tendencies of substantial innovation. They cling to old customs, old habits, and old things because their fathers considered them sufficient; and social convenience in their ways of thinking after all is not so important a matter as the innovator claims. The aphorism "Let well enough alone" is one which they find especially handy, when they are interested so much as to consider a new thing. They operate, too, as a check upon social retrogression and political intemperance; upon the former, because they may not be stirred from the well-worn tracks which they inertly move in; upon the latter, because the scheming and corrupt demagogue, while he contemns their listlessness, is fully aware of the latent power in their serene depths, which might be aroused by some excessive imposition, and utterly destroy the fabric of aggrandizement raised by his already achieved success. Their passivity, therefore, has some influence indirectly manifested for good. Though there may be little or no sympathy between the two classes (for how can activity and inactivity, opposites, mutually

sympathize?), there can be some reciprocity—a reciprocity in the way of performances by the one party, impressions or indicative effects by the other. Some prefer the ranks of the *passive* class because there are influences at work among the *active* which at heart they condemn, and their disgust inclines them to include the whole class in their anathema. Some there are who in the chargin and discomfiture of defeated effort have withdrawn from the active throng and taken a place among the indifferent.

We are said to live in an age of activity. There certainly are Titan energies at work: steam and electricity do their work, and property directed by mind will do their work well; but there are too many men and too many women who do nothing more than absorb instruction—truth, and lack the *animus* to radiate or impart it to others. Their culpability lies in their inertness, in their do-nothingness. Opportunities for doing good lie "thick as autumnal leaves," and as but few of the active engage in the good work of ameliorating the social and moral condition of humanity at large, the capable passive can come out of their burrows and bestir themselves.

We would in a measure reverse the common grammatical rule—we would turn the *passive* into the *active*—we would have all be doers, each in some sphere peculiarly adapted to himself or herself, and that sphere one pervaded by virtue and benevolence. A few earnest spirits may accomplish much; but when the great mass of those who can and might co-operate in hastening forward that work of social improvement which all acknowledge so desirable, stand coldly aloof, extend no hand, proffer no aid, their spirit of indifference is likely to dampen the zeal of the self-sacrificing philanthropist and increase his difficulties. *Active* men of the right stamp are needed.

"A time like this demands

Strong minds, great hearts, true faith, and ready hands;
Men whom the lust of office does not kill;
Men whom the spoils of office can not buy;
Men who possess opinions and a will;
Men who have honor—men who will not lie;
Men who can stand before a demagogue
And scorn his treacherous flatteries without winking;
Tall men sun-crowned, who live above the fog
In public duty, and in private thinking—
For while the artful, with their thumb-worn creeds,
Their large professions, and their little deeds,
Mingle in selfish strife, lo! Freedom weeps,
Wrong rules the land, and waiting Justice keeps."

A WIFE.—Jeremy Taylor says that if you are for pleasure, marry; if you prize rosy health, marry. A good wife is Heaven's last best gift to man; his angel of mercy; his minister of graces innumerable; his gem of many virtues; his casket of jewels; her voice his sweetest music; her smile his brightest day; her kiss the guardian of innocence; her industry his surest wealth; her economy his safest steward; her lips his faithful counselors; her bosom the softest pillow of his cares, and her prayers the ablest advocates of Heaven's blessings on his head.

FASHIONABLE ABSURDITIES.

"O, wad some power the gifle gie us,
To see oursels as ithers see us."

A WICKED wag has been plying his art in the production of what was, what is, and what may be. These verities, probabilities, and possibilities, in the way of ladies' dress, are not much more absurd than the fashions of the other sex, especially that of their great, heavy, bungling stove-pipe hats, or the fantastic manner of shaving and trimming the beard.

FIG. 1.

Cut No. 1 shows whence the present fashion of huge chignons or waterfalls may have originated. We had some admiration for the rather neat style of wearing the hair in a net,

FIG. 2.

which was the mode a few years ago—especially for girls and young women.

No. 2 is evidently an exaggeration; the bag

FIG. 3.

—unlike the tail of the otter—is supposed to be stuffed with wadding of some or any sort.

No. 3 is merely an expansion of the present

FIG. 4.

style, commended to those who are bound to lead the fashions, by getting a little ahead of

all the rest. We see no greater objection to this, than to the enormous bustle of a few years ago.

No. 4 seeks to re-introduce an ancient style of head-dress, of which we find many illustrations in old prints; and we may, ere long, see our young ladies topped off in this aristocratic coiffure.

FIG. 5.

No. 5 is plainly inadmissible, except for special occasions, or where ambitious mammas wish to show up their daughters, with a view to—what you call it?

FIG. 6.

No. 6 is simply absurd, and the man who drew it knew it. He ought to have his ears pinched for such a marked attempt to ridicule the ladies.

FIG. 7.

No. 7. We presume this is intended to represent a genuine waterfall. See the trees and shrubbery on the banks, with the cataract pouring down in graceful showers. But why

not have a little boat with a man in it, going down with the stream? Would not this heighten the effect, and increase the admiration of the beholder? Here is a large field for inventive genius.

FIG. 8.

No. 8 is a pretty girl, after our own heart, and "aint she neat?" Her hair—in wavy ringlets—is quite as ornamental as any in the group; nay, the very naturalness of her style exceeds them all, for is not "beauty unadorned, adorned the most?"

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Chabris.*

My people are destroyed for lack of knowledge.—*Isaiah IV. 6.*

RECENT RESEARCHES ON MUSCULAR POWER.

BY PROF. RUFUS KING BROWNE, M.D.

It has long been questioned what the seat of the working power exerted by the human frame was—that is to say, if the products of exertion, during the evolution of force, were traceable, in what part of the tissues or other ingredients of the body did this change, during exertion, take place? The first who broached a pointed opinion on the subject was an English physician, 200 years ago, who stated the supposition, that the necessary conditions of muscular motion were the conveyance of combustible substances by the blood to the muscles, and the access of oxygen by respiration; but this was not exact. Liebig, Playfair, and other chemists and physiologists, contended that the source of mechanical power in the muscles was due wholly to the combination of oxygen with the muscular tissue—or, as it was termed, the combustion of the muscles. Assuming that there is an agreement, that muscular power is dependent on the mutual action of the food and the oxygen, it was wholly undecided whether that food must first be converted into the actual organized substance of the muscles before its oxydation can give rise to mechanical force, or whether muscular power may not be derived from the oxydation of food which has only arrived at the condition of blood, and not of organized muscular tissue. The answer to this question affords the key to the process of animal nutrition.

It has been recently shown, by careful experiment, that the sum of force evolved in muscular action, measured by the mechanical work performed, is far greater than could be generated by the quantity of muscle oxydized during the same period, and hence that the power of the muscles is not derived from the oxydation of their own substance. Frankland has recently announced the conclusions, that the muscular power is the product chiefly, if not exclusively, of the oxydation of matter contained in the blood itself, and not from the oxydation of muscles themselves; that the chief material used for the production of muscular power are non-nitrogenous absorbed matters of the food; that the constant renewal of the muscles, like every other part of the body, is not more rapid during great muscular activity than during repose; that the transformation of potential (or latent) energy into muscular power is accompanied by the production of heat within the body, even when the muscular power is exerted externally, and that this is the chief if not the only source of animal heat.

But plausible and however readily accepted this view now is, there are well-ascertained facts which qualify it. Smith has shown the amount of carbonic acid exhaled during rest and exercise. His experiments show that the greater amount of this is derived from the blood in which it is dissolved. This conclusion accords with Frankland's, who used Smith's data. It is exhaled in greater quantity during the greater activity of the work of respiration. But Matteucci has shown that the muscular tissue itself, when entirely deprived of blood, will yield carbonic acid when caused to contract by galvanism. He found that the muscles of frogs, which had been several times washed, exhaled carbonic acid, and the unavoidable conclusion was, that during contraction the muscular fiber itself is oxydized, the result being carbonic acid. He found that heat also is developed at the same time. In employing the most feeble galvanic currents possible to excite muscular contraction, it was easy to determine the quantity of zinc oxydized in the battery during the passage of the current which is employed to excite the nerve, to move the muscle, and produce contraction. He ascertained that the *work* of muscular contraction induced in this way is enormously greater than the amount of work done in the battery as measured by the voltmeter.

These experiments, although they do not exactly represent the exact elements of muscular work as done in the living body, yet furnish data well worthy of confidence in making up our general estimate of the problem of muscular power.

In Matteucci's experiments, it was found that of two equal and opposed muscles (of the thighs) of a frog, the one having been galvanically excited, and the other being at rest, the electro-motor force of the latter was considerably superior, that of the former, an exhausted muscle, showing an actual *loss* during the act of contraction. These experiments indicate that when deprived of all blood, the muscular

tissue does, by being contracted by an artificial stimulus, undergo change of substance and evolve certain proportions of energy in the form of one or more kinds of force, *i. e.*, heat. But between this and the *natural* contractile effort there is a very wide distance—a difference of two kinds. In the first place, the *physiological* or living stimulus to the nerves is not electrical; and in the second place, when removed from its complete investment by the living parts in the body and brought into the air, muscular tissue undergoes immediate oxydation and yields carbonic acid.

Matteucci, whose experiments were physically of the most delicate character, concluded that in the case of irritation of muscle by galvanism to the nerve, as above related, "that the nervous irritation [by galvanic excitation of muscles deprived of blood] can not act without having previously given rise to the combustion or oxydation of organic matters accompanying muscular contraction." On this theory, the change or disturbance in the muscular tissues occurs *before* the irritation initiated in the chemical work of the battery becomes a strictly nervous irritation, and although the nerve is its track, to begin with, the muscular tissue must *react* upon the nerve in an inverse direction. This latter irritation is, in a certain sense, not mere *conduction* from the battery to the muscle, but physiological irritation.

It results from a great number of experiments, that the *work* produced by muscular contraction is enormously greater than the corresponding chemical or calorific work in the battery. It necessarily follows from this, that the nervous irritation can not act without having previously given rise to the combustion of the organic matters, azotized or non-azotized, which accompanies muscular contraction.

"The muscular fiber is also burnt and oxydized during contraction." (Matteucci.)

EFFECTS OF A BAD DREAM.

THE five leading journals of Paris contain long and circumstantial accounts of a distinguished engineer whose head was turned perfectly white by a most frightful dream. The engineer had visited a rough and unfrequented mineral region for the purpose of exploring and reporting to a company of capitalists upon the richness of a certain mine. The night of his arrival, and before he descended into the mine, he lodged at a small inn, and after devouring a pound or two of pork chops, went to bed. He dreamed that he had visited the mine, and was being hauled up, when he discovered that the rope was almost severed, and there was only a single strand to support his weight and that of the bucket in which he was being drawn up. Suddenly, when he had ascended two hundred feet, the rope, he dreamed, gave way, and he uttered a fearful shriek, which aroused the inmates of the house, and when they burst open the door of the dreamer's room, they found a white-headed man in the place of the black-haired young gentleman who had retired a few hours before. The story is well authenticated, and his is the first instance on record of a man's hair having been turned white from the effects of a dream.

[It is not at all wonderful that the man had the nightmare, after eating two pounds of pork at supper; but that a dream should have induced such a metamorphosis in the color of his hair is a startling commentary for those to digest who indulge in late and hearty meals.]

TIGHT LACING.

WE have a letter before us asking some advice on the effects of tight lacing; and without attempting to give an elaborate analysis of this destructive custom, we offer a few hints for the use of those wise enough and true enough to themselves to appreciate them.

We introduce four engraved outlines. Fig. 1 shows the natural proportions of the different parts of the trunk of woman; No. 2 shows the skeleton in its natural condition.

FIG. 1.

FIG. 2.

The lungs and heart are located within the cavity formed by the ribs. That these organs should be protected from external injury, a bony frame-work has been thus thrown around them. The stomach and liver are located just below the ribs, at that point where the belt is generally placed. These organs require freedom, especially the stomach, in order that digestion may be carried on efficiently.

We have an idea, though we do not wish to insist upon it too strenuously, that the Creator understood what form was best for man, for woman, and for all the members of the animal kingdom.

In Nos. 1 and 2 we find the God-given form, with ample room for the lungs and heart to do their work, and with abundant room for the stomach, liver, and other organs essential to life and health located in that region.

Now, let us turn to art and see how she has improved upon God's work. Woman is called "God's last, best gift to man;" but here we find, in figs. 3 and 4, what Dame Fashion has given to mankind.

No. 3 is a laced, pinched-up, contracted waist, reduced nearly one half in diameter and three

FIG. 3.

FIG. 4.

quarters in room. Look at No. 4, the skeleton of No. 3; see how those ribs are squeezed down! how narrow! how contracted! the lower part of the lungs reduced to less than one third their proper capacity, and the region of the stomach and liver is so small as to induce great physical weakness. Woman as well as man needs to digest food in order to be healthy. She can not live on fashion and flattery.

There seems to be a mania among ladies who are too slim by nature for substantial health, to

lace themselves as small as possible; and we are sorry to see there are men of good sense, in most respects, who are so ill-informed in regard to what a woman ought to be for a wife and mother, for a healthy human being, indeed, that they praise a small waist.

But women say, "My clothes don't feel tight—they are not uncomfortable." But we beg to remark that they are tight enough to prevent the proper expansion of that part of the system which contains the vital organs; and while thus cramped up, a woman can neither digest food enough to maintain her health or properly vitalize the blood, and the consequence is that her large and active brain and her nervous susceptibility exhaust life-power faster than she manufactures it.

We regret to see that lacing is again coming into fashion. Young girls seem to be crazy to get on corsets which can be girded up. The shop windows indicate what are in the market and what are in use; though nothing of this kind finds a place in the writer's family, or has for the last twenty-five years. The unphysiological, unnatural waists and stiff figures seen on the street, and in the shop windows aforesaid, where these stiffening apparatuses are kept for sale, tell us plainly that the present generation of women are committing suicide, and that the mothers of the next ten years will often be called, with Rachel of old, to "mourn for their children, because they are not."

If woman would be fair, healthy, and happy, and hold her youthfulness far on in life, let her avoid lacing, whether with or without stays.

If men would have healthy wives who will not break down within ten years after marriage and become invalids for life or go to an untimely grave, leaving behind them a family of puny children, let them seek for wives those who do not lace. Moreover, if women would avoid the thousand ills to which she is of late years apparently the heir, let her avoid lacing; insist on room for her lungs and her stomach, and she may be the wife of a happy husband, and the mother of healthy, happy children.

FRANKLIN AND JACKSON. THE MAN OF IDEAS AND THE MAN OF ACTION.

THE two faces illustrating this article we have chosen as the types of two prominent and characteristic classes of Americans. It is doubtful whether in the whole range of our biography there could be selected two who have left so deep a mark upon the generation in which they lived and acted, between whom the contrast is so entire and striking, as between the inventor of the lightning-rod and the hero of New Orleans.

Both these men attained great age, both reached fame at an early period in their lives, and both spanned a very wide arc in American history.

When Franklin first went from Boston to Philadelphia in 1723, a lad of eighteen, that city was then a pleasant country village. Bears were shot within sound of the nine-o'clock bell. He lived a long and prosperous

BENJAMIN FRANKLIN.

life under the Georges of England, accumulating one of the largest fortunes that were made by the industry of one man in colonial times; was an old man of seventy when the first volley was fired from behind the earthwork on Bunker Hill, and throwing the whole weight of his great character, his splendid reputation, and his consummate diplomatic genius into the struggle, he fought that contest through, leaving it doubtful whether he or Washington did the most toward the grand result, and died at the age of eighty-four, just after the final adoption of the constitution; the molding of which was the last of his public labors.

The first figure that Andrew Jackson makes in our national annals is during the last year of the Revolution, when he appears as a long, gaunt, red-haired, and blue-eyed stripling of twelve, fleeing with his mother from a raid of the red-coats, but even then breathing threatenings and slaughter against the enemies of his country and the authors of the disasters that overtook his family. From that time on till the close of the Mexican War, a period of more than sixty years, Andrew Jackson was emphatically *the fighting man* of this country, and the most distinguished citizen of this republic.

The lives of these men, taken in the order of time, cover almost the whole of our history from early colonial days till the beginning of the last epoch in our public affairs. But with these circumstances, the extreme age which both attained, the powerful influence which each wielded during almost the entire period of their lives, all resemblance between them ceases. At all other points the contrast is striking and total.

Jackson is the type of whatever is strong in volition, prompt in decision, vigorous in execution. A powerful and indomitable WILL char-

acterized the man through every period of his history, and in every prominent act of his life. His intellectual faculties, whether we take the testimony of Phrenology or of his biographers, though good, were not of a high order. Here he had many superiors. In fact, every public man with whom he came in competition, and especially his two life-long antagonists Calhoun and Clay, far surpassed him in volume of brain, clearness of mental vision, extent of acquirements, and ability in public debate; yet in a sagacious estimate of the political future and in the skill of party tactics he invariably foiled or crushed his opponent.

What appeared to be wisdom in Jackson was only a certain intuition. Having himself strong passions, and being swayed by violent prejudices, he was able to estimate the force of these in others; and as men are more frequently and more entirely governed by passion than by principle, his judgment as to the extent to which the masses would be or could be swayed, was more correct than if he had himself been guided more entirely by reason.

His intellectual powers being not much above the average of intelligent American citizens, never lifted him out of sympathy with the uneducated and unthinking crowd. None of the organs that make man pre-eminently an intellectual being are largely developed on the head of Jackson; Causality and Comparison, Ideality and Wit are all moderately developed. Only the perceptive are large. His memory of localities, dates, and faces was excellent. But knowledge with him was a collection of dry and perhaps isolated facts, not data from which wise conclusions and important truths could be drawn. A man with a head shaped like his does not care for the abstract principle, but for the fact on which it rests. Such men are not fitted to discuss and defend principles in debate, but are always prepared to fight for a position once taken, and to execute a policy once determined upon.

We have had no great man whose tendencies were so irresistible in the direction of active life. When Jackson was about thirty years of age he was a senator in Congress and a judge; but he resigned all these high and honorable positions in order to become a trader, a farmer, and a horse-racer. He was satisfied with no mode of life that did not allow him to pass the most of his time in the open air on horseback. He enjoyed a morning gallop on *Truxton*, his famous race-horse, far better than to sit all day on the mahogany and red morocco of a senatorial chair.

With Franklin, the tendencies were all in the other direction. He was a sedentary man by nature, and a philosopher by constitution. His mind was ceaselessly vigilant, restless, and acquisitive, but he was content to pass weeks in his library and at his fireside writing and talking, and taking his exercise in an hour's pacing of the floor. Though a great traveler, and at one time an Indian fighter, he did not

through a long and stirring life pass more than thirty days in the saddle; while from 1788, when Jackson first crossed the Alleghanies, till 1828 when he went to Washington as President, a period of forty years he was hardly ever out of the saddle for more than half a day at a time.

Observe the wide and striking contrast in the intellectual regions of these two heads. The face and head and figure of Jackson taken together give as strong an impression of superiority as the person of Franklin. In fact, Jackson has the more kingly bearing. But looking at their foreheads alone, one bears the stamp of genius and the record of long bright years of successful application to science, literature, music, fine arts, everything that decorates and ennobles our nature; while the other, though ample enough, has an arid and unused expression. Both were keen and vigilant observers, but how different as to the objects that came under their notice! With Jackson, everything was subordinated to a single and controlling purpose. If he was campaigning in a wild country he would have no thought that was not connected with warfare. He would observe the face of the country and learn all the roads and paths traversing it; aside from that, he would care for nothing.

Franklin, on the contrary, was interested in everything that could aid his fellow-men, everything that could in any manner promote their interests or enlarge the domain of man over nature. He could not pass a new plant without wondering if it was known to the botanists, or if it had any valuable properties; he took lessons from birds and bees, from running streams and rolling clouds. If he rode over a ledge of rocks, he was interested in knowing whether or not it might prove useful as a building material; if the chimney of the room in which he was staying did not convey away the smoke, he at once set about discovering the reason and removing the difficulty; if a thunder-storm swept over the town, he was devising some way in which the lightning could be stripped of its terrors; observing how much heat was wasted by the old open fireplace, he invented that admirable arrangement, which for cheerfulness, ventilation, and economy has never been surpassed—the Franklin stove. Whenever he crossed the Atlantic, he was studying the ocean currents, and making the most valuable suggestions as to the theory of storms, and for the improvement of navigation as an art. No man since Bacon has been so thoroughly imbued with the system of that great English philosopher, so constant and successful a devotee of "the philosophy of uses."

Observe how evenly and how admirably the forehead of Franklin is developed from the eyes upward. For a man with such a head no fact can long remain dry and unproductive in his memory. The law of his mental organization draws him ever from the special to the general, from the phenomenon to its cause, from the isolated truth to its connections, its history, and its lessons; in a word, a Franklin is always climbing up from the details of things to their philosophy, from effect to cause, from the arid plains of dry knowledge to the serene and slightly mountain-tops of wisdom.

In Jackson, on the other hand, the indifference to learning was remarkable. Though for many years a lawyer and a judge, it is doubtful if he ever read Blackstone or any other legal authority through in his life. He came near losing all his property at one time from ignorance of the familiar principle in our system, that when plaintiff and defendant are both non-residents of a State, a suit between them is improperly brought in the United States Dis-

ANDREW JACKSON.

trict Court. When he was senator he wrote in the grammar and style of a backwoodsman, and it is doubtful whether he ever believed that the world is round.

There was but one branch of knowledge in which he was proficient, but for winning success in life the man who understands *this*, and knows how to use his knowledge, can dispense with schools and all their lore. *Jackson knew men.* The certainty with which he selected honest men in his business transactions and successful men in politics, was equaled only by the correctness of his judgment at the race-course and in the cockpit.

Combined with this knowledge and springing from it was the ability to adapt himself to any company in which he was thrown. From the circle of rude wagoners around the camp-fire to the most polished society of city parlors he could pass at once, and seem equally at home in each. There were but two men of his time that could equal him in dignity of bearing and courtliness of address, these were Aaron Burr and Henry Clay. Yet his conversation was more entertaining than instructive, consisting as it did of fact, anecdote, and personal adventure, the stories of the frontier and the camp-fire.

The colloquial powers of Dr. Franklin have seldom been surpassed by any of whom history gives account; certainly by no American. He could talk delightfully with any human being from a child to a sage, for he was himself at once child and sage. He possessed that rare faculty, a gift that not more than three or four in the history of the world have displayed, that enabled him to illustrate every important truth by a most felicitous anecdote. To hear one of Franklin's anecdotes was to be most exquisitely entertained by a well-told story and, at the same time, to have some valuable truth in morals or philosophy brought home to the understanding and fastened in the memory.

He was emphatically a laughing philosopher. He believed in growth, in acquisition, in studiousness, and in industry; but he believed still more strongly in *happiness*. If Oliver Goldsmith had not said it, we should believe that Franklin was the author of that golden sentence: "As some men gaze with admiration at the colors of a tulip, and others are smitten

with the wings of a butterfly, so I was by nature an admirer of happy human faces." It was said of Burke, that one could not step under the shelter of a gateway with him, to escape a shower without discovering that he was in the presence of an extraordinary man. It might have been said of Franklin.

Until he was about fifty years old, he was a methodical, enterprising, and successful printer, editor, and publisher. Then he retired from business with a fortune of something more than a hundred thousand dollars, and devoted the rest of his days to acquiring and imparting knowledge, and to the public service. A great part of the time he spent in travel both in this country and in Europe, and in conversation with the most witty and learned men and the most charming women of his time. Thus for nearly forty years his life was one long festivity. He was in affluent circumstances, his health was perfect, his temperament sanguine and joyous, his mind stored by years of unremitting industry, his memory rich with the experience of a long, varied, and crowded lifetime. How could the conversation of such a man fail of being in the last degree charming?

Jackson was the warmest and most devoted of friends. He always proceeded on the conviction that he could not have been mistaken as to the worth or courage of any man whom he had trusted or who had served under him. The following anecdote illustrates at once his belief in his friends and his heroic bearing when excited. Some time not long after the last war with England, when the fame of his battles was still fresh, he rode into Nashville one morning and found the topic of the day was a duel, in which his old protege Sam Houston was one of the parties.

Houston, the least irascible of men, had shown himself reluctant to bring the "difficulty" to a crisis, and some doubts had been expressed as to his courage. Remarks to that effect reached Jackson's ears. Instantly the old soldier was all aflame. With hair erect he paced backward and forward on the flagstones in front of the old Nashville Inn, bringing down the iron ferule of his walking-stick with a ring that was heard all over the square, and shouting: "Gentlemen, you're mistaken, Sam Houston is no coward. I know him, and he'll fight. He was with me at Talladega, at Emucfau, and Horseshoe, and I tell you **HE WILL FIGHT!**"

The contrast in the personal appearance of these men is as striking as in their character. One reason why Jackson was always so intensely popular with the masses of the people was because he was in many respects the ideal and typical American. They saw in him their own qualities and their own personal characteristics exaggerated and made heroic. Six feet and two inches in his stockings, angular, bony, restless, and swift, "as straight as though he had swallowed all the ramrods in the army," the backwoodsman never saw a more perfect leader. He had that passion for swift, intense, and sometimes aimless or thoughtless activity which is one of the besetting defects of the American temperament.

The style of man to which Franklin belongs is English, and disappears in two or three generations when brought to these skies. Our climate and manner of life does not permit the development of this full, mellow, rounded physique, muscular in youth, tending to corpulence as age advances. It is seen, but mostly in families where the descent is direct on both sides from English stock. It is the temperament peculiarly fitted for social activity and social success. Somewhat less strenuous than the other, it is equally persevering and effective, accomplishing as much while sitting by the fireside or standing behind the counter as the other can do by the constant activity, long journeys, and swift rides of which he is so fond. L.

NEW YORK,

MAY, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unblinded truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Poe*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$2 a year in advance; single numbers, 20 cents. Please address, SAMUEL R. WEISS, 389 Broadway, New York.

PHRENOLOGY IN SCHOOLS.

WE have received the annual report of the City Superintendent of Schools of the city of New York for 1866, and are pleased to find within its covers such a recognition of the advantages derived from the application of phrenological principles to scholastic training as must commend our science to those educators who have heretofore regarded it with coldness.

Recognizing the importance of a correct system of classification, careful investigations have been made with a view to ascertain the best basis or the proper conditions for such classification. One of the school inspectors, Mr. John Hecker, especially interested himself in this inquiry, and, in the language of the report, has come to the conclusion "that a classification of the pupils of our public schools, based, partially at least, upon *temperamental characteristics and physical conditions* [the italics are in the report] affecting character, disposition, and intellectual development, might advantageously be adopted. * * * In accordance with the soundest principles of physical science, he recognizes the strongly-marked and clearly defined external characteristics which discriminate the Nervous, the Sanguine, the Lymphatic, and the Bilious temperaments,* and recommends a subdivision by the teacher of each class into four portions, according to the predominance in the pupils of these four temperaments respectively."

Then follows a description of the characteristics exhibited by those children

* Mr. Hecker seems to adhere to the old classification of the temperaments. We now recognize three, the Mental (Nervous), the Motive (Bilious), and the Vital (comprehending both the Sanguine and Lymphatic) temperaments.

possessing these temperaments respectively in predominance; and though it may be somewhat tame reading to those of our readers who are familiar with temperamental differences, we give it verbatim for the purpose of showing that some of our metropolitan educators have got their eyes open to the fact that mental phenomena are greatly influenced by temperamental condition; and that these same educators have bestowed sufficient attention to this matter to obtain an excellent idea of the nature of temperament.

"Children in whom the Nervous temperament predominates are distinguished by quick intelligence, aptness and facility of apprehension, rapidity of conception, and readiness to acquire instruction; while, at the same time, they are less able to retain what they learn, and need frequent and thorough reviews. Those of a Sanguine temperament are more readily affected by external sensation than by mental impression—requiring the constant interchange of physical exercise with intellectual training, and a high degree of patience and perseverance on the part of the teacher to enable them to retain and assimilate instruction. Those of Lymphatic temperament are easily swayed, and led by the will of the teacher, receiving *impressions* as distinguished from ideas easily, but are slow of comprehension intellectually, inert physically, and deficient in retaining impressions. The Bilious temperament gives permanence and retentiveness to all instruction, when once acquired, although its acquisition is very slow and difficult."

The report goes on further to state substantially, that it is quite palpable that children differing in mental power and physical condition should not be subjected to a like standard of instruction, but that their different capacities for learning should be carefully considered, and those, only, of similar or nearly similar mental apprehension and physical condition should be graded together.

The teacher should be careful to study the qualities of his pupils, and so adapt himself and his instruction to them, that each scholar may be developed intellectually according to his or her capacity. The principles laid down in those works

which treat of education as related to physical and mental conformation are worthy of careful study and observation. Those principles have heretofore been much overlooked, but their importance has been shown to be such that no candid mind, if it be at all interested in the training of youth, can ignore them.

The above official recognition of the value of Phrenology when employed in the classification of pupils in the district schools of a metropolis like New York is worthy of more than a mere passing notice. There are many private teachers, some engaged in a small way and some conducting large seminaries, who recognize the utility of our science and employ it with the most happy results in the mental discipline of their scholars. Not long since we examined, phrenologically, a young man who stated that he was the principal of a large seminary in Massachusetts, having attained that position, he believed, solely through the knowledge of character and the correct notions of education which he had obtained by a careful study of Phrenology. He had entered the seminary as a subordinate teacher, and determined from the first to make practical trial of the science which had interested him. His successful management of the children intrusted to him was marked; and although a stranger in the place, and with no outside personal influence, he was rapidly promoted to positions of greater and still greater responsibility, until his advancement culminated in the principalship. "I found," he said, "that a system of classification based on the principles of Phrenology was the best, and in the very outset paved the way to successful training."

Mr. Hecker, whose deep interest in educational matters is only equaled by the attention he has given to phrenological investigations with the view to their practical application as already indicated, is highly commended by the Superintendent in his report, as will appear by the following extract:

"The interest thus manifested by Inspector Hecker in the practical working of the various schools under his immediate jurisdiction, and in those of the city generally, is praiseworthy in the extreme; and a lasting debt of gratitude is due to him from the large body of teachers for

whose welfare and success he has so perseveringly and energetically labored."

We are content that New York shall take the lead in thus introducing into her public school system the healthful principles of that science which is so eminently fitted to improve society at large; and we are confident that the more generally those principles are applied in the school systems of the different States, the better will become their details of arrangement and the more thorough the scholarship of the pupils. Of the beneficial influences flowing from a system of education which recognizes the disparities in character, mental caliber, and physical condition of youth, and grades them accordingly, it is hardly necessary for us to speak; they will be at once acknowledged to be incalculable to the State and the nation.

PHRENOLOGY.

BY A. A. G.

"PHRENOLOGY," says one, "is the worst of all ologies."

"Phrenology," says another, "is a money-making science, and that's all."

"Phrenology," says still another, "is one of the greatest of humbugs, and destined, sooner or later, to be exploded."

"Phrenology," says yet another, "makes fatalists and infidels."

And, after all these foes of Phrenology, there rises up another, who says: "The man who believes in Phrenology is a slave to his 'bumps,' for he is nothing more or less than his 'bumps' will let him be."

Another says: "No man who believes in Phrenology can be a cheerful man, for he carries about with him the consciousness that he has one or more *bad* 'bumps,' which, like an evil genius, must always lead him whithersoever he would not go. Despair goes hand in hand with Phrenology, and the devil follows after, as hard as he can go."

Truth always seeks to manifest itself, and to make revelations of good to man, and the truth of Phrenology, we think, longs to be recognized by all the race.

So far from being "the worst of all ologies," it is one of the best. It presents as respectable an appearance as any of them, and is as earnest a toiler in the field. It meets persecution, too, with as much fortitude as any of the "ologies," and waits as patiently for its time of complete triumph.

If it be a "money-making science," we should be glad to know it, as it is very seldom that we hear of anything *good* being "money-making." It is truer than we want to have it, that almost everything *good* that people do brings more happiness than money, in spite of the fact that

equal parts of each are very desirable. It was the devil, if we rightly remember, who said: "All these things will I give thee, if thou wilt" do thus and so. He generally stands ready to pay well for fraud and cheating, and all kinds of dishonesty, while those who toil unselfishly for the great brotherhood of man have to wait, usually, for "the good time coming," when every noble work shall be made manifest, and receive great "recompense of reward." Serious doubts may well be entertained whether Phrenology is a very "money-making science." Whether it is, or is not, nothing can be more certain than that it is no humbug. Reams of paper might be covered in proof of this assertion, but it is only necessary to say that humbugs generally live a short life. They run their race quickly, and are gone and seen no more. Phrenology seems to hold on its way without any abatement of vigor, and its sight—its insight—improves rapidly, if the testimony of some men, who have had their 'bumps' examined, may be received as reliable. If it be a humbug, it will die at least a very old humbug, and one that has accomplished great good in the world.

It will never be said truly of it that it has "made fatalists and infidels." It is not the phrenologist who says: "What is to be will be, and I will not raise my hand to work for myself or others." The phrenologist and the fatalist are two different beings. Light and darkness are not more unlike than they are. Neither are the phrenologist and infidel more nearly related. Infidel* and fool are synonyms. It is the infidel and fool who work together to prove that the great revelation of God to man is not what it pretends to be—not the infidel and phrenologist.

The believer in Phrenology is also as far from being a *slave* as he is from being a fatalist or an infidel. He does not propose to let his "bad bumps," as many name some of their "bumps," be conquerors. He proposes to be conqueror himself—not that he intends to kill any of his "bumps," for this he has no thought of doing; but he means to have the mastery of them all, and keep each in its appropriate place. And so he says to Secretiveness: "You are quite too large a 'bump;' you hold your head too high; you must go under!"

To Acquisitiveness he says: "You take up too much room; you are too prominent; you swallow down everything, and are never satisfied. I mustn't give you more than half as much, and I must make you give half of that away!"

To Benevolence he says: "You are small and puny and sickly; you need exercise. You must have daily activity, and then you will get to be a 'bump' of respectable size!"

To Conscientiousness he says: "I am ashamed of you. You, who should be the greatest

* Infidels, so-called, are merely unbelieving querists, having the frontal or *reasoning* organs larger than those of Veneration and Spirituality, hence are erratic in coming to conclusions which need aid from those higher organs, which are not large enough in their craniums.—Ed.

of all, are the least of all. You are so small that no one knows that you even have an existence. Rise to your true position. Follow my orders!"

And so the man is king over all his "bumps," and "a slave" to none. In other words, he is intelligent with regard to himself, and knows what needs to be cultivated, and what has already been too much cultivated, and he uses his knowledge to make himself better. The result is a symmetrical, harmonious character. The "bumps" of our believer in Phrenology are soon on the best of terms, and all work together to make a beautiful and perfect life. Who shall say, then, that the man who believes in Phrenology is a slave, and, more than all other men, lives under a cloud? Surely the man who believes in Phrenology, and uses it for his own renovation, is on the way, at least, to being a free man, and neither despair nor the devil love to have much to do with him.

Cheerfulness is, with few exceptions, the blessing of every man who strives after the full development and dignity of manhood. And the devil is always shy of the cheerful worker, as he is of everything good under the sun.

Phrenology, if thoroughly believed in and understood, and applied to the greatest work a man has to do in this world—cultivating himself—is a blessing beyond all price, and never brings infidelity or slavery, darkness or the devil. Let its light and truth once enter a heart, and that heart is made better.

Phrenology has blessed us, and we would therefore reach out our hands and bless it, bidding it God-speed through the world. And we would call upon all men, everywhere, to welcome it as a purifier and helper and friend.

In our next issue we purpose giving the portrait, with biographical sketch, of M. Ernest Rénan, the French author. Several correspondents doubtless will be pleased with the installment of the "Phrenological Theory of Man's Organization," published in the present number. Many persons kindly disposed toward Phrenology have been very seriously puzzled by the views of the English physician, Dr. Carpenter, relative to that science. His statements in "Principles of Human Physiology," which is regarded as a great work by the medical profession, are very neatly and fairly refuted, as the reader of the "Phrenological Theory" will perceive. The series of articles under that heading deserve a careful reading.

Owing to unexpected difficulties connected with its preparation, we are obliged to disappoint our subscribers and friends by not publishing in this number the article on "The Navy," as promised in our last. A third article in the series on the "Characters of Shakspeare," and a very interesting sermon on "The Gospel Among the Animals," by Rev. Dr. Osgood, of New York, will be presented to our readers in our next number.

THE METRIC SYSTEM.

In 1795 the *Corps Legislatif* of France adopted a system of weights and measures founded upon the decimal system of notation, and called it the "Metric" System. It is now used in all business transactions in France, where it is regarded as a great improvement upon the old methods, and it has since been adopted, either wholly or in part, by Italy, Spain, Portugal, Austria, Belgium, Switzerland, Holland, and by considerable portions of Germany. In 1864 Great Britain passed an act authorizing its use, and the United States Congress, on July 27, 1866, passed a bill which, though it does not make the system compulsory, establishes it as legal.

The Metric System, as adopted by France, is based upon a fundamental unit or measure of length, which received the name of *meter*, from the Greek *metron*, signifying *measure*. This standard was sought for and found in the sublimest of sciences, namely, Astronomy. It is approximately the one ten-millionth part of the distance between the equator and the north pole. A bar of platinum was carefully prepared to represent this length, and was deposited in the archives of France as the perpetual standard. Other bars have since been copied from it and distributed throughout France and other countries, and thus it has become the recognized metrical standard; although the astronomical measurement then taken has been found to be slightly incorrect. Thus the distance of 10,000,000 *meters* from the equator to the north pole, as established by the French observers, is too small by 935 yards, according to Bessel; by 1,410 yards, according to Buisant; and by 1,967 yards, according to Chazalon. Sir John Herschell has also testified against the accuracy of this result. Therefore, for all practical purposes, the *meter* is really nothing else than a bar of platinum of a certain length. But the Metric System is none the less beautiful and free from inaccuracy in its elaboration, notwithstanding the mistakes of astronomers.

Let us now look at the system. The *meter*, which is assumed to be one ten-millionth part of the distance from the equator to the poles, is, in fact, 39 $\frac{1}{2}$ inches or 39.37 inches in length. It is especially the unit of length, but it is also the unit from which all measures of weight and capacity, square or cubic, are derived. Multiplied by 10, by 100, by 1,000, and so forth, the *meter* supplies all needed linear measures, measures of area and surface on the one hand, and of solidity and capacity on the other.

The unit of *measures of surface* or land measures is the *are*, from the Latin *area*, and is the square of ten meters, or, in other words, a square of which each side is ten meters in length.

The unit of *solid measure* is the *stere*, from the Greek, and is the cube of a meter, or, in other words, a solid mass one meter long, one meter broad, and one meter high.

The unit of *liquid measure* is the *liter*, from the Greek, and is the cube of the tenth part of the meter, which is the *decimeter*, or, in other

words, it is a vessel, of which, by interior measurement, each side and the bottom are square *decimeters*.

The unit of weight is the *gram*, also derived from the Greek, and is the one-thousandth part of the weight of a cubic liter of distilled water—at its greatest density—this being just above the freezing-point.

Such are the main elements of the Metric System. But each of these has its multiples and its subdivisions. It is multiplied decimally upward and divided decimally downward. The multiples are derived from the Greek. Thus, *deca*, ten; *hecto*, hundred; *kilo*, thousand; and *myria*, ten thousand, prefixed to meter, signify ten meters, one thousand meters, and ten thousand meters. The subdivisions are derived from the Latin. Thus *deci*, centi, milli, prefixed to meter, signify one-tenth, one-hundredth, and one-thousandth of a meter.

These same prefixes may be applied in ascending and descending the scales to the are, the liter, and the gram. Thus, for example, we have in the ascending scale, *deca*gram, *hecto*gram, *kilo*gram, and *myria*gram; and in the descending scale, *deci*gram, *centi*gram, *milli*gram.

In this brief space we have the whole metrical system of weights and measures. Its details and nomenclature may be best studied under the following tables as adopted by Congress:

MEASURES OF LENGTH.

Metric Denominations and Values.	Equivalents.
Myriameter..... 10,000 meters.....	6.2137 miles.
Kilometer..... 1,000 meters.....	0.62137 miles.
Hectometer..... 100 meters.....	328 feet and 1 inch.
Decameter..... 10 meters.....	39.37 inches.
Meter..... 1 meter.....	39.37 inches.
Decimeter..... 1-10 of a meter.....	3.937 inches.
Centimeter..... 1-100 of a meter.....	0.3937 inches.
Millimeter..... 1-1000 of a meter.....	0.0394 inches.

MEASURES OF SURFACE.

Metric Denominations and Values.	Equivalents.
Hectare..... 10,000 square meters.....	2.471 acres.
Are..... 100 square meters.....	119.6 square yards.
Centare..... 1 square meter.....	1550.52 square inches.

MEASURES OF CAPACITY.

METRIC DENOMINATIONS AND VALUES.		
Names.	No. of Liters.	Cubic Measure.
Kiloliter, or Stere.....	1,000.....	1 cubic meter.
Hectoliter.....	100.....	1-10 of a cubic meter.
Dekaliter.....	10.....	10 cubic decimeters.
LITER.....	1.....	1 cubic decimeter.
Deciliter.....	1-10.....	1-10 of a cubic decimeter.
Centiliter.....	1-100.....	10 cubic centimeters.
Milliliter.....	1-1000.....	1 cubic centimeter.

The equivalents of these measures in common use are respectively as follows:

Dry Measure.	Liquid or Wine Measure.
1.308 cubic yards.....	264.17 gallons.
2 bushels and 3.35 pecks.....	26.417 gallons.
9.08 quarts.....	2.6417 gallons.
0.908 quarts.....	1.0567 quarts.
6.1022 cubic inches.....	0.845 gills.
6.102 cubic inches.....	0.338 fluid ounces.
0.061 cubic inches.....	0.27 fluid drams.

WEIGHTS.

Names.	No. of Grams.
Miller, or Tonneau.....	1,000,000
Quintal.....	100,000
Myriagram.....	10,000
Kilogram, or Kilo.....	1,000
Hectogram.....	100
Dekagram.....	10
GRAM.....	1
Decigram.....	1-10
Centigram.....	1-100
Milligram.....	1-1000

Which are equivalent respectively to the following:

Weight of Water at Maximum Density.	Avoirdupois Weight.
1 cubic meter.....	2204.6 pounds.
1 hectoliter.....	220.46 pounds.
10 liters.....	22.046 pounds.
1 liter.....	2.2046 pounds.
1 deciliter.....	3.5274 ounces.
10 cubic centimeters.....	0.527 ounces.
1 cubic centimeter.....	15.432 grains.
1-10 of a cubic centimeter.....	1.5432 grains.
10 cubic millimeters.....	0.1543 grains.
1 cubic millimeter.....	0.0154 grains.

For the measurement of small surfaces, the *are*, which is the unit of surface (land) measure, would be found too large. Therefore the *square meter* has been adopted as the unit of surface measure not including land, and equals 11.9603 square yards. The other denominations used in this measure are the *square decimeter*, the *square centimeter*, and the *square millimeter*. The *meter* contains ten decimeters, hence the square meter contains one hundred square decimeters. Thus a square meter contains

100 square decimeters.
10,000 square centimeters.
1,000,000 square millimeters.

In accordance with this principle, in order to represent decimally a surface composed of several square meters and several square decimeters—for example, 8 square meters and 6 square decimeters—we should write 8.06, because the square decimeter is the hundredth part of a square meter; 49 square meters, 6 square decimeters, and 4 square centimeters, would be represented by 48.0604, because the square centimeter is the ten thousandth part of a square meter.

The only subdivision of the *are*, or unit of surface (land) measure, is the *centiare*, the one hundredth part of the are, which will be found sufficient for all practical purposes.

For the measurement of solids, as firewood and lumber, we have the *stere*, which is the cube of a meter, and equals 35.3166 cubic feet, or 1.308 cubic yards. The only multiple of the *stere* is the *decastere*, and the only subdivision of the *stere* is the *decistere*.

The beautiful simplicity and directness of the relations between weights and measures and volumes in this system can be seen at once. A little study will place it all as clear as daylight even to the dullest comprehension.

The manner of expressing weight or measure will be readily comprehended by comparison with our manner of reading decimal currency. Thus we read \$105.00 one hundred and five dollars—not ten eagles and five dollars. So in the Metric System we read 12 dekameters, 9 meters, 7 centimeters, 4 millimeters, as 129.074 meters, and so throughout the whole system, the unit being the basis, except where custom shall adopt a different one, as in France, where the kilogram is the basis of weight instead of the gram itself, which would be too small for commercial purposes. All computations under this system are made with decimals, thus doing away with the compound and fractional system.

The advantages to be derived from the adoption of the metrical system of weights and measures are incalculable. It may prove a little difficult at first to substitute a new system for one that has been learned in childhood, but practice will overcome this obstacle, and the Metric System become popular because of its harmonious simplicity. The utility of a system recognized by all civilized nations in their home and foreign trade needs no argument to sustain it.

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—Spurzheim.

ABORIGINAL LEGENDS OF NORTH AMERICA.

[CONTINUED.]

BY E. G. SQUIER, M.A.

THE ORIGIN OF THE HUMAN RACE; OF GAME AND THE INDIAN CORN.

A CHEROKEE LEGEND.

In the earliest days of the world there were two superior beings—a woman and a man. At that time two sons by this pair were the only children on the earth. These sons were under the uncontrolled charge of their mother. When the boys got old enough to observe, and began to reason, they wondered why their mother left them every day, for a short time, and whither she went. They began to watch her. As they grew older they watched her more intently. It now occurred to them that she disappeared when their provision was exhausted, and always returned with a new supply. Thereupon they determined to find out how she came by the food with which she fed them. They hid themselves and followed her unseen through a dense forest to a mysterious and secluded structure of logs, into which she shut herself. Peeping through the interstices between the logs, they saw her go through certain movements, to them entirely inexplicable, followed by an outgushing of corn and beans, from underneath her arms and from her loins. They were terrified and fled. They could not comprehend the power by which their mother enabled them to be thus supplied from her own person, and they determined to slay her as an enchantress. She discovered their dark design, and told them that they plotted against her life, because their minds were bewildered by their incapacity to understand her power; and she added:

"Sons, your minds are bewildered; your sense is gone, and your mother must be slain by her own sons! But I found food for you, and I was your food; and in killing your mother, under the pretense of her being evil, you will fill yourselves with evil. But your mother will remain a mother to you always, even though you slay her; take heed, therefore, and treasure up her words."

She then informed them that though they would incur the guilt of her murder, they would not be able wholly to destroy either her or her love for them; that she would still be alive, both on earth and in the skies; that in the skies she would occupy the place whence she descended on her coming to the earth, and in which place she would forever dwell. But she added that her death by their wickedness would entail upon them the necessity of earning their own subsistence, by overwhelming labors, under hot suns and amid pinching

frosts. Still, if they attended to her injunctions, they would not labor in vain. She instructed them at stated periods to draw her body slowly over the earth, and promised that she would return to them in a growth of corn from the places over which her body had thus been drawn; while, at the same time, she should observe from her unseen abode in the skies, whether or not they complied with her further instructions to attend the fields through which they drew her, at the various stages of her uprising, in the shape of corn, by rooting out the weeds and lopping away the superfluous husks, and at the same time uttering thanks and prayers in a series of devotional chants, which she would teach them.

"When you have discharged these duties, and when you shall have sung these songs," she added, "you will at length see me fully grown. I shall lift my head proudly. You will look upon me and be glad; and be sure that you are careful of me, for elsewhere you will find no milk whose source is inexhaustible—like mine; and when you discover that my bosom is full of nourishment, and when my head towers on high, so that no foot can step over my crest as it waves toward the sun, then you are to set apart seven days and seven nights, and on the morning which shall follow, at the time of the rising sun, you are to prepare me for a feast; and when the feast is ready, you are to make your invocations, first toward the east, secondly toward the north, and thirdly toward the west, and finally toward the south; then you are to stand in the center of the four points and call to me above—for I shall be there, and shall hear you if you call—and when I hear you I will take fast hold on your minds, and bring them back to what they ought to be. As you increase in strength and numbers, take heed that you observe these things, for I shall know if you observe them not. But if you forget to think of me, and of these things which I enjoin, and shall make use of me without remembering my words, I will fling among you the Desolator! I will do this, but you will not think whence comes the scourge. It will be my work, and you will feel me when you can not know me."

It seems, however, that the sons, after committing the murder of their mother, disobeyed her instructions, and were presently without food. Their father returning from the chase, discovered their crime, and was shocked by their perverseness in protesting that their mother was justly slain, because she was an enchantress and "full of evil."

"In killing your mother," he said, "you have filled yourselves with evil. By your mother you lived; by your mother you continue to live. She could not be full of evil when the sole business of her life was to sustain her sons."

And so he left them in anger. But knowing they were entirely destitute of food, he presently brought them venison, and made bows and arrows for them, telling them what particular birds they were to shoot when he was away

from them, and directing them at such times to keep within certain bounds. One day they complained to him that they could not find certain birds where they ranged, and he ordered them to obey his first instructions, and not to overpass the limits he had set for them. Now and then, for four successive days, he would return without game, but would not explain the cause; he nevertheless prepared bitter, mystical drinks for them, saying that after they had taken these the game would be more plenty. Their curiosity was aroused by the strangeness of these proceedings. Day after day they secretly stole out after their father, gradually exceeding their bounds more and more. On the last day they watched him as far as a mighty cave, just opposite to a high precipice, on which they themselves stood concealed to observe what passed. They saw their father roll a rock from the mouth of the cave, shoot a deer as it sprung forth, then carefully close up the cavern, and afterward sling the deer over his back, and go homeward with it. They were in great exultation in having, as they fancied, over-reached their father and possessed themselves of the secret source of their supply, whence they now thought they could always obtain as much venison as they might wish. So they rolled away the stone, and out sprang a fine deer, which one brother shot; and then leaped forth another, which was shot by the other brother. But not deer only; animals of every variety now darted out of the cave, each moment in quicker and quicker succession, and filling the air with hideous howlings. Eye-balls glared on all sides, the earth quivered with trampling and bounding hoofs; and at last there streamed forth a horrible rush of serpents and an interminable variety of other reptiles.

The disobedient sons, who had been turned giddy by the first outburst, reeled and staggered about, and finally lost all knowledge, even of themselves. Their father heard the tumult, flung down his game, and ran back to his sons. Though he was deeply wounded and mortified by their wickedness, he could not forsake them, but gave them herbs to bring them back to their senses. Being much troubled about them, after leaving them long enough by themselves to have had time for reflection, he called them to him one night and remonstrated with them on their murder of their mother, who had been their nourisher, and on their disobedience to him; but they were surly and said nothing. He told them:

"Sons, you have said in your hearts, 'We can do even without our father.' Beware lest your father leave you to yourselves!"

Finding no change in their deportment, the next night he again reproached them for having trifled with the ample means provided for their support, and told them that he had at length resolved to punish their waywardness by withdrawing from them altogether. The sons did not believe that their father was quite in earnest, but they had no objection to being relieved from the restraint of his presence. Besides, they said, one to the other, that their

father, being an old man, could not see so clearly as they; the game they had set at large in the forest must always more than supply them; and the pursuit of it would keep them in good health and spirits. So they went abroad light of heart, but wandered all day and found no game. Their father was not at home when they got back, weary and hungry, at night, and they felt disappointed and chagrined. The next day passed in the same fruitless effort, and the next night they again wished in vain for their father. They were nearly famished. "What has become of our father?" exclaimed one; "We must seek our father!" cried the other. "If we seek him diligently, we shall be sure to find him," replied the first. And so they took up their bows and arrows and went forth to seek their father.

Said one, pointing eastward, "Perhaps he is in this direction," and he shot an arrow eastward; but the arrow returned and stuck in the ground before them. Said the other, pointing to the northward, "Perhaps he is in that direction," and he shot an arrow northward; but the second arrow returned as did the first, and they exclaimed: "Lo! he is west, then. Is it thitherward that he is gone?" inquired they, pointing toward the west; but the arrow returned from the westward also, and they cried despondingly: "No! he is not this way!" And when they tried the south, the south too sent the arrow back, and they exclaimed, "Alas! where can our father be?" And now their minds were filled with fear and wonder. "Is it possible that he can be gone above?" They looked upward to the sky. The arrow which they shot thither never returned. "We have found our father!" cried they exultingly to one another; "joy, joy, we have found our father!"

The father was melted when he saw how earnestly his sons had sought for him, and he took pity on them, and came down to them from the skies. He talked with them much, and gave them much good counsel. But he told them that in consequence of their offenses against him and their mother, they must not again hope to be fed without hard and anxious toil. He then imparted wise instructions to them, which being ended, "I must now," he added, "rise up to my rest again, and leave you; but remember, when you are in want of game, the instructions I have given you; and if you should ever slight them, purify yourselves by the medicine I have told you of, and then strive afresh to do as I have taught. I return now to where your mother is, and where we dwell together. Against both of us you have offended; but take heed of what we both have told you, and if you do so, whenever you are in need of succor call on us, and you will find that the ingratitude of the sons to the parents is lost in the love of the parents to their sons." And having said this he was seen no more.

Among their other traditions, adds Mr. Payne, they have one to the effect that the world was created by three beings who came down from

on high for that purpose, at the commencement of the autumnal new moon, when the fruits were all ripe. Hence that moon begins the year, and is called the Great Moon. From this moon time is reckoned, as far as respects the festivals of the new moons. All beings were at first red; serpents were not poisonous, nor were any roots unfit for man's use. He would have lived forever; but the sun in passing over perceived that this earth was not large enough to support all men in immortality. Poison was therefore inserted in the tooth of the snake, in the root of the wild parsnep, and ferocity was given to wild beasts. One of the first family was soon bitten by a serpent and died. All possible efforts were made to bring him to life again, but without avail. Being overcome in the first instance, the whole race was doomed, not only to the death of the body, but to eternal misery.

Not long after, the Creator ordered men to build high places, on which to erect structures for purposes of worship, where they might offer sacrifices, assemble for religious instruction, and perform their dances. On certain days, it was ordained that they were to assemble in the temples they had erected obediently to the command of the Creator.

According to their tradition, the priests who officiated in these temples offered sacrifices at sunset, on an altar consisting of an elevated flat stone. The sacrifice was a piece of flesh, sprinkled over with powder of old tobacco. The fire was each time newly kindled by friction.

They have a tradition of the deluge coinciding suspiciously in its details with the Hebrew account, and evidently, so far as these are concerned, derived from the whites. They relate that long ago the Indians, having traveled a great distance, came to a great water. Dividing here, a part went north and a part went south. Those who went north settled in two towns, called Ka-no-wo-gi and Nu-ta-gi. Those who went south settled at Ka-gu-li, or Old Town, because they took the lead in the journey, and were considered the grandfathers of all the Indians.

Though the holy fire which the Indians originally obtained was not brought with them to this country, they afterward procured it, and kept it, until about a hundred years ago, in the council house at Ta-gu-la. In a war with the whites, their council house was destroyed, and some of the people suppose the holy fire was extinguished; but others think it is still burning in the ground.

Besides the sun and moon, they have many inferior deities; but the sun and moon were considered as supreme over the lower creation, and all the rest were regarded as having been made by them, subject to their direction, and employed in their service. Special duties were ascribed to each.

The most active and efficient agent appointed by the sun and moon to take care of the earth was fire. When therefore especial favor was needed, it was made known to Fire, accompanied by an offering. Fire was considered

the intermediate being, nearest the sun, and received the same sort of homage from the Cherokees that the same element did from the Eastern Magi. This reverence was extended to smoke, which was esteemed Fire's messenger, always in readiness to convey the petition on high. A child immediately after birth was sometimes waved over fire; children were brought before it, and its guardian care solicited for them. Hunters also waved their mocassins over it, to secure protection from serpents. Some consider fire to have descended direct from heaven. Others speak of it as an active and intelligent being, in the form of a man, dwelling in distant regions, beyond the waters whence their ancestors came. Some represent a portion of it as having been brought with them and sacredly guarded. Others pretend that after crossing wide waters, they sent back for it to the "Man of Fire," from whom a little was conveyed by a spider, wrapped in his web. It was thenceforth, they say, kept in their national heptagon, or rather in a hole or cave dug under it. But this edifice being captured by enemies and destroyed the fire was lost; but some suppose it only sunk deeper in the ground, to avoid unhallowed eyes, and that it still exists there. Since its disappearance new fire has been made at particular times, with various ceremonies, which are yet continued.

The Cherokees also say that the original or superior Creator, of whom the sun and moon are emblems, and whose abode is in the center of the sky, immediately overhead, in the beginning directed certain lines upon the earth, which we call North, South, East, and West. To each of these points he sent newly-created beings of different colors. In the north he placed the *Blue Man*; in the west, which is called the region of the setting sun, the *Black Man* was placed, who is called *Kah-waick-hu*, "the Fearless;" to the south was sent the *White Man*, the man of purity and peace; but the first and original of all was the *Red Man*, who was placed in the east (supposed to signify the seat of the sun). These four beings are now existing on high, as the Vicegerents of the Great Supreme Being, and the mediators between him and their posterity, of whom the *Red Man* (the sun) was the first born. To these four beings power is given over the world. To each one of them our first supplications are to be addressed in succession. Whatever is addressed to the *Black Man*, the Fearless, will forthwith be attended to; for all that relates to goodness, the *White Man* is to be invoked. But over all the Creator rules supreme, enthroned at the point where the four cardinal points intersect each other. His eye beholds them and us, and to him, after first invoking the man of the east, the man of the north, of the south, and the west, to him, the greatest of all, the last and most fervent of our prayers are to be addressed. It sometimes happens that the four beings usually invoked as men are prayed to as four dogs—the Great Black Dog of the West, etc.

[TO BE CONTINUED.]

ORIGIN OF LIFE.

COMPOUND or complicated forms of life are only traceable as the product of parentage, and so, necessarily, retrospectively through simpler forms, down to the first simple organized derivative germ, cell, or globule of each type. All complicated forms of life are built up and sustained in constant repair by blood globules, or cells with nuclei, which alone have the power of selecting from surrounding or introduced nutrition the appropriate and assimilative materials for the ultimate production of bone, muscle, tissue, etc., which are carried by these active globules to their various depositories, to build and keep in repair the whole animal organization, in all its varied and complicated parts. Now what are all these very important globules or cells, of which the red or vital parts of the blood are composed, with their observed internal organisms, or nuclei and nucleoli?

Jean Macé, in his admirable "History of a Mouthful of Bread," believes that each of these globules is an animated being (an opinion I have long entertained); and that their vitality has not been detected by the microscope, as he says, because they have been studied only in the clot or dead state. In their living condition of circulation through animal systems, these globules, in the frog's foot for instance, where they have been most investigated, their passage is so rapid, and the forms so minute, that the interposing films of the blood-vessels render their individual examination for evidences of life almost hopeless of detection.

In no liquid but the blood do we find any globules with nuclei, except such as are absolute low forms of cell life, as the monad, amœba, etc., whose vitality, under the microscope, are easily recognized, frisking and seeking food from the surrounding liquid; and even their mode of reproduction is noticed by fissure, gemination, conjugation, and, perhaps, other still undiscovered processes. These facts render the similar forms or character of the blood globules, floating in their serum liquid throughout the circulatory systems of all animals, as probably low forms, too, of cell life, or individual vitality.

In the case of simple celled monads, etc., there exists some intelligence, inseparable from life, as evidenced in their observed modes of enjoyable play, as well as maneuvers adopted in securing their nutrition from the surrounding protoplasm, and perhaps from still lesser organisms. This varied cell life probably has different habits in the forms of their work, as well as different selections for their nutrition, and the materials requisite for their varied habitations, our organs; hence the varied and seeming intelligent selection which the blood makes from food introduced into the animal digestive organs, whose globules alone carry to divers parts of the frame the necessary materials to build up or keep in repair the various forms and materials of the organs, of which compound animals are constructed. These characteristics of cause and effect, so like the intelligent oper-

ations of minute forms of life, forcibly remind us of the habits and wondrous accomplishments of the tiny polypus, who by their ciliated evolutions, draw currents of water to themselves, and from which they extract the materials out of the great ocean for their sustenance, as well as with their different habits, for their variously-constructed homes, in many beautiful forms, conjointly to produce great frameworks of calcareous stone for reefs, islands, and future continents.

Here then is, probably, a world of little intelligent globules, or nucleous cell life, constantly at work in our circulatory systems for our benefit, and in which alone, as intelligent operators, can we assign a cause for the varied selection which the blood makes from our introduced food, which is as variously applied to build up and keep in repair our variously positioned and constituted organs. Here, too, may be explained why these globules, after coursing through our systems as arterial and venous creatures, partially exhausting themselves by contributing to the building and repairing their homes, our bodies; carry away the refuse charcoal, or burnt carbon, in their now little blackened cells or bodies, in returning through our veins, as venous animalculæ, to seek the surface again, in the little pores of our lungs, to breathe, or be saturated with, the pure vital oxygen, in exchange for their load of carbon. Thus invigorated and lightened in color by this exchange, they return to the appointed work in their great ocean and its estuaries, the heart and arteries, as the now refreshed arterial creatures, or arterial blood (so called), carrying their full supply of stores for their own sustenance on their journey, and to build up and keep in repair their prized resorts, their appointed labor, which are our various organs. Here, too, is a further evidence of the usefulness of all creatures, however humble; none being made for drones—creation being all activity.

Thus in an endless round of such intelligent globular action are we alone enabled to account for such otherwise inexplicable processes, which selects always the appropriate material for each organ to build up and sustain by repairing the continued waste of all animal organizations, the various parts of which are, doubtless, the peculiar attraction and ambition of these various cell animalculæ.

To attain to the most comprehensive view of the origin of animal life, all that man can hope to do is thus to trace their most complicated forms by parental origin, and through vast periods of time, retrospectively, into less complicated progenitors, down to their simple derivative globule or cell; whose presence as very blood relations, pointing to our origin, we probably still carry in our veins, as the primal link in all animal creations, down to these infinitesimal existences, whose adaptability, through wondrous formulative laws, impressed on each of these little derivative creatures by Almighty Forethought, Power, and Beneficence.

CHAS. E. TOWNSEND.

A SPRING IDYL.

Oh, brightening skies, slow reaching through,
In warm and royal robes of blue,
The deep-drawn shadows that the Winter knew.

Give in thy heart your radiance room,
Unlock therein each hidden tomb,
And in the sunshine bury all the gloom.

Oh, truant birds, fast hovering near,
Whose golden drops of song I hear
With April rain fall through the atmosphere,

Bear me a new-born melody,
A deep, high breath of harmony,
That wakes, and lives, and lasts eternally.

Oh, breath of flowers, that bloom below
The leaves that faded long ago,
Where lingers yet the last light print of snow!

Wake from beneath the frost and mold,
Life's vernal buds will sure unfold
In perfect blooms and beauties manifold.

Oh, young capricious winds, whose wings
Hang sweet with balms of tropic Springs,
Captured in your far southward wanderings,

Touch all the soul as by some gracious chance
With fragrance and a higher excellence—
Waft back the dreams of youth, and all life's sweet romance.

Oh, plenteous showers, that sob to rest
On beds, your tears keep greenly dressed,
That kiss the graves of those loved most, and best,

Let fall the tender dews on me
Of loftiest truth, of largest charity;
Wash from all earthly dross the gold in purity.

CENTREVILLE, R. I.

EMILY S. TANNER.

WANT OF DECISION.—A great deal of labor is lost to the world for the want of a little courage. Every day sends to their graves a number of obscure men, who have only remained in obscurity because their timidity has prevented them from making a first effort, and who, if they had only been induced to begin, would in all probability have gone great lengths in the career of fame. The fact is, that in doing anything in the world worth doing, we must not stand shivering on the bank, thinking of the cold and danger, but jump in and scramble through as well as we can. It will not do to be perpetually calculating risks and adjusting nice chances; it did all very well before the flood, when a man could consult his friends upon an intended publication for a hundred and fifty years, and live to see its success for six or seven centuries afterward; but at present a man waits and doubts, and consults his brothers, and his uncles, and his particular friends, till one day he finds that he is sixty-five years of age, and that he has lost so much time in consulting first cousins and particular friends, that he has no more time to follow their advice. There is so little time for over-squeamishness at present, that the opportunity slips away. The very period of life at which a man chooses to venture, if ever, is so confined, that it is no bad rule to preach up the necessity, in such instances, of a little violence done to the feelings, and efforts made in defiance of strict and sober calculations.—*Sidney Smith.*

Communications.

Under this head we publish such voluntary contributions as we deem sufficiently interesting or suggestive to merit a place here, but without indorsing either the opinions or the alleged facts set forth.

TO WHOM IT MAY CONCERN.

WHAT WE THINK OF THE QUACKS.—Could we publish the letters sent us exposing wicked swindlers, who rob and poison their victims under the most benevolent pretenses, it would startle the incredulous. One poor fellow—an indiscreet young man—writes us, that he paid the proprietors of the Anatomical Museum one hundred dollars for worse than useless medicines, and when he assured them that he was getting no better, but rather worse under their treatment, they had the coolness to ask him for an additional sum, in all, four hundred dollars! For this, they *promised* positively to cure him. But what were their promises worth? Should the victim follow their prescriptions yet longer, the probability is they would hear nothing more of him forever. These quacks—and a hundred others—deceive, rob, and poison whom they can entice into their traps.

The "Howard Association" is a shameless cheat, and its owner gets money by selling stuff which he calls medicine—"to be procured nowhere else." He charges \$30 to start with, and then so much a month—as long as he can hang on to his deluded victim.

Then there are numerous small quack medical swindlers, who charge only \$10 or \$15 for worthless trash. These advertise "no cure no pay," or anything to catch young men who are green enough to fall into their nets.

We repeat the warning. Beware! Trust them not! Their show of nude figures, morbid and other anatomical specimens, are simply baits; and their "private lectures to gentlemen" intended, first to excite and pervert the passions, with the hope of catching a victim. All these advertising doctors are wicked quacks. We do not know of a single reliable physician who advertises for practice.

A PHENOMENON EXPLAINED.

Two gentlemen recently addressed to me the following query: "Why does the sun, in summer, shine on the north side of a house, or other raised object, at rising and setting?" I gave my solution, and received from the same parties the following response: "That is the best and only solution of that difficult problem we have ever seen, and are anxious that the same should be published."

As such phenomenon is little noticed, and less generally understood by the observing, if you, Messrs. Editors, think my solution is worth publishing, the following is submitted.

The sun comes north, that is, shines perpendicularly at the summer solstice $23^{\circ} 28'$ north of the equator, consequently his rays then fall the same number of degrees beyond the true pole; showing that the pole of the earth then leans that number of degrees toward the sun, as the south pole correspondingly does at the winter solstice.

At the summer solstice every parallel of latitude, viewed as a plane cutting through the earth, rises or becomes more elevated as it recedes from the sun, so from his meridian on that parallel to the east and west quadratures (the points of sunrise and sunset) there is a corresponding elevation of one half the entire plane of that latitude. From such elevation of the plane of each latitude, it will be apparent that objects situated near the quadratures, and having a north exposure, must then receive the sun's rays on that side. Example: Imagine a thin and very flaring hoop, placed edgewise around the globe, to represent a parallel of latitude, and its raised face, all around, to represent a continuous elevation, as a range of mountains or a continuous row of houses on that latitude, the side facing the pole, all around, being the north face. Now it must be apparent at and near the summer solstice, the pole then leaning toward the sun $23^{\circ} 28'$ (equal to his perpendicularity north of the equator), that if we elevate the hoop on the side from the sun $23^{\circ} 28'$, each of such parallels of latitude correspondently represents a plane, cutting through the earth, which rises as

it recedes from that luminary to the extent of $23^{\circ} 28'$; hence at the quadratures, half way (the farthest eastern and western points of sunrise and sunset), that there the sun must then shine on the inner or north face of that hoop; while at and near meridian his rays will exclusively fall on the outer or south face of the hoop (the meridian or side nearest the sun), as, on all raised objects, upon every parallel north of the sun's perpendicularity, at and near the season of summer solstice.

As a further illustration, hold a narrow strip of paper, coiled into a circle, before a light, and raise the farthest side about 23° , and you will observe that the light shines on the outer face of the strip which is nearest the light, and its south or meridian side; while it also shines, at the quadratures, on the inside of the strip, which represent the points of sunrise and sunset, and are the north faces of such raised objects on a parallel of latitude. The farther half of this hoop, of course, is the non-luminous half of that parallel, or the then night portion of the globe.

CHARLES E. TOWNSEND.

SUCCESS.

BY FRANCES A. BAKER.

How shall we measure that which men have called success,

And by what standard shall we test its worth?
That which is sought with yearning none can quite repress,
And watched and waited for through all the earth.

To one the dream of counting golden treasures o'er,
Makes bright the future, lends a charm to life;
The heart grows strong at thought of adding store to store,
Until at last sweet peace shall crown the strife.

But added weight of gold brings added weight of care.
With heart to "mammon" given too late, he finds
That that which he had deemed success is but a snare
Whose chains around the soul Time closer binds.

Too late he finds that wealth alone can never bless;
Peace has no song to drown his spirit's wail;
Gold has no charm, when looking back with sore distress;
And bitterness, he sees what 'tis to fail.

Another looks upon the glittering star of fame,
And fondly worships its unsteady light,
Firmly resolved to gain at any cost a name
That Time shall bear forever in its flight.

The prize seems won, but oh, at what a fearful cost!
Soul-wealth, heart-treasure, hopes, and joys, all, all
That might have been, now in the past forever lost—
For what? To reach a giddy height, then faint and fall.

It is not he who strives to meet a selfish aim,
Whom God crowns with the noble word success;
'Tis he who freely from his own pure life and name
Gives most his brother-man to cheer and bless.

'Tis he who struggles boldly, manfully through life,
Who rules that one strong city, his own heart—
Who nobly stands amid the tempest, toll, and strife,
Taking his Master's word for guide and chart.

'Tis he who will not shrink from burdens hard to bear,
Whose heart is strong to suffer and to love—
Whose feet will tread dark paths since God would lead them there—
Whose eye is firmly fixed on things above.

'Tis he whose heart is ever kept in perfect tune
With fearful, joyful sympathies of earth,
So that sweet harmony shall tremble in his own,
When other hearts are touched to give it birth.

Trusting and loving God more than all else beside,
Though earthly power and wealth to him are given,
They will be hallowed, consecrated, sanctified
Till angels write upon his brow "success," in heaven.

PERPETUAL MOTION!

A CORRESPONDENT writes as follows:

JAMESTOWN, GREENE Co., OHIO.
S. R. WELLS—I announce the invention of perpetual motion! The inventor is a man by the name of Havens. Providence not preventing, this man will soon astonish the scientific world. After thirty years' labor, he has perfected, or rather produced, what no other man has done, and if it should stand the test, it will produce a revolution in modern philosophy. I merely make this early announcement, that you may seek an opportunity to see him. He expects to be in New York shortly, as it will be on his way to the World's Fair, where his invention will be exhibited. I might say much more about this remarkable man, but I desist, hoping you will have an opportunity to see him.

From here he goes to Canada, from thence to Washington, D. C., from thence to New York, and from thence to Paris. Respectfully,

P. S. This is not for publication.

But "how in the world" can we be expected to keep such a discovery as this from the world? No, indeed. We keep the name of the above writer in the most profound confidence; but his sublime discovery *must* be announced in the A. P. J.! We await the visit of the inventor of perpetual motion with awe! Wonder if he wears spectacles and long hair! How wise he must be! We shall never forget our early experiments in this line of investigation; nor the investments of a weak and amiable man to forward the enterprise of one Heaton, who spent twenty years of valuable time, and all the cash he could borrow, in "perfecting" a machine, "almost ready to go off itself." What has become of Heaton? Has his spirit been transported from the Sixth Avenue, New York, to Jamestown, "Greene" County, Ohio? We shall report further when we find out. Till then, hold your breath!

TOLL NOT THE BELL.

BY FRANCES LAMARTINE KEELER.

Toll not the bell for me when I am gone,
When o'er life's stormy sea this soul hath flown;
Too solemn doth it sound for spirits blest,
When they have ceased to grieve and are at rest.

Toll not the bell for me when life is riven;
Then I shall speed away pure and forgiven;
Let not the bell's deep tones ring o'er my bier,
Smile when you look farwell, weep not a tear.

Toll not the bell for me if, in the spring,
Death fanneth out my life with his dark wing;
Then murm'ring streams will glide swift on their way,
Telling of brighter things than earth's decay.

Toll not the bell if, in the summer hours,
Death steals my breath away with fading flowers;
Then summer birds will sing o'er my retreat
Songs I have loved to hear, gentle and sweet.

Toll not the bell if, in the autumn time,
Death knocketh at my door whispering, "mine;"
For autumn crickets then, sadly and low,
Will chant above my tomb when night-winds blow.

Toll not the bell if, winter, cold and chill,
Shall bid my life-pulse cease, my heart be still;
Then dreary winds will moan their requiems sad—
Toll not the bell for me when I am dead.

A MISSISSIPPI newspaper copies the following, and adds remarks:

RELIEF FOR THE SUFFERING WOMEN AND CHILDREN OF THE SOUTH.—An association comprising many of the most influential ladies of New York, and called "The Ladies' New York Southern Relief Association," has been organized for the purpose of receiving and distributing contributions in aid of the suffering women and children in the Southern States.—*Exchange.*

REMARKS.—If these New York ladies will persuade their husbands, brothers, and sweethearts to cease their persecutions of the South, and return or pay for such articles as they stole from our widows and orphans, we can get along very well without their charities. Northern people may call it charity to take a fine gold watch or diamond pin from a helpless woman, and two years after subscribe two bits to buy her provisions, but we can't see it.

[In other words, "We want none of your charity." Fie, fie, Mr. Mississippian. How sure are you that it was not the bad men of your own State who stole the jewels? Besides, you can not eat watches and diamonds.]

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

THOUGHTS SELECTED FROM THE WRITINGS OF HON. HORACE MANN. Pp. 240, 18mo. Cloth, gilt. Price \$1 50. Boston: H. B. Fuller & Co.

A beautiful volume of beautiful thoughts. The editor has condensed the writings of this prolific educator and given us the gist of the whole in this handsome, handy volume, which should have a place not only in every library, but on every center-table. We have met with nothing new for years which pleased us more than this rich compilation, which is, indeed, *multum in parvo*—much in little.

THE TENT ON THE BEACH, and Other Poems. By John Greenleaf Whittier. Boston: Ticknor & Fields.

Another gem from the Quaker poet. How gratifying it is to meet with such genial, happy thoughts so sweetly expressed! How much Benevolence! how much devotion! and what a vivid imagination are marked in the poems of Whittier! And yet how clearly all his images are described by the intellect to the intellect. He lifts us up to the ethereal world, and yet in contemplating the beauties of the supernal, the relations of the earthly are not lost sight of, but are invested with the charm of affinity with the spiritual.

PARIS SOCIAL. A sketch of every-day life in the French metropolis. By Lieutenant-Colonel H. B. Addison, author of "Belgium As She Is," etc. London print. Price 3s.

For those who are desirous of knowing the manner in which French people actually live; how to locate themselves pleasantly while in Paris, for a longer or shorter time; how to secure a good living without being "bled to death;" how to procure the necessities and comforts of life; and how to conduct themselves generally, this book is the best book that has come under our notice. It is rather a compendium of advice for the conduct of one's domestic affairs while in Paris, than a general guide-book.

PEDAGOGICS. By H. M. Cridder. Published by Kephart & Crier, York, Pa. Cloth. Price 75 cts.

This is a very readable little book. The metrical composition, after the style of "Hiawatha," invests it with a charm which renders the really interesting matter more interesting. Old style, tyrannical, lazy, stupid, love-sick, inefficient, and capable preceptors, or pedagogues as our author would style them, are graphically described.

OUR MUTUAL FRIEND. By Charles Dickens. With Forty-two Illustrations from original designs. 8vo. Cloth, \$1 25. Philadelphia: T. B. Peterson & Brothers.

Peterson Brothers are certainly book-makers for the people. Bringing out, as they constantly are, editions of standard authors at prices quite within the pecuniary ability of the middle or working classes, they contribute in no small degree to the intellectual improvement of those classes. Their efforts in producing books at low prices have a favorable influence upon the trade at large, in the way of cheapening books. The diminished profit arising from the sale of one book will be more than compensated by the increased sales resultant upon the reduction.

We have also received a copy of Ticknor & Fields' Diamond Edition of **OUR MUTUAL**

FRIEND. It is handsomely illustrated, and of the same style of binding as "The Pickwick Papers." Price \$1 50.

Between Messrs. Ticknor & Fields and the Peterson Brothers, poor folks have a fine opportunity to add an occasional good book to their thin libraries.

THE AMERICAN FRUIT CULTURIST; containing Practical Directions for the Propagation and Culture of Fruit-trees in the Nursery, Orchard, and Garden. With descriptions of the principal American and foreign varieties cultivated in the United States. By John J. Thomas. 480 illustrations. New York: William Wood & Co. Price

The author is one of our most scientific fruit-growers. He has become venerable in his calling, is learned in the school of actual practice, and knows from his own knowledge whereof he speaks and writes. Since Downing, perhaps no author in America is more thoroughly posted in all departments of this most useful pursuit. Mr. Thomas was long connected with the *Albany Cultivator and Country Gentleman*. He has also written for other agricultural periodicals, and we have here the gist of his whole experience. His work is beautifully illustrated by accurate drawings, and handsomely printed by the veteran publishers of Walker Street. Whoever buys this book will buy a good one, one from which he may learn much. It is a work which is thoroughly reliable. Following its teachings he can not be misled, but will be put in the way of the best success. We wish a copy could be placed in the hands of every agriculturist, horticulturist, and gardener in America. It would tend to the production of an abundance of those delicious and healthful fruits which all unperverted appetites so much enjoy.

We take occasion to thank Mr. Seymour for the copy of his very interesting "Western Incidents Connected with the Union Pacific Railroad," which has recently come into our hands. Our own recollections of the excursion to the 100th meridian are so vivid, and our relations with several of the gentlemen connected with the management of the U. P. R.R. are so pleasant, that a reading of the book is doubly agreeable.

TEMPERANCE ESSAYS AND SELECTIONS FROM DIFFERENT AUTHORS. Collected and edited by Edward C. Delavan, South Ballston, N. Y. Fourth Edition. Published by the National Temperance Society and Publication House: New York. Cloth, \$1 50.

This collection, which may be considered a compendium of statistical information relating to the use and abuse of intoxicating liquors, will prove of great service to the temperance reformer. The history, the physiological, moral, and religious aspects of liquor drinking are so condensed in it as to be of practical use to him who would actively combat with the fiery demon—rum. Letters, essays, addresses, and selections from the addresses of distinguished clergymen, statesmen, physicians, etc., constitute a considerable portion of the volume, and enhance its value. A full account of the celebrated "Beer trial" at Albany in 1840 is given; in which the testimony offered is of an exceedingly interesting character, especially to those who are fond of ale or beer.

ENGINEERING: an illustrated weekly journal, conducted by Zerah Colburn, of London, is republished by D. Van Nostrand, of New York, and is doubtless the best periodical on the subject indicated by its title.

THE DRUGGIST'S CIRCULAR AND CHEMICAL GAZETTE is well worthy the patronage of all interested in *materia medica*. The February number contains excellent articles on "Public Hygiene" and "The Water We Drink."

PICTORIAL HISTORY OF THE CIVIL WAR IN THE UNITED STATES OF AMERICA. By Benson J. Lossing. Illustrated by many hundred engravings on wood by Lossing and Barrett, from sketches by the author and others. Vol. I. Philadelphia: George W. Childs, Publisher. 8vo, pp. 608. \$5.

An examination of this volume has convinced us of its permanent value. In Mr. Lossing as its author, we have a gentleman of acknowledged literary and practical ability. His numerous historical publications have ever received the approbation of the intelligent for their clearness, authenticity of detail, and liberal handling. Besides, Mr. Lossing writes for the people generally and not for a class, and therefore his books are entitled to universal consideration. The first volume is well brought out, abundantly illustrated, and will, we doubt not, command a ready sale.

ALCOHOL: its Place and Power. By James Miller.

THE USE AND ABUSE OF TOBACCO. By John Lizards. New York: National Temperance Society and Publication House. Cloth, \$1 25.

These powerfully-written essays, by two distinguished Scottish scholars, exhibit the pernicious tendencies of the use of Alcohol and Tobacco in the clearest light conceivable. We, although long convinced of the dangerous character of these social evils, find ourselves more convinced by the weight of evidence adduced in this book. They are fairly considered in their various aspects, and the conclusions are irrefutable. This is emphatically the book for young men to read.

DAVID COPPERFIELD. By Charles Dickens. Philadelphia: T. B. Peterson & Brothers.

The fertility of the press-rooms of the above publishers is becoming a matter worthy of admiration. Volume after volume is sent forth in quick succession, and the public are instructed by these enterprising gentlemen to expect more. We suppose that before long we shall have "Great Expectations" with their imprint. One commendable feature of their reprints of Dickens' novels is that the original illustrations, which served so much to popularize the English editions, are reproduced.

THE INITIALS. A story of Modern Life. By the Baroness Tanteus, author of "Quita," "Cyrilla," etc. Philadelphia: T. B. Peterson & Brothers. Paper, \$1 50; cloth \$2.

The lovers of fiction who have not read this likely volume, will find the above new republication of it issued in a style quite to their taste. The cloth edition is bound and ornamented in a style well adapted to the library. As a literary production, "The Initials" will compare favorably with any modern romance.

MESSRS. BLANCHARD & CRAM'S Hand-books of Iowa and Minnesota are excellent publications in their way. Those who contemplate removal to the West will find much information in these interesting hand-books respecting the agricultural, commercial, manufacturing, and other resources of the States specified.

COMMON SENSE. A Moral, Philosophical, and Political Poem. By E. Searle. Mr. Searle has selected a style of

versification which is somewhat difficult to manage with acceptance to the learned reader. His matter, however, reads pleasantly, and hits off the social and political aspects of the times with considerable accuracy. This is a good specimen of his verse:

We've had our manias and our crazy dreams

Of wealth and fashion, till the public mind

Has grown diseased with speculating schemes,

And Folly is on Folly's self refined.

Like old age in her dotage—fickle, blind,

She leads us onward in a madcap chase,

Some fancied or some latent good to find,

In some far distant and Utopian region,

Where dwells that alchemist whose name is "legion."

Within the same covers we find a good paraphrase of a portion of that glorious poem in the Bible, the Book of Job, and also a lyrical attempt to expose the pernicious tendencies of tobacco using. The last we can fervently say Amen to, because it strikes at the root of much moral evil in society to-day.

MR. S. T. FOWLER has issued a second part of his "Manual of Instruction for an Improved Method of Building with Concrete; or, How to Make the Best House at the Least Cost," which may be obtained from us for 25 cts.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting:]

THE PICTURE OF ST. JOHN. By Bayard Taylor. A Poem. Cloth, Library style, \$2.

BROTHER SOLDIERS. A Household Story of the American Conflict. By Mary S. Robinson. \$1.

RED LETTER DAYS IN APPLETHORPE. By Gail Hamilton. \$1 50.

THE NEGATIVE AND THE PRINT; or, the Photographer's Guide. By John Towler, M.D. Cloth, \$1 75.

WAR LYRICS AND OTHER POEMS. By Henry Howard Brownell. Cloth, \$1 25.

WASHINGTON AND HIS MASONIC COMPANIES. By Sidney Hayden. Illustrated. Cloth, \$2 50.

THE CENTENARY OF AMERICAN METHODISM. By Abel Stevens, D.D. \$1 50.

THE HUMAN HAIR, and the Diseases which Affect It. By B. C. Perry. Illustrated, \$2.

THE GIFT OF THE FATHER; or, Thoughts for the Weary. By Rev. C. Battersby. 18mo, pp. 122. Cloth, 90 cents.

FIRST YEAR IN EUROPE. By George H. Calvert. 18mo, pp. 308. Cloth, \$2.

A SEQUEL TO "MINISTERING CHILDREN." By Marie L. Charlesworth. Cloth, \$2.

STUDIES OF OUR ENGLISH; or, Glimpses of the Inner Life of our Language. By M. Schele de Vere, LL.D. Cloth, \$2 75.

PHILIP II. OF SPAIN. By Charles Gayarré. With an Introductory Letter by George Bancroft. 8vo, pp. iv., 366. Cloth, \$3 50.

GARDENING FOR PROFIT: a Guide to the Successful Cultivation of the Market and Family Garden. By Peter Henderson. Cloth, \$1 75.

CORFEW CRIMES; or, Thoughts for Life's Eventide. By J. R. Macduff, D.D. Second Edition. Cloth, 90 cents.

HISTORY OF THE CHRISTIAN CHURCH FROM CONSTANTINE THE GREAT TO GREGORY I. Completing the History of Ancient Christianity. In Two Vols. 8vo. Cloth, per vol., \$4.

SIX HUNDRED DOLLARS A YEAR. A Wife's Effort at Low Living under High Prices. Cloth, \$1 90.

THE LAWYER IN THE SCHOOL-ROOM. Comprising the Laws of all the States on Important Educational Subjects. Compiled and Explained by M. McN. Walsh. Cloth, \$1 90.

WOODWARD'S ARCHITECTURE, LANDSCAPE GARDENING, AND RURAL ART. No. 1. 1867. By G. E. & F. W. Woodward. Illustrated. Paper, 90 cents.

OBSERVATIONS ON THE SCIENTIFIC STUDY OF HUMAN NATURE. A Lecture before the London College of Preceptors, October 10, 1866. By E. L. Youmans, M.D. 16mo, pp. 41. Paper, 30 cents.

CATENA DOMINICA. A Series of Sunday Idylls. By John H. Alexander. Second Edition. Cloth, full gilt, \$3.

INJURIES OF THE SPINE. With an Analysis of nearly 400 Cases. By J. Ashhurst, Jr., M.D. Cloth, \$1 75.

BEADLE'S DIME HUMOROUS SPEAKER. 18mo, pp. 96. Paper, 30 cents.

SCHOOL-DAY DIALOGUES. Compiled by A. Clark. Cloth, \$1 75.

ELEMENTS OF LOGIC. Comprising the Doctrines of the Laws and Products of Thought, and the Doctrine of Method; together with a Logical Praxis. By Henry N. Day. Cloth, \$1 75.

THE MARKET ASSISTANT. Containing a brief Description of Every Article of Human Food sold in the Public Markets of New York, Boston, Philadelphia, and Brooklyn. With Incidents and Anecdotes. By Thos. De Voe. Cloth, \$2 75.

NEW AMERICA. By W. H. Dixon. With Illustrations from Original Photographs. Cr. 8vo, pp. 486. Cloth, \$3 25.

FENIAN (THE) CATECHISM. From the Vulgate of St. Laurence O'Toole. Designed for the Use of the Fenian Soldier, at Home and Abroad. Paper, 35 cents.

THE LIFE OF JEANUS. According to the Original Biographers, with Notes. By J. R. Gilmore (Edmund Kirke). Cloth, \$1 75.

THE PAPAX; its Historic Origin and Primitive Relations with the Eastern Churches. By the Abbe Gnettee, D.D. Translated from the French; with a Biographical Notice of the Author. With Introduction by A. C. Cox, Bishop of Western New York. Cloth, \$3.

THE INDIAN CLUB EXERCISE. With Explanatory Figures and Positions. Photographed from Life. Also, General Remarks on Physical Culture. Illustrated. By Sim. D. Kehoe. Cloth, \$2 25.

THE PICTURE AND THE MEN. Being Biographical Sketches of President Lincoln and his Cabinet, an Account of the Life of F. B. Carpenter, author of the Picture of the First Reading of the Emancipation Proclamation, an Account of the Picture, etc., etc. Compiled by Fred. R. Perkins. Cloth, \$1 75.

POPULAR PASTIMES FOR FIELD AND FIRE-SIDE; or, Amusements for Young and Old. By Aunt Carrie. Cloth, \$2.

RACHEL COMFORTED. Thoughts for the Consolation of Bereaved Parents. Cloth, 60 cents.

HISTORY OF THE CHRISTIAN CHURCH. Vols. 2 and 3 (completing the work), 8vo, pp. xiv, 888; viii, 539 to 1,087. Cloth, per vol., \$4 25.

THE SILVER WREATH: a Collection of Songs, Ballads, Duets, and Trios, with Accompaniments for the Pianoforte. For Home, Classes, and Singing Schools. Boards, \$4.

THE SPARKLING STREAM: a Collection of Temperance Melodies. Compiled by M. F. H. Smith. Music. Paper, 60 cents.

THE FENT ON THE BEACH, and Other Poems. By John G. Whittier. Cloth, \$1 50.

THE CHILDREN'S TREASURY OF NEW STORIES. By A. L. O. E. Cloth, \$1.

THE SOLITUDES OF NATURE AND OF MAN; or, The Loneliness of Human Life. By W. R. Alger. Cloth, \$2 25.

HOURS OF WORK AND PLAY. By Frances Power Cobbe. Cloth, \$1 75.

OUT OF HARNESS. Sketches, Narrative and Descriptive. By Thomas Guthrie, D.D. Cloth, \$3 25.

ON THE ACTION OF MEDICINES IN THE SYSTEM. By Frederick William Headland. Fifth American from the Fourth London Edition, revised and enlarged. Cloth, \$3 25.

A COMPLETE MANUAL OF ENGLISH LITERATURE. By Thomas B. Shaw. Edited, with Notes and Illustrations, by William Smith, LL.D. With a Sketch of American Literature, by H. T. Tuckerman. Cloth, \$3 25.

THE RESTORATION OF BELIEF. By Isaac Taylor. New Edition, revised, with an Additional Section. Cloth, \$1 75.

HEALTH IN THE COUNTRY AND CITIES. With Tables of Death-Rates, Sickness-Rates, etc. By W. F. Thoms. Extracted from the Proceedings of the American Medical Association. Fl. cloth, 90 cents.

A TREATISE ON THE PRACTICE OF MEDICINE. By George B. Wood, M.D., LL.D. Sixth Edition. 2 vols. 8vo, pp. 1,002, 982. Sheep, \$14.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

MIRTHFULNESS.—Large Mirthfulness is indicated by the breadth rather than by the height of the forehead. You will find it illustrated at length in "New Physiognomy," or in "The Self-Instructor." Animal food is approved by the majority of mankind—disapproved by a few. We have in our catalogue works on Vegetarianism, and also on a mixed diet, which discuss the whole question, *pro and con*.

BAD HEADS AND GOOD CHARACTERS.—Can a person with what is called a low, bad head, where the animal propensities predominate over the intellectual and moral sentiments, manifest a good character?

Ans. Yes. And this is the most encouraging feature of phrenological science, viz., that although we may be ever so strongly inclined to vice, that the tendency pulls or pushes strongly in the wrong direction, still there is something within most men—indeed, we may say in all men who are not imbeciles or idiots—which will enable them to master themselves and steer a course contrary to their strong, natural inclinations. In other words, by the aid of grace,

and that still, small voice which whispers to every one, we may overcome our evil tendencies and inclinations, and live in accordance with our highest attributes. We have met splendid heads with decidedly bad characters, and indifferent heads with decidedly good characters. Nor will any phrenologist undertake to say, from any man's head, what he has done, nor what he will do. He can simply state what are his inclinations, tendencies, and capabilities; one is mechanical, another musical or artistic, another more inclined to count coppers than to seek the good of others. In our professional interviews, we frequently meet men who acknowledge how strong are their temptations in this or that direction, but by the grace of God they are enabled to overcome them; still others, who boast of their wickedness, and think it an honor to be able to eat or drink more than other men, and who brag of the prowess of a plucky dog or the achievement of a barn-door cock. No, let not those less favorably organized despair, but rather let them be thankful that they are no worse. Let them make the most of the talent they have, and strive to add to what they have rather than complain of what they have not. Every honest effort in the right direction will be rewarded, and God's blessing will attend all who do their best.

BATHING.—The "Hydro-pathic Encyclopedia" gives all necessary directions for the use of water—of all temperatures—in the treatment of disease, and in health. By post, \$4 50. The organs of the brain will grow by exercise.

DR. WINDSHIP, of Boston, is working, not writing. He has published nothing of late, and we have no new revelations in regard to his growth in strength.

MOHAMMEDANISM.—Will you inform me whether there were revivals or times of special interest in the Mohammedan Church, in its more prosperous times, similar to the religious revivals we now have, and did Mohammedans suppose they were influenced by the spirit when they embraced that faith of their own free will?

Ans. The chief instrumentality used by the "prophet" Mohammed and his earlier followers in the propagation of the religion of Islam was the sword. Afterward missions, if we can call them such, were established here and there in the East by the Saracens and Turks, who planted schools and taught their attractive doctrines. Wherever coercion was practicable, the Mohammedan teachers did not fail to apply it to expedite conversions, and in that way they have been very successful. Such conversions, however, have not the character of our modern religious revivals. The Moslems are very earnest in prayer, and "pious" ejaculations are often on their tongues; as for their being influenced by the spirit, we have no doubt that the sincere disciple communing with his one God feels nearly all the fervency and enthusiasm of the devout Christian.

THE TRINITY.—The doctrine of the Trinity is accepted as a matter of belief by all orthodox Christians. Its explanation is beyond the capability of the finite mind. In the days when the Almighty revealed himself to holy men by direct interpositions, it was said, as we find in the eleventh chapter of Job, "Can man by searching find out God?" intimating thereby the utter futility of a creature like man to comprehend the Creator. To-day, with all our much-lauded advantages for improvement in religious things, men can

not be said to be in closer communion with God than were those Old Testament saints who "walked with God," or to have better opportunities than they had for *knowing* the Eternal One. The great apostle to the Gentiles, whose strong faith seemed to grasp with the zest of fruition the other life, says, "Now we see through a glass darkly."

E. S. P.—Twenty-two inches is considerably above the average size for a lady. A high crown is indicative of much perseverance and steadiness of will.

"MIND YOUR STOPS."—The book which is well suited to your purposes is "Wilson's Treatise on English Punctuation." Price, postage paid, \$1 50.

THE FORBIDDEN FRUIT.—There is no end to the speculations of writers on ethics with reference to this subject. Some are inclined to accept the account literally as given; others, viewing it figuratively or allegorically, prefer various hypotheses. We are content to believe that man fell from his first estate of purity through transgression of moral law, disobedience of those commands clearly expressed in the laws which govern human nature. Having no other account of the fall than the Scriptural one, we are at a loss to suggest one more probable.

INQUIRER.—Our contributor in his discussion of the "Phrenological Theory," quotes from the Hebrew and Greek the original language of the Old and the New Testaments respectively, giving the literal rendering of specific passages. He finds that the closer the approximation of the English translation to the full signification of the original, the nicer the adaptation of the principles of Phrenology—and this, too, without any hair-splitting sophistry or metaphysical balderdash.

IMPROVEMENT OF MEMORY.—How can Language and Memory be improved?

Ans. This question, or similar ones, relative to the different organs, are being asked almost every week by correspondents, and we wish to state that we can not every month take up the space in the JOURNAL, giving instruction how to increase or diminish the strength and activity of the different faculties and propensities of the human mind. For the information of those who have not read much of Phrenology, who have only recently subscribed for the JOURNAL, we may say that our work entitled "Memory" teaches how all the intellectual organs can be strengthened and improved; while "Self-Culture" shows how all the passions, emotions, sentiments, and feelings can be regulated, educated, trained, guided, and restrained, and also gives valuable hints how to cultivate and restrain each one of the mental powers. To those works we refer all inquirers on the subject.

PAWNBROKERS' THREE BALLS.—What is the signification of the three golden balls suspended as a sign over the door of a pawnbroker's office?

Ans. We have nothing at hand which is authority on the subject, but have a vague recollection of an explanation of this fact: That pawnbrokerage was established by a broken-down Italian nobleman, and that the three golden balls were his coat of arms, and he put them up over his door. We have also heard of quite a different explanation, namely, that the three balls signify that there are two chances to one that you never will get back what you put into the office; and we think this last explanation the best.

WM. H. LAMBDIN, of West
Wilmington, Del., wishes information in
regard to the working of the Dalton knit-
ting-machine. Will some one who knows
reply?

Is it correct to say "Southern
Indiana," when you mean the southern
part of Indiana? *Ans.* Yes. Is coal oil
good for the hair? *Ans.* No. The least
objectionable oily substance is good sweet
oil, scented to your taste. It is better,
however, to abstain from all oily prepara-
tions in dressing the hair, as they tend to
heat the scalp and impair the action of the
hair cells.

SIGNS OF CHARACTER.—

Why is it that some persons whom I shake
hands with grasp my hand tightly within
theirs, while many others merely touch my
hand? 2. Why is it that some persons can
lie down and go to sleep without difficulty,
apparently, when some one of their dearest
friends is dangerously ill, while others seem
almost deranged with anxiety, and are in-
capable of rest? 3. Why is it that some
persons can not cry, even at the loss of a
dear friend, while others can cry with
ease, etc.?

Ans. A strong character exhibits itself
by a vigorous pressure and an earnest
grasp; a weak character permits the strong
one to shake it. Large Cautiousness re-
mains wakeful; while small Cautiousness
goes to sleep more readily. One with
small Secretiveness weeps spontaneously;
while one with it large is thereby restrain-
ed, and the emotions controlled. These
questions, or similar ones we have an-
swered over and over again. The whole
subject is pretty thoroughly elucidated in
the various works on Phrenology and
Physiognomy. Men do but act out their
organic constitutions in accordance with
natural laws. Education and social condi-
tion modify to some extent organic man-
ifestation, but do not entirely change it.

CONSCIENTIOUSNESS.—Does

Conscientiousness decide between right
and wrong? or does it simply give the
impulse to do right, while Intellect decides
the question of right or wrong?

Ans. They act together. Idiots have
neither will nor conscience. Some men,
who have plenty of intelligence, have but
little conscience, and they reason upon
right and wrong very much as one reasons
upon mathematical questions, without any
feeling or emotion on the subject. The
mother loves her children, and reasons as
to what will be best for them. One feels
a similar emotion respecting right and
wrong. Intellect aids us in coming to just
conclusions.

DREAMING.—1. Does a per-
son ever sleep sound while dreaming?

Ans. No.

2. Why is it that I dream almost every
night, and yet sleep all night without inter-
ruption? I fall asleep very soon after retir-
ing, and the hardest storms rarely wake me.

Ans. The fact that you are conscious of
dreaming is evidence that your sleep is
not profound—that the faculties are not in
a state of perfect repose. In dreaming, we
are partially awake—i. e., some of the facul-
ties are conscious and others unconscious.

A MODEST REQUEST.—A

correspondent writes us as follows: I
greatly desire to know all the "wonders of
the world;" will you please give them in
your next number of the JOURNAL? Very
respectfully.

Ans. We can not get them all into a
single number, but will "spread ourselves"
during the year, and come as near to it as
we can.

Publishers' Department.

CHECKS, drafts, and post-
office money orders for books or JOURNALS
should be made payable to S. R. WELLS,
New York.

THE JOURNAL will be en-
larged at the commencement of a new
volume, in July, when the subscription
price will be \$3 a year. Present rates
rule up to the first of June.

GOING TO PARIS.—We pub-
lish a list of best European guide-books,
with prices, on cover of present number
A. P. J., to which we call the attention of
those intending to visit Europe.

ADVERTISEMENTS.—A respect-
ed correspondent suggests that in the pro-
posed change in the JOURNAL, to take place
in July, we omit all advertisements from
the body of the JOURNAL, inserting them
on fly leaves, so that they may be removed
at the end of the year, before binding. We
will consider the matter, and though we
may not act upon the suggestion at present,
we may do so at the beginning of another
year. If our subscribers will put our list
up to the respectable number of 100,000, we
will give them a journal entirely free from
advertisements. As it is, we are careful
to exclude whatever may seem to be de-
ceptive, and we seek only that which we
deem instructive, or in some way useful.
We can not, however, be supposed to in-
dose anything in this department except
that which appears over our own name.
We regard the announcement of new books
not in the light of advertisements, but as
useful information to all who would be
posted in regard to science, literature, and
general intelligence. We have the thanks
of many readers for these announcements.

GOOD WORDS FROM THE WEST.

—A physician writes us from Tennessee
as follows: "Inclosed find forty cents, for
which you will please send me your three
"Annals" for 1865-'66-'67. You say "they
are the best books for beginners, through
which to get an outline of the first prin-
ciples of Phrenology and Physiognomy."

Now, although a physician of nearly
twenty years' practice, I am (or desire to
become, rather) a "beginner in Phreno-
logy." Taught by the schools to oppose
and ridicule it, I have only recently become
a thorough convert to its teachings; and
would like, even at this late date, to repair
as far as may be this error of my life.
But I am so thoroughly ignorant of the
science, and having access to no one that
can teach me, I don't know how or where
to begin. Would you kindly give me a few
suggestions? I do not aim at becoming a
thorough phrenologist, but I desire to learn
the location of the organs, and how to im-
prove those that are deficient, for my own
improvement and that of my children. I
have just received the January number of
the JOURNAL, and am highly pleased with it.
I expect to be a subscriber for life.

Can you recommend me to any reliable
teacher of Phrenology in this part of the
country? If you could only see the need
of such teachers here, you certainly would
send us some. "Verily, the harvest is
great but the laborers are" *not to be found.*

For fear my questions may be too nu-
merous for you to answer in your JOURNAL,
I inclose an envelope with my address, and
must ask you to oblige a poor benighted
seeker after the truth so much as to answer
by mail.

Hoping you will pardon my presumption
in thus troubling you, I subscribe myself,
Yours, most respectfully, J. M. S., M.D.

[We trust some of our recent graduates
will find their way into Tennessee, and aid
in disseminating the truths revealed by
these sciences. NEW PHRENOLOGY, based
on Anatomy, Ethnology, Physiology, and

Phrenology, covers the ground, and brings
the subject down from the beginning to
the latest discoveries—we may say to the
present date.]

For the information of those
who may be contemplating a visit to the
Paris Exhibition, we would announce that
Cook's excursion tickets for the trip to and
from Paris by the best transportation lines,
at a price little above the ordinary rates for
a single passage by steamer, can be pro-
cured at our office. We are prepared to
furnish the particulars relating to the
excursion on the application of those
interested.

General Items.

HYGIENIC MEDICAL COLLEGE.

—The winter term of the above College was
brought to a close on the 25th of March, at
No. 36 Sixth Avenue, when Dr. Trall ad-
dressed the meeting and stated that since
its commencement much had been done to
promote its success, especially during the
last term, and that the school had much to
be proud of, diplomas having been given
in all directions. He desired it to be
understood, also, that the school claims
equality of the sexes, and that men and
women have been paid equally for services,
and that, in fact, if he had to select six or
even a dozen of his best pupils they would
be women. In conclusion he alluded to the
wholesale poisoning that goes on daily
under the present general system of medical
practice, and to the opposition that would
be met with in prosecuting the hygienic
treatment. A song and a thesis by Miss
Kellogg followed, when Professor Lyon
offered a few remarks to those of his au-
dience who had received diplomas and
were about to practice and lecture. Mrs.
Harmon next spoke at some length and
with great eloquence on the woman ques-
tion, and on the style of dress they should
adopt. She said that if they would have
their equal rights they should prove their
capacity, and that there have been and are
instances where they have equaled men
intellectually and physically—that no mind
could be healthy in an unhealthy body—
that what was required was the *mens sana
in corpore sano*. This was what her hearers
were to advocate and accomplish on vege-
tarian principles. After informing those
present that Dr. Trall had purchased ten
thousand acres in Ohio for a vegetarian
colony, called "Hygienia," the meeting
was dismissed.

CHEAP OCEAN POSTAGE.—

The present rate of letter postage between
the United States and Great Britain
(twenty-four cents) is not only unreason-
able, but acts unfavorably upon the trade
and commerce, and upon the intimate re-
lationship that should exist between the two
countries, being, in fact, a restriction upon
the free and social intercourse of the two
peoples. It will be seen how preposterous
this exorbitant charge is when we com-
pare it with the rates between other coun-
tries. The rate between England and
Australia, being six times a greater dis-
tance, is only half that amount; between
England and Canada, it is one half; and
between New York and San Francisco,
a longer distance than from New York to
England, with greater expenses, the price
is only three cents. To obviate this ex-
orbitant charge of twenty-four cents per
letter, the public send newspapers, the
charge on which is four cents (two cents
being paid in America and two cents in
England) for every four ounces, while a

letter of the same weight costs nearly \$1!
The enormous quantity of newspapers sent
off by the English mail, compared with the
number of letters, plainly show that a
cheaper rate of postage would increase the
number of letters; and it would be found,
should a uniform rate of two cents, or one
penny English, be adopted, that instead of
the governments having to vote large sub-
sidies yearly for the carrying of the mails,
that a large surplus would be the result.
It is a parallel case to the postal system of
England before the reform introduced by
Rowland Hill, when, instead of inflicting a
pecuniary loss upon the exchequer, there
was a positive gain. The increase in the
number of letters would far more than
compensate the reduction which we advo-
cate. The two countries are so closely
linked together by the ties of relationship
and commerce, that it must come to this
ere long, and we call upon the government
to give the matter a close and careful con-
sideration.

PRINTING PAPER.—The quan-
tity of paper used every year in England,
represents a weight of about two hundred
and twenty millions of pounds. France
uses one hundred and ninety-five millions
of pounds, while the United States of
America, with a much smaller population,
consumes more paper than England and
France put together, viz., four hundred
and forty millions of pounds. In a free
country, where common schools abound—
where newspapers, magazines, and books
are read by all the natives, it follows,
that more paper would be used than in
monarchical countries, where a few aris-
tocrats get all the land and learning, and
keep the mass of people in poverty and
ignorance. If bad government, bad whisky,
and bad religion were abolished in the
"old country," and free schools, free
religion, and free-soil established, they
would soon use as much printing paper as
we, in

"The land of the free
And the home of the brave."

OUR GRADUATES.—We are
receiving letters from the gentlemen who
composed our recent professional class in
Phrenology, and who are now in the
lecturing field and meeting with quite as
much success as they could reasonably ex-
pect. We hope their efforts to disseminate
the man-reforming truths of science will
receive the cordial co-operation of the
public. Mr. Evans lectures principally in
his native language, Welsh, to his country-
men, and is generally allowed to occupy
their churches. Wherever we have been,
we have found this people very much in
favor of Phrenology, and hearty supporters
of its teachers. We congratulate the Welsh
people on their acquisition of Mr. Evans as
a teacher of these useful truths. Mr.
McDonald, of Michigan; Mr. Stone, of
Indiana; Rev. Mr. Downey and Mr. King,
of Ohio; Mr. Newman, of Illinois; Mr.
Hammond, and others send us words of
encouragement in regard to their success.
There is ample room in America for a
thousand good and true lecturers and ex-
aminers, where we now have scarcely a
dozen. Help, help! we want missionaries
to help disseminate the truth.

SARTAIN'S fine steel engrav-
ing of "Our Saviour" is meeting with
merited success. Mr. J. S. Thomson, 436
Pearl Street, New York, is agent. The
picture sells at \$5 without frame, and at
\$10 in an elegant gilt frame. Descriptive
circulars sent on application to the agent.

Business.

[Under this head we publish, for a consideration, such matters as rightfully belong to this department. We disclaim responsibility for what may herein appear. Matter will be LEADED and charged according to the space occupied, at the rate of 50 cents a line.]

THE HYGEIAN HOME.—At this establishment all the Water-Cure appliances are given, with the Swedish Movements and Electricity. Send for our circular. Address A. SMITH, M.D., Wernersville, Berks County, Pa.

HIGHLAND WATER-CURE.—H. P. Burdick, M.D. (Laughing Doctor. See PHRENOLOGICAL JOURNAL, December, '86), and Mrs. Mary Bryant Burdick, M.D., Physicians and Proprietors.

Send for a circular.

Address ALFRED, Allegany Co., N. Y.

MRS. E. DE LA VERGNE, M.D.,
149 CARLTON AVENUE, BROOKLYN.

THE MOVEMENT - CURE.—Chronic Invalids may learn the particulars of this mode of treatment by sending for Dr. Geo. H. Taylor's illustrated sketch of the Movement-Cure, 25 cents. Address 67 West 88th Street, New York City.

WATERS' SQUARE AND UPRIGHT PIANOS, MELODIONS, AND CABINET ORGANS, the best manufactured, to Let, and rent allowed if purchased. Monthly payments received for the same. Second-hand Pianos taken in exchange. Liberal discount to teachers and clergymen. Cash paid for second-hand pianos. Pianos tuned and repaired. New 7-octave Pianos for \$375 and upward. Warerooms, No. 481 Broadway, New York.

HORACE WATERS.

FOR THE LADIES.—The Fashion Magazines are all recommending Bradley's celebrated Duplex Elliptic or Double Spring Skirt as the most graceful and elegant as well as the most durable and economical skirt made.

See advertisement.

Advertisements.

[Announcements for this or the preceding department must reach the publishers by the 1st of the month preceding the date in which they are intended to appear. Terms for advertising, 35 cents a line, or \$35 a column.]

TEMPERANCE CHIMES.—The National Temperance Society have just published a new Temperance Hymn and Tune Book, of 128 pages, comprising a great variety of New Music, Glees, Songs, and Hymns designed for the use of Temperance Meetings and Organizations, Bands of Hope, Glee Clubs, and the Home Circle. Many of the Hymns have been written expressly for this book, by some of the best writers in the country. The Odes of the Sons of Temperance and Good Templars are given in full, and set to appropriate music. The book is Edited by Wm. B. BRADBURY and J. N. STEARNS, and contains over 150 Hymns and Tunes, which will be found worthy of the great and noble Cause they are intended to advance. Price, in paper covers, 30 cents, single copies; \$35 per hundred. Price, in board covers, 35 cents, single copies; \$30 per hundred. J. N. STEARNS, Publishing Agent, 173 William Street, New York.

AN ILLUSTRATED CIRCULAR, showing the facts in regard to the many different qualities of electricity, as now recognized by scientific men, will be sent to any address, free of expense.
Address DR. JEROME KIDDER, 480 Broadway, New York.

NEW AND ATTRACTIVE BOOKS. THE OPEN POLAR SEA.

A Narrative of a Voyage of Discovery toward the North Pole, in the schooner "United States." By Dr. Isaac I. Hayes, Commander of the Expedition. Embellished with six full-page illustrations, drawn by Darley, White, and others, from Dr. Hayes's sketches; three full-page charts; twenty-eight vignettes, and a fine portrait of the Author, engraved on steel. 1 vol. 8vo. Price, \$3 75; half calf, \$6.

"Written in a style peculiarly clear and elegant."—*Troy Times*.
"What we have said of Dr. Hayes's book, will, we trust, send many readers to its pages. The Doctor's heroism is remarkable, and he well deserves to be bracketed with the late Dr. Kane in Arctic honors."—*London Athenaeum*.

MRS. CAUDLE'S CURTAIN LECTURES.

By Douglas Jerrold. With appropriate illustrations from designs by Charles Keene. 1 vol. 16mo. Price, cloth, \$1 50.

"A perpetual, ironical lay sermon to all viragos and Xantippes."—*Boston Transcript*.

"The 'Lectures,' as many married men know, never lose their freshness, and there are those, we presume, to whom they always will have the charm of being true to life. The present edition is very elegantly printed, and profusely illustrated."—*Norwich Bulletin*.

VENETIAN LIFE.

Including Commercial, Social, Historical, and Artistic Notice of the place. By William D. Howells. 1 vol. crown 8vo. Price, extra cloth, \$2.

"Probably no book of the season has given so much delight as Mr. Howells's 'Venetian Life.' Mr. Howells has produced a volume which is worthy to stand with Irving's 'Alhambra.'"—*Hartford Press*.

"Mr. Howells's reminiscences of Venice are worthy of more than a passing glance, for he is not to be confounded with the crowd of superficial observers who annually float through the city."—*Saturday Review*.

"There is a continual stream of delightful humor running through this book."—*Ohio State Journal*.

"For a book which exhibits the whole panorama of Venetian life so faithfully and strikingly as Mr. Howells's we do not know where to turn."—*Pall Mall Gazette*.

"It is Venice directly presented to the imagination, steeped in its own peculiar atmosphere, so that we see what the writer sees, share his emotion, and are made the companion of his walks rather than the reader of his pages."—*Boston Daily Transcript*.

THE MARKET ASSISTANT.

Containing a brief description of every article of Human Food sold in the Public Markets of the Cities of New York, Boston, Philadelphia, and Brooklyn; including the various Domestic and Wild Animals, Poultry, Game, Fish, Vegetables, Fruits, etc., etc., with many curious incidents and anecdotes. By Thomas F. De Voe, Author of the "Market Book," etc. With numerous explanatory illustrations. 1 vol. 8vo. Price, cloth, \$2 50.

"The Market Assistant" is a thick and well-filled volume, prepared by a New York butcher, and is exactly what it pretends to be—a plain account of every article of human food sold in the great city markets, with practical instructions of how and what to buy, diagrams of animals showing how they are 'cut up,' and all the information that one needs in going to market."—*Hartford Press*.

"Judging from the sheets which came under our notice, it gives evidence of a remarkable fund of knowledge, on the part of the author, in Natural History as well as in the odd and out-of-the-way paths of literature; and yet the author is a butcher, having his stall in the market where he daily deals out roasting-pieces and steaks. He is proud of his vocation, too, for the book will contain his portrait, exhibiting him in market costume."—*Cleveland Herald*.

MANHATTAN PAPERS. No. LXXXIX.

—One of the best known, most enterprising, and honorable houses now engaged in business in the metropolis, is the firm of BENEDICT BROTHERS, at No. 171 Broadway. This house was established by S. W. BENEDICT, on the corner of Maiden Lane and Broadway in 1821, and a few years later was removed to the southwest corner of Wall and William streets, and it has ever since that time—embracing a period of forty-six years—been successfully engaged in the jewelry business.

And we find them to-day among the noble array of merchants who have stood staunch and firm through every conflict and crisis that has visited the mercantile community, and who can point with commendable pride to the honorable record they have sustained in the past.

The Merchants' Exchange—now the Custom House—was erected on the ground in part purchased of S. W. BENEDICT after the great fire of 1835, but at the sale a reservation was made giving Mr. BENEDICT the right of room for his store on the same property. Since then the affairs of the house have prospered wonderfully, and many of our leading jewelers graduated here. Careful business habits, honorable dealing, promptitude, and a perfect knowledge of their entire affairs, are the leading characteristics of the establishment of BENEDICT BROTHERS. No better school was needed to educate and fit young men who have since developed an honorable career.

The members of the firm have taken a just pride in the accuracy of their time, and every known improvement has been adopted to give efficiency to this desirable purpose. "Benedict's Time" is the watchword of our business community; and a man who is regulated by such careful and pains-taking exactness can not go far amiss. This house furnishes hotels, railroads, steamboats, and public buildings with correct time; while for the convenience of the traveling public they publish time-tables of the exact hour of arrival and departure of all the various steamboats and railroads that center in our city.

Many European inventions and improvements in the construction of watches were introduced into this country by the house of BENEDICT BROTHERS. A number of these improvements were again improved upon, and in process of time the accuracy and completeness of their system became the established authority that now culminates in the perfection of the watches of the present day.

The clock and regulator department of the house is very complete, and is under the supervision of T. H. Smyth and D. G. Hodgins, two gentlemen every way competent to give satisfaction in their line. They attend to the winding, regulation, and oversight of office and public clocks by the year, thus securing a uniformity of time which can be attained in no other way. This is a very important feature to the business public, and such complete confidence is felt in the system described, that nearly all the principal banks, railroads, and public office clocks are regulated by Benedict's time.

One of the most useful and satisfactory improvements in clocks has recently been introduced by this firm; it is a modification and arrangement of the lever watch movement, on a peculiar plan, enabling them to apply it to clocks to overcome the disadvantages of position caused by sudden jarring, at railroad depots, ferry-houses, etc. The improvement works admirably, and its practical advantages can be seen at the offices of the Central Railroad of New Jersey.

With a store fitted up in the most approved style, a fine fashionable jewelry, and with hosts of friends, this house of the growth of nearly half a century is as young, energetic, and alive to the demands of the times as the most indomitable of its contemporaries. Watches ranging in price from \$100 to \$300 can be purchased at this establishment. —*From the Christian Press*.

SWARTWOUT'S PATENT METALLIC PAPER FASTENER AND BINDER.

Patented March 22, 1860.
Diploma from the American Institute of New York, September, 1863.
Diploma from the Maryland Institute of Baltimore, October, 1863.
Silver Medal from the American Institute of New York, October, 1865.

IT FASTENS	IT BINDS
LAW PAPERS,	MAGAZINES,
SPECIFICATIONS,	SHEET MUSIC,

NEW YORK HYGEIAN HOME

AND SWEDISH MOVEMENT CURE.—N. D. Thompson, M.D., has rented house No. 117 Waverley Place, New York, a few doors west of Washington Square, where patients can promenade in the grove at pleasure, and convenient to Sixth Avenue car.

He has secured the services of competent associate physicians, male and female, and efficient help in all departments; and is prepared to afford the best facilities for the successful treatment of all forms of disease.

He is also prepared to visit patients in city or country; and to lecture on Hygiene at any convenient point where all necessary preparations have been made, and from twenty to thirty days' notice has been given him. He may also be consulted by letter, stating fully the patient's symptoms, manner of living, and age, and inclosing five dollars for prescription.

The table is strictly vegetarian, but freely supplied with the best fruits and vegetables that can be procured in this market.

The cooking department is under the direct supervision of a graduate of the Hygieno-Therapeutic College, one of superior ability and experience in that department.

The moral and religious influence of a Scriptural Christianity will, so far as possible, be encouraged throughout the entire institution, and devotional exercises will be conducted daily, to which all are kindly invited to attend.

For further particulars address N. D. THOMPSON, M.D., 140 West Sixteenth Street, until the first of May 1887, after that 117 Waverley Place, New York.

THE FARMER'S RECORD AND ACCOUNT BOOK.

with Appropriate Readings and Rulings. For Recording Business Transactions, Embracing Family and Farm Expenses, General Accounts, Date of Bills Receivable and Payable, Names of Employees, when their Services Began, when Finished, Price Agreed on per Year, Month, or Day, and Entire Amount, etc. Also, the Number of Acres of each Growing Crop, the Quality Raised, the Amount Sold, Price per Bushel, Pound, etc., and the Entire Amount of each.

The whole so classified, arranged, and consolidated as to present the result of each year's business transactions in the smallest possible compass, and also so simple that the balance sheet can be easily and correctly adjusted.

Together with Valuable Information for Farmers, Tables of Weights and Measures, Rules, and the Annual Report of Income Required to be made to the Assessor of Internal Revenue.

DESIGNED EXPRESSLY FOR THE USE OF PRACTICAL FARMERS.

Two sizes—alike in the form, differing only in size. Sent by mail, pre-paid. Prices, \$4 and \$6.

339 Broadway, New York.

AMERICAN ARTISAN AND

PATENT RECORD.—New Series.

The *American Artisan*, now in the second year of its publication, is a Weekly Journal, devoted to fostering the interests of Artisans and Manufacturers, encouraging the genius of Inventors, and protecting the rights of Patentees.

Each number contains numerous original engravings and descriptions of new machinery, etc., both American and Foreign; reliable receipts for use in the field, the workshop, and the household; practical rules for mechanics and advice to farmers; "Mechanical Movements," and other useful lessons for young artisans; the official list of claims of all patents issued weekly from the United States Patent Office; reports of law cases relating to patents, etc.

Each number of the *American Artisan* contains sixteen pages of instructive and interesting reading matter, in which the progress of the arts and sciences is recorded in familiar language. Twenty-six numbers form a handsome half-yearly volume. The columns of the *American Artisan* are rendered attractive by articles from the pens of many talented American writers upon scientific and mechanical subjects.

Terms of subscription: Single copies, by mail, per year, \$2 50 in advance. Single copies, by mail, six months, \$1 25 in advance.

The publishers of the *American Artisan* are also extensively engaged as Solicitors of American and Foreign Patents, and will promptly forward to all who desire it, per mail, gratis, a pamphlet, entitled "Important Information for Inventors and Patentees." Address

THE COMPLETE PHONOGRAPH.

being an Inductive Exposition of Phonography, with its application to all branches of Reporting, and affording the fullest instruction to those who have not the assistance of an Oral Teacher, also intended as a School-book. By JAMES E. MUMFORD, Official Stenographer to the Supreme Court of New York. 1 vol. 12mo. Price, post-paid, \$2 25. Address

POWELL AND WELLS,
389 Broadway, New York.

NOTICES OF THE PRESS.—This is the latest, and, in most respects, by far the best book on Phonography that has yet been published. The book adheres closely, throughout, to general principles, avoiding all exceptional expedients; and in every part of it there are a clearness of arrangement and an exactness and conciseness of statement and illustration which peculiarly fit it for use as a text-book in schools, and for a self-instructor.—*N. Y. Times*.

"The Complete Phonographer" gives a full exposition of the principles and methods of Phonography, especially in its relation to short-hand reporting. The volume, for its clearness of statement and fullness of details, will doubtless take the precedence of all previous manuals on the subject. It is particularly adapted to the use of reporters, and can not fail to prove of great service to that important branch of the profession of journalists.—*N. Y. Tribune*.

Mr. Munson's work is not only a clear, intelligible, and complete exposition of Phonography, but it is also an attempt, and, we think, a successful one, to remove many of the incongruities of the system as it has been written.—*N. Y. World*.

"The Complete Phonographer" is by far the best book on Phonography that exists, and really establishes that which heretofore has been only a name with very little behind it—the "American Standard System."—*The Nation* of Feb. 28th.

TO BOOK BUYERS!!! To

Sunday-Schools. Our stock of Sunday-school books includes all the latest and best books from all the publishers.

School District, Family, and General Libraries—many times these Libraries can be made up for half the price usually paid.

is a specialty with us. We do not hesitate to say that ours is the place for the Theologian to buy his books, and also stationery. *Sermon Paper*, every style and price. N. TIBBALS & Co., 37 Park Row, New York.

INDEPENDENT, FRATERNAL, LOYAL, AND PROGRESSIVE.

THE METHODIST:

An eight-page Weekly Newspaper. Religious and Literary.

This Journal commands some of the best literary ability of the Methodist Episcopal Church, and represents loyally and courageously the great religious interests of the age. Nothing is admitted into its columns calculated to offend the enlightened sentiment of any Christian of whatever name. It is edited, as heretofore, by Rev. George R. Crooks, D.D., assisted by an able corps of editorial contributors.

Rev. Henry Ward Beecher will furnish regular contributions, consisting of Fortnightly Sermons, and "Lecture-Room Talks," reported expressly for *The Methodist*, and protected by copyright. Also, Sermons by eminent Methodist Pulpit Orators.

Other experienced writers contribute to the various special departments. The News Department is under the supervision of an Editor who makes that one thing a specialty.

The Children's Department contains a fresh story every week, written expressly for it.

The Financial, Commercial, Mercantile, and Agricultural Columns are crowded with invaluable information for business men, mechanics, manufacturers, and farmers.

Terms to Mail Subscribers, Two Dollars and Fifty Cents per year, in advance; to all Ministers, for their own Subscription, Two Dollars. Postage prepaid at the post-office where received, Twenty Cents per year. Twenty Cents must be added by Canada subscribers, to prepay postage. Liberal premiums to those getting up Clubs. Subscriptions received at any time during the year. Address

Gravities for the Gay! Fun, Fact, and Sense six months for 25 cents. Address

HOUSEHOLD MESSENGER, London Ridge, N. H.

DR. JEROME KIDDER'S GEN-

UINE SIX CURRENT MACHINE received the highest premium at the American Institute.

All others pretending to have six currents are only the old trick revived, of the torpedo principle of one current taken over and over from the different metallic parts.

Dr. Hammond, late Surgeon-General of U. S. Army, in speaking of my improved apparatus, says that it is "the best yet devised in any country, for the treatment of disease."

The magnetism of the current A B is far greater in power than the so-called "direct and to and fro" current machine, which latter is proved by the records filed at Washington, to be only an abortive attempt to get a patent for a new name applied to the common machine, with two coils. Send for circular.

Address DR. JEROME KIDDER, 450 Broadway, New York.

SCALES.—A large variety of

Improved Weighing Scales for Stores, Markets, Factories, Families, etc., at reduced prices—every Scale warranted.

D. YOUNG, Agent, 56 Courtland Street, below Greenwich, New York.

Fairbanks' and Howe's Scales always on hand.

PROSPECTUS OF THE CHRISTIAN

PRESS, New York.—A new Baptist Paper, THE CHRISTIAN PRESS, was started in New York February, 1866, and has been in successful operation since, far beyond the most sanguine expectations of its warmest friends. This has been done by the desire and advice of many pastors and influential laymen in and about the city, who patronize it and wish it the widest circulation as the organ of the denomination.

It is designed to be a religious newspaper, in the true, broad sense of the term, and to report all the leading movements of the religious world, both at home and abroad, both in Baptist and all Evangelical churches, and endeavor to enlist a powerful, united influence of Protestant Christians against Rome, and tendencies toward Rome, for which the Baptist Church, from the simplicity of its faith and practice, is peculiarly qualified to lead. It will have nothing to do with party politics, and yet will speak freely on the morality of political movements as involved in all parties and in all political action. It will deeply sympathize with pastors and churches in all their relations and duties, speak freely of their labor and interests, try to aid them as far as possible, and open its columns at all times and to any extent, in promotion of the same.

It will rest on a broad platform as the organ of the Baptist Church, and act the part of a faithful friend to all societies and institutions connected with the same, and with entire impartiality.

Distinguished correspondents have been engaged to aid in sustaining its columns, making it one of the ablest and best papers published under the auspices of Baptists, among whom are Drs. J. Dowling, Babcock, and Armitage of New York; Revs. J. B. Thomas and Levy, of Brooklyn; Dr. Fish and Levy, of Newark; Rev. C. H. Malcom, of Newport, R. I.; Dr. Fuller, of Baltimore; Dr. Robinson, of Rochester; Drs. Eaton and Arnold, of Hamilton; Drs. Hackett, Hovey, and Anderson, of Newton; Drs. Neale and Eddy, of Boston; Dr. Gillette and Senator Anthony, of Washington; and Henry Ward Beecher, of Brooklyn; and others in England and Paris.

The paper will be sent to subscribers by mail. Single copy.....\$2 50 per year. Clubs, of five or more.....2 00 " Clubs, of twenty or more.....1 50 "

These clubs may be formed at any time, and the money sent with the names. Names of those wishing to subscribe, or enter a club, may be left with the Pastor of the church.

P. S.—Any Pastor who will read this prospectus in his pulpit, with such remarks as he may deem proper to make, shall receive the CHRISTIAN PRESS one year, gratis; and if he, or any other person, will raise a club, of twenty or more, he shall have this paper for three years, gratis. If all the friends of the CHRISTIAN PRESS will aid in this work, our list may be doubled in a few months.

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[CONTINUED FROM APRIL NUMBER.]

NOR ends the pleasure with the first embrace;
They love themselves a third time in their race.
Thus beast and bird their common-charge attend,
The mothers nurse it, and the sires defend:
The young dismissed to wander earth or air,
There stops the instinct, and there ends the care;
The link dissolves, each seeks a fresh embrace,
Another love succeeds, another race.*

A longer care man's helpless kind demands;
The longer care contracts more lasting bands;
Reflection, reason, still the ties improve,
At once extend the interest and the love:
With choice we fix, with sympathy we burn;
Each virtue in each passion takes its turn;
And still new needs, new helps, new habits rise,
That graft benevolence on charities.
Still as one brood, and as another rose,
These natural love maintained, habitual those:
The last, scarce ripened into perfect man,
Saw helpless him from whom their life began:
Memory and forecast just returns engage;
That pointed back to youth, this on to age;
While pleasure, gratitude, and hope combin'd,
Still spread the interest and preserve the kind.

IV. Nor think, in nature's state they blindly trod;
The state of nature was the reign of God;
Self-love and social at her birth began,
Union the bond of all things, and of man.
Pride then was not; nor arts, that pride to aid;
Man walked with beast, joint-tenant of the shade;
The same his table, and the same his bed;
No murder cloth'd him, and no murder fed.
In the same temple, the resounding wood,
All vocal beings hymn'd their equal God:
The shrine with gore unstain'd, with gold undrest,
Unbr'd, unbloody, stood the blameless priest:
Heaven's attribute was universal care,
And man's prerogative to rule, but spare.
Ah! how unlike the man of times to come!
Of half that live the butcher and the tomb,—
Who, foe to nature, hears the general groan,
Murders their species, and betrays his own.†
But just disease to luxury succeeds,
And every death its own avenger breeds:
The fury-passions from that blood began,
And turned on man, a fiercer savage, man.

See him from nature rising slow to art:
To copy instinct then was reason's part.
Thus then to man the voice of nature spake—
"Go, from the creatures thy instructions take:
Learn from the birds what food the thickets yield;
Learn from the beast the physic of the field;
Thy arts of building from the bee receive;
Learn of the mole to plow, the worm to weave;
Learn of the little nautilus to sail,
Spread the thin oar, and catch the driving gale.‡
Here, too, all forms of social union find,
And hence let reason, late, instruct mankind:

* This is according with the Divine injunction, to multiply and replenish the earth. There are no commands, no obligations on man, in Divine or natural law, which he is not capable of fulfilling.

† Is it to be inferred from these words of the poet, that man was intended to live without animal food? that he was to subsist on fruits and farinacea? and is he a murderer if he partakes of fish, flesh, or fowl? Did not animals from the beginning feed on each other?

‡ See the illustration of the nautilus at the head of this Epistle.

Here subterranean works and cities see;
There towns aerial on the waving tree.
Learn each small people's genius, policies,
The ant's republic, and the realm of bees;
How those in common all their wealth bestow,
And anarchy without confusion know;
And these forever, though a monarch reign,
Their separate cells, and properties maintain.*
Mark what unvaried laws preserve each state,
Laws, wise as nature, and as fixed as fate.
In vain thy reason finer webs shall draw,
Entangle justice in her net of law,
And right, too rigid, harden into wrong;
Still for the strong too weak, the weak too strong.
Yet go! and thus o'er all the creatures sway,
Thus let the wiser make the rest obey.†
And for those arts mere instinct could afford,
Be crown'd as monarchs, or as gods ador'd."

V. Great nature spoke; observant man obeyed;
Cities were built, societies were made:
Here rose one little state, another near
Grew by like means, and joined through love or fear.
Did here the trees with ruddier burdens bend,
And there the streams in purer rills descend?
What war could ravish, commerce could bestow;
And he return'd a friend who came a foe.
Converse and love, mankind might strongly draw,
When love was liberty, and nature law.
Thus states were form'd: the name of king unknown,
Till common interest placed the sway in one.
'Twas VIRTUE ONLY, (or in arts or arms,
Diffusing blessings, or averting harms,)
The same which in a sire the sons obey'd,
A prince, the father of a people made.‡

VI. Till then, by nature crown'd, each patriarch sate,
King, priest, and parent of his growing state;
On him, their second Providence, they hung,
Their law his eye, their oracle his tongue.
He from the wond'ring furrow call'd the food,
Taught to command the fire, control the flood,
Draw forth the monsters of the abyss profound,
Or fetch the aerial eagle to the ground;

* Man is a social being, adapted to society, and must have it, to develop all his nature. Hermits are exceptions, and are eccentric or insane.

† It is natural and right for parents to govern their children, and for wise men to enact laws to govern such as can not or do not properly govern themselves.

‡ In America, we choose or elect our President and public servants for a term. In Europe, and in the East, they have monarchies, with hereditary rulers.

Till drooping, sickening, dying, they began
Whom they rever'd as God to mourn as man :
Then, looking up, from sire to sire explor'd
One great First Father, and that first ador'd.
On plain tradition that this all begun,
Convey'd unbroken faith from sire to son.
The worker from the work distinct was known,
And simple reason never sought but one :
Ere wit oblique had broke that steady light,
Man, like his Maker, saw that all was right :
To virtue, in the paths of pleasure trod,
And own'd a father when he own'd a God.
Love, all the faith, and all the allegiance then,
For nature knew no right divine in men :
Nor ill could fear in God, and understood
A sovereign being, but a sovereign good.
True faith, true policy, united ran,
That was but love of God, and this of man.
Who first taught souls enslav'd, and realms undone,
The enormous faith of many made for one ;
That proud exception to all nature's laws,
T' invert the world, and counterwork its cause.
Force first made conquest, and that conquest law ;
Till superstition taught the tyrant awe.
Then shar'd the tyranny, then lent it aid,
And Gods of conquerors, slaves of subjects made :
She, 'midst the lightning's blaze, and thunder's sound,
When rock'd the mountains, and when groan'd the ground,
She taught the weak to bend, the proud to pray
To Power unseen, and mightier far than they :
She, from the rending earth and bursting skies,
Saw gods descend, and fiends infernal rise :
Here fix'd the dreadful, there the blest abodes ;
Fear made her devils, and weak hope her gods ;
Gods partial, changeful, passionate, unjust,
Whose attributes were rage, revenge, or lust :*
Such as the souls of cowards might conceive,
And, form'd like tyrants, tyrants would believe.
Zeal then, not charity, became the guide ;
And hell was built on spite, and heaven on pride.
Then sacred seemed the ethereal vault no more :
Altars grew marble then, and reek'd with gore ;
Then first the flamen tasted living food,
Next his grim idol, smear'd with human blood ;
With heaven's own thunders shook the world below,
And played the God an engine on his foe.

So drives self-love, through just and through unjust,
To one man's pow'r, ambition, lucre, lust ;
The same self-love, in all, becomes the cause
Of what restrains him, government and laws.
For what one likes, if others like as well,
What serves one will, when many wills rebel ?
How shall he keep, what, sleeping or awake,
A weaker may surprise, a stronger take ?
His safety must his liberty restrain :
All join to guard what each desires to gain.
Forced into virtue thus, by self-defense,
E'en kings learn'd justice and benevolence :
Self-love forsook the path it first pursu'd,
And found the private in the public good.

'Twas then the studious head or generous mind,
Follower of God, or friend of human kind,
Poet or patriot, rose but to restore
The faith that moral Nature gave before ;
Resumed her ancient light, not kindled new ;
If not God's image, yet his shadow drew ;

* The advent of Christianity changed all that, and the attributes of the Christian's God are all virtues in their infinite essence ; and whereas the heathen ignored these high attributes, the Christian professes to be influenced, if not governed, by Faith, Hope, and Charity, the graces of a pure human life.

Taught power's due use to people and to kings,
Taught not to slack, nor strain its tender strings,
The less or greater set so justly true,
That touching one must strike the other too ;
Till jarring interests of themselves create
Th' according music of a well mix'd state.
Such is the world's great harmony, that springs
From order, union, full consent of things :
Where small and great, where weak and mighty, made
To serve, not suffer, strengthen, not invade ;
More powerful each as needful to the rest,
And, in proportion as it blesses, blest ;
Draw to one point, and to one center bring
Beast, man, or angel, servant, lord, or king.

For forms of government let fools contest ;
Whate'er is best administered is best :*
For modes of faith, let graceless zealots fight ;
His can't be wrong whose life is in the right ;
In faith and hope the world will disagree, —
But all mankind's concern is charity, —
All must be false that thwart this one great end ;
And all of God, that bless mankind, or mend.†
Man, like the generous vine, supported lives ;
The strength he gains is from the embrace he gives.
On their own axis as the planets run,
To make at once their circle round the sun ;
So two consistent motions act the soul ;
And one regards itself, and one the whole.
Thus God and nature link'd the general frame,
And bade self-love and social be the same, —

EPISTLE IV.

OF THE NATURE AND STATE OF MAN WITH RESPECT TO HAPPINESS.

False notions of happiness, philosophical and popular, answered. It is the end of all men, and attainable by all. God intends happiness to be equal ; and to be so, it must be social, since all particular happiness depends on general, and since he governs by general laws. As it is necessary for order, and the peace and welfare of society, that external goods should be unequal, happiness is not made to consist in these. But notwithstanding that inequality, the balance of happiness among mankind is kept even by Providence, by the two passions of hope and fear. What the happiness of individuals is, as far as it is consistent with the constitution of this world ; and that the good man has here the advantage. The error of imputing to virtue what are only the calamities of nature or of fortune. The folly of expecting that God should alter his general laws in favor of particulars. That we are not judges who are good ; but that whoever they are, they must be happiest. That external goods are not the proper rewards, but often inconsistent with, or destructive of, virtue. That even these can make no man happy, without virtue—instanced in riches, honors, nobility, greatness, fame, superior talents. Pictures of human infelicity in men possessed of them all. That virtue alone constitutes happiness, whose object is universal, and whose prospect is eternal. That the perfection of virtue and happiness consists in a conformity to the order of providence here, and a resignation to it here and hereafter.

Oh, Happiness ! our being's end and aim !

Good, pleasure, ease, content ! whate'er thy name :

That something still which prompts the eternal sigh,

For which we bear to live, or dare to die :

Which still so near us, yet beyond us lies,

O'erlook'd, seen double, by the fool and wise.

Plant of celestial seed ! if dropt below,
Say, in what mortal soil thou deign'st to grow :
Fair opening to some courts, propitious shine,
Or deep with diamonds in the flaming mine ?
Twined with the wreaths Parnassian laurels yield,
Or reap'd in iron harvests of the field ?

[TO BE CONTINUED.]

* Providing it is just, granting equal rights to all, including life, liberty, and the pursuit of happiness, as in a democratic republic. No monarchy which denies equal rights to all her citizens can be just.

† Which is consistent with Christianity, and with all good. Benevolence, or brotherly kindness, is the source of all real charity.

EGYPTIAN ARABS.

EGYPTIAN ARABS.

THE population of Egypt is of a strangely mingled character. There is the Turk, who rules, and the various races who are subject to him—Egyptian Arabs, Bedouins, Copts, besides fragments of natives who have wandered to this central land from Asia, Africa, and Europe. The Egyptian Arabs are believed to be descended from the old inhabitants of the land, mixed with their Arab conquerors, and hence partake to a certain extent the peculiarities of the two races; the one, full of energy, restless activity, changing many times their manner of existence—sometimes nomadic, feeding their flocks in desert places, now settled and cultivating the earth, and filling their land with populous villages and towns and fenced cities, then spreading themselves by the love of glory and zeal of proselytism over distant countries; the other, reposing ever in luxurious ease and wealth on the rich soil watered by their slimy

river, never quitting it for a foreign clime, or displaying, unless forced, the least change in their position or habits of life. The physical characters of these nations are also different. In the wandering Arab are seen the sharp features, restless visages, and lean and active figures. In the Egyptian Arab, the full, but delicate and voluptuous forms, round and soft features, dark complexions—the whole aspect displaying a state of inactivity and degeneration.

The Egyptian Arabs are usually tall and well made. Their complexion is very dark, and their eyes black. The wealthier sort in the towns pass their time in idleness; the fellahs, or peasants, are occupied in agriculture; some being employed in keeping sheep, goats, or buffaloes, or carrying water, while others sit in the dust gossiping. The dress of the latter consists of a pair of loose blue or white cotton drawers, with a long blue tunic which serves to cover them from the neck to the ankles,

and a small red woolen skull cap, round which they occasionally wind a long strip of white woolen manufacture. In addition to the long flowing robe, which comes down to the heels, the women mostly use the face veil.

The Egyptian Arab has a finely-formed physique and head, though by years of inactivity and sloth his intellectual caliber has very greatly deteriorated. Mr. Wells, in his recent work, "New Physiognomy," thus speaks of the Arab proper:

"In the Arab of the desert we have the pure, wild Semitic stock, of which the Jew, the Syrian, and the Saracen are cultivated tribes. The genuine Arab skull is thus described by Baron Larry: 'It indicates a most harmonious development of all the internal organs, as well as those which belong to the senses. Independently of the elevation of the vault of the cranium, and its almost spherical form, the surface of the jaws is of great extent, and lies in a straight or perpendicular line. The orbits are wider than they usually seem in the crania of Europeans, and they are somewhat less inclined backward. We are convinced that the bones of the cranium are thinner in the Arab than in other races, and more dense in texture, which is proved by their greater transparency.' The Arab has undoubtedly the finest brain and the best-formed head of any nomadic and uncultivated man, indicating the nobility and purity of his blood. He is swarthy but handsome, with black eyes, hair, and beard; an arched nose, a firm mouth, a prominent chin, rather spare but muscular limbs, and dignified and courteous bearing."

ERROR CONTAGIOUS.

THE mischief of giving a child an erroneous principle of action, or habit of association, is not to be measured by taking the dimensions of that one error. No error is infused into the young mind to lie there dormant, or to be reproduced only when the subject of thought or action recurs to which the error belongs; but the error becomes a model or archetype, after whose likeness the active powers of the mind create a thousand other errors. Some leading idea in our minds being the mold in which our views are cast, it becomes of inconceivable importance what those patterns or formative ideas are.—*Horace Mann.*

THE
PHRENOLOGICAL JOURNAL,

S. R. WELLS, EDITOR AND PROPRIETOR,

Is devoted to *The Science of Man*, in all its branches, including PHRENOLOGY, PHYSIOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, SOCIOLOGY, etc. It furnishes a guide in *Choosing a Pursuit*, and in judging of the dispositions of those around us, by all the known external *Signs of Character.*

Published monthly, \$3 a year in advance. Sample numbers, 20 cents. Clubs of ten or more, \$1 50 each. Supplied by Booksellers and Newsmen everywhere. Address, SAMUEL R. WELLS,

389 Broadway, New York, U. S. A.

Contents of

Introduction.—Physiognomy Defined, A Historical Sketch, Advent of Lavater, Modern Writers, Physiognomy To-day, Universally Practiced, Emerson on Physiognomy, Solomon, Benefits of Physiognomy, Matrimonial Hints, Its Application to Business, Self-Improvement, Harmony of Physiognomy with Phenology.

An Account of Previous Systems.—System of Lavater, General Rules, The Forehead, The Eyes, The Eyebrows, The Nose, The Cheeks, The Mouth, The Chin, The Forehead and Mouth, Stupidity, Folly, Sophists, Knaves, Women, Caution, The Smile, To be Avoided, Thinkers, Cautious, Manly Character. Alexander Walker's System, General Rules, The Mouth, The Nose, The Eye, The Ear, The Chin and Jaw, Dr. Redfield's System, Analysis of Man, The Twelve Qualities, Names of Physiognomical Signs according to Dr. Redfield, Classification of Faculties, Practical Examples, with Illustrations.

Structure of the Human Body.—The Mechanical System, The Bones, The Ligaments, The Muscles, Thorax and Pelvis, Vital System, The Lymphatics, The Blood-Vessels, The Glands, The Heart, Mental System, The Organs of Sense, The Cerebrum, The Cerebellum, The Spinal Cord and its Connections, amply illustrated with Engravings.

General Principles Stated.—Law of Correspondence, Law of Homogeneity, Law of Special Development, Law of Quantity, Law of Quality, Law of Temperament, Law of Form, Law of Distinct Functions, Law of Latency.

The Temperaments Defined.—The Ancient Doctrine, Modifications, Brain Left Out, Dr. Spurzheim's Description, The New Classification, The Motive Temperament, The Vital Temperament, The Mental Temperament, Nervous, Bilious, Sanguine, and Lymphatic. (Illustrated.)

Man and Woman Compared.—Size, Venus and Apollo, General Form, Sex in the Features, Phenological Differences, Physiognomical Distinctions, Lavater's Antitheses, Let Man be Manly and let Woman be Womanly.

General Forms of Faces.—The Oblong Face, The Round Face, The Pyramidal Face, Profiles, Facial Angles, with Illustrations, an interesting study.

Outlines of Modern Phenology.—Phenology Defined, As an Art, Basis, First Principles, Names, Numbers and Location of Organs, Symbolical Head, Definition of Organs, Domestic Propensities, Selfish Propensities, Aspiring and Governing Organs, Moral Sentiments, Perfective Faculties, Perceptive Faculties, Literary Faculties, Reasoning Faculties.

Anatomy of the Human Face.—Framework of the Face, Muscles of the Face, Bones of the Head and Face, Sinuses of the Face, Muscles of the Eye and Eyebrows.

The Human Chin, What it Indicates.—Chin and Corbellum, Love or Amativeness, Chins Classified, The Pointed Chin, The Indented Chin, The Narrow Square Chin, The Broad Square Chin, The Broad Round Chin, Will or Determination, Scorn and Contempt, Economy indicated in the Chin.

The Jaws and the Teeth.—Comparative Anatomy, Heads of the Wolf and the Sheep Compared, A Sign of Animality, The Jaws and Diet, Destructiveness, Love of Overcoming, Signs of Physical Degeneracy.

The Human Mouth Indicates Character.—The Mouth Tells Tales, General Remarks, The Lips and the Affections, Philosophy of Kissing, Friendship, Hospitality, Love in the Lips, Jealousy, The Lips of Contempt, Approbation, Love of Distinction, Firmness and Self-Esteem, Gravity and Gloominess, Mirthfulness, Animals and Savages, Complacency, Self-Control, Enjoyment, Dissatisfaction and Hate, Other Signs.

All About Noses, With Illustrations.—Some General Remarks, The Nose as a Sign of Development, Noses Classified, The Roman Nose, Executiveness, The Greek Nose, Refinement, The Jewish Nose, Commercialism, The Snub Nose, Underdevelopment, The Celestial Nose, Inquisitiveness, Tristram Shandy on the Nose, What is a Cognitive Nose, The Appreciative Nose, The Inquisitive Nose, A Toper's Nose, Combative Noses, The Defensive Nose, The Irritable Nose, The Aggressive Nose, Contrasted Noses, The Tasteless Nose, Memory of Names, Intellectual Noses, Front Views, Secretive Nose, The Confiding Nose, Acquisitive Nose, The Economical Nose, Feminine

New Physiognomy, OR SIGNS OF CHARACTER

AS MANIFESTED IN

TEMPERAMENT AND EXTERNAL FORMS,

AND ESPECIALLY IN

"The Human Face Divine."

BY SAMUEL R. WELLS.

Editor *Phrenological Journal* and *Life Illustrated*.

NEW YORK:

FOWLER & WELLS.

One Large Vol. nearly 800 pages, with more than 1,000 Illustrative Engravings, in three styles of binding—handsome embossed muslin, \$5; heavy calf, with marble edges, \$8; rich turkey morocco, full gilt, elegant, \$10. A beautiful presentation book suitable for the center-table.

Noses, National Noses, The American Nose, The German Nose, The English Nose, The Irish Nose, The French Nose, Miscellaneous National Noses, Indian Noses, Negro Noses, Mongolian Noses, Noses of the Pacific Islanders, Noted Noses, Photographed Noses, The Noses of Sculpture, Lord Brougham's Nose, Some Poetical Noses, A Double Nose, The End of the Nose.

About the Eyes—Language, Color, and Character.—Size of the Eye, Prominence of the Eye, Language, Width of the Eyes, Impressibility, The Uplifted Eye, Prayerfulness, The Downcast Eye, Humility, Rapture and Wonder, The Eyelids, Mirthfulness in the Eye, Probity, The Eye of the Drunkard, The Color of the Eyes, What it Indicates, Effects of Climate, Blue Eyes, Black Eyes, Daniel Webster's Eyes, Brown Eyes, Hazel Eyes, Gray Eyes, Green Eyes, Opinions about Eyes, Expression, Children's Eyes, Educating the Eye, Eyes of Celebrated Persons, The Eyebrows.

The Cheeks and the Complexion.—Temperament and Health, Complexion, Blushing, Dimples, Supposed Discoveries of Dr. Redfield, Protection, Hurling, Medicine, Wave Motion, Watchfulness, Rest and Repose, Sleep.

What the Forehead Indicates.—The Blending of Phenology and Physiognomy, Intellectual Capacity, Perception, Memory of Events, Reasoning Power, Wit or Mirthfulness, Ideality, Benevolence, Conscientiousness.

Signs of the Neck and Ears.—Vitality, Tenacity of Life, An Indian's Opinion, Masculine Energy, Children, Firmness, Self-Esteem, The Ear, Tune.

The Hair and Beard—Their Color, Quality, and Character.—Form and Structure, How the Hair Grows, Color of the Hair, Dyeing the Hair, National Peculiarities of the Hair, Remarkable Length, Modes of Wearing the Hair, The Church on Long Hair, Absurdities of the Female Coiffure, Natural Curiosities, Mixed Races, Cutting the Hair, Wigs, Quality of the Hair, Gray Hair, Baldness, Physiognomical Indications, Hair, Wool, Fur, Political Significance of Long Hair, The Beard, The Modern Oriental, Greek and Roman Beards, Long Beards, The Church on the Beard, How Duprat Lost his Bishopric, A Modern Ball against the Beard, Beards Classified, Peter the Great, The Beard of To-day, Ethnology of the Beard, Uses of the Beard, Physiognomical Indications, Bearded Women.

Human Hands and Feet—Varieties.—Structure of the Hand, Manual Movements, Why the Fingers are of Different Lengths, How we hold a Ball, The Ring-Finger, The Nails, Why are we Right-Handed, Physiognomy of the Hand, Hands Classified, The Long Hand, Activity, The Thick Hand, Vivacity, The Small, Slender Hand, Delicacy, Hand and Heart, Tussock, Bones of the Foot, The Arch of the Foot, Ligaments, Muscles of the Foot and Leg, Walking, Positions in Walking, Forms of the Feet.

Signs of Character in Action, in Walk, and in Voice.—Shaking Hands, Why do we Shake Hands, Character in the Walk, The Walk of Animals, The Voice, Its Physiology, Differences in the Voice, The Voice and Character, The Nasal Twang, Music and Character, The Voice of Devotion, Remembering Voices, Stammering, Dress Indicative of Character, Temperaments and Colors.

The Physiognomy of Insanity.—What is Insanity, Varieties of Insanity, Celebrated Maniacs, Causes of Insanity, Treatment of Insanity, Prevention, Physiognomical Signs of Insanity, Insanity is Disgraceful, Cranial Deformities, The Hair, The Skin, The Eyes, The Eyebrows, The Nose, The Mouth, The Mad-House, A Stretch of Insane Thought.

Idiocy—Its Causes and Peculiarities.—Natural Idiots, Idiocy from Disease, Causes of Idiocy, The Brains and Skulls of Idiots, Education of Idiots, Signs of Idiocy, Dementia Illustrated, Idiots Classified.

Fighting Physiognomies, with Examples.—Fighting Preachers and Preaching Fighters, Broad Heads, Courage of the Narrow Heads, Fighting Noses, Strong Jaws, Prominent Temples, Decided Chins, The Sign of Command.

Effects of Climate on Character.—The Temperate Zones Best, The Man of the Tropics, Man of the Ice, The Men of Temperate Climates, Climate and Crime, Examples, Plants and Animals, Southern Improvidence, Northern and Southern Civilization, Climate and Poetry, Thought vs. Feeling, Stimulating Up, How far is Man Cosmopolitan, Per Contra, Complexion, The Blondes Disappearing, A Theory of Complexion.

Ethnology, or Types of Mankind.—The Races Classified, The Caucasian Race, The Mongolian Race, The Malay Race, The American Race, The Ethiopian Race.

National Types, with Portraits.—The Teuton, The German, The Scandinavian, The Englishman, Ancient Types Preserved, The Anglo-American, Are the Deteriorating, The Future American, The Lowland Scot, The Highlander, The Welshman, The Irishman, The Frenchman, The Italian, The Spaniard, The Slavon, The Russian, The Finn, The Magyar, The Ancient Greek, The Greek-Egyptian, The Roman, The Semite, The Arab, The Jew, The Assyrian, The Ancient Egyptian, The Phœnician, The Hindoo, The Sioux Indians, An Indian War Talk, The Esquimaux, The Tschuktschi, The Kamtschutkana, The Samoides, The Calmuck, The Patagonians, The Negro in America, The Papuan, The Sandwich Islanders, The Tahitian, Other Polynesians, The Australians, The Siamese and the Siamese Twins.

The Physiognomy of Classes Illustrated.—Divine, Pagilists, Warriors, Surgeons, Inventors, Discoverers, Philosophers, Statesmen, Orators, Actors, Poets, Musicians, Artists, with Twelve Groups of Portraits.

New Physiognomy.

Contrasted Faces—How w Change.—Size vs. Quality, The Important and the Cultivated, Cruelty vs. Benevolence, The Two Poets, Tennyson and Beranger, History in the Human Face; Mr. Lincoln in 1860, 1865—The Two Paths.

Transmitted Physiognomies Illustrated.—The Bonapartes, The Austrians, Lip, Charles Edward Stuart, Mary Queen of Scots, Queen Victoria and Prince of Wales, The Franklin Face, Remarkable Resemblances, "Like Produces Like."

Love-Signs in the Lips, Chin, and Eyes.—Matrimonial Mistakes, Phenological Organ of Love, Modifying Conditions, Temperament and Love, Love on the Chin, Loving Lips, How to Judge of Compatibility and Adaption.

Signs of Health and Disease.—Signs of Health, Beauty, Strength, Activity, Happiness, Signs of Disease, Aspect of the Face, Paleases, Expressions.

Curious Changes of Countenance.—Assuming a Character, Can a Villain look like an Honest Man? Emma Stanley in Different Characters, Differences of Expression.

Grades of Intelligence, Human and Animal.—Lavater's Remarks, The Chain of Being, An Ascending Series, from the Infusoria to Man, A New Facial Angle, Man and Animal Compared, Instinct and Reason, The Phenological View.

Animal Heads, with Remarkable Contrasts.—Broad Heads vs. Narrow Heads, Strength vs. Cunning, Cats and their Characteristics, The Grass Eaters, The Wild and the Cultivated, Some Bad Heads, Individual Differences, Breaking Horses.

Comparative Physiognomy Illustrated.—Animal Types in the Human Race, A Goosey, Foxy, A Great Bear, A Donkey, Huggish, Dog Types, Rat and Cats.

Graphomaney and Chiromaney.—Styles of Handwriting, and what they Mean, Practical Suggestions, Illustrative Autographs, Chirography or Palmistry.

Exercise in Expression Illustrated.—Antoniou's Wonder, Curiosity, Contempt, Fury, Rage and Fear, Desire, Hope, Terror and Vexation, Love, etc., Expression in Animals, all appropriately illustrated.

The Great Secret of Human Beauty.—What is Beauty, Styles of Beauty, How to be Beautiful, The Rationale of Physical Changes, Effects of Intellectual Culture, Love as a Cosmetic, Spiritual Beauty, A Sweet Temper Essential, Beauty Begins Beauty, How to Improve the Complexion, Beauty of Age.

Childhood—Remarkable Effects of Training.—The Right Way and the Wrong, The Two Boys, and How they Grew Up, Hints to Parents, The Rod of Correction Explained.

Character-Reading, Illustrative Examples.—Two Historians, A Poet in Youth and in Age, Two American Poets, The Preacher and the Writer, A Traveller and a Legislator, The Artist and the Woman of the World, The Great English Reformers, The Observer and Man of Facts, The Thinker, The Lecturer and Reformer, The Magistrate, The Merchant, The Politician, The Philanthropist, The Man of Will and Energy, The Agitator, The Ambitious Revolutionist, The Christian Gentleman, The Experimenter, The Religious Notaphysician, The Brutal Murderer, The Humorist, The Engineer, The Traitor, The Eccentric Preacher, The Journalist and Author, A Modern Philosopher, The Romance Writer, The Essayist and Poet, An Art Writer, A Preacher and Poet, The Woman of Genius, The Dress Reformer, The Great Historian, The Old Man Eloquent, The Scotch Philanthropist, The Man of the People, The Great Lawyer, The Eminent Jurist, The Father of his Country, The Ambitious Ruler, The Religious Reformer, The Priest and Diplomatist, The Pulpit Orator, The Friend, The Philosophical Historian, The Disinfectant of Life and Character, The Physiognomist, The Founder of Phenology, The Practical Religionist, The Theologian, "Bertie Becaratus", The Great Prussian.

Interesting Miscellaneous Addenda.—Aristotle, An Ideal Head, Head of St. Paul, Eyebrows, Life as Seen from Opposite Stand-points, Physiognomical Anecdotes.

A Brief Recapitulation or Summing Up.—A Synopsis of the Work, New Illustrations Introduced, Additional Hints, A Group of East Indians, The Shapes of Heads Illustrated, How to Observe and How to Read Character, It may be called an Illustrated Encyclopedia of Physiognomy, Biography, and Signs of Character.

Fig. 1018.—GEORGE WASHINGTON.

Fig. 1019.—JULIUS CAESAR.

Among the new Books of the year, none have been more kindly received by the Press than this. We clip brief extracts from a few journals, which show the general tenor of the whole. The Work contains upwards of a thousand Portraits and illustrative Engravings.

NEW PHYSIOGNOMY TESTIMONIALS.

The most complete hand-book in the language; a man who cannot find amusement and instruction in Mr. Wells' book, must have a very stupid face indeed.—*N. Y. Tribune*.

It is by far the best work ever written on this subject. It cannot be read without instruction and profit, and its suggestions are of great value. * * * It were immensely better for us if we understood that, however we may conceal our thoughts and loves, and shut ourselves within ourselves, we are known and read of all men here and now; and it would be far better for us in life, if we knew how to rightly interpret the signs of character.—*Christian Inquirer*.

Our extracts last week from this popular work, proved so acceptable that we have been induced to extend our approbations to some kindred topics.—*Homes Journal*.

This exhaustive and admirable work defines Physiognomy and shows its benefits. It contains a vast amount of intelligence, and ought to find its way to every private and public library in the land.—*Herald of Health*.

"New Physiognomy" is a useful book, and we view it as a worthy addition to our library.—*Educational Monthly*.

Mr. Wells has put the thought, the practical experience, the close observation, and the professional collection of a life-time into this important physiological work. He treats, as Lavater did, of Physiognomy, shows its harmony with Phrenology, and explains, to elucidate both sciences, the whole structure of the human body.—*Philadelphia Press*.

We cannot help treasuring the book as a highly valuable repository of practical wisdom, and of vast use to us in our course of life and action.—*N. Y. Jewish Messenger*.

"New Physiognomy" is a work of science, art and literature whose purity of tone will commend it to all classes of readers.—*Wide World*.

Abounding as the volume does in portraits of men and women, who are, or have been prominent, with brief analyses or descriptions of their characteristics, it will take a place among the curiosities of literature and science.—*Worcester Palladium*.

Among those who have contributed to the advancement of the science of Physiognomy in this country, the author of this book is honorably distinguished, and we feel pleasure in bearing testimony to the conscientiousness and ability with which he has executed the laborious task that he imposed upon himself.—*N. Y. Herald*.

This is, probably, the best work now extant upon the subject of

Physiognomy, and that it is the most interesting one of the kind ever published cannot be questioned.—*Chicago Evening Journal*.

No one can read the book with any degree of attention without deriving much benefit from it, and its thorough study would furnish one with a knowledge of the signs of character indispensable to success in any walk of life.—*New Jerusalem Messenger*.

Take such a volume as this, and every one must acknowledge that Physiognomy opens a wide field for interesting investigation.—*N. Y. Daily Times*.

A voluminous and very comprehensive work, taking the student by a thousand paths to a conclusion as to its entire correctness of theory, demonstrated by multitudes of the aptest illustrations.—*Boston Gazette*.

This is the largest, and undoubtedly by far the best and most comprehensive work upon the subject of Physiognomy ever published. We bespeak for it a rapid sale, as it contains matters of interest to all classes of people.—*Prairie Farmer*.

Mr. Wells has done ample justice to the history of his favorite science, and drawn together from obscure sources a great deal of useful information, while his own theory is ably expounded. * * * We trust Mr. Wells' book will receive the attention it deserves and be the means of advancing a science which is one of the greatest importance on account of its close relation to mental philosophy.—*Scottish American*.

Mr. Wells' new work on Physiognomy covers the whole ground more thoroughly than any book before issued.—*The Field and Fireside*.

Our merchants and mechanics, as classes, read too little, and often suffer thereby. A careful perusal of this work would, doubtless, enable them to escape what is called "bad luck," giving them the basis upon which to form a judgment of character.—*N. Y. Dispatch*.

The Volume before us is attractive in many respects. The author has thoroughly popularized his language, and is at home in his subject, and the volume is full of materials from which thoughts are generated. Its grouping of portraits with reference to particular styles of character or the tendencies to particular pursuits, is ingenious and good.—*Cincinnati Daily Inquirer*.

Mr. Wells' work should be perused by everybody. It is learned, curious, amusing, enlightening, profound, and as excellent a production for the counter-table as the library. If we could give it a better character we would, for it deserves all the good we can say of it.—*N. Y. Sun-day Times*. [Agents Wanted.]

	An Essay on Man..... 199

The Journal.

Man, know thyself. All wisdom centers there;
To none man seems ignoble, but to man.—Young.

ERNEST RENAN.

"To write the history of a religion, it is necessary, first, to have believed in it (without that, we could not understand by what it has charmed and satisfied the human conscience); in the second place, to believe in it no longer implicitly; for implicit faith is incompatible with sincere history."

This is the basis upon which M. Renan has constructed his "Life of Jesus," a work which perhaps created more sensation in the religious and literary world, when first announced, than any previous book of a like character.

And what an index is this of the character of the man who thus sits down to write a history of Christianity as exemplified in its great founder, coolly asserting that a man must be an apostate before he can fully comprehend it in its origin and varied relations. Should not this very assertion at once preclude us from placing much confidence in the statements of such a man? Would we trust the writing of the history of the American people to one who

PORTRAIT OF ERNEST RENAN.

has expatriated himself, or to a traitor? No! But, according to Renan, none but an infidel is fit to treat of the glorious principles of Christianity, which, by the way, he finds it impossible to comprehend! This is Renan, an imitator of that class of German theologians who attempt to understand the truths contained in the Bible

by the aid of reason alone; who totally ignore the existence of the faculty of spiritual apprehension or faith; who reject everything that does not appear to their intellect probable or possible; and who accept only that which they can fully grasp in their finite mind; therefore they deny the presence of any other ele-

ment than the human in the Bible and in the character of Christ!

These are the men who are the strongest opponents of religious truth; these are the rank and file of the rationalistic army who stand opposed to the advancement of Christian theology in the present century, and who attempt to bar the way of religious belief by presenting Christianity in the garb of their own philosophy. It is the old war between rationalism and supernaturalism, between infidelity and religious faith or belief, which is even now being hotly contended by the theologians of Germany, of England, and of America.

Considered from our stand-point of Phrenology, we find in both the intellectual and moral organization of man the infinite wisdom of a beneficent Creator. "Faith begins where reason ends." Reason alone can never comprehend the sacred and spiritual character of Christ. Spirituality, alone, however, unguided by reason, would soon degenerate into mere blind superstition. But, on the other hand, when reason dethrones faith from her true position and attempts to grasp the sublime idea of God, it loses itself in the mazes of vague speculation, and floats down the stream of rationalistic infidelity. Reason was given to man, not as a leader, but as a guide; as Bryant has said:

I would make
Reason my guide, but she should sometimes sit
Patiently by the wayside, while I trac'd
The mazes of the pleasant wilderness
Around me. She should be my counselor,
But not my tyrant; for the spirit needs
Impulses from a deeper source than hers;
And there are motions in the mind of man
That she must look upon with awe.

It is not our intention, however, to plunge into the depths of theological discussion; but, rather, to see, by the aid of Phrenology, wherein consist the defects in the character of Renan, which make him, instead of portraying Christ in all His divinity, write up his biography as an "incomparable man," and write himself down a pantheist.

Renan is lacking in some of the essentials of a devout Christian. His phrenological organization, as indicated in our portrait, shows that the organs of Veneration and Spirituality are but moderately developed—in fact, small, as seen by the low forehead and slanting crown. With the aid of rather strong Ideality and Sublimity, he can only sublimate Christ *intellectually* as "this sublime person, who each day still presides over the destinies of the world; whom we may call divine, not in the sense that Jesus absorbed all divinity, or was equal to it (to employ the scholastic expression), but in this sense, that Jesus is that *individual* who has caused his species to make the greatest advance toward the divine." He places Jesus upon the highest pinnacle of humanity; makes him the embodiment of all that is good and lofty in our human nature, yet says "he was not sinless; he conquered the same passions that we combat; no angel of God comforted him, save that which each bears in his heart. * * * There never

was a man—Sakya-Mouni perhaps excepted—who so completely trampled under foot family, the joys of the world, and only temporal cares. He lived only for his Father, and for the divine mission which he *believed* it was his to fulfill."

According to his theory, Jesus is to Christianity what Socrates was to philosophy; what Aristotle was to science—the founder. Renan can not comprehend His divinity. To him Jesus stands in the same light as a Mohammed, a Luther, or a Calvin, "a *superior person*, who by his bold initiative, and by the love which he inspired, created the object and fixed the starting-point of the future faith of humanity." Renan is unable, with his materialistic tendencies, to rise into the atmosphere of Christ's lofty ministry, which he describes as the period of His developed fanaticism, the time when "His brain was disturbed by the great vision of the kingdom of God which flamed before his eyes."

Renan's belief in God is limited, if not entirely wanting. Those faculties which link man with his Creator, through which we look from nature up to nature's God, seem to have little influence upon his positive intellectuality. A human being who ignores or discourages what spiritual emotions there may be within him, can not apprehend the connection between himself and his God; and, as if in confirmation of this principle, Renan says: "If God is a being apart from man, then it is visionary to dream of any personal and intimate relations between him and man." Christ himself, he says, had no more connection with God other than that "he *felt* himself with God, just as Plato, Paul, Augustine, and other great leaders *felt* God in themselves. The fullest consciousness of God that ever dwelt in human breast was that of Jesus. He conceived God as the immediate father; and he drew from the depths of his own heart all he says of his Father."

We can hardly believe Conscientiousness to be a leading faculty of Renan's organization. What he has appears to be like his religious organs; subverted to the reason; and in the following extract we do but find the echo of his organism, when in speaking of the propagation of new ideas he says: "The strife of life leaves none of its combatants immaculate. It is not enough to conceive a grand or beneficent idea—one must propagate it among men. *Pure means do not suffice for this.*" Renan is here unconsciously painting himself, and not Christ. *Pure means* certainly do not suffice for Renan.

Renan has a fine development of the intellectual faculties, especially the perceptive; he is talented, and having large Approbativeness, he betrays much learned vanity. The reasoning faculties are rather large; but these are held somewhat in subjection by the predominant development of the observing organs. True to his organization, Renan does not reason deeply or broadly; he first assumes his position, and upon that assumption builds his theory. He is plausible and attractive, but far from profound. In his introduction he says: "Let the

gospels be in part legendary, that is evident, since they are full of miracles and the supernatural." These are his great stumbling-blocks. He can not see, and feel, and hear the supernatural; he believes nothing that is not material, that is not apparent to the senses; hence he rejects miracles as untrue, but does not attempt to reason them away. He makes use only of that part of Christian history which will serve his purpose; he takes as true what suits his preconceived theory, and throws the rest aside as legendary. It is this preconceived opinion which compels him to degrade "the incomparable Jesus" into a mere thaumaturgist. It is this which compels him to call the raising of Lazarus from the dead a contrivance of the Apostles, connived at by the Master for the sake of enlarging his influence. He rejects miracles and the supernatural, not in "the name of any school of philosophy, but in the name of universal experience." He rejects them logically, because he is a pantheist. His mind is shackled; it can not rise to the grand idea of anything higher than the physical; hence he makes all things subordinate to the physical and the material.

Of Renan's intellectual attainments, we shall let his biography speak. Born at Tréguier, Brittany, February 27, 1823, at fourteen he entered the seminary of St. Nicholas, Paris, with the intention of preparing himself for the service of the Church, and showed a remarkable degree of intellectual ability, but at the same time an intractable disposition. Always reading, writing, talking, he seldom shared in the youthful sports of his fellows. At seventeen he gained the prize of History by an essay on Alexander the Great; subsequently he went to a seminary at Issy, where he completed his academical studies, his time being chiefly occupied in morals, mathematics, and, most of all, the German language. The *theologia moralis* of the school, taught after the old or orthodox Roman fashion, soon disgusted him; he read Jouffroy, and became his disciple. After leaving Issy, he commenced his theological studies proper at St. Sulpice; but the seeds of skepticism had already been sown, and he is said to have never learned much of theology as a science or history, but found solace in the study of the Oriental languages—Hebrew, Arabic, and Syriac. The Hebrew language, however, was never fully mastered by him. So said his eminent Oriental instructor, Le Hér. Religious instruction and skepticism had been battling for two years in Renan's breast; he had received the tonsure and the minor orders; the time of his ordination as sub-deacon was approaching; but his doubts growing every day, he opened his mind frankly to his superiors, who, as if fearful of the influence of his eccentric views, advised him to abandon his ecclesiastical career, which he did, and went out into the world to begin his life anew. Renan soon gained the friendship of Dupanloup, who secured him a position as tutor in the College of Stanislas. He published a "History of the Semitic Languages" at

twenty-three; he obtained the Volnay prize for an "Essay on the Semitic Languages;" and two years later he was crowned by the Institute for a historical essay on the "Study of Greek in the Middle Ages," thus securing for himself an early fame. Shortly afterward he was sent to Italy on an antiquarian mission by the Academy of Inscriptions; in 1850 he was made keeper of the MSS. of the Imperial Library, often writing brilliant and learned reviews in the mean time. In 1860 he was sent to explore the antiquities of Phœnicia, the result of which was a report to the Academy, in which Renan set forth a number of discoveries, which, however, were disputed by a Jewish *savant*.

It was during this tour that Renan collected the matter for the "Life of Jesus." In the course of his travels he spent a good deal of time on the borders of the Lake of Galilee; traversed the whole region covered by the Gospel history; visited Jerusalem, Hebron, and Samaria, and made himself familiar with all the sacred localities; and during a summer's rest on the top of Lebanon, wrote the "Life of Jesus." He was not alone in his travels, however. His sister, Henriette, was his companion, who, it is said, implanted in his heart the seeds of infidelity. She had spent several years in Germany as a teacher, and had drank deeply the intoxicating and blinding philosophy of Hegel. She, too, was talented; and these two beings trod through the beautiful scenery of the Gospel narrative, pilgrims of science, and not of faith. But pilgrims as they were, one came to the enchanted land to die upon its borders. Renan loved his sister devotedly. It is one of the redeeming features of his life. The story of her death as told by himself in his introduction to the "Life of Jesus" is very touching. It brings out the finest portions of his nature. It is a cry from the heart to the heart. He does not reason when Henriette is swept from him by the tide of fever. He says:

"To the pure spirit of my sister Henriette, who died at Byblos, September 24, 1861. Do you remember, from your rest in the bosom of God, those long days at Ghazir, where, alone with you, I wrote these pages, inspired by the scenes we had just traversed? Silent by my side, you read every leaf, and copied it as soon as written, while the sea, the villages, the ravines, the mountains were spread out at our feet. When the overwhelming light of the sun had given place to the innumerable army of the stars, your fine and delicate questions, your discreet doubts, brought me back to the sublime object of our common thoughts. * * * One day you told me that you should love this book, first, because it had been written with you, and also because it pleased you. In the midst of these sweet meditations Death struck us both with his wing; the sleep of fever seized us both at the same hour; I awoke alone! * * * You sleep now in the land of Adonis, near the holy Byblus and the sacred waters where the women of the ancient mysteries came to mingle their tears. Reveal to me, O my good genius! to me whom you loved, those truths which

master Death, prevent us from fearing, and make us almost love it."

Here, Renan, elsewhere pantheist and unbeliever, to whom the human soul has no existence apart from matter, for whom God is the monstrous All, or a shadowy Nothing, invokes the spirit of his sister from "the bosom of God;" and yet this tender outburst of love finds its channel in heathen phrase—"in the land of Adonis, near the sacred waters with which the women of ancient mysteries mingled their tears."

The great feature of Renan's book is its style. Language, perfect in description, graceful, limpid, yet full of color. His words are apt and expressive; his sense of the beautiful is large; and he paints the localities of the sacred narrative in veritable pictures. The landscape of Judea stands before the reader in all its fullness of life. He paints in exquisite language the smiling valleys of Samaria; the silver waves of Galilee; the billowy mountains of Judea; the desolate plains about Jerusalem. He is intoxicated by the glories of the Galilean landscape—the true land, as he calls it, of the "Song of Songs, and the Chants of the Well-Beloved." He sought repose from the hot sun on the top of Mount Lebanon, and with a brain burning with the scenes which he had passed, as he himself says, "fixed in rapid sketches the vivid image of the 'Life of Christ,' which the marvelous harmony between the Gospel story and the actual scenes of the Galilean landscape had imprinted on his mind."

This is beautiful language; and none the less beautiful, too, is its harmony with phrenological development. Look at his portrait, and note the large development of Language and the perceptive organs, and the fullness of Ideality and Sublimity, the latter especially. The occurrence of events with him is remembered; the locality of places becomes impressed ineffaceably upon his mind. He sees the whole Galilean landscape smiling in beauty; and with his large Language he is enabled to paint the scenes he looks upon in glowing, fervid words.

But how does he describe Christ? He can not bring to bear his spiritual nature, but simply describes him, stripped of all its artistic coloring, as "a young peasant of mild and even captivating manners, who appeared in a corner of Galilee, in the reign of Augustus Caesar. His education was but scanty. There is no ground for belief that he ever learned to read even the Old Testament in Hebrew. Of the Greek culture, philosophy, poetry, history, art, he knew absolutely nothing. As for the exquisite Greek mythology, his Jewish monotheistic training would not have allowed him even to comprehend it. Nature was his great teacher; the smiling valleys, the swelling hills, the brilliant sky of Galilee made him what he was. Of laws, society, government, ethics, psychology he was not only ignorant but indifferent. His book learning was confined to a part of the Jewish sacred writings. His practical wisdom was derived from Jewish tra-

ditions, that were incorporated two centuries after in the Talmud. Of politics he knew nothing, save that Cæsar reigned. Destitute of the knowledge of physical science, he believed in demons, angels, and marvels of all kinds. Though of a gentle nature, he despised the family tie; imbibed at an early age the idea of a divine mission, and abandoned the cottage in which he was born and the parents who nurtured him. A few susceptible peasants like himself hailed him as Messiah. An enthusiast named John favored his pretensions. His ambition grew, and, by-and-by, in spite of his lofty nature, he pretended to work miracles. After a few years of wandering he was arrested, tried, and executed."

Such is M. Renan's Christ!

On his return from Syria in 1861, M. Renan was appointed Professor of Hebrew and Oriental Literature in the College of France, although his skeptical tendencies were well known to the Government. His inaugural lecture was fixed for the 22d February, 1862; the college was crowded to excess to hear him; the first words were greeted with hisses, but these were drowned by the cry of the young students, "Down with the Jesuits!" M. Renan conquered, but his triumph was of short duration, for the next day his lectures were suspended. This lecture was soon published, but it was no miracle either of learning or style, and was soon forgotten in France. In the summer of 1863 appeared his noted work on the "Life of Christ," which has been followed by his "Lives of the Apostles." Renan intends also to treat of Christianity under the Antonines, and a fourth work to the progress of the new religion up to its establishment under Constantine.

Renan has a strongly-marked organization, and one strongly animal in its manifestations. The cast of the countenance and features is somewhat Jewish. [Is he not of Jewish blood?] In appearance he is thus described by a recent biographer: "Renan is a thick-set man of moderate height and stooping shoulders. He has a strongly-marked face, somewhat Jewish in cut, flecked with red spots, not wanting in signs of resolution, but yet preoccupied, and with an undescribable air of uncertainty. The man seems to be disputing with some invisible opponent, and shakes his hand, and even clutches his fist now and then."

His nose is aggressive; the mouth has an appearance of pride or assumed dignity, which corresponds with his large development of Firmness and Approbativeness. The social organs are well shown in the large chin, especially the animal propensities; while Destructiveness, Combativeness, Secretiveness, and Caution are all well indicated.

Renan needs to exercise his moral and religious faculties, to look to God through his intuition rather than attempt to grasp Him with his intellect.

NOTE. — For the portrait accompanying the above sketch, as well as the biographical facts connected with M. Renan's life, we are indebted to *Harper's Monthly Magazine*.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

[CONTINUED.]

METAPHYSICAL ABSURDITIES.

WE shall next proceed to show the vast superiority of phrenological exposition, in a labor-saving point of view, over the old-school expositions, by comparing the bungling, verbose expositions in which the play of the faculties of Firmness and Concentrativeness is confounded. We must, however, notice a contradiction: on page 573 § 628, Carpenter says: "In regard to every kind of mental activity that does not involve origination, *the power of the Will, though limited to selection, is otherwise unbounded;*" and then continues on a few pages further, and maintains that the influence of the Will, so far from being unbounded in every kind of mental action not involving origination, is absolutely *nil*, and that mental actions capable of evolving very astonishing results, are not under the influence of the Will, but are automatic. Such contradictions among writers of the old school are too common to require any additional comment, and we shall proceed with our quotation to show how verbose and awkward are the metaphysical expositions when compared with the phrenological. Carpenter, p. 586 § 650: "Two striking instances may be adduced, of men distinguished, the one for intellectual, the other for artistic ability; in both of whom the mental action which evolved the result seems to have been almost entirely of an automatic character. All accounts of Coleridge's habits of thought, as manifested in his conversation (which was a sort of *thinking aloud*), agree in showing that his train of mental operation, once started, went on of *itself*, sometimes for a long distance in the original direction, sometimes with a divergence into some other track, according to the consecutive suggestions of his own mind or to new suggestions introduced into it from without. His whole course of life was one continued proof of the weakness of his Will; for with numerous gigantic projects continually in his mind, he never could bring himself, even seriously, to attempt to execute any one of them; and his utter deficiency in self-control rendered it *necessary* for his welfare that he should yield himself to the control of others.

"The composition of the poetical fragment 'Kubla Khan' in his sleep, is a typical example of automatic mental action; and almost his whole life might be regarded, in consequence of the deficiency of that self-determining power which is the pre-eminent characteristic of every really great mind, as a sort of waking dream. One of the most characteristic examples of his extraordinary deficiency of Will was displayed very early in his career, for when he had found a bookseller (Mr. Cottle) generous enough to promise him fifty guineas for poems which he recited to him, and might have received the whole sum immediately on the delivery of the manuscript, he went on borrowing for his daily needs, in the most humiliating manner, until he had drawn from his patron the whole of the

promised purchase money, without supplying him with a line of that poetry which he had only to *write down* to free himself from obligation. Yet there was no man of his day who surpassed Coleridge in the combination of the reasoning powers of the philosopher with imagination of the poet and the inspiration of the seer; and there was perhaps not one of the last generation who has left so strong an impress of himself in the subsequent course of thought of reflective minds engaged in the highest subjects of human contemplation. So, again, the whole artistic life of Mozart, from his infancy to his death, save in so far as the earlier part of it was directed by his father, may be cited as an example of the spontaneous or automatic development of musical ideas, which, under the guidance of his intuitive sense of harmony [§ 607], expressed themselves in appropriate language. When only four years old, he began to write music, which was found to be in strict accordance with the rules of composition, although he had received no instruction in these; and when engaged, during his after-life, in the production of those works which have rendered his name immortal, it was enough for him to fix his thoughts in the first instance upon the subject (the libretto of an opera, for example, or the words of a religious service), so as to give the requisite start and direction to his ideas, which then flowed onward without any effort of his own, so that the whole of a symphony or an overture would develop itself in his mind, its separate instrumental parts taking (so to speak) their respective shapes, without any intentional elaboration. In fact, the only exercise of Will that *seemed* to be required on his part, consisted in the *writing down* of the composition when complete, and this, under the temptations of social intercourse and a dislike to anything like 'work,' he would postpone until the last moment. Thus it is well known that his overture to Don Giovanni was only written out (although it must have been previously composed) during the night previous to its performance, which took place without any rehearsal. It is recorded of him, that being once asked by an inferior musician how he set to work to compose a symphony, he replied: 'If you once think of how you are to do it, you will never write anything worth hearing. I write because I can not help it.'

"Mozart, like Coleridge, was a man of extremely weak will. He could neither keep firm to a resolution nor resist temptation, and when not under the guidance of his excellent wife, was the sport of almost every kind of impulse. But there was probably never a more remarkable example than his musical career presents, of the automatic operation of that creative power which specially constitutes genius; and his life is altogether a most interesting study to the psychologist as well as to the musician. On the other hand, in the life and literary career of Southey, we have a striking example of what a determined Will, acting under a strong sense of duty, may do in utilizing and turning to the best account acquisitions of a comparatively mediocre order. Al-

though few of his poems may retain a lasting celebrity, yet his prose writings will always be models of excellence in composition; and he had his powers under such complete command, that he never failed (save from physical incapacity) to execute those engagements which are too often made by men of genius 'only to be broken,' and never shrank from what he felt to be a task of disagreeable drudgery, when once he had undertaken it."

This long quotation will serve to show the great superiority of phrenological over metaphysical expositions in clearness and terseness, for all this waste of words which we have just copied could have been expressed in two or three lines had the writer used the phrenological system of mental nomenclature. Coleridge and Mozart had very large Concentrativeness, and they could apply their minds continuously for a great length of time, and their other faculties, being of a suitable type, they could elaborate astonishing results; but being very deficient in Firmness, they became the "sport of circumstances," and were unstable in all their ways; while Southey had large Firmness combined with his Concentrativeness, and he stood true to his engagements, and carried through unflinchingly his undertakings. We can thus readily perceive that if Carpenter instead of presenting us with that long-winded waste of words had said, "Coleridge and Mozart had very large Concentrativeness, but were deficient in Firmness, while Southey possessed both faculties large," every reader—supposing the phrenological nomenclature generally in use—would have known just exactly what kind of beings those three men were, so far as that myth the Will is concerned, without the addition of another word.

We have called the above quotation a waste of words. Now for the proof. On page 573 he tells us that "In regard to every kind of mental activity that does *not* involve origination, the power of the Will, though limited to selection, is otherwise unbounded. For although it can not directly bring objects before the consciousness which are not present to it, yet it can concentrate the mental gaze (so to speak) upon any object that may be within its reach, and can make use of this, as we shall hereafter see, to bring in other objects by suggestion or association," and then turns around and informs us that the power of the Will, so far from being "unbounded," and "able to concentrate the mental gaze upon any object," is absolutely worthless, and that the operations of the mind are "automatic," and go on of themselves.

These cases of Coleridge and Mozart will serve to show the confusion of thought from their confounding the personified attribute with the spirit itself, and their misapprehension of the play of the faculties of Firmness and Concentrativeness. Since Coleridge and Mozart could "concentrate their mental gaze" for a great length of time on any given subject, we might logically conclude that it was an attribute of the Will to "concentrate the mental gaze;" their wills were very strong and determined;

but this would not suit, for it would be contradicted by the fact that they had very weak wills, and were "the sport of circumstances." Hence it was necessary to invent some other theory to get rid of this trouble, and the operations of their minds were supposed to be taken from under the care of their wills, and made "purely automatic." This, however, only exchanged one contradiction for another, for this automatic exposition contradicts his affirmation on page 573, that the Will can concentrate the mental gaze upon any object, and "can virtually determine what shall not be regarded by the mind, *through its power of keeping the attention fixed* in some other direction." What is such a system of mental science worth which gives us no more light than that which we derive from such contradictory expositions? Yet Carpenter really deserves considerable credit for not wasting any more words, for some other expositors would have given us twice as many words and no more light.

We would inquire, in passing, what is the use of a man's denying Phrenology, when he has to use language to disguise his expression of phrenological principles? Carpenter speaks of Mozart's "intuitive sense of harmony." Now, what is the difference between the phrenologist's organ or faculty of Tune and Carpenter's "intuitive sense of harmony?" We can not tell the difference. *Phrenologically*, Coleridge did not distinguish himself as a musician, because his organs of Time and Tune were not so largely developed as Mozart's, and *metaphysically* it was because his "intuitive sense of harmony" was not so large. On page 573, Carpenter says: "Thus no one has ever acquired the creative power of genius, or made himself a good artist, or a good poet, or gained by practice that peculiar insight which characterizes the original discoverer; for these 'gifts' are mental instincts or intuitions, which may be developed and strengthened by due cultivation, but which can never be generated *de novo*." When the metaphysician has to stand and acknowledge the existence of thirty-seven "gifts," or "mental instincts," or "intuitions," one after the other as he is questioned, what in the name of reason is the use of his saying it is "a fundamental error to suppose the entire intellect may be split up into a certain number of faculties?" Carpenter, so far from proving that it is a fundamental error to suppose that the entire intellect is split up into a certain number of faculties, actually furnishes proof that it is a fundamental truth, by his inability to explain phenomena on the supposition that the mind is a unit, while those very phenomena are readily susceptible of clear and harmonious expositions on the supposition that the intellect "is split up into a certain number of faculties."

Again, we frequently see men who are perfectly sane on every subject except one, and on that they are perfectly wild—monomaniacs. If the mind is a unit, "the whole of it (so far as we can form a judgment) being called into operation in every kind of intellectual process which occupies the attention at the time"

(Carpenter, page 580), it is absolutely impossible to give any rational exposition of insanity, for if deranged on one subject, the man must be on all. If, however, we say that the mind is not a unit, but is endowed with a plurality of faculties, and that some particular faculty is diseased, and hence the manifestations of disordered intellect on that particular topic, we have a clear, rational, harmonious, and satisfactory exposition of the whole subject. And it was not until the advent of phrenologists that any rational indications were laid down for the treatment of the insane; on the supposition that the mind was a unit, whenever an individual manifested clearness of intellect on some subjects, and was insane on another, he was supposed to do whatever was objectionable through "deviltry," and the roughest measures were planned to cure him of his evil disposition, and many a wail of woe and anguish has arisen from the suffering monomaniac in consequence of the erroneous charts handed out from the metaphysical temple of science for the guidance of the physician.

Again, on the supposition that the mind is not endowed with a plurality of faculties, the phenomena of memory are inexplicable. We often find men whose memory of figures is extraordinary, others whose memory of words is remarkable, while others, of equal ability in other particulars, can not remember figures or words half so well. On the supposition that phrenological revelations are true, we have a beautiful exposition. In one class the organ of Calculation, Language, Locality, or Individuality, as the case may be, is largely developed, and the individual possesses a tenacious memory of figures, words, places, or individual objects, accordingly. In the other class these organs are small, and the individuals possess a very defective memory on those particular subjects. My grandfather was well acquainted with a man whose organ of Language was so large that he was an accomplished scholar, thoroughly versed in Latin and Greek, yet his organs of Individuality, Size, and Color were so defective, he could not distinguish the horse on which he rode to church, but was obliged to apply to a friend to point out his horse, or wait until all had departed and take the horse that was left. On the supposition that "it is a fundamental error to suppose that the entire intellect may be split up into a certain number of faculties," such a case is perfectly inexplicable; but on phrenological principles the mystery is removed at once.

Since, then, old-school metaphysical dogmas can not be made to harmonize with or explain many well-established facts, but on the contrary are directly antagonistic to anything like a rational exposition of them, and phrenological revelations harmonize with and give a beautiful exposition of these very phenomena, we will presume that the reader will adopt, without further comment, the phrenological revelation that the mind is endowed with a plurality of faculties, and will proceed to show further in our next paper that the phrenological exposition of those faculties, instead of being "pretty much humbug," and at war with the Bible, is emphatically sanctioned by the Bible.

On Psychology.

The soul, the mother of deep fears, of high hopes infinite,
Of glorious dreams, mysterious tears, of sleepless inner sight;
Lovely, but solemn it arose,
Unfolding what no more might close.—Mrs. Hemans.

SHAKESPEARE'S SUPERNATURAL CHARACTERS.

BY EDWARD W. TULLIDGE.

THE subject of supernatural beings manifesting themselves in human affairs has ever been most fascinating to genius. In the grand epic poems of the ancients, the human and the superhuman divide the field; Milton made the action of his celestial and infernal powers the very body of his immortal poem; and even our atheistic Shelleys and Byrons can not keep out of the charmed circle. The subject of the metaphysical agencies of the world—the good and evil—incarnating themselves in the action of human life, gives to the poet at once such a vast field for his capacities, and such a unique character to his work. Hence it is a favorite with genius; but it requires the greatest masters to handle it, or it will fall into contempt. And it is vastly more difficult to give the supernatural an extensive treatment in an acting drama than it is in the epic poem.

Shakspeare in several of his plays, such as Hamlet, trod on the boundaries of the metaphysical world and introduced a ghost. He also in the "Tempest" still made further inroads upon it, and introduced the magician Prospero, with his familiar spirit Ariel, and others of the spirit class; but this was only a drama of magic on an uninhabited island. Even Shakspeare did not fully succeed in reaching the great epic theme of supernatural powers manifesting themselves in the affairs of nations, until he embodied them in his play of Macbeth, which as a dramatic composition is his masterpiece.

And here it must be noted that Shakspeare's Witches are not mere hags, but supernatural beings; yet the subject is so nicely managed, that these unreal things not only originate the theme and shape the action, but they themselves form so much of the body of the play. They are as much realities upon the stage as Macbeth and Banquo. Thus our dramatist has brought into palpable relation, performing before the audience, the beings of two worlds. Herein is Shakspeare's triumph, that he has given his spirits a dramatic substance.

There are other pieces put upon the stage in which the deities of mythology are introduced, but they never impress the audience with the feeling of reality. We see in them nothing but old classical references. They are more of the fairy class of pieces, suitable only for the Christmas holidays, and are not presentable as solid dramatic performances. This is some what the case with Shakspeare's play of the "Tempest," which, if presented at all with due effect, requires all that a Charles Kean can do for it in fairy-like embellishments. In this

drama of magic, Shakspeare has not evolved a legitimate subject of supernatural beings entering into the action of human life. They smack too much of a defunct mythology. They are Homeric in their class and references, without, to us, the reality of personages, which made them to the Greeks much what the God of Israel and his angels were to the Hebrews—at once a part of their religion and their history. Iris, Ceres, Juno, nymphs, etc., are introduced, but they are too remote from the class of spirits, either good or evil, who will harmonize with the Hebrew or Christian theology, and they take too little hold of the superstitions of modern times. A fiction of supernatural beings brought into a modern play must be in harmony with the theology and superstitions of the times. It must be decidedly of Hebrew or Christian origin. Our poet evidently felt much of this when composing the "Tempest," which called forth from Prospero, as an apology for the creatures of his magic charms, one of Shakspeare's most splendid passages, in which we here get a deep vein of *our own* metaphysics:

These our actors,
As I foretold you, were all spirits, and
Are melted into air, into thin air:
And, like the baseless fabric of this vision,
The cloud-capped towers, the great globe itself,
Yea, all which it inherits, shall dissolve,
And, like this unsubstantial pageant faded,
Leave not a rack behind. We are such stuff
As dreams are made of, and our little life
Is rounded with a sleep.

But in the play of *Macbeth*, though the witches also melt into thin air, yet we have *substance* in effects. Between its supernatural beings and action and our own spiritual essence and drama of life there is both a metaphysical and common harmony. The audience has almost as intense a relation with the superhuman of the play as *Macbeth* himself. In it we have the souls of evil incarnating themselves in the drama of human affairs, and the duplex subject held between the beings of two worlds move together in the unity of a common action. They are not far removed from our own race, but seem like the spirits of evil beings who once were mortals, now continuing their wicked parts in the other world, manifesting themselves through the mediums of this. They are still taking part with us on earth; and there is a fiendish attachment in them toward mortal existence and acts, as though the drama of this life was also theirs in its relations and issues. They are neither the offspring of heaven nor hell, but as the incorporeal evil powers of the earth. The weird sisters are typed more from the Witch of Endor than from the heathen deities, and they are made more modern in their character and tone. Indeed, this famous Witch of Israel, who was potent enough to call up the spirit of Samuel, might very consistently, in the supernatural fiction of *Macbeth*, be given a leading character among the weird sisters. They also remind us of the evil spirits who of old are said to have possessed people, and who, up to this day, are believed to have often insinuated themselves into human tabernacles,

and more frequently, in fact generally, to have influenced human action. These seemed to have such a predisposition for the tabernacles of flesh, that, when they were cast out of men, they implored Jesus to let them enter into the herd of swine, which, doubtless, was in our poet's mind, for he makes one of the sisters answer the other that she had been

Killing swine.

Moreover, in the present day—in this age of Spiritualism—when millions upon millions of people firmly believe that departed spirits take part still in our affairs, and manifest themselves through various ways and many mediums, Shakspeare's dramatic fiction, bringing into the play of *Macbeth* a class of spirits of the type of the Witch of Endor, is very effective and matter-of-fact-like.

It is just in this taking hold of the religious faith and superstitions of the people that makes the supernatural part of *Macbeth* so effective upon the stage; for, in all ages, the belief has obtained that the evil powers do work up the direful events among mortals, and that the agencies of darkness have the mission to tempt souls to their ruin. In thus giving his supernatural beings a semi-human character, and making them so intensely a part, though the evil part, of the spiritual agencies of our own world—in making them so tangibly related to our witches of Endor, and surrounding them with so much reference in our theology and superstition, our great poet has been most happy. Mankind ever has been, and ever will be, deeply interested in the real or fancied visitation of beings spiritual, whose existence is prophetic of our hereafter life, and whose continuation in the drama of mortals foreshadows our own continuation. Nor does the evil quality of the superhuman lessen the intensity of the interest, for wicked and direful plays are ever performed in real life, and it is a certain explanation, aye even satisfaction, to believe them to be inspired and worked-up by evil spirits, who are taking part with us and managing the issues against human good. The Arch Tempter ever has been, and ever will be, a potent center of interest and terror, not because he was once as a god in light, and now "archangel fallen," but because he was cast down into the very heart of human affairs, and is the great Tempter with his agents leading mankind to their perdition. As long as this state remains, he will share the dominion of the world with God, and be even a personage of more fascinating interest, for the dark and terrible in life is always the most bewitching. In Milton, Satan is the hero, and his wing is broader to overshadow us, because it has night as its fringing. So is it in the great drama of practical life. It was not Milton's design to make Satan his hero; but splendid genius finds its greatest triumphs on the dark sides of Nature. Thus with Shakspeare, and in showing us, with all the strength of his matchless genius, a soul, big in its twinship of good and evil, drawn by this fascination native in us, intensified by the potency of fiends, into the

whirlpool of a drama worked up around him by infernal powers, he enters deeply into our human sympathies. In much we are all *Macbeths*, and like him we have not only to fight against ourselves, but the fiends also, and upon their own ground. The sun-tipt Michael himself can not hold the field on earth; though he did in heaven, against the Power of Darkness. Jude tells us that when these two great archangels were contending over the body of Moses, Michael was in *himself* worsted, and he dared not bring a railing accusation against his sable antagonist, but resigned the field of strife with "the Lord rebuke thee, Satan." How would it have stood had it been *Macbeth*, instead of Moses, that Michael and Satan were contending for? There is suggestiveness here that brings the interest directly home to ourselves; and hence Shakspeare in his *Macbeth* seizes strongly hold of our theological faith and our superstitious fears. As we are not chiefly interested in "Archangel Fallen" because he was once as a god in light, neither are we in Shakspeare's superhuman beings because they melt into thin air, but that, like the Arch Tempter, they are concerned with us and are working themselves out through our dramas. Herein was Shakspeare most happy in choosing a supernatural subject having so much reference to all mankind, and in creating beings like the souls of the weird dead, who when in life were potent enough to call up by their charms the spirit of a Samuel. *Macbeth* is Shakspeare's Saul, who, finding himself outside the circle of the Power of Good, seeks unto his Witches of Endor to know his destiny, and they call up spirits, not like the faithful Samuel, who will rebuke him, but those who will

Palter with us in a double sense,
That keep the word of promise to our ear,
And break it to our hope.

This supernatural fiction of the play of *Macbeth* is most consistent, and, therefore, most happy.

Had Shakspeare in this play brought on the stage the gods and goddesses of a defunct mythology, he would have failed, and more so because of the nature of the subject which he had chosen, and yet it is this subject which has given birth not only to a splendid drama, but also to the type of character of *Macbeth*. He might let these old classic deities take part in his "Tempest"—a play of magic—but dared not let them take part in the great drama of humanity. Christian nations could not accept Pluto as the Arch Fiend, nor allow any of the Greek deities to meddle in our affairs. They might do it among the ancient Greeks, but not among modern Christians. It is true that Shakspeare brings on Hecate as the mistress of all the witches, and she is the goddess of the moon; but it is the weird sisters who fill our mind from first to last, and Hecate is but one of them with a classical name. They have all the Hebrew or Christian type of witches. Moreover, the moon is religiously believed by many to have some direful influence over the earth, and to affect people as a ruling power

in their fits of insanity and madness. "Whom the gods would destroy they first make mad;" and Hecate, the most potent spirit of night, and her subordinate spirits of darkness, make Macbeth mad, and draw him down to perdition.

But this happy choice of subject and typing of his superhuman powers would not have realized such great and manifold effects, both dramatic and metaphysical, had not Shakspeare, in his play of Macbeth, given all its weird *tone* and tangibility in effects, at the same time so masterly weaving the action of supernatural beings in the unity of a literal drama. There is more dramatic science unfolded by Shakspeare in his play of Macbeth than in any other of his works. Metaphysical methods wonderfully abound in this play, and its dramatic machinery is most elaborate and well fitted. As a musical theorist testing the *Messiah* can see in it not only Handel's power of genius, but also his profound knowledge of counterpoint, so the critic can see in Macbeth that Shakspeare has put there all the might of his genius and all his dramatic science and skill. Here is the *master* as well as the matchless mind. All the effects which Shakspeare has put in this play he has done with design, and his methods are traceable. Let us analyze some of its supernatural portions, which is the most difficult part of his subject in treatment, and upon the effects of which all the rest hung, and we shall at once see the great dramatic *master* evolving his science, as well as the capacity of his genius. We have the prophecy of both at the very opening.

ACT FIRST.

SCENE 1.—An Open Place. Thunder and Lightning.
Enter three Witches.

1 Witch. When shall we three meet again—
In thunder, lightning, or in rain?

2 Witch. When the hurlyburly's done,
When the battle's lost and won.

3 Witch. That will be ere set of sun.

1 Witch. Where the place?

2 Witch. Upon the heath;

3 Witch. There to meet with Macbeth.

1 Witch. I come, Graymalkin!

All. Paddock calls: Anon.

Fair is foul, and foul is fair
Hover through the fog and filthy air.

[Witches vanish]

Here is *preparation*, and then the quality and tone of that preparation! The scene is brief and abrupt, but it is a great prophecy of the drama and issues to come. Take it away and the play will not be perfect in dramatic art. And yet the action has not begun; it is the overture to the supernatural, and at once gives the subject into the hands of those designed to hold it and to work up the action. Had they come on in the second scene instead of the first, the *method* would not have been perfect nor the *preparation* there, neither in dramatic nor metaphysical effects. Again, that the weird sisters should meet in thunder and lightning, any writer of plays might conceive, but that brief scene has all the quality of Shakspeare's dramatic genius. There are the unique *forms* and weird tone in it, and in its very brevity there is *quantity*. Had the scene

been ten times as long, but destitute of those forms and tone, it would not have been as much, either in quality or quantity for dramatic development; and even with both, it would have been less artistic, for the play must *grow* upon us—the greater must come hereafter. A less masterly dramatist, even though a great poet, would most likely have produced something more splendid and elaborately infernal, and then he would have failed in an *acting* play. It is more than probable that this would have been the case with Milton. Out of that bit of supernatural subject the rest has been developed. The critic analyzing the whole will find in it the same quality and tone. Development always proves the master's science.

The second scene is held between the humans, in which the wounded soldier tells of the victory of Macbeth. Here we see more, unfolded of the method of treatment, and that Shakspeare is, very properly, giving the management into the hands of his superhuman powers; for that battle and its issue was worked up by them; so was the defeat of Norway and the rebel Thane of Cawdor, and also the arrival of this news, directly upon that of the victory, that from Duncan might come the command—

Go, pronounce his death,
And with his former title greet Macbeth.

And not only had they in their programme of performance the issue of that battle, which was to be "lost and won" "ere set of sun," with the defeat of Norway and the uprooting of the Thane of Cawdor to plant Macbeth, but they have also Duncan's *own* seat for him, and much more premanaged in their programme. Hence they must have the opening scene to *foreshadow* the action, and prepare the movements; and they time and shape the second scene, for they are immediately going to give in the next a dramatic surprise. We see them in the play throughout, even when they do not appear on the stage.

Scene third, the witches hold on the heath, according to appointment, to meet Macbeth. And here we have another rich illustration of Shakspeare's nice treatment of his most difficult subject. He first gives the weird tone to the scene, before he brings about the meeting, and yet the witches' dialogue has but very little reference to the action of the play; it is to stamp their *type*, and give the supernatural quality. See the character and unique forms of it:

A Heath. Thunder. Enter three Witches.

1 Witch. Where hast thou been, sister?

2 Witch. Killing swine.

3 Witch. Sister, where thou?

1 Witch. A sailor's wife had chestnuts in her lap,
And mounch'd, and mounch'd, and mounch'd.
"Give me," quoth I:

"Aroint thee, witch!" the rump-fed ronyon cries.

Her husband's to Aleppo gone, master o' the Tiger:

But in a sieve I'll thither sail,
And, like a rat without a tail,
I'll do, I'll do, and I'll do.

2 Witch. I'll give thee a wind.

1 Witch. Thou art kind.

3 Witch. And I another.

1 Witch. And I myself have all the other.

* * * * *
Look what I have.

2 Witch. Show me, show me.

1 Witch. Here I have a pilot's thumb,
Wreck'd as homeward he did come.

3 Witch. A drum, a drum;

Macbeth doth come.

All. The weird sisters, hand in hand,
Posters of the sea and land,
Thus do go about, about;
Thrice to thine, and thrice to mine,
And thrice again, to make up nine:
Peace!—the charm's wound up.

That bit of composition shows more of dramatic genius and art than would fifty great soliloquies. This will surprise many who will see not much in it, and that of a very common quality. But there is more painting in two touches—seeming daubs—given by the brush of a great master, than in many a large picture which would delight the eye of the crowd, but which would not have on its yards of canvas *enough* even to provoke the contempt of an artist, much less draw out his admiration, and yet, perchance, he would give his left hand to purchase the power for his right to give those two touches on the master painter's canvas. What a witchy picture of *type* of character there is in the two daubs the sisters give:

1 Witch. Look what I have.

2 Witch. Show me, show me.

It takes us in its *performance* with its eagerness and wicked simplicity. It is like a group of innocent girls running together, the leader with the burden of interest, "Look what I have!" to be followed with the eager exclamation of desire from every tongue, "Show me, show me!" But then there is in this simplicity and eagerness such a volume of fiendish subject, that its very suggestiveness of something related to a group of innocent maidens is a master touch of weird painting; two more daubs of the same character immediately (*animate in the action*)—"Here I have a pilot's thumb, wreck'd as homeward he did come," and our minds are filled at once with a thousand wicked dramas of the fiends, while the quick breaking off, by the 3d Witch—"A drum, a drum; Macbeth doth come," hurries on, with weird music in the rhythm, the soul of the drama of Macbeth, even before he has made his *entrées* in the action of the play. The physical picture of direful wrecks of home-bound mariners, and the metaphysical picture of the wreck of the soul of Macbeth, home-bound from victorious wars, leap together into the scene to strike our mental vision.

All through the verse of the witches' parts there can be detected a weird harmony, not only in the rhythm, but in the very *tone* of its metaphysics. This doubtless suggested to Locke the design of composing to those parts his celebrated music. He saw that he could imitate the peculiar metaphysical chords and forms which Shakspeare had given to his supernatural theme, and that he could embody in harmony the weird subtlety of its qualities, and, by making palpable to the ear the strain

of subject, help to bring out in the performance its rare effects. Had the magician Beethoven elaborately worked upon every bit of Shakspeare's supernatural subject, by way of testing what quantity and quality was in it, he might have given a still grander illustration, in a more extensive form, and composed a great weird musical drama, strictly imitating Shakspeare's subject and treatment. All that can be done to make palpable in the performance the demoniac theme, of the play of the witches, whether of musical accompaniment, scenic effects, or dramatic rendering, can not more than illustrate Shakspeare. Our matchless dramatist has not only given so much metaphysical theme to be embodied in harmonic effects, but he has incarnated his supernatural influences in every conceivable form of the drama, as though he was aiming everywhere to make his weird chords tell. Sometimes it is his peculiar preparation and sudden resolution of the action and plot that catches us with a charmed power, and throws us into the demoniac interest of the play, and Macbeth it draws down as though he was in a whirlpool of infernal influences. See the example of this in Macbeth's first meeting with the witches. We have noticed their typing of themselves, the preparation, and the bringing on of Macbeth. Banquo describes them, but it is to Macbeth's "Speak if you can:—What are you?" that they answer:

1 *Witch*. All hail, Macbeth! hail to thee, thane of Glamis!

This he knows, but it is to intensify a surprise burdened with wicked design in their programme.

2 *Witch*. All hail, Macbeth! hail to thee, thane of Cawdor!

He is in the whirlpool now, and the climax drowns him in his perdition.

3 *Witch*. All hail, Macbeth! that shall be king hereafter.

Their "Hail" to Banquo is but to sink Macbeth deeper, and there is much development to come of it in the play thereafter. The result reached, they vanish. No tarrying now, for the subject is working in.

Macbeth. Your children shall be kings.

Banquo. You shall be king.

Macbeth. And thane of Cawdor, too; went it not so?

All is timed in the management of the fiends, and now their evil drama comes on with a rush.

(*Rosse and Angus enter.*)

Rosse. And, for an earnest of a greater honor,

He bade me, from him, call thee thane of Cawdor!

In which addition, hail, most worthy thane!

The rush of the fulfillment is overwhelming, But mark, this is not like the mere stage-manager's denouements. It is strongly dramatic in metaphysical effects, which only genius can produce. See how in that quality it immediately fills Macbeth's mind.

Glamis, and thane of Cawdor.
The greatest is behind.

Two truths are told,
As happy prologues to the swelling act
Of the imperial theme.

This supernatural soliciting
Can not be ill; can not be good. If ill,
Why hath it given me earnest of success,
Commencing in a truth? I am thane of Cawdor:
If good, why do I yield to that suggestion
Whose horrid image doth unfix my hair,
And make my seated heart knock at my ribs,
Against the use of nature? Present fears
Are less than horrible imaginings:
My thought, whose murder yet is but fantastical,
Shakes so my single state of man, that function
Is smothered in surmise; and nothing is
But what is not.

The play moves on, and all its direful issues grow into a great drama; but though the supernatural powers have been "behind the scenes," moving the whole along, yet they do not appear in the play again until the V. scene of the Third Act, when Hecate, their mistress, comes into the action rebuking them.

The Heath. Thunder. Enter Hecate, meeting the Three Witches.

1 *Witch*. Why, how now, Hecate? you look angrily.
Hecate. Have I not reason, beldames as you are,
Saucy and overbold? How did you dare
To trade and traffic with Macbeth,
In riddles and affairs of death;
And I, the mistress of your charms,
The close contriver of all harms,
Was never call'd to bear my part,
Or show the glory of our art?

[The "art" of the Evil Powers to lead mankind to their perdition; another proof that this was Shakspeare's principal subject.]

But make amends now: Get you gone,
And at the pit of Acheron
Meet me! the morning; thither he
Will come to know his destiny.
Your vessels, and your spells provide,
Your charms and everything beside.

There is so much of the semi-human in this—so much of our ancient and modern Witch of Endor class and matter. They are as wicked spirits going to practice professionally, as when in mortality. But, as before dwelt upon, it is these human references, and their seeming kindred to the spirits of human beings, that catches such a deep hold of our interest, and gives to the whole the character of a legitimate play, and not that of a mere dramatic phantasmagoria. But there is a dignity directly added to the *caste* of these supernatural beings, by the rank of Hecate as mistress, or Spirit of the Moon.

I'm for the air; this night I'll spend
Unto a dismal and a fatal end.
Great business must be wrought ere noon.
Upon the corner of the moon
There hangs a vaporous drop profound;
I'll catch it ere it come to ground;
And that, distilled by magic slights,
Shall raise such artificial sprites,
As, by the strength of their illusion,
Shall draw him on to his confusion.

Here we have reference to the supposed evil influences of the moon, and the fiction that brings Hecate into the play is thus nicely sustained, by this shaping toward modern superstition and popular belief.

The principal witch scene is at the opening of the Fourth Act. Every one who has seen Macbeth performed will remember the scene at the "Pit of Acheron" around the magic

cauldron. The performance is not more striking than the text. In fact, the critic would revel more in the text. Read it again to test its witchy tone; mark its dramatic weird subject and coloring, and then fancy what "hell-broth" was ever mixed with such acceptable ingredients—what witches could offer such a drink offering to the infernal deities, as did Shakspeare's witches?

A Dark Cave. In the middle a Cauldron Boiling. Thunder. Enter the Three Witches.

1 *Witch*. Thrice the brinded cat hath mew'd—
2 *Witch*. Thrice; and once the hedge-pig whin'd.
3 *Witch*. Harper cries: "'Tis time, 'tis time."

1 *Witch*. Round about the cauldron go;
In the poison'd entrails throw.
Toad, that under coldest stone,
Days and nights hast thirty-one,
Swelter'd venom, sleeping got,
Boil thou first! 't the charmed pot!

All. Double, double, toil and trouble;
Fire burn, and cauldron bubble.

2 *Witch*. Fillet of a fenny snake,
In the cauldron boil and bake;
Eye of newt, and toe of frog,
Wool of bat, and tongue of dog,
Adder's fork, and blind-worm's sting,
Lizard's leg, and owl's wing,
For a charm of powerful trouble,
Like a hell-broth boil and bubble.

All. Double, double, toil and trouble;
Fire burn, and cauldron bubble.

3 *Witch*. Scale of dragon, tooth of wolf;
Witches' mummy: maw and gulf
Of the ravin'd salt-sea shark;
Root of hemlock, digg'd i' the dark;
Liver of blaspheming Jew;
Gall of goat, and slips of yew,
Silver'd in the moon's eclipse;
Nose of Turk, and Tartar's lips;
Finger of birth-strangled babe,
Ditch-deliver'd by a drab,
Make the gruel thick and slab;
Add unto a tiger's chandron,
For the ingredients of our cauldron.

All. Double, double, toil and trouble;
Fire burn, and cauldron bubble.

2 *Witch*. Cool it with a baboon's blood,
Then the charm is firm and good.

Enter Hecate and the other Three Witches.

Hecate. O, well done! I commend your pains,
And every one shall share i' the gains;
And now about the cauldron sing,
Like elves and fairies in a ring,
Enchanting all that you put in.

Then their characteristic revelry song.

Black spirits and white,
Red spirits and gray;
Mingle, mingle, mingle,
You that mingle may.

2 *Witch*. By the pricking of my thumbs,
Something wicked this way comes:
Open, locks, whoever knocks.

The charms are complete. Macbeth is drawn on to his destiny, which he comes to them to have revealed, and he is further entrapped into the meshes of the drama of the Evil Powers among mortals. Having, by his deeds, sold to the fiends his "eternal jewel," and run his chosen course, he closes the tragic action of his life with the burden of the moral of the play:

And be those juggling fiends no more believed,
That palter with us in a double sense,
That keep the word of promise to our ear
And break it to our hope.

The play of Macbeth is a great sermon

HON. E. C. SCRANTON.

PHRENOLOGICAL CHARACTER.*

THE general build and make-up of this organization indicated, first, a good framework and an excellent constitution. The chest and all the vital organs were well developed; large lungs, with ample breathing power; a large heart, with good circulation; a capacious stomach, with excellent digestion. We infer that he was out of a hardy and long-lived stock; that his progenitors must have attained very old age, possibly near a hundred years; no indication of disease or premature decay was apparent in his whole organization. In fine, all things favored the inference that he, too (accidents excepted), might live healthfully and long. So much for the body. But what of the brain? This: it was one of the largest class, and well supported by a healthy physiology, and amply developed in nearly every part. It was broad between the ears, giving executiveness; high in the crown, giving decision, perseverance, and steadfastness; high in the top, indicating integrity, devotion, faith, hope, and kindness; and broad through the temples, indicating mechanical ingenuity, economy, constructiveness, and love for the beautiful in art.

He was large in the intellect, the perceptive faculties predominating, rendering him at once a practical, matter-of-fact, and a common-sense man. The reflective faculties, including Causality and Comparison, were also large, enabling him to comprehend and apply principles in a definite manner. He could appreciate the value of property, realizing its worth and the best way to use it. He understood mechanism; was ingenious in planning, contriving, and devising ways and means to accomplish difficult ends. Was methodical and systematic, accurate in his estimates as to values; could measure well by the eye in judging of forms, sizes, proportions, and of distance; had an excellent memory of faces, places, thoughts, experiences, and all things which he saw. He was prompt, off-hand, and could decide a question as satisfactorily in a moment as in a week. Was the opposite of an irresolute, timid, procrastinating spirit, and disposed to strike while the iron was hot.

His Cautiousness was but moderately developed, and if he failed it was likely to be through indiscretion, or venturing where a more cautious or prudent man would hesitate to go. He may have made investments or engaged in speculations beyond his control; but aside from this we see no reason why he was not eminently successful in almost any

PORTRAIT OF HON. ERASTUS C. SCRANTON.

department of business, and well adapted to take a leading position even among leading men. As a banker, a broker, a merchant, or a manufacturer, he would have excelled. He was at once a dignified, intelligent, honest, frank, straightforward, manly man.

BIOGRAPHY.

Hon. Erastus C. Scranton, late President of the New York and New Haven Railway—says a cotemporary, the *Journal and Courier* of New Haven—was born in Madison, Conn., about the year 1808. In early life, he, like most of the enterprising young men of that vicinity, engaged in the coasting trade, gradually extending his business until he became largely interested in commercial adventures, from Connecticut to Florida. He was extensively engaged in commercial and banking business in Georgia and Florida, and accumulated a handsome fortune, with which he returned to his Madison home. His active and energetic nature still demanded occupation, and from his reputation for financial sagacity and resoluteness of purpose, he was sought out by his Connecticut friends to take the laboring oar in many of their public improvements and enterprises. He was an active friend of the New Haven and New London Railway. With his brothers and other capitalists he founded the town of Scranton, Pa., and developed that system of mines and railways which has given wealth to a considerable portion of the State of Pennsyl-

vania. On the organization of the Elm City Bank (now Second National Bank), of New Haven, he was elected its president, and held that office till his death, managing its large capital of one million of dollars with great sagacity and success. In 1858 he was offered the nomination for Governor by an American party, but he declined the honor. In 1860 he was elected to the Senate from the Sixth District, and in several Legislatures he represented the town of Madison in the House of Representatives. Though New Haven was his winter and business residence for several years, he did not make it his permanent home till 1864, and immediately afterward he was elected Mayor of the city by the Republicans. He was a candidate for reelection last year, and, though defeated, his popularity was evinced by the fact that he ran five hundred votes ahead of the Republican candidate for Governor. Last year he was elected President of the New York and New Haven Railway, and under his untiring and sagacious oversight great improvements and reforms were being developed in its management. His brother, S. H. Scranton, Esq., of Madison, was at the same time elected President of the Shore Line Railway, and by the energetic and harmonious action of the two, the railway along the Sound was being managed with greater ability and success than ever before. This interest will severely feel his loss. Probably no man in the State surpassed Mr. Scranton in business capacity. It seemed to be a pleasure to him to do the work of half a dozen men. He was always cheerfully kind and inspiring, and work in his hands seemed only a healthy recreation. His social life was, like his business life, free, generous, frank, and cordial, gathering friends and garnering friendship, till the whole city knew and loved him.

In giving an account of the sudden death of Mr. Scranton, which occurred on Dec. 29, 1866, the same paper says: "As President of the New York and New Haven Railway Company, Mr. Scranton was obliged to make frequent trips over the road, and at six o'clock and thirty minutes A.M., on the 29th inst., he left this city on one of those trips, accompanied by his daughter, an only child, a young lady of about twenty years. At Norwalk depot he got out of the cars and crossed the street north of the depot, to transact some business at a store. The train started before he got back, and he ran around the west end of the depot to catch the cars. He seized hold of the rails of a platform, and at that moment his foot slipped and he fell partially under the car. He seemed to the spectators to roll over two or three times, apparently endeavoring to get away, but was, almost in an instant, caught under the wheels, and two cars passed over him, the wheels literally severing his body. To a person who ran to his aid he said, 'I am cut in two,' and almost immediately expired. So sad a termination of an honorable and useful life plunged the whole city into grief, and everywhere the event was discussed in deep sorrow for the public loss, and heartfelt sympathy for the bereaved family and friends of the deceased."

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

ALTOGETHER WRONG!

BY MRS. GEORGE WASHINGTON WYLLYS.

THE other day we bethought ourself—a very unusual and unprecedented proceeding, no doubt—to ask a question. Being a woman, we are curious; being naturally of an enterprising disposition, our curiosity is pretty certain, sooner or later, to find an outlet.

We had pondered the subject within ourself for some time, and finally concluded to carry it straight to headquarters, and have the matter decided at once, by the very best authority, a man. (Men are supposed, you know, Public, to be able to answer all the questions women can conjure up—a popular fallacy, as any one can speedily find out for him or herself, by asking *enough* questions!) However, we watched our opportunity, and cleverly propounded our subject to a gentleman who supposes himself, and probably is, quite up to the average of Adamkind.

"Do you know we have been listening to your conversation for the last ten minutes?"

"Have you?" And he looked as if we ought to be very much edified by the sublime privilege. None the less we carried our destroying sword into his camp, however!

"Yes, and we want to know why you always talk such nonsense to ladies?"

"Nonsense!" with an injured air.

"Yes—what was it but nonsense?"

Our gentleman stroked his whiskers retrospectively—he hadn't much to say for himself. Looking back upon his conversation, it *didn't* sound much like the Proverbs of Solomon!

"Why, I am sure I talked about the weather—and the fashions—and—and—lots of things! What else could I talk about, I'd like to know?"

"What do you talk about in the society of gentlemen?"

"Oh, that's a different thing. We talk of politics—news—current topics of the day, I suppose."

"But why don't you talk about the same things to women?"

"Because there isn't one woman in twenty who reads the newspapers, or keeps up with the general literature of the day—that's why!"

We were silenced, *pro tem.*, but not convinced, so we carried the question still farther—to the ladies themselves.

"It is true," confessed one. "I never pretend to read newspapers; as for the books of the day, their titles are all I know anything about!"

"But why is this?"

"I never get time to read, now-a-days!"

"Never get time!" we pondered. And what becomes of all the time? Have the days waxed shorter than when you were a bright, intelligent girl? or do the hours contain fewer

minutes? Yes, we know the answer you would make; you are married now, with a husband and little ones to claim your attention, and a house to overlook; but surely husband and children and little ones need not eat up all your time! When once a woman gets so that she has no time to read, she might as well go a little farther, and have no time to live! When the Brain stops growing and the Mind has its gates shut, life becomes a treadmill sort of affair at the best. Time should never be allowed to govern us; we should govern time.

Just look at the house of my friend who "never gets time to read!" It is not only neat—it is distressingly clean. You can not walk in without feeling painfully conscious of the three grains of mud that may have adhered to your soles; you sit down, aware that your hostess is nervously hoping the chair covers won't get dragged down. Dust is a thing persecuted and driven forth—all the furniture stands by rule and plummet—the piano is opened merely for show, and the books on the center-table are put there only to be looked at! "All my house is just like my parlor!" says our friend triumphantly, and we have no doubt, more's the pity, that it is so! All the rooms are scrubbed and swept and dusted and turned downside up and upside down once in so often, no matter whether they are used or not! If there is an atom of dust in the southwest corner of the scuttle-stairs, our friend is miserable; if a spider weaves its gossamer thread across the cornices of the ceiling, step-ladders, servants, and long-handled brooms are ordered to the rescue! It is her ambition to be a model housekeeper, and she is determined to reach that ambition if she dies at her post!

Look at her little children—they are like so many wax dolls. "I worked a week on that braided apron," says the mother, exultantly turning Wax Doll Number One around, the better to display her elaborate finery. Think of it, ye who count the days by the good works ye accomplish therein—who call the hours your Master's, not your own! A whole week of God's long bright days wasted on a child's useless adornments! And this is the woman who is subsiding into a mere animated drudge, because, forsooth, she has "no time to read!"

"I have finished Helen's skirts," goes on our devoted slave—what else can we call her? "Six of them, and I put nineteen tucks on each, and scoloped them all round the edge. I had to sit up nights to do it, though! And I don't know when I ever shall finish the baby's cashmere robe!"

Now we like to see pretty things, dainty embroidery and trim stitching, as well as any daughter of Eve in the land. But we don't like to see these crushing and elbowing Soul and Mind out of all existence. There is—or ought to be—a time for all things, fancy needlework included. But as for making ourselves slaves to the miserable frippery of fleeting fashion, that we don't believe in, no, and never shall!

We know there is a class of conservatives,

mostly in black silk dresses, false "fronts," and spectacles, who disseminate much mischief by perpetually holding up past ages to us. "Women don't begin to work as they did when I was a girl!" is their cry. Well, why should they, when you come to think of the matter? Neither do men. Machinery has stepped in to our aid. Invention is at work all the time to lift the heavy burden from overworked shoulders and wearied hands. We should be more than foolish, we should be wicked, if we persisted now in working as they did in the days when our grandmothers were girls.

"No time to read!" *Make* time! Put a few tucks less in the elaborate garments, a few stitches less in the long, long seams that continue to devour your leisure hours. Buy a sewing-machine, even if you go in calico a year to pay for it. Your family will be none the worse if you mix less cake and beat fewer eggs and conserve less sugared fruit; in fact, they will be rather the gainers, as far as dyspepsia and headache and annual doctor's bills are concerned. And if your husband is anything on earth but a spoiled epicure, he would far rather have an intelligent companion, who can converse with him on equal grounds, than a table full of sweets and indigestibles. As for his clothes, bless the man! do you suppose he knows or cares whether the stitches in his shirt-sleeves are microscopically small, or that his stockings are darned in the old laborious way, "when you can't tell them from woven work?" Let the work be done neatly and strongly, and tell us, if you can, most *exigent* [exact-ing] of housekeepers, what else is necessary?

Men say of the woman with whom they are brought in contact, "She is an intelligent person; she has read extensively; she is posted in what is going on in the world!" They never say, "She is a beautiful seamstress; she cleans house eight times a year," or "she gets breakfast over by candle-light!" You may immolate yourself soul and body on the altar of the housekeeping Moloch, and ten to one they won't appreciate the sacrifice! They do not see the necessity of it—neither do we.

We ought to be past the age when women make mere drudges of themselves out of a mistaken idea of duty, but it seems we are not. It is so easy to neglect book and pen and daily paper, because this thing and that thing and the other thing "*must* be done." *Must* is a marvelously elastic word, sometimes! Don't give way to it when the interests of your mental and intellectual nature are concerned! Once more we say, *make* time! The hour you devote to the living, moving history of to-day—to the books that fill your memory with pleasant things and new ideas—will never be missed when sunset comes.

Set open the chambers of your mind—sweep them, brush away the dust and cobwebs of antiquity, let in the free fresh air of the nineteenth century, and invite guests from every land and clime! Don't fall into the miserable refrain of "no time!" We can respect a machine as a machine—we owe deference to the

honest, hard-working drudge as a drudge—but we have neither respect, deference, nor patience with the educated woman of the year 1867 who finds no time to read the newspapers.

PLAIN WORDS WITH THE BIG BOYS, ABOUT PRYING AND SNEAKING.

BY REV. ALFRED TAYLOR.

THERE used to be an old gentleman in business here, who, though wealthy, and at the head of a well-established house, had an ugly habit which caused him to be generally despised. Like all the bad habits that ever fasten themselves on people, it had evidently attached itself to him when he was a boy, and had grown up with him. In going into anybody's counting-house on business, this old gentleman would cast his eyes about him to see what information he could pick up. Instead of standing at the counter, he would edge up to the desk and look over the top of it to see if there were any letters lying open which he could read. If he came to receive a check, he would furtively glance over the margin of your check-book while you drew the check for him, so that he might see the names and amounts of other checks which you had entered there. His particular delight seemed to be to pry over an open account book. By long practice he had accustomed himself to read upside-down as well as in the ordinary way, so that if you were careless enough to leave your books or papers exposed on your desk, they were sure to be the victims of his investigating disposition, while he would stand quietly waiting and as quietly gratifying his curiosity at your expense.

The amount of information which this old fellow picked up in this way in the course of a long business career must have been stupendous. A sly glance may often have given him information which he could have acquired in no other way. A few moments spent in eaves-dropping, where other men were talking on what did not concern him, may have afforded valuable suggestion for the day's operations. A peep at a half-opened telegram may have furnished hints which served as a basis for a profitable purchase of stocks or merchandise. But with all this old person's industrious searchings for knowledge, with all his wealth, and his success in business, and in finding out all about other people's business, the name of "*Old Sneak*" so firmly cemented itself to him that it became a part of him, in the estimation of all who knew him. Men who dealt with him would often close books which were lying open on their desks, and cover letters and papers which were exposed when he entered their doors.

There are few boys who would like to grow up with such a character for prying and sneaking as this old man had. But there are many boys and men who, while they are not habitual meddlers in other men's affairs, do not hesitate surreptitiously to acquire information which is none of their business.

Here is a lad who has been to the post-office for letters. He brings half a dozen or a dozen to his employer. What is contained in those letters is none of the boy's business; nor does it concern him who wrote them, what are the places and dates post-marked on them, whether they contain inclosures or not, or whether the handwriting is that of regular correspondents or of somebody who has not been heard from before. All those things are his employer's business, and not his; and the boy or man who will fumble over a letter intrusted to him, hold it up to the light to see if it contains an inclosure, or to try to discover the style of the handwriting, or who will study the post-mark carefully to obtain from it information which he would be afraid to ask for openly, is but a step removed in perfidious criminality from the sly rascal who breaks the seal of the letter, or the bolder villain who actually robs the mail.

A lad in a lawyer's office in this city was in the habit of opening letters which were intrusted to him to deliver, whenever he found the gummed envelope sufficiently moist (from its freshness) to enable him to do so. The lawyer had reason to suspect him, and one day set a trap for him. He gave him a letter, with instructions to take it to a neighboring lawyer, and wait for an answer. The lad started off with the letter, but presently came back, looking very blank indeed, and confusedly stammering out something about, "Did you want me to deliver *that* letter?" The question and the confusion revealed the fact that the youthful sinner, having found the gum so moist that he could safely open the envelope, had opened it, of course with the intention of sealing it again, and had found, to his dismay, that the letter read, "*Please give the bearer a good thrashing!*" Had he retained his self-possession on making this discovery, he might have left the letter as directed, and hurried away without the "answer;" but his sin found him out, and his confusion overcame him, and, guilty and abashed, he returned to his employer and received a severe reprimand and a dismissal. It is more than probable that his prying habits never gained him any information worth having. It is certain that they lost him a very good situation.

A prying sneak is no gentleman. He will sacrifice the interests of his best friend in order to gratify his desire for procuring knowledge of that which is none of his business; and he who will stoop to this will stoop to any mean trick, no matter how low or contemptible. He may acquire an expertness in such things which will make him a good burglar or pick-pocket, or even a detective policeman. He may reach such a degree of skillfulness as to be sent abroad to listen at the key-holes of the door of foreign ministers, to catch and report so much as he can steal of their private conversation. But, as he stoops to these things, he puts himself in position to receive from society the moral kicks which his unprincipled conduct deserves.

Boys! remember that nobody respects one

who is continually spying into other people's affairs—who is sneaking and prying and nosing into what does not concern him. He is known as a mean fellow, and though he may be made use of by the unscrupulous and designing to further their purposes, and though he may in consequence boast himself of his ability in the way of picking up what does not belong to him, yet he is despised by the very people who would thus make use of him.

The world is full enough of information which can be honorably and fairly acquired, without sneaking into that which is the exclusive property of other people. Success in life is vastly more apt to follow a manly, open course, than the despicable course of the sneak. Hold up your heads like Christian gentlemen. Go honestly and straightforward to work at getting information, and manfully making use of it after you have obtained it, and you will the better enjoy your success, and be the more respected as you enjoy it.

ENCOURAGEMENT.

Work while you can—
Time's flitting by;
Gather the moments,
Quickly they fly.

Cheerily labor;
Workmen are few,
Large is the harvest,
There's plenty to do.

The enemy soweth
Tares in the field;
Thistles and thorns
Doth the wilderness yield.

Cast with a bounteous
And plentiful hand,
Seeds that shall cover
The length of the land.

Work while you can,
And work while you may;
Soon the night cometh,
Soon passeth the day.

—Moravian.

WITHOUT GOD IN THE WORLD.—There is no other conceivable privation to be compared with an ignorance of our Creator. If a man be blind, he but loses the outward light. If a man be deaf, he but loses music and the sweet converse of friends. If a man be bereaved of companions, and the nearest and dearest kindred are plucked from his bosom,—if he be persecuted and imprisoned, and torn limb from limb, by the hatred and malice of men,—he is only beneath a temporary cloud which will pass away like the vapor of the morning. But if he is "without God," he is a wanderer and a solitary in the universe, with no haven or hope before him when beaten upon by the storms of fate; with no home or sanctuary to flee to, though all the spirits of darkness should have made him their victim.—*Horace Mann.*

THE GOSPEL AMONG THE ANIMALS.

A Sermon Preached in the Church of the Messiah, January 18, 1867,
BY SAMUEL OSGOOD, D.D.

INTRODUCTION.

MESSESS. FOWLER AND WELLS: In reply to your request, I send you my sermon on our true relation to the animal world, and am encouraged to believe that it may be of some use at the present time, when so much attention is given to the subject, and we are looking horses, sheep, and cattle in the face with new interest, alike for our health and profit and their welfare. The handsome volume on Physiognomy that you were kind enough to send me, bears somewhat on the same subject, and shows that there is something of the human face in animals, and that they have their claims to something of our countenance.

It is very clear to me that we are to recognize the unity of the plan of creation as never before, and study out reverently the connection of all elements, laws, and beings with each other. It is utterly vain and foolish to shut off nature from the spiritual world, and say that natural laws have nothing to do with our moral and spiritual life. Body and soul are very near to each other, and immortality itself is not the annihilation, but the glorification, of the body, by a process which every true soul begins on this earth. We need the animals to educate both body and soul, and our substance is built up by the tissues that they develop, and our muscles and spirits are trained and quickened by their discipline. We have found food and that great medical secret, vaccination, from the cow, and learned much of our manhood as well as our ease from the strength and speed of the horse.

We have much more to learn of God by the study of His creation, and I know no subject in the Scriptures more interesting than that of the manifestation of God in the animal world, and the future relations of the natural and spiritual kingdoms. The cherubim that were the insignia or cipher of God in the Hebrew temple presented the ox, the lion, the eagle, and man in combination, and thus taught the manifestation of God in the whole compass of creation.

Allow me to express great interest in your work as the popular advocates of the study of natural laws in America, and my wish that you may continue and enlarge your sphere, and do what you can to give fair play to body and mind among our people, and interpret nature as the creature and servant of God.

This sermon was suggested by a conversation with the President of the Society for the Protection of Animals; and the preacher will think himself favored if his words shall add any interest to that movement, or do anything to start similar associations in our other great cities, and turn the minds and laws of our people in mercy toward the dependent creatures who too often are treated with neglect, and even with cruelty, in return for their great service. S. O.

NEW YORK, March 28, 1867.

SERMON.

PSALM CXLVIII. 1, 10.—Praise ye the Lord,
Beasts, and all cattle;
Creeping things, and flying fowl.

MATT. II. 2.—Where is he that is born King of the Jews? For we have seen his star in the East, and are come to worship him.

ROMANS VIII. 19.—For the earnest expectation of the creature waiteth for the manifestation of the sons of God.

We say, in our age of large fellowship and universal ideas, that Christianity is the universal religion, and throws its light not only upon all men, but upon all nature, and looks to the consummation of all things under its merciful yet mighty sway. The New Testament does not use our language, and

bears no trace of the science of the nineteenth century, yet it expresses, in its own way, the convictions that we have so much at heart. It does not speak of the laws of nature, and the philosophy of nature, and the progress of arts and sciences, and the approaching integration of all races, interests, nationalities, and religions in one broad and godly humanity; but it suggests all that we have at heart by expressive symbols and devout yearnings. Thus all creation seems to gather around the cradle of Christ, and show forth the universality of his empire. The shepherds heard the angels sing his nativity, and came to do him honor. The Magi were led by a star to his feet, and brought in their homage the tribute of Eastern faith and the treasures of Eastern wealth; gold from the mines, frankincense and myrrh from the forest. The brute beasts were not forgotten, and although there is good reason to believe that his birth was not literally as usually described, among the oxen, and the manger was not an ox crib, but an outbuilding for servants, or a reserved apartment of the inn, yet the cattle were near his cradle, and they shared in the benign promise of his reign. The whole scene thus connected with the birth of Christ, and that especially which is associated with what is usually called the Epiphany, or the Manifestation to the Gentile Magi, has a very large and far-seeing significance, and furnishes favorite topics for the liberal thinkers and preachers of our time. St. Paul struck the key-note of all such generous aspirations when, in his deep experience and great heart, he felt the pulses of all mankind and all nature answering to his own, and said: "The earnest expectation of the creature waiteth for the manifestation of the sons of God."

Let us touch to-day this chord of faith and love, and try to illustrate the manifestation of God in Christ to all nature—especially to what we call the animal creation—and to rise to a new and blessed sense of the unity of all things in Christ. No realm of creation, indeed, is to be left out of the account; and the mineral and the plant come in with the animal for a share in the ministry of reconciliation. The gold of the Magi stands for all the products of the mines, and pays tribute in their name to the Gospel for all the merciful and exalted uses of the mineral world. Of what service gold itself has been and is in giving a fixed standard of value, a reliable currency for trade, charity, and piety! And how marvelous are the adaptations of its pure and imperishable and flexible substance to the various purposes of the arts of utility and beauty! How much of the Gospel has gone into gold, and represents the spirit of Christ in industry, healing, benevolence, and faith! Well may devotion delight to express itself in the cross of gold, for that bright creature of the earth has been lifted by the Gospel into its best honor, and been made the almoner of the bounty of Heaven—whether in gilding the letters upon the Bible, or illuminating the pages of the missal or prayer-book; whether in giving to surgery its incorruptible substance for restoring lost or injured organs, or supplying charity and devotion with their most effective bounty.

Who shall say what the mine has not done under the merciful hand of true civilization? It gives us the fuel that warms our homes, and the light that pours forth from its vast reservoirs to make our streets and houses bright at night as the day. How wonderfully the metals have been evangelized, and have learned to sing, in their way, the angel song of the nativity!—whether they tremble in the harp or organ with divine melody, point out the sailor his way on the sea, in the magnetic needle, or flash the message of good-will under the ocean beds from continent to continent. It is not an unworthy illustration of our subject, that one of our own families was relieved of painful anxiety since we last met here, by word from Paris, on the submarine wire, that the son and brother was recovering from alarming illness; and so that piece of metal was evangelized, and was God's own messenger of glad tidings.

And the world of plants! Who shall exhaust the story of their service under the blessed ministry of Christ? Well were frankincense and myrrh, precious products of aromatic trees, brought to his cradle, for his religion has educated the gentle and refined and merciful tastes that have given the flowers and shrubs and trees their true interpretation. How much of the Gospel do flowers speak now in fields and gardens, churches and homes—whether to express sympathy to the sick or afflicted, give joy to the festival, or lend poetry to love, whether to throw comfort over death, or express the rising of life and immortality in the Easter altar. Frankincense and myrrh we all give to Christ, when we read in the flowers and trees the interpretation of his truth and grace; and our affections rise to his Father and our Father in the devotion which is incense and the remembrance which is myrrh.

The old tradition is, that on Christmas night all the cattle bow down in awful homage to Christ, in gratitude for his great condescension in being with them in his birth and infancy. We need not urge such superstitions in order to establish our position of his ministry of mercy to the animal creation. Mrs. Browning touches the true note in her charming poem of "The Virgin Mary to the Child Jesus:"

"He sat among the stalls at Bethlehem:
The dumb kine from their fodder turned them,
Softening their horned faces
To almost human gazes,
Toward the Newly Born!"

That would be an interesting and novel book that would give adequately a history of the influence of the Christian religion upon the relation of man to the creatures below, especially to those nearest to his uses, such as the dog, the ox, the cow, the horse, the camel, the deer, the elephant. It would be made to appear that animals have shared in the evangelizing of man, and have caught themselves from him something of the gentleness of the Gospel.

I. First of all, it is very clear that the animal kingdom has found *protection* in Christ from the cruelty of barbaric passions, and that in his name a great work has been done, and is still doing, for the dumb creatures who can not plead their own cause. The record of it is not very full, because they that have received the mercy have not had power to tell their own story or write their own gratitude. What a record it would be, if all the poor creatures who have been saved from cruel usage by Christian hands could say what they feel, and all those mild eyes of sheep, oxen, dogs, and horses, that have looked love and gratitude to benefactors, could be translated into words or break forth into song!

The old Hebrew religion was merciful to beasts; forbade masters to muzzle the ox that treadeth out the corn; and gave a kind of majesty to animal life even when used for food, by offering it up first to God in solemn sacrifice instead of brutally destroying it in the slaughter-house. The Greeks were kind to animals, and the great court of the Areopagus at Athens sometimes condemned citizens for cruelty toward beasts. But Christianity is love itself, and took all creation under its mighty yet gentle empire. It did for the beasts what it did for men, and repeated the Blessed Mary's Magnificat in stables and fields, in parks and coliseums, as well as in camps and palaces:

"He hath shewed strength with His arm;
He hath scattered the proud in the imagination of their hearts;
He hath put down the mighty from their seats,
And exalted them of low degree."

How far the game of torturing tame and kindly animals by savage beasts and more savage men was carried, we can not fully tell; but we may be quite sure that the same cruel temper that cast men and women to the tigers and lions, did not spare the lamb and the deer, the cow and the ox, the

camel and the horse. When the Christian met the wild beasts in the arena, these were but manifestations—representatives of the lust, pride, and rage that ruled the heathen world;—and often, in dying for the faith under the wild beast's fangs, the martyr conquered the wild beast that lurked in the spectator's heart, and the bloody Coliseum sent many a convert to the Church in penitence and prayer. The cross that now stands in that arena speaks more eloquently of the power that has subdued that old empire of blood, and declared, in a new and mighty civilization, the sway of love, and repeated Christ's beatitude: "Blessed are the meek: for they shall inherit the earth."

The day of wild animals, as well as wild men, has gone; and we measure our power and prosperity now, in great part, by our judicious and kindly care of the more gentle and useful orders of creation. Wild beasts are for the menagerie, where it is most instructive to see them; but the mild creatures of the pasture and the stable are now the companions and ornament of the farmer and the farm, the helpers and hope of industry and wealth. They are the wealth and pride of nobles and princes, who no longer boast of their beasts of prey.

Of course there is a large element of calculation and thrift in our mercy to the dumb creatures under our influence, and our horses, sheep, and cattle are a large part of our private and national property. Recognize the utility of these creatures, and do not forget the true principle that should preside over the vast interest. Remember that this State alone, in 1865, numbered 64,486 working oxen, 1,147,251 milch cows, and 1,824,221 neat cattle of all kinds. We made over eighty-four million pounds of butter, and sold over seventy-two million pounds of cheese, and over twenty-nine million gallons of milk in 1864. In 1865 we numbered 584,930 horses of all classes, and 5,515,610 sheep and lambs.

But the element of mercy also comes in, and a great sentiment of good-will toward these creatures appears in our manners and speech, and has been embodied in our literature, and, in some cases, it has established especial institutions of protection and healing. Surely there is still need enough for nurturing this sentiment, and especially for bringing it to bear upon the ruder class of men, and the less favored order of animals. Still, a sad amount of cruelty exists, as the streets of our city show every day and every hour; and many who are not willfully cruel are so by neglect, and allow dumb creatures to suffer wretchedly from want of due care for their food and shelter.

We have reason to express great satisfaction at the good work that has been done in this city to save animals from suffering; and it is clear that a great change has been effected. We no longer see loads of calves and sheep piled upon each other, like bags of corn or sticks of wood, with tongues protruded in agony, borne to the shambles as if to receive our curses in return for yielding up their lives to keep our tables supplied with food. The good work should go on until all such and the like acts of cruelty are done away; until the brutal passions and coarse temper at the root of the wrong are thoroughly rebuked, and the wild beast that is in man is subdued into good-will toward the almost human heart that lives in our domestic beasts.

II. It is not enough thus to protect the animal species from harm, but we owe them more—even full protection in their proper faculties and sphere, *liberty* to fulfill their functions and destiny, so far as consistent with the welfare of their superiors. Where the spirit of the Lord is, there is liberty; and all creatures should be free to develop their natural gifts. Let the bird sing and the bee make honey; let the cow pasture and give milk, and the horse feed and run; all according to their true nature. Let us interfere as little as possible with the native ways of God's innocent creatures, and how pleasant it is to hear the birds sing and the squirrels chirp in our

parks and rural cemeteries, and to see the deer and the lambs gambol, and the ducks and swans swim! All creatures have some talent of their own, and it is right and pleasant to see its proper manifestation.

A lover of nature will find great delight everywhere; and an Izaak Walton or Audubon find history, and drama too, among the birds and fishes. We may all see things that surprise us, and I confess to being an especial admirer of all rural creatures that are not noxious by their bite or sting, and even the venomous reptiles and insects I can admire at a safe distance. I have seen a little humming-bird show fight and drive away a sparrow of ten times his weight, and have known the little crested lord of the barn-yard march out to meet a fierce hen-hawk most valiantly, and be torn in pieces in defense of his frightened family, and prove himself thus—as General Scott was fond of saying, in his favorite tribute to the gamecock—to have “the elements of the hero and the gentleman.”

In our care for our favorite domestic animals, especially the horse, we are to give him all reasonable liberty, and study his true nature in food and training, harness and usage. We probably often pain and worry him ignorantly, and there is need of studying anew the whole subject of his discipline. He is to have a new and large share in the science and education of his masters, and will well repay the care by new intelligence, docility, gentleness, and force. He has more talent than we commonly think, and we may learn something of the Mohammedan Arabs in bringing out the love and helpfulness of this noble creature. We must be generous in our estimate of him, and remember that he has pride and ambition as well as appetite and strength. Let him walk and trot and pace and run according to his gifts, and it is cruel alike to push him to feats beyond his power and health as it is to keep him from putting forth his native speed. God made the racer as well as the farm horse, and it is well to let the creature run the race within the limits of reason and humanity. A free field to all innocent faculties, the career open to all good talents, whether in man or beast! Down with all tyranny over God's creatures, whether in the chambers of the Inquisition or the stable, the kennel, the pit, or the street or field! I hate not the Pope, but the Pope's Encyclical Letter, with its gag religion; and I hate the bad spirit of tyranny that carries out its temper anywhere, whether in chaining a slave or torturing a beast.

Especially bring out the loving traits of God's creatures, and so carry the Gospel out in the widest compass, and bring creation into harmony with the manifestation of the sons of God. How much these creatures can love, we do not know; nor are we obliged to set any limit to their capacities. We know that they do rise sometimes into a certain human quality, and the dog who pines over his master's grave, or the horse that bears in the funeral procession his brave master's empty saddle, has a certain human worth about him, and our hearts beat and our tears flow at the sight.

I made a visit, the day after Christmas, to Van Amburgh's collection of animals—a pastoral visit to the animals—the first that I ever made, or that I ever heard of any minister making to these orders of our fellow-creatures. I hope that I got some good from them, and shall be able to do some good to them and their kind. The collection is large, various, rich, and most instructive. We may learn to interpret anew the vast range of animal forms, natures, and gifts, and also to dismiss many prejudices and illusions. We may admire the lama, while we see that he does not weep and die at a harsh word, but has his share of spite. We may marvel at the elephant's sagacity and strength, yet not ignore the fact that he needs discipline, and his good-will comes not without severe training.

We must beware, indeed, of the weak sentimentalism that expects to evangelize the whole animal world, and even

change the nature of wild beasts by kindness. Some beasts are apparently untameable—like the hyena; and others are subdued mainly by terror; and even the mildest of animals, such as the ox, the dog, and the horse, must be made to see the master's superior power. The great horse-tamer, Rarey, dealt gently with his mighty pupils; but he began by making them feel his superior force, and getting the creature's limbs into subjection. It is so, indeed, with the whole training of the willful element in man or beast. All discipline implies a certain power; not necessarily physical power, indeed, but some kind of force; and society rests upon firm law alike as an armed power and a force of public opinion. Who would like to live here, or anywhere in a great city, without a strong police? And they who have never felt its arm upon them may be all the more peaceful for the assurance that the arm is there, and may strike them the moment the bad spirit goes out into the overt act. For the whole animal world there is need of discipline, both strong and gentle, to curb the self-will and bring out the better nature. The thoroughbred horse and the well-trained soldier both illustrate the workings of the same essential law.

III. The last thought that we could urge in relation to the world of animals is the duty of regarding and treating them not only for what they are in themselves, but for what they are to God, as Creator and Preserver, and as *manifesting His mind and will*. Our point of view now is wholly practical, and I will not treat such speculative questions as whether animals have souls, or whether species exist by development and transformation, or by direct agency of God, once for all. There is no time now for these inquiries, and we must be content with the more obvious aspects of the subject.

The profound theologians have long taught us that the universe is not only the creature, but, in a high sense, the image and child of God, and shows forth His attributes in the all of nature—from the star to the flower; from man, who is little lower than the angels, to the insect of an hour's span. According to this idea, each creature shows us something of the mind of God, and we are therefore to study the structure and instincts and habits and uses of all creatures reverently, and read them as parts of the book of nature, the word of God. How vast and pictorial is that alphabet of creation, as you may read it here and there in nature, or see it gathered in some great collection of creatures like that now in our city! What variety, compass, and power in all that range of life, from the gentle lamb to the untameable hyena; from the little guinea-pig to the huge elephant; from the wee mouse to the great lion; from the chattering parrot to the solemn owl; from the cold and crawling crocodile to the tall and frisky giraffe; from the gentle deer to the bloodthirsty tiger! The grandest of these creatures say little or nothing; and their silence, that is perhaps the reason of their being sometimes worshiped as mysterious, should lead us to study them more carefully, and read God's mind within them. God's mind is eminently shown in animal instinct, and natural history is a vast illustration of the intellect of the Creator. That the animals reason as man does in the highest sense, we can not say; but it is very clear that there is much reason in them, and many of their motives and acts are infallible, and show certainty where man is in doubt, as in the bird's foresight of the seasons, and the migrations of beasts and fishes. There is reason in animals that do not seem to stop to reason, and it is more God's mind than their own.

Some creatures we can not understand; and it is not easy to see the design of rattlesnakes, scorpions, and sharks; yet even these creatures are perfect in their way and exquisitely organized; and Holy Writ has some of its most powerful illustrations from the more fearful aspects of nature; and these may be God's illustrations of the objectionable traits of character in their obvious manifestation, and therefore important parts of our study of man and His types in creation.

The book of Job and the Apocalypse are proofs of what powerful use may be made of the grandest and the cruellest creatures in illustrating the Word of God and the duty and destiny of man, while the masters of fable, from *Æsop* to *La Fontaine*, are ample proof of the treasures of wisdom and amusement that God has placed before us in the air and earth, the fields and woods and waters. Who of us would give up those old favorites of the nursery for any of the new moralists or story-tellers? Let us keep the new science, and study the anatomy and physiology and all the natural history of animals, yet we need not abandon the old drama in which they were actors, nor cease to hear the wisdom of ages speaking through their odd ways and funny habits. All pure and true literature is from God, and helps us own His mind in nature and in man.

A distinguished author asked me, last evening, if I thought that our fathers adopted the eagle as our national symbol from any prevalent notion of the place of that bird in heraldry. I replied to him that I had not studied heraldry much, and cared little about its antiquated conceits, but it was my belief that our national progenitors knew more of the Bible than of the books of chivalry; and they were more likely to have taken their idea of the eagle from seeing the noble bird for themselves in the air or in the forest or on the mountain, and to have interpreted his place in the arms of our Union according to such passages of Scripture as these words from the swan song of the Hebrew Washington, Moses, just before he went up into Mount Abarim to die:

"For the Lord's portion is His people:
Jacob is the lot of His inheritance.
As an eagle stirreth up her nest,
Fluttereth over her young,
Spreadeth abroad her wings,
Taketh them, beareth them on her wings:
So the Lord alone did lead him,
And there was no strange god with him."

What a picture of the States of our Union under their Providential rule as they have been, and God grant that they shall be!

We must, however, study animals not only *ideally*, but *dynamically*; that is, we must not only see the ideas or purpose of God, but the power of God in them. In ways partly seen, and, as yet, partly unseen, they are doing God's work in evoking the mighty forces of nature, and maturing it for its great consummation. We can see how it is that essential forces of nutriment and strength are ripened for great uses in the plants and animals that are used for food, and in the grass and corn, the sheep and the ox. Material atoms are taken out of the dust and brought up to assimilate with the muscle, nerves, and brain of man. In the year 1863 this city received nearly two millions of butchers' animals for food (1,927,203); among them 264,091 oxen and 529,316 sheep. What is this but bringing the strength of the pastures and hills to repair the waste and build up the energy of our people? It is the method of God, and His is the strength of the hills and the wealth of the flocks.

I confess to a feeling of gratitude and obligation in view of the dependence of a great community like ours upon the herds that supply our market. The great prize-ox that is decked with ribbons and paraded through the streets with shouts, is but the stately leader of the great procession of creatures that bring the fresh life of the country to repair the wasting energies of the city. What is the huge wholesome creature but a living Koh-i-noor, a mountain of light and warmth, a reservoir of sunshine, a treasury of sweet juices and flavors distilled under the bright or the shaded heavens from the rains and the dews, the grass and the clover, that are God's bounty to the pastures for the cattle, and through the cattle to man? Thank God for the ox, and let mercy to the creature go with thanksgiving to the Creator!

But who shall set a limit to God's economy in developing force for higher uses? Probably all creatures have a part in the mission, and are bringing on the consummation of all things, or preparing powers for the true civilization, that shall be the final manifestation of the sons of God. Nothing shall be lost, but every power, like every atom, shall exist, however transformed. Perhaps even venomous reptiles are evoking elements that are needed for new uses, or else keeping them out of combinations that might poison the air or the waters; and when they are extinct, those bad elements may be transferred to benign uses. The fierce beasts hold powers that shall not die, and they carry the forces as well as represent the poetry and drama of God; and the men who slay or tame them inherit their might; and so the might of savage nature passes up, and is exalted and evangelized in the mind and will of man, who is more and more a microcosm, or world in miniature, and ever enriching his powers, as he enriches his gardens and museums, with the treasures of all climes and the forces of all kingdoms of nature. The gentler animals shall more and more help their lord—like the horse, that, in return for his care, gives man so much of his courage and majesty.

We ought to lay far more stress than we do upon this dynamic aspect of nature as connected with the plan of creation and the education of the human race. The great fact of the continuity and correlation of forces that our modern science so insists upon, runs through the whole plan of the universe; and it is evident that the energies that are embodied in the animal kingdom do not end with the animals themselves, but act upon the training, and pass into the motive powers of men. God means to give us strength as well as wisdom, and he is as much opposed to idleness and inefficiency as to folly and improvidence. He keeps his rational creatures ever on the alert; and in ruder ages he set the wild beasts about men as a kind of watch to keep them awake; and sometimes it was the stern destiny of the backwoodsman either to slay or be slain, or to eat the bear or be eaten up by him. Even the annoying insects that we so little love and so readily commit to Beelzebub, the demon of flies as of lies, have a use, and are, like the mosquitoes, a sort of police-guard to keep sluggards awake, especially on warm days; and undoubtedly those little imps, whom I do not love, add to the wealth and health of the nation, by spurring the lazy and sleepy to work, and keeping many a lounging from a perilous nap in malarious regions.

So it is that God is educating us, and his powers as well as his thoughts manifest themselves to us in the animal kingdom. Reptile, insect, bird, beast are his agents, and are intended to help us to our own vocabulary of expression and our stock of energy. The powers that have existed never die; and we can see in actual history how marvelously the races that conquer brute beasts inherit their courage or utilize their strength or their gentleness. In this way, the lower creatures carry out the great plan of Heaven, and connect themselves with the character and destiny of man.

In this way the golden age shall come, and all powers shall be concentrated in man, and the creature shall find the manifestation of the sons of God by training his children to their higher powers and service, even if we do not accept the opinion of those Christians who have claimed for the animals that men cherish and love, a share in the immortal life which the established faith regards as the exclusive prerogative of man. In some way the prophecy shall be fulfilled.

"The wolf also shall dwell with the lamb,
And the leopard shall lie down with the kid;
And the calf, and the young lion, and the falling together,
And a little child shall lead them.

They shall not hurt nor destroy in all my holy mountain;
For the earth shall be full of the knowledge of God,
As the waters cover the sea."

FEELING.

BY BERTHA HASSELTINE.

In the gladsome sunshine sparkling,
Or in somber shadow darkling,
Element of smiles and tears,
Through life's widening valley stealing,
Flow ye limpid floods of feeling;
From your gushing fountains welling,
Evermore your story telling
Of the past and future years;

And with hopes and memories teeming,
Floats my soul awake or dreaming,
By thy vision isles of thought;
Where springs bloom, and light falls golden,
As I've read in stories olden,
That around elysian bowers,
Bloom enchanting spirit-flowers,
Which to mortal touch are not.

But my soul with spirit-fingers
Twineth these; and loving lingers,
Bathing in the waters bright,
Till the current ceases flowing,
Through its depths no motion showing,
Save when heart-enraptured dreamer,
With a bliss-o'erflowing tremor,
Stirs the surges with its might.

Or unto a pang of grieving,
The responsive tide upheaving,
Moans an answer to its sob,
Till the billows waked from sleeping
Shoreward roll; and backward sweeping
With a power beyond its staying,
Rocks the heart vibrating, swaying
With tumultuous thrill and throb.

And with gathered echoes sounding,
With new motion onward bounding,
Sweeps it onward to its goal;
Ah, its goal! Oh! whither tending
Is thy swelling current bending?
And beyond this life's commotion,
Into what eternal ocean,
Wilt thou final launch, my soul?

THE AUTHORESS AND THE ACTRESS.

LUISE MÜHLBACH AND CHARLOTTE BIRCH PFEIFFER.

"NOT to WOMAN, but to *women*, do I deny the talent of men," Rousseau has said; perhaps one of the finest compliments which a man of genius has paid to the feminine Corypheans of literature. There has always been one species of literature, especially, in which women have at times excelled, namely, romance. Miss Kavanagh, the well-known authoress of "Nathalie" and "Rachel Gray," in two pretty books has narrated the history of the French and English authoresses of the last century; in her preface she says: "The novel is not only the great characteristic of modern literature, but it is also the only branch in which women have attained undisputed excellence. Here they owe nothing, either to indulgence or courtesy." What the woman asserts of women with such universality, a newer critic, Rudolf Gottschalk, in his excellent work on "The German National Literature," has made a little more sharply precise when he says: "What to the novelist is indispensable?—a happy comprehension of social life, sharp observing talent, tact, agreeableness of description." These are exact distinctions, and are peculiar to the more passive and reproductive

PORTRAIT OF CHARLOTTE B. PFEIFFER.

talent of women. Their proper circle for representation, to which their experiences, observations, intuitions, yes, and nature itself seem to refer them, is, *the world of the heart and the life of society*. All the brilliant female names of all literatures move in this circle; in France, Scudéry, Stael, Sand; in England, d'Arblay, George Elliott, Miss Muloch, and Miss Braddon; in America, Mrs. Harriet Beecher Stowe, Mrs. Emma D. E. N. Southworth, Mrs. Sigourney, Miss Augusta Evans; in Sweden, Mrs. Bremer, Flygare-Carten, Schwartz; in Spain, Fernando Caballero; and in Germany, the names of Luise Mühlbach and Madame Pfeiffer take high rank in this department.

The works of Miss Mühlbach have gained for her a notoriety in America which has never been surpassed by any foreign authoress. Her novels are to Germany what Sir Walter Scott's are to Scotland and England, and James Fenimore Cooper's to the early days of America—history pleasantly interwoven with romance, truth with fiction. This class of novelists are undoubtedly the most successful in the end, though the mere sensational writer may gain immense popularity for the time being; but, unlike the novelist-historian, the works of such writers are soon forgotten. It is to the perusal of historical novels alone that many thousands of men and women are in-

debted for their knowledge of history. The history of the Scots, and manners and customs of the days of Bruce, would have been quite lost to us had it not been for Scott and Miss Porter; and how little of the aboriginal nature of the North American Indian, untainted by contaminating influences, would have been shown to us but for James Fenimore Cooper! and the perusal of the works of Miss Mühlbach will tend to give us an adequate knowledge of the German fatherland, of which the greater portion of Americans are ignorant. The writings of this lady bring us into more intimate connection with a people who are with us and for us, and where still may be found the germs from which sprung many a strong element in our own giant Republic.

Luise Mühlbach is the maiden name of this talented German lady. She was born January 2, 1814, and was married to Professor Theodore Mundt in 1837, who died in the year 1860. She did not gain her present popularity in a single day; but almost unnoticed she emerged from her obscurity in mature years, her first romance being "A

Pupil of Nature," which appeared in 1842. Some of these early writings indicate very extreme views of life, ultra liberal political impressions, and an unbridled imagination. In 1853 appeared her "Frederick the Great and His Court," a work which met with almost unparalleled success. But, unlike too many of our writers, she knew how to retain the favor of the public. Its extraordinary adulation did not dazzle her; on the contrary, she became more careful with each new success; and her next work, "Germany in Tempest and Oppression," published in 1856, besides an unaltered richness of imagination and power of production, exhibits a conscientious endeavor for artistic consistency.

Among her other works, may be mentioned: "Joseph and His Court;" "Berlin and Sans Souci, or, Frederick the Great and His Friends;" "The Merchant of Berlin;" "Two Life Paths;" "The Emperor Leopold and His Time;" "Empress Josephine;" "Napoleon in Germany;" "Henry the Eighth;" "Prince Eugene and His Time;" "The Great Elector and His Children;" "Louisa of Prussia;" "Count Bénjowské, or, Frederick the Great in Bohemia;" "Old Fritz and Modern Time;" "Frederick the Great and His Family," and others, all of which are deservedly popular.

The portrait of this lady, though accurately transferred from a German illustration of her,

does not exhibit the degree of fineness of texture that is seen in a photograph. In her organization there are strength and substance rather than shadow and show. If she be not handsome, she has power. It is an organization that looks to results; that has an object beyond temporary gratification. She is a woman of many talents and of great versatility. While others are so constituted that they can do but one thing, and that indifferently, she can do almost anything, and do it well. She combines the masculine and the feminine, the resolute and the executive, with the genial and kindly.

She has both economy and generosity, concealment and candor, imitation and originality. Ideality, Sublimity, and Constructiveness are all prominent, while Cautiousness and Approbativeness are not so large as to restrain or prevent her from manifesting herself fully. She would exhibit more of tragedy than of comedy, and yet there is a gentleness which would greatly modify her naturally resolute nature.

Miss Mühlbach resides in Berlin, where she is prized by a select circle of literary, artistic, and political celebrities, who are wont to associate in her *salon* as with a kind and amiable friend.

In contrast with Miss Mühlbach we have a lady of quite a different stamp. Madame Charlotte Birch Pfeiffer is a fair specimen of the feminine Teuton, with a strongly marked vital temperament. Her power lies in her affection and devotion, while the other exhibits more force of character. This lady's head is high in the crown, broad at the base, and large in the cerebellum; while the other having all the latter qualities, has not so large a development of the top-head. The intellect is that of an observer, a practical, definite, and descriptive nature. She has a large brain, well associated with a large body, by which it is amply sustained. She would exhibit more feeling, emotion, and intuition than reason or philosophy. There is eloquence of expression, poetry, and music in her countenance; and her large Language furnishes excellent descriptive powers. But humorist, *tragedienne*, or dramatist though she be, it is through her moral and spiritual sense that she derives her greatest ability and exerts her chief influence.

She is eminently fitted for social life in its various departments, and those more masculine traits which she has derived from her father, whom she probably resembles, give her much self-reliance, decision, ambition, and individual-

PORTRAIT OF LUISE MÜHLBACH.

ity of character. Her massive chin corresponds with the vital temperament; the lips indicate strength and fullness of affection; the nose shows development and culture of mind, and the whole physiognomy a strongly marked character.

Madame Pfeiffer is not unknown to the American public, as will be seen by a perusal of her biography. She was born in Stuttgart, in the year 1800. She early displayed a passion for the stage, and for about twenty years performed in the various theaters of Germany, and made excursions to Petersburg, Pesth, Amsterdam, and other cities, until 1837, when she undertook the management of the Zurich Theater, which she retained until 1843, when she received an appointment at the Royal Theater at Berlin. In Germany she is the sovereign of every *repertoire*, from the court stage to the wandering temple of art which builds itself in a barn. She, too, has also written some novels and romances; but she is best known by her dramatic writings. She is a dramatist of great industry, and she produces as many as two plays a year. Criticism was at first backward, shy—she did not wish to criticise her, but only to shut her out by a quarantine. But she made her way through, and criticism, like the old abbé before great Richelieu, at last took off the hat. Her vigor, aptness, yes, indispensability, as Gottschalk

says, are now fixed facts. Not the dramatic making, but the dramatic nerve and quintessence of her being; that is the secret of success. She has mastered the most difficult tasks, inasmuch as she has put such extensive matter as the "Orphan of Lowood" and "The Woman in White" in the narrow limits and form of five acts; and has not been less fortunate in her original dramas, "The Marchioness of Villette" and "A Child of Fortune." Always amusing, always lively, excited, and inciting, she shows the most solid qualities of the German mind.

Americans will best recognize her as the writer of the play of "Fanchon, the Cricket," which has been so well impersonated in its chief rôle by Miss Maggie Mitchell; "The Woman in White," dramatized after Wilkie Collins' novel of the same name; and the drama of "Jane Eyre," which alone would gain her the reputation she justly enjoys.

UTILITY OF BEARDS.

THERE are more solid inducements for wearing the beard than the mere improvement of a man's personal appearance, and the cultivation of such an aid to the everyday diplomacy of life. Nature combining, as she never fails to do, the useful with the ornamental, provides us with a far better respirator than science could ever make, and one that is never so hideous to wear as that black seal upon the face that looks like a passport to the realms of suffering and death. The hair of the mustache not only absorbs the moisture and miasma of the fogs, but it strains the air from the dust and soot of our great cities. It acts also in the most scientific manner, by taking heat from the warm breath as it leaves the chest, and supplying it to the cold air taken in. It is not only a respirator, but, with the beard entire, we are provided with a comforter as well; and these are never left at home, like the umbrellas, and all such appliances, whenever they are wanted. Moffat and Livingstone, the African explorers, and many other travelers, say that in the night no wrapper can equal the beard. The remarkable thing is, too, that the beard, like the hair of the head, protects against the heat of the sun; but, more than this, it becomes moist with the perspiration, and then, by evaporation, cools the skin. A man who accepts this protection of nature may face the rudest storm and the hardest winter. He may go from the hottest room into the coldest air without any dread; and we verily believe he might almost sleep in a morass with impunity; at least, his chance of escaping a terrible fever would be better than his beardless companion's.—*Anonymous*.

THE EYELIDS.—The drooping of the upper eyelids generally accompanies the expression of humility, and indicates *penitence*, the disposition to repent, to feel sorry for our sins, and to do "works meet for repentance."

NEW YORK,

JUNE, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slaughter. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Foe*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 369 Broadway, New York.

END OF VOLUME FORTY-FIVE.

THIS (JUNE) number of the PHRENOLOGICAL JOURNAL completes the semi-annual volume, FORTY-FIVE. With the JULY NUMBER we enter upon the FORTY-SIXTH Volume, which terminates with the year, in December, 1867.

The present period forms a convenient half-way stopping-place in the year's journey. Here we halt, take breath, and feed. To-morrow, being refreshed and renewed in body, and replenished in pocket, we re-commence our journey around the world; and, we trust, *toward* the "better land." Many who have journeyed so far with us, who took tickets to this JUNE station, leave the train here. Others, having paid in advance for the round trip, from January to December, will continue with us. We shall part from any with reluctance. A continuance of our frequent cordial "good-mornings," and our always happy "good-nights," have come to be almost necessary to our growth and well-being. We grow strong or weak in bone and muscle by virtue of what we eat and drink. We grow mentally, morally, socially, and spiritually by virtue of our surrounding influences, by what we see, read, and hear. Bad books, bawdy pictures, and vulgar conversation lower the tone of mind and morals. Good books, good journals, and refined conversation elevate and improve. If we would truly beautify our features, we must beautify our characters. We are constantly changing; and to grow in grace, we need all the instruction we can get from revelation and science. If our interpretations of nature—if Ethnology, Phrenology, Physiology, Anatomy, Physiognomy, and Psychology throw new light on MAN and his destiny, let us

avail ourselves of this light. Other fields are being worked. Earth, sea, and heaven are explored in our interest; but how few, how very few, study themselves! Who among us is satisfied with his lot? Who is making the most of himself? Who comes up to his own highest capability? Show us one such, and we will point to a thousand who are dragging out miserable lives, whose tendency is down, *down*, *down*! Why? Simply because they are "off the track," running in the wrong direction, out of their sphere, employed about that in which they can take no interest; tied to a clog, they can not elevate; discouraged, disheartened, they sink to rise no more. The advent of Phrenology helped the world to think on a sound basis, and to-day we see its fruits on every hand. Boys are selected and educated for pursuits to which they are adapted. Men will be chosen for responsible positions who are by organization and qualification fitted to fill them. Schools, asylums, and prisons will be conducted on principles more in accordance with the organization of man. Religious bigotry, sectarian animosity, social inequality, will all be modified in accordance with our clearer knowledge, and the evident will of God. But this is not the time to expatiate on the merits of our theme. Present readers know how to regard this. As to our enlargement; we find ourselves cramped for space. Twenty-four pages, equal to forty-eight octavo pages, were too few to admit the variety we wished to serve up; we enlarged to thirty-two, equal to sixty-four octavo pages, and the cry continued for "room, room, more room!" We now propose to give thirty-six quarto pages, equal to seventy-two octavo per month—or, say, a volume of 864 octavo pages a year, at the very moderate price of \$3. Counting cost for engravings, we believe this to be giving an ample equivalent for the sum. Other improvements are contemplated, which will render the PHRENOLOGICAL JOURNAL still more desirable—may we not say, kind reader, *INDISPENSABLE*?

Club rates for generous-hearted co-workers who wish to aid in extending our circulation, and in disseminating a knowledge of these principles, are given on another page.

PREMIUMS are also offered as inducements

for zealous efforts in placing the JOURNAL in the hands of all.

In conclusion: To those who now elect to stop, we bid an affectionate though regretful farewell. To all who decide to go on to the end of the journey, we cordially welcome, and re-enroll their familiar names among the loved ones. To *all*, we wish a happy, prosperous, and joyous future.

WHOM TO ELECT.

POLITICAL agitation is not peculiar to America, nor to republics. All mankind participate or feel an interest in the governmental changes continually going on in the world. In Europe, it is the anxious care of a king or queen to keep the crown. And no bad, ambitious emperor or usurper sits easily or safely on his throne. The people everywhere demand their inherent rights. They will not be kept in slavery, nor willing subjects to selfish rulers. They ask for the franchise—a right to *choose* their officers and their servants; and they want the best. They also demand the right to worship God according to their own consciences. In America, universal suffrage is likely to become the rule. Were all as intelligent as the native born, or were all capable of reading and understanding the laws which their votes would help to make, and were each possessed of even a moderate property, no objection to universal suffrage could be urged. Each having an interest to protect and defend, each would use his best judgment in selecting the "right man for the right place." No gamblers, no boxers, no tricksters could get a nomination, much less an election to a post of honor or profit.

Political parties disgrace themselves, and bring contempt on a state, by obtruding bad men into responsible positions. There are honorable, competent, and honest men in every state, men worthy of the highest trust—religious men, who neither gamble, fight, get drunk, or even use tobacco or drink liquor! Why not select and elect such as these? What are good men about that they passively permit low-lived, bullet-headed swaggers to play the statesman? Why nominate clowns and showmen—persons chiefly known for their low cunning and

dishonesty. It is only the partisan, the ignorant, the indifferent, or the corrupt who will support such a character. Let all Americans, of native or foreign birth, see to it that they trust only the true. Let them not hope for peace, for prosperity, or for the perpetuity of our glorious institutions, with bad men in our councils. Then let us be mindful as to whom we elect. Noisy office-seekers are not wanted; professional gamblers and corruptionists should be sentenced—and sent—to State's prison—drunkards to asylums. Boxers should be put to work breaking stone, or at something more useful and ornamental than in smashing each other's countenances. And good men, temperate and religious men, should be elected to administer the law and the government. Let our Fourth-of-July orators, let the clergy, let editors, let all good men look to this, now and always.

OUR NEXT PRESIDENT.

ALREADY political newspapers are canvassing the country to determine who shall—not rule, but—be the *servant* of the people when the present incumbent's term shall expire. We are not among the number who believe that all great statesmen are departed. On the contrary, we know very well that in looking at men of the past, it is, to the view of many, "*distance*" which lends enchantment. Some there are who *live* in the *past*. Such see nothing favorable in the present. Others, more prophetic, live chiefly in the future; and some live only in anticipation of happiness beyond the tomb. Comparatively few live in the ever most wonderful present. We hold that the highest statesmanship ever displayed is being displayed in this our own day and generation. We need not instance examples. The future historian will put this in its proper place on the page of history. Let us not be deceived by the hopeless croakers. There is an unseen power, greater than that of man, which shapes our destiny, which is "onward and upward." Let us trust in God and do our duty. Light, rattle-headed nobodies will sometimes elbow modest worth out of his place, and thus wrong a nation. But if honest, sensible men will agree and unite, they may lead, mold, and elevate the public mind for its good. Among those most talked about for the Presidency are the following: Mr. S. P. Chase, who has filled various offices, from State Governor to U. S. Senator, Secretary of the Treasury, and Judge of the Supreme Court. He is an able man; we propose to give a portrait, with some account of him, in an early number of this JOURNAL. Mr. B. F. Wade, now president of the U. S. Senate, is an able and an honest man. See our March number for his portrait, biography, and character. Mr. Schuyler Colfax, chairman of the

House of Representatives, is a rising man and an excellent executive officer. Then there are Messrs. Stanton, Harland, Sumner, Wilson, Yates, Morgan, and half a dozen generals who can be had for the asking, who would, no doubt, with a suitable cabinet, serve the country acceptably. But *our* choice will be a thoroughly honest, temperate, religious, intelligent, good man—who will hold to the truth, the right, and the good of the whole country, regardless of all mere personal or party interests. Let us try to choose such a man to serve us.

WHAT ARE YOU DOING?

THOUGHTLESS and indolent persons will reply "Nothing," or, "Nothing in particular." But they are mistaken. Though not engaged in any regular employment, they are *forming character*. There is no standing still in life. We advance or recede—growing in grace, or going to waste. A thoughtful and industrious person will reply, "I am trying to improve myself, that I may be more useful to others, and thus increase my own happiness." A thriftless young man will "wait for something to turn up," instead of going to work and *turning something up*. One "waits for dead men's shoes," while another more enterprising earns his own shoes. What are *you* doing? Are you improving in mind or in pocket? You should do both at the same time. We *can* work and think, or, machine like, work and *not* think.

Elihu Burritt, the learned blacksmith, is said to have studied many languages—more than fifty—while working at the anvil. Shoemakers have become legislators and statesmen; and a good tailor may be promoted to a high office. General Grant was a tanner and currier. All great men, or men who rise in life, have been real *workers* and hard students. Nor is it wise to be over-nice as to the calling, so that it be useful and honorable. Too many, who are not fit for them, aim for the learned professions—not realizing the fact, that it is better to be a good mechanic, farmer, or merchant, than a poor lawyer, doctor, or preacher. The question should be, "In what calling can I do the most good?" "be the most useful?" "succeed the best?" But if you would not become a dependent pauper, a miserable vagabond, go to work and do *something*—make brooms or baskets, fish-nets or fanning mills—and thus call the faculties into use, and develop them. It is *wicked* to be *idle*. What are you doing?

PHONOGRAPHY IN ILLINOIS.

THE legislature of Illinois have quite recently passed a bill for the "appointment of official reporters, and for the preservation of evidence in certain cases in Cook County." This act has special reference to the necessities of legal proceedings in Chicago, where the chief part of the judicial actions in the State are conducted. The act provides for the number of

reporters who shall be appointed, and their compensation. By virtue of this act, Messrs. Ely, Burnham, and Bartlett have been appointed the "official reporters" to the Superior Court of Chicago. Messrs. Burnham and Ely were formerly reporters in our office. The passage of the act referred to has been greatly due to the interest taken in it by Messrs. E. B. & B., and the official position which they have secured will enable them to further the ends of shorthand, by making their office a sort of Western nucleus for the shorthand reporting interest.

These gentlemen contemplate the establishing of a reportorial bureau, where shorthand writers can be obtained by those needing their services. We certainly wish them well in the enterprise. The advantages of shorthand for expediting business of all kinds in which much writing is requisite, are becoming more and more generally appreciated, and we have no doubt that in a few years it will be one of the questions merchants will put to young men seeking counting-house situations, "Can you write shorthand?"

ANNOUNCEMENTS.

AMONG other good things on the *tapis* for publication in the July number are, an elaborate paper treating of the various species of monkeys, and profusely illustrated; an excellent article on "Eloquence," by our senior contributor, John Neal; a philosophical review of the life of Queen Elizabeth, by Tullidge, and some unique physiognomical contrasts. We have also in course of preparation a biographical sketch and portrait of Hon. Salmon P. Chase, Chief Justice of the U. S. Supreme Court.

We have received letters from time to time during the publication of the Phrenological Theory of Man's Organization, in which the writers express the strongest approval of the points taken in that serial treatise. The clearness and force of the reasoning which mark those passages wherein certain fundamental principles of our Science, which have been contested by clever anti-phrenologists, are maintained, have won over to complete discipleship many who before were hesitating and doubting.

The article on the Navy in the present issue will prove interesting to all our readers, as it presents, in a condensed form, nearly all that is of value in that department of governmental affairs. In fact, one would have to examine at some length into national statistics to procure all the information which is comprehended within our one article.

Some pains have been taken to prepare a list of premiums under "our new terms" of subscriptions, calculated to command the attention of all our readers, young and old, male and female. The variety is considerable, and the arrangements most liberal. We think the inducements offered are sufficient to swell our subscription list to one hundred thousand, and should that aggregate be attained, we might then be induced to return to our old rate \$2, without decreasing the size of the JOURNAL.

OUR NATIONAL MILITARY SYSTEM.

THE NAVY.

In a previous article we gave a sketch of the United States Army, and this month we present to our readers a similar account of the Navy. It is difficult to say in which service the force of modern innovations is most felt. Industry and invention have not merely given the soldier better tools to work with, but, by railroads and innumerable bridges spanning streams formerly impassable except by boats, they have changed the very face of the country. New tactics are needed in the Army, and a greater grasp of resources is demanded from the commander. In the Navy, the ordnance men wage war upon armor as if it were a good thing to find a gun that can send all our ships to the bottom, while the constructors are trying to make a ship that can maintain a fight under any circumstances until her timbers rot behind her armor. Our previous article was so long, that we left the consideration of the ordnance used in the Army to this article, and a description of some army guns, with specimens of their performance, will be found in the paragraph relating to the Navy ordnance.

The guns used in the Army have assumed proportions as great, and even greater, than those adopted by the Navy authorities. McClellan woke up the rebel army in Yorktown one morning by plunging into their camp rifle shells weighing 250 pounds. After that, in the splendid bombardment of Fort Sumter, the same guns, and others of less caliber, were used effectively. These weapons were made by Captain R. B. Parrott, at the West Point Foundry. They are simple constructions of cast iron, with a reinforce or strengthening band of wrought iron put in one piece around the breech. The sizes, charges, and weight of the projectiles used in those guns at the bombardment of Fort Sumter and of Charleston are given in the next table, which also shows the weight of shot thrown from the smooth-bore of the same size:

Size of Parrott.	Powder, Pounds.	Shot, Pounds.	Weight of Smooth-bore Shot same Caliber.
10-pounder.....	1	10	3
20-pounder.....	3	19	6
30-pounder.....	3½	20	9
100-pounder.....	10	80	33
200-pounder.....	16	180	64
300-pounder.....	25	250	125

The rifle guns throw their shot to enormous distances, as is shown in the following table of ranges, with varying charges and angle of inclination. The guns were posted on Morris Island, and at high elevations threw their shot into the city of Charleston:

Gun.	Elevation.	Charge.	Range.
300-pounder.....	13° 30'	26	4290 yds.
300-pounder.....	11° 47'	16	4270 "
100-pounder.....	13° 30'	10	4273 "
300-pounder.....	5° 12'	25½	1950 "
300-pounder.....	4° 19'	16	1750 "
100-pounder.....	4° 15'	10	1750 "

The range of the ten-pounder gun at twenty degrees was 5,000 yards; of the twenty-pounder at fifteen degrees 4,400 yards; and of the thirty-pounder at thirty-five degrees 8,453

yards. Such ranges as these for continuous lengths of time have not been reached before in actual war. Very much has been said of the lack of strength which is supposed by some to unfit cast iron for rifled guns. Several of the large rifles burst after a few rounds. But General Gillmore thinks the defect was in the shells, which burst prematurely and knocked off the muzzle of the gun. He says the endurance of the guns improved as the workmen at the foundry became more accustomed to casting the shells.

The United States Army possesses the heaviest gun in the world, of modern make. It is the twenty-inch smooth-bore, of which there are two in the service. One of these was lately tested with *two hundred pounds of powder* and a shot of 1,080 pounds weight. The size of the gun is not near so remarkable as the enormous charges it endures. With such a gun defending a harbor, it is decidedly a matter of doubt whether any hostile ship, iron-clad or not, could enter.

ORGANIZATION.

The Navy, like the Army, expresses in its organization the principles of economy and peace which govern the Republic when not imminently threatened by an enemy, and at the same time contains the root which can be quickly fostered to a growth ample enough to shield our country in any storm. Among the triumphs which our republican system won in the rebellion, one of the greatest was that we were not merely able to do as much in war as any other nation of equal numbers, but that we did not need to change our groundwork to do it. The provision we had made for the contingencies of war were proved under trying circumstances to be sufficient.

Our old Navy, if small, was worthy even of so large a country. Nothing impresses foreigners with so lively a sense of a nation's powers as the possession of fine war ships. We had these, and we had, besides, the prestige of having, by boldness in war and skill in science, advanced the standard of naval seamanship all over the world. For though our Navy has always been, and is to-day, after our great war, exceedingly small in proportion to our sea-coast and our marine, yet in building vessels our officers have ever studied the advancement and dignity of the service, and it has happened that enemies who professed in peace to despise us, had occasion to give us their respect in war. Both in speed and weight of offensive armament we early made such progress that other nations have been glad to follow in our steps.

Our naval service is made up of the combatants and the department of administration. The first is composed of the ships, the men, and the guns.

THE SHIPS.

The old Navy, when the war commenced, comprised seventy-six vessels, carrying nearly 1,800 guns. But most of these vessels were unavailable, being either on foreign service, or so old as to be of no value, though their names

were still on the navy list. The guns, too, were of a size and description that now are entirely obsolete. When the tidings of war came so suddenly, the Secretary of the Navy had difficulty to get together a fleet of half a dozen vessels. The first step toward the increase of our strength was the purchase of sea and coasting steamers, which were hurriedly strengthened at the navy yards and armed with all the guns they could bear. At the extra session of Congress in 1861, the Secretary was authorized to purchase and build new vessels of war, and among other appropriations a million and a half of dollars was allotted for iron-clad ships. The wooden vessels begun were mostly what are called gunboats—small, narrow, swift steamers, carrying armament which, for the time, was very heavy, and well fitted for river and harbor service, though not fitted for the sea. These were built at private shipyards, and have done good service. The rapidity of their construction, however, indicates that they will not last long, and some have already been broken up, some made over nearly new, and some sold. Some vessels of a larger size were built or finished after having been on the stocks for years. The appropriation for iron-clads produced the Monitor, New Ironsides, and Galena. With the exception of the last, these are now gone, the victims of disaster by water and by fire.

THE IRON-CLADS.

The victory over the Merrimac, achieved within a few weeks after the Monitor left the builder's hands, gave great prominence to that style of vessel, and determined the adoption of them into our Navy. She was a novelty from keel to turret, novel in principle, and novel in nearly every detail. With great boldness, considering the fact that she had had but one trial, the Department determined to build ten new monitors of larger size. The first of these was called the Passaic, and the ten are known as the "Passaic class." The necessities of the time threw these ships into the hardest service, and often it was of a kind for which they were not fitted. Many faults were developed, but they were patiently remedied, and with constant progress we were able, in the last years of the war, to build vessels of this class which were not only fitted for sea service, but which have commanded the admiration of the world.

The New Ironsides did good service all through the war, but there were certain faults of construction which condemned her as a type vessel, and she never was able to accomplish anything which could rival the brilliancy of the first Monitor's victory in Hampton Roads. She has never been duplicated, though there now lies in New York a vessel which far surpasses her in size and power, and which is armed on the same broadside principle. This is the Dunderberg, built by Mr. W. H. Webb. The Galena has been unfortunate, and inevitably so from the very nature of her make. It was attempted to combine the broadside method of carrying guns with light draft and an armored side. But to do all this the armor

had to be made very thin, and in the first action in which she was put to the test she suffered terribly in killed and wounded, and was repeatedly pierced by heavy shot.

THE MONITOR SYSTEM

alone found favor. And here it is well to explain briefly the distinction between the "broadside" and "turret" methods of construction, and their peculiar merits. In the former, the guns, as in the old sailing vessels, are ranged round the sides of the deck. The only difference is that the sides have a thick covering of iron, and in order to accommodate this increase of weight, the three decks of old ships of the line are cut down to one. The guns on this deck, too, are not more than half the number of those on one of the decks of an old liner; but they will be many times more powerful; and the Dunderberg, with her twelve eleven and fifteen-inch guns, is infinitely more formidable, even without her armor, than any of the three deckers famous in former times. In order to make the surface which must be covered with armor as small as possible, the gun-deck is much smaller than the other decks of the ship, and all of the latter but one are under water. Thus the Dunderberg again, which is 385 feet in length, has a covered gun-deck only 256 feet long, and under that, below the water-line, are the engines, boilers, living-rooms, and every other attachment of the ship. The vessel really consists of a hull, which is almost entirely submerged, carrying on its back a box strongly made of wood beams and heavily plated with iron, in which are the guns. The monitors themselves are not more remarkable in appearance than the Dunderberg.

The turret vessels are precisely like the broadside ships in construction, with the exception that the casemate which protects the guns is replaced by a circular turret, and which can be revolved by suitable machinery. In this comparison only the American types of the two constructions are referred to. In Europe, instead of a casemate mounted on a hull nearly submerged, it is more common to plate a vessel nearly of the old familiar shape, so that those iron-clads do not present the remarkable contrast in appearance to the old forms which the American styles do.

BROADSIDE AND TURRET.

However they may be constructed, the distinction between broadside and turret is well marked. The former carries so many guns on each side, that a volley from them all together would throw as much metal as half a dozen turrets. But the large extent of surface to be covered with iron compels the armor to be made very thin, or the vessel to be made very large. With the size of the ships the difficulties and expense of their construction increase very rapidly, and their usefulness is also limited to sea service, or to those harbors which have deep waters. Vessels of this class in England, where much more attention has been paid to them than in this country, now reach the size of more than 6,000 tons, and carry armor eight inches thick in a solid piece.

The monitors are limited in the number of guns, the largest number carried by any turreted vessel being six. But these are available at all points of the compass. To deliver her full strength of projectile, a broadside vessel has to present her side a fair mark to the enemy. A monitor can lie with her prow to her foe and present only the narrow curved line of the bow and the rounded turret to the hostile fire. These are difficult things to hit; and when they are struck, the shot finds them covered with a thickness of armor which can not be approached in other vessels. The Dictator carries fifteen inches of solid iron in her turret and six inches on her sides, the latter being backed with strips of iron running lengthwise the vessel and four inches thick. This armor is unmatched in the world, and there is little hope that a broadside vessel can be made to carry such a heavy shield. Another great advantage of the monitors is that their dimensions do not need to be large to enable them to carry turrets which are almost impregnable. The first monitor was only 173 feet in length and 776 tons measurement.

The following tables give a comparison between our monitors and foreign iron-clads. In the table of the latter it is plainly seen by what means the British naval authorities manage to build such large armor-plated vessels. With the exception of our light draught vessels, which are an acknowledged failure—the fruit of mismanagement—we have not a vessel afloat on the Atlantic coast with defenses so weak as the best of these great foreign ships.

TABLE OF MONITORS.

Class.	No. of Vessels.	Tons.	Length, Feet.	Draught, Feet.	In. of Armor.	Guns.
Monitor	1	776	173	10	15	2
Passaic	10	844	200	10½	11	5
Tecumseh	9	1,034	234	14	11	9
Light Draught	30	614	235	6½	8	3
Winnebago	4	970	170	—	—	—
Monadnock	4	1,564	260	14	11	9
Kalamazoo	4	3,200	262	19	15	14
Dictator	1	3,033	320	21	15	10½
Puritan	1	3,265	341	21	20	10½

FOREIGN IRON-CLADS.

	Tons.	Length, Feet.	Draught, Feet.	Inches of Armor.
Warrior	6,039	380	26½	4½
Defence	3,766	380	24.10	4½
Achilles	6,039	380	27	4½
Northumberland	6,621	380	27	5½
Prince Consort	4,045	277	25	4½

The magnificent structures built in England have had no trial more severe than a month's cruise in the Channel. Our monitors, on the contrary, have had the hardest service, and there can be no doubt that we know every defect in them. The men who have fought them in their most trying moments are those who are most willing to meet vessels of the broadside kind in action.

It would not be proper to leave this subject of armored ships without mentioning those which were built for service on the Western rivers. We have about 6,000 miles of river there, which during the war was constantly patrolled. It is true that the ships which did

* The Puritan's guns will be twenty-inch, throwing 1,080 lb. shot with 175 to 300 pounds of powder.

this work were for the most part hastily improvised and hurriedly built. But if another war comes, there is no question but that we shall do the work again in just as great a hurry. None of these iron-clads, except three monitors of the Tecumseh class, were intended to be impregnable. One or two inches of iron, with twice as much on the more important parts, was all that could be applied to vessels which were restricted to four and five feet draught. This accounts for the loss of life in the Western river battles. The boats were broad, flat-bottomed, with side or stern wheels. The armor, if penetrable to gun shot, was a protection against rifle balls, and saved many a valuable life. The boats were all made heavy about the bow, and most of the battles there were decided by ramming. They were mostly 180 to 200 feet in length and 60 to 75 feet in breadth. They carried a large number of heavy guns, and this was the secret of their power.

The subject of American iron-clads has in this article been merely outlined. To discuss the monitors alone, and the changes made in them, would require a much larger space than can be allowed now. Our vessels have been made to fit a particular case, and to do this, old ideas have been unhesitatingly cast off. As might be expected, the result is remarkable. The selection of the best form of iron-clad for our service has been greatly simplified by the character of our harbors and the peculiar service required of them in the war. The foreign armor-clad ships draw, almost without exception, twenty-five feet and more. Very few of them could enter New York, and none of them Charleston harbor. But we wanted vessels that could engage forts built far inland on rivers, the approaches to important cities. Hardly anything but the monitors would serve, and we therefore made them in great numbers. It might have been well to have given more attention to vessels of the New Ironsides type; and if we had studied this kind of battery as enthusiastically as we did the monitors, we perhaps would have sooner seen the inside of Fort Sumter. One of the objections to monitors is the difficulty of using them against forts, which are usually placed on hills or bluffs. The guns in a turret have very little vertical range, and to reach a fort placed a hundred or two feet above the water-line, they have to lie off so far that the shot are robbed of a large part of their destructive power.

The first vessels built to meet the great necessities of the war were a fleet of gunboats, so called. Fourteen of these were of about 1,200 tons each, and carried 7 guns apiece; twenty-three were of 500 tons measurement, and carried 4 guns; and twelve were 700 tons measurement, and carried 4 guns. These did good service patrolling rivers and guarding bays and harbors, but now there are but few of them in the service, the vicissitudes of war and the economical habit of the Government in selling its useless vessels having lessened their numbers.

When the first pressing hurry was over, the Government exerted itself to construct larger vessels. A number of steam sloops of war, of a pattern that for size and excellence of model is not equaled elsewhere in the world, were built. Effort was also made to produce very fast screw vessels, which would be able to overtake anything on the ocean. These, with the vessels significantly called "double enders," are perhaps the most characteristic of the vessels built by the Department during the war, and which were of a great many varieties. The last-mentioned ships have a rudder at each end, like our river ferry boats, and are thus able to navigate the narrow rivers of the Southern coast without difficulty. These vessels have done far more than could be expected of them. One went around Cape Horn to San Francisco. Another ran full tilt at a rebel iron-clad in Albemarle Sound, and came very near sinking her.

THE MEN.

The highest officer in the service is Admiral David G. Farragut, who had spent fifty-six years in the Navy when he received his present commission. His pay is \$10,000 a year.

Next in grade is the vice-admiral, now David D. Porter. His present service is as Superintendent of the Naval Academy. Pay on sea duty, \$7,000; on shore duty, \$6,000; on leave, \$5,000.

Of rear-admirals there are ten on the active list—Admirals Goldsborough, Davis, Dahlgren, Bell, Thatcher, Godon, Palmer, Radford, Rowan, and Craven. Pay at sea, \$5,000; on shore duty, \$4,000. On the retired list there are seventeen—Admirals Stewart, Shubrick, Smith, Stringham, Breesee, Paulding, Sloat, Mervine, Crabbe, Montgomery, Stribling, Sands, Bell, Pearson, Wilkes, Bailey, and Lardner. Pay, \$2,000.

There are twenty-four commodores on the active list, who receive when on sea duty \$4,000, and on shore duty \$3,200. On the retired list there are also twenty-four, whose pay is \$1,800.

The captains number forty-six on the active list, and twelve on the retired list. The former receive \$3,500 at sea, and \$2,800 when on shore duty, and the latter are paid \$1,600. There is also a retired list which numbers seven.

The commanders are ninety in number on the active list, twenty-seven on the retired list, and eleven on the reserved list. The first are paid \$2,800 when at sea, and \$2,240 on shore duty. The others receive \$1,400.

The lieutenant-commanders on the active list are one hundred and sixty-five, and on the retired list are four in number. The first receive \$2,343 at sea, and \$1,875 on shore duty. The pay of the latter is \$1,300.

Of lieutenants who are next highest, the service contains twenty-two on the active list, eight on the retired list, and nine on the reserved list. Pay of the first, at sea, \$1,875; on shore duty, \$1,500; of the others, \$1,000.

The masters number on the active list fifty-three, and on the reserved list seven. Pay of

the former, at sea, \$1,500; on shore duty, \$1,200; of the latter, \$800.

The ensigns are fifty-four in number on the active list, and two on the reserved list. Pay of the former, at sea, \$1,200; and on shore duty, \$960; of the latter, \$500.

The midshipmen are seventy-two in service, besides those not yet graduated, four hundred and twenty-one in number. The first are paid \$800, and the others \$500.

THE SURGICAL DEPARTMENT

is composed of surgeons, who rank with captains, commanders, and lieutenant-commanders, according to the length of their service; passed assistant surgeons ranking with lieutenants, and assistant surgeons who rank with masters. Of the first there are one hundred, of whom seventy-nine are on the active list. The pay of these is \$2,200 for the first five years, and increases \$200 with each succeeding five years of service. Passed assistant surgeons receive \$1,500, and assistant surgeons \$1,250.

THE PAY DEPARTMENT

is composed of paymasters, whose pay begins with \$2,000 and increases as follows with each succeeding five years: \$2,400, \$2,600, \$2,800, \$3,100; assistant paymasters \$1,300 for first five years, and \$1,500 thereafter.

THE GUNS.

The position of the United States is especially prominent in regard to the subject of ordnance, for while other governments have hastened to throw away the smooth-bore cast iron guns in order to replace them with rifles, usually made of wrought iron or steel, we have clung to the old form. This, however, has been perfected in our hands until results have been reached which no other nation has obtained, and which a few years ago were thought impossible. The great question of the day, in gunnery, is how to overcome iron armor, whether on ships or on forts. The practice in Europe is to use guns which will throw a shell through the armor into the vessel, and explode it in the heart of the enemy's stronghold. To do this they use rifles with high charges of powder and shot which are long but have a small face, so that they do not have to cut away much material in order to do their work. In this it must be said they are very successful, and their experiments have produced some very remarkable penetrations of thick iron plates.

We, on the other hand, try to get a shot so heavy, and to throw it with such force, that though it can not, on account of its size, go through the armor, yet by the force of the tremendous blow it delivers, it will break down the defence before it. Eleven and fifteen inches are therefore the diameter of our guns now, while six and seven and a half inches are the diameters of corresponding rifle guns, though they are made as high as ten and a half inches. Indeed, there is to be a fourteen-inch steel rifle at the Paris Exposition; but as it has never been fired, it is much more an experiment than are our twenty-inch guns. Of our system, we have it to say that it has produced the best

results, not merely in easy experimental trials, but in the important test of war. The fighting of our monitors has been almost entirely done with smooth-bores.

But we have by no means neglected the rifle system. We have used in the war with considerable success rifles throwing 300 pounds. 100 pound bolts have been thrown from rifles with the greatest success. The breaching and destruction of the walls of Fort Sumter at a distance of between four and five miles were done mostly by 100 pounders and by 30 pounders. That achievement lost some of its brightness by the subsequent failure to capture the fort. But the victory of the guns working at such an immense distance should be separated from operations that they could not influence, and it will be seen in its true light as a deed that no other war in the world can equal. The guns that did this work were made of a cast iron body, strengthened by having a thick band of wrought iron put tight around the breech end. These are the famous Parrott guns. Almost coeval with them were the Armstrong guns of the British service, which were made entirely of wrought iron by a tedious process. They were very expensive, and after all have been discarded for their many deficiencies. They have cost about twenty millions of dollars. When the war broke out, our largest guns in use were nine-inch, and threw shot of about ninety pounds weight. The change from these to fifteen inches leads to the expectation that there is to be a still greater increase in the future. But the old sizes are not altogether discarded. Nine-inch and thirty-two pounder guns were used with good effect on the smaller gunboats with which our Navy swarmed during the war. But it is very likely that rifle guns will replace these, as they are farther reaching and more effective; for the crushing effects of very large shot can not be expected from balls of thirty-two and ninety pounds weight.

THE DEPARTMENT OF ADMINISTRATION

is divided into eight bureaus, as follows:

1. Of Yards and Docks.
2. Of Equipment and Recruiting.
3. Of Navigation.
4. Of Ordnance.
5. Of Construction and Repair.
6. Of Steam Engineering.
7. Of Provisions and Clothing.
8. Of Medicine and Surgery.

The head of the Navy Department is Gideon Welles, who is assisted by William Faxon as assistant secretary, John A. Bolles as solicitor, Edgar T. Welles as chief clerk, and eighteen others.

There are eight Navy Yards in the country, at the following places: Portsmouth, N. H.; Boston, Mass.; Brooklyn, N. Y.; Philadelphia, Pa.; Washington, D. C.; Norfolk, Va.; Pensacola, Fla.; and Mare Island, Cal. In these yards are stored the timber, materials for rigging, and all other things used in building vessels. They also contain dry docks for repairs, machine shops, and store houses for

ordnance and ammunition. They are very important, though almost insignificant in extent when compared with foreign yards. But they turn out the best of work, and during the war accomplished a vast amount. The Secretary has for three or four years urged the increase of the capacity of the yards, and the addition of a yard for iron vessels, which is certainly needed; but the head of the Department desires to locate this at League Island, a little below Philadelphia. Twice this has been examined by Naval Boards, and both times condemned by majority reports. A bill passed one branch of Congress last session to make a yard there in spite of this, but it fell through by the neglect of the Senate to take it up. The Portsmouth Yard has been extended by the purchase of Seavey's Island, and arrangements are making to incorporate the Ruggles estate into the Brooklyn Yard. These establishments are of great importance, for upon the efficiency of these depots of supply the power and activity of the Navy in a great measure depends. The Naval Asylum and the Naval Insane Asylum are under the charge of this bureau. The first of these was established to provide a comfortable home for disabled and decrepit naval officers, seamen, and marines. The applicants are obliged to prove a twenty years' service in the Navy. Last year there were 182 inmates, and the expenses were \$62,282.

The Bureau of Navigation has under its charge the Naval Academy, Naval Observatory, Hydrographic Office, Nautical Almanac, and the School for Naval Apprentices. The second highest officer in the service has the direction of the Naval Academy, which is located at Annapolis, Md. He has seventy-four assistants of various grades and eight vessels, one of which is an iron-clad, for the purpose of giving practical instruction in seamanship. Until lately, the instruction besides the customary studies of advanced schools was mostly in seamanship, navigation, and gunnery. But with the exclusion almost of sails from the Navy and the substitution of steam, it was obviously necessary to teach engineering, and a school for that purpose has been added to the Academy, in which "engineer cadets" are taught all that is necessary in their branch of the profession.

The Hydrographic Office was established in Washington last year for the purpose of issuing charts, sailing directions, and other nautical works to the Navy.

NAVAL APPRENTICES.

An old custom of the Navy was revived during the war, in the establishment of a school of boys who desire to enter the service. It is established on the frigate Sabine, which is stationed at the Naval Academy. The boys, of whom there are nearly three hundred, are taught all that is necessary to sailors.

THE NAVAL PENSION FUND

now amounts to more than \$10,000,000, which has been derived entirely from the Government share in prize money. It is sufficient for the wants of the service, and the necessity of taxation is thus avoided. The yearly interest in

1865 was about \$300,000 in currency, and of this \$249,000 was paid over to the pensioners, of whom there were 2,027.

The Bureau of Medicine and Surgery does a work precisely similar to that of the medical department of the army. The tables of casualties during the war show that 4,030 persons were wounded, of whom 3,266 received their injuries from gunpowder, 456 were scalded in battle, and 308 were drowned in battle. The casualties not connected with battle amounted to 2,070. The number of deaths was 2,272.

THE MARINE CORPS

is a sort of ocean police. It is indeed neither navy nor army. Its officers are graduates of the Naval Academy, but they have nothing to do with the management of the ship they may be on. They are a watch upon the seamen, and in case of mutiny, the jealousy which always exists between the marines and the sailors is trusted to make the former faithful to the officers. It is proposed to detail one of the officers of each ship to command the marines on board instead of having their organization so entirely separate, and it is also proposed to do away with them altogether. The utility of the organization is disputed, but it is still maintained. The corps numbers some thirty-six hundred men, under the chief command of a colonel. The other officers also bear the same rank and title of army officers.

THE DISPOSITION OF THE SHIPS.

The ships composing the active naval force are disposed in squadrons which are named according to the station they are on, as follows:

1. North Atlantic Squadron, Rear Admiral Palmer.
2. Gulf Squadron, Commodore Winslow.
3. South Atlantic Squadron, Rear Admiral Godon.
4. European Squadron, Rear Admiral Goldsborough.
5. North Pacific Squadron, Rear Admiral Thatcher.
6. South Pacific Squadron, Rear Admiral Dahlgren.
7. Asiatic Squadron, Rear Admiral Bell.
8. On special service, seven vessels.

These squadrons contain altogether seventy-seven vessels. They maintain the dignity of our diplomatic agents all over the world, and protect our commerce. In civilized countries this duty is peaceable enough; but the ships on the China and Japan station have at times a lively skirmish with pirates, or a refractory Daimio or Mandarin to subdue.

In the first paragraph of this article it was remarked that our Navy, though small, was very expensible. How elastic it is may be seen in the history of the service during the six years past. In 1861 the entire force of the service was 7,600 officers and men; when the war ended it was 51,500. At the beginning there were 3,844 artisans in the yards; at the end there were 16,880, and perhaps as many more in the private shipyards to which the Government demand gave their principal work. We commenced with fifty or sixty vessels nominally, but with an available fleet of not more than ten. We built or commenced 208 ships, and purchased 418 more. The latter cost \$18,366,000, and 340 of them were sold for \$5,621,800. Such figures as these show to what a development our small nucleus can reach in time of necessity.

On Physiology.

A knowledge of the structure and functions of the human body should guide us in all our investigations of the various phenomena of life.—*Chamberlain*.

My people are destroyed for lack of knowledge.—*Hosea iv. 6*.

HEALTH AT HOME; OR, HYGIENE IN ITS PERSONAL AND HOUSE- HOLD RELATIONS.

BY JOHN H. GRISCOM, M.D.

CARBONIC ACID GAS IN THE HOUSE.

ONE more consideration relating to the air requires attention. The carbonic acid gas which has been proved to be one of the results of respiration, and thrown off from the lungs at every breath, is a *virulent poison*, to inhale which, in any considerable quantity, is certain death. Air which has been once respired is therefore unfit for a second inspiration, not only by reason of the diminished proportion of oxygen, but also because of the presence of carbonic acid gas. Hence there is a double cause of sickness in air which has been once breathed. A simple experiment will exhibit to the eye the evidence of the incapacity of such an atmosphere to sustain life. It is a fact that no person can safely breathe an atmosphere in which a candle will not burn. That the air which has been exhaled from the human lungs will not support the combustion of a candle may be proved by the following illustration:

Fill a small glass jar (pint or quart) with water, and invert it in a basin of water with its mouth below the surface, so that when inverted the jar will remain full. Then insert a tube under the mouth of the jar, and blow into it from the mouth, until the water is all displaced and the jar filled with the breath. Then turn it upright with the hand over its mouth, and dip into it a lighted candle suspended on a wire. The candle will be immediately extinguished, a sufficient proof that an animal could not live in it.

A distinguished authoress (Catharine Sinclair) tells us, that "an eminent chemist wishing to prove what a poisonous atmosphere is endured by crowded congregations in Edinburgh, carefully bottled off a specimen of the air of various churches after the audience had dispersed. The result was that a fly could scarcely survive upon the polluted air which had been breathed successively by a dozen persons at least;" and she adds, in allusion to the unaccountable dread which many people entertain of pure air, under all circumstances, "*Some of our friends, if they lived in a bottle, would wish to put the cork in.*"

The history of man is full of examples of the deleterious effects of impure air—air made impure by himself. The story of the Black Hole of Calcutta is too well known to be repeated here, though it was a striking proof of the rapidly destructive effects of foul air. Nor need I cite any other of hundreds of well-known instances in which death has followed similar exposures. I will take it for granted,

after what has been written, that every reader is convinced of the necessity of the purity and abundance in every breath drawn into the lungs. Let us then briefly review the manner of life and education of the human family in this respect, and see how near they generally come to inhaling pure air at every breath.

In the first place, how fares the *tender infant*? He has scarcely made his entrance into the great ocean of air, ere he is tucked away under the bed-clothes, lest the already too close air of the chamber should be "too strong" for his lungs, and there he is left to swelter in the foul air of his own little blanket prison, to generate scrofula from his own poison. Should he, in his suffocating throes, penetrate an opening through the woolen walls, and utter an instinctive cry for air, it is but the signal for the careful nurse to protect him against the danger of "taking cold," by hiding him again out of sight, and covering him head and ears. The louder the little Oliver cries for more oxygen, the closer is he confined to avoid it. As a consequence of this almost universal mode of treatment, in part, it is an appalling fact that one third of the children born in cities die before they are one year old, and one half before reaching their fifth year.

If he chance to survive his infancy, then how as a *school boy* is he treated with respect to pure air? Who ever saw a properly and well-ventilated school-house? If such a one exists, it is an exception to the general rule. Inclosed within four walls, and a roof impervious to air, with several hundred others, he has little else to breathe than the air which has become tainted in a few minutes after entering with the foul gases from the lungs and bodies of his schoolmates. Yet his brain, which requires a larger proportion of good blood than any other organ of his body, is stimulated to exertion by ambition, by competition, or by the ferule. Can we wonder that too many a one should "creep, like a snail, unwillingly to school," where the artificial stimulus of the rod is substituted for the natural stimulus of oxygen? and that so many break down in health before reaching maturity?

Should he survive till the period of *apprenticeship*, happy for him if opportunity is given him to learn an *out-door* trade or profession. A ventilated workshop is likewise an unknown thing. Where is the journeyman printer, tailor, shoemaker, or operative of any other kindred occupation, with the ruddy cheeks and stalwart frame of the carpenter, the mason, or the blacksmith? These classes of operatives, when living temperately, respectively demonstrate the relative values of indoor and outdoor life.

But, sad to say, even the followers of those occupations, which of all should be the most healthful and most conducive to longevity, viz., those of the sailor and the farmer, are deprived of a great portion of their advantages by being confined at night in close, unventilated dormitories. In the one case, the salubrity of his life "on deck" is counteracted during the hours of his being "turned in," in a low,

crowded, damp, "forecastle," where the sun never enters but by chance, and the atmosphere of which is never renewed by full ventilation. While in the case of the farmer, his nights are passed in chambers almost proverbially small, low ceiled, and whose ventilation is never thought of, the air being renewed only when "sweeping day" comes round to the housewife, when the windows are opened for an hour or two a week.

But these evils are by no means confined to the laboring classes. The humble toiler has no monopoly of foul air in his workshop or bedroom, nor do the costly furniture, the gilded mirrors, nor the downy carpets of the millionaire maintain the purity of the atmosphere of his dwelling, or exempt him from the pernicious effects of its foulness. Employer and employee are alike subject to the laws of nature, and suffer equally from their violation, while in many instances the indolence induced by luxuriousness aggravates the evil.

Nor is it alone as a *cause* of ill-health that the general breathing of our self-made foul air is to be deprecated. In the medical treatment of a great number of the diseases which "flesh is heir to," the impure air of private chambers and hospital wards, where there is insufficient ventilation, is one of the greatest obstacles that the physician has to contend with. Especially is this the case in the treatment of fevers, and such cutaneous disorders as scarlet fever, measles, small-pox, etc. But in no one place is the aid of a pure atmosphere more essential, or a close, confined, and impure air more injurious, than in the lying-in room. There is scarcely a physician who has not experienced in his practice the depressing and injurious influence of non-ventilation in this branch of his profession, upon both of the parties who most demand fresh air in the freest quantities, the one to avoid puerperal diseases, the other for growth and strength.

Let then the cry go forth from family to family, from children to parents and teachers and from workmen to employers, "*Ventilate! Ventilate! your chambers, your schools, your churches, your workshops, your everything!*" and keep up the cry till over the whole land it shall be as fashionable to do it as it is now not to do it; until it shall be the rule when you visit, or meet a friend, instead of the universal question, "How is your health?" it will be, "Is your house ventilated?"

INTEMPERANCE.—If all the wealth now sunk in the bottomless pit of intemperance were appropriated to the purchase of libraries, philosophical apparatus, or cabinets of natural history; if all the time, that element of priceless value, which is now worse than lost in the various haunts of dissipation, were devoted to the reading of well-selected books, to lyceum exercises, to music, or other social and refining arts, it would give to society a new moral and political sensorium. How can any man witness without pain this great deformity, where there should be beauty and divine grandeur!—*Horace Mann.*

THE NUTRIMENT OF BEER.—People who drink their ale and beer are very fond of telling how much *nutriment* they derive from them! Because they are manufactured from grain, many have the idea that the concentrated virtues of the grain are in the drinks. This is an entire fallacy. Professor Liebig, one of the most eminent chemists in the world, assures us that 1,400 quarts of best Bavaria beer contain exactly the nourishment of a two-and-a-half-pound loaf of bread! This beer is very similar to the famous English Allsopp's, and our more popular American beer. The fact is, the nutritious portion of the grain is rotted before beer can be made; and if the fermentation of the beer has been complete, Professor Lyon Playfair declares that no nourishment whatever remains in the fermented liquor; and, as the English *Alliance News* says, "No chemist now disputes these assertions; for, except in flavor and amount of alcohol, the chemical composition of all kinds of beer is alike, and brewers must laugh to hear doctors advising porter as more nourishing than beer, when porter is nothing but beer colored by burnt malt; and often when beer goes wrong in the making, and is unsalable as beer, it is converted into fine porter, the mere coloring covering many defects!"—*The Nation.*

WORK AND WASTE.

EVERY manifestation of physical force involves the metamorphosis of a certain quantity of matter. Prof. Houghton, of Trinity College, Dublin, asserts as the result of his investigations, that in the human organism there is a definite relation between the amount of force exerted and the amount of urea generated. The urea formed daily in a healthy man, weighing 150 pounds, fluctuates from 400 to 650 grains. Of this, 300 grains are the result of vital work; that is, of force expended in the motions of the digestive organs and the heart, and in sustaining the temperature of the body at a uniform rate. This amount exceeds all other force generated and expended in the system, and is equal to that required to raise 769 tons one foot high. In addition to the mere act of living, the working-man undergoes bodily labor equivalent to lifting 200 tons one foot high daily, which requires the formation of 77.38 grains of urea. The force expended in two hours of hard mental labor involves an expenditure of power equal to lifting 222 foot-tons, and a generation of urea weighing 86 grains. Thus we have a minimum formation of urea during 24 hours, amounting to 477.38 grains, for which there is expended force equal to 969 foot-tons.—*Annual of Scientific Discovery for 1865.*

[According to the above statement, the student or writer exerts a much greater degree of actual force with his brains, than the mere laborer does when engaged in the severest manual toil; and consequently the former expends physical vitality more rapidly than the latter. Can we wonder any longer that the man of letters, the brain-toiler, is generally spare in flesh and weak of limb? And have we not here a substantial reason, couched in terms of statistical exactitude, for urging the studious to cultivate their bodies as well as their brains?]

On Ethnology.

True Christianity will gain by every step which is made in the knowledge of man.—*Spurkheim.*

ABORIGINAL LEGENDS OF NORTH AMERICA.

[CONCLUDED FROM MAY NUMBER.]

BY E. G. SQUIER, M.A.

VARIOUS other fantastic conceptions exist among the Cherokees, from which we select those which appear to be least recent.

A female, for example, is held in special honor, and identified with Indian corn. Most of the night dances refer in some way to her, as did some of the ceremonies of the Green Corn Festival. A legend relating to her is copied elsewhere. The woman of the East is also held in much reverence.

Thunder was adored, or rather thunders, for there was supposed to be many stationed in different places, and each charged with a specific duty. They paid also a sort of veneration to the morning star, but rather as an object of fear. They say that long ago a very wicked conjuror committed murder by witchcraft. The Cherokees combined to slay him. Hearing of their purpose he gathered his shining implements of mischief and flew upward to a certain height, where his apparatus made him seem a star. He then became fixed in his position, and is prayed to by all who seek to kill others by necromancy.

The cluster usually called the "seven stars" was regarded with peculiar reverence. There are no prayers addressed to it, but there is a wild legend of its having sprung from a family of eight boys, who were wont to steal into the town council-house and beat the drum, which was kept there for public solemnities. Some of the elders reproving them for it, they took offense, and seizing the drum sprang upward, beating it in defiance as they ascended. On the way, however, one came down with so hard a fall that his head stuck deep in the ground. He was immediately transformed into a cedar, which is to stand forever, and which bleeds like a human being when cut. The others mounted on high, where they now are. There are many other celestial personages denominated "ancients," varying in figure, color, and office. They are said to be stationed in different parts of the firmament, and prayers are frequently addressed to them. May they not have been heroes deified after death? Certain animals also received some degree of homage, but only as intermediates. The Cherokees believe in various superhuman existences not properly coming within the range of their religious theories.

They have various crystals for purposes of divinations. They constituted part of the apparatus of the ancient Cherokee priest, and were indispensable to his vocation. They were called *ooh-ling-ah-tah*, which signifies "light that passes through," as through a glass. So sacred were these stones, that it was death for

any one who had not been sanctified and initiated for the purpose to touch them. The priests would sometimes wear them on their breasts, suspended by a string, but always hidden from view. They were sometimes carried, wrapped in a weasel's skin, by the great warrior of the nation; and if he was killed in battle, it was the first aim of his followers to snatch the crystal from his bosom and guard it reverently; but it was the first object of the foe to wrench it away and crush it between stones. All who were permitted to carry the talisman, the great warrior alone excepted, concealed even the knowledge of where it was worn. Such as were not borne about the body of a priest, were treasured up in a holy box or ark, or carefully folded away in deer-skins. Accounts are given of four different sides of this talisman. It was in the shape of a hexagon, of crystalline quartz, but many fancy this was only a substitute for the early diamond. How the supposed magical properties were imparted to it is not explained; we only know that each priest was possessed of one, and that all sizes were consulted with equal confidence and held in equal honor. The larger were used for divining the results of war; those used by civil priests were a size smaller. The latter were devoted to ascertaining whether sickness was to be apprehended, either by an individual, or a family, or a tribe. When consulted for that purpose a sacrifice was first made. This over, the stone was set either upon seven deer-skins folded, or on a post covered with a fawn's skin, or in some crevice of a house, so as to catch the first rays of the morning sun. If the omen was favorable, a bright and unclouded blaze would appear in the stone; but if unpropitious, the stone would look blue and smoky, and just as many would die as there appeared figures lying in its right side. The stone was consulted by the people in large bodies on certain occasions—for example, on the Great Moon, as it is called, when the ancient Cherokees commenced their year. The time being come, before sunrise in the morning the priest of each town would gather all the men, women, and children of the place in one building, and seating them in rows, with their faces turned toward the east, would open a crack in that side of the house and so set his crystal as to catch the rays of the rising sun. Receding a few feet, with his eyes riveted upon the stone and his face toward the sun, he would make a prayer; as he prayed, it is asserted, the crystal became brighter and brighter, till it attained a brightness equal to that of a mirror with the glare of the mid-day full upon it. The reflected beams would first strike the underside of the roof, then move back and forth, and then descending would at length glance toward where the people sat. Over such as were to die before another Great Moon, the light would pass without the least illumination. Credible witnesses of this superstition aver that they have actually known instances wherein this brightness failed to rest upon those it passed among, who all died before the termination of the stated period. During these

ceremonies the priest never touches the crystal, but simply utters prayers. A smaller crystal is used for detecting theft; another still smaller is used preparatory to hunting expeditions; and the least of the five is used in ascertaining the length of life. It was also applied to the detection of adultery.

So highly did each priest value his own particular crystal, that when he found death approaching, if he had no favored disciple to whom to consign it, he would totter to the woods, and as soon as he discovered a tree in the side of which some bird had picked an opening, he would bury the crystal there, and stop up the cleft, so as to render its discovery impossible. He did this, for if the stone were found lying about after his decease, with no properly authorized person commissioned to take it, it would be the death of every person who had resided beneath his roof.

Some singular customs prevailed as regards the initiation of boys in the mysteries of life and of manhood. Not only in cases of a birth being expected in a family where the priesthood is hereditary, but in others where it has been predetermined that an expected child, if male, should be devoted to any sacred office, it appears that a priest was always forewarned, so as to receive the infant upon its coming into the world. If a son, the first thing administered by the priest was a consecrating drink. As the child was then unable to fast, the parents were bound to fast in its place, and during seven days to taste nothing but a certain root, and even that not more than once during the twenty-four hours after sunset. Such sons were trained up with peculiar care. On the approach of the regular monthly disqualification of the mother for coming in contact with holy things, she delivered the infant to its grandmother, or some aged matron, for the protection of his purity. He was never permitted to wander about like other children, nor allowed to sit or eat in the hut of a neighbor, lest he should chance to come in contact with some female under the term of exclusion, or some male included for any cause in a similar interdiction. But though the child was thus rigidly reared by his natural guardians, the priest to whom he was committed at his birth always kept him in view. As he grew in years, the holy monitor increased in assiduity; and many a day of fasting and night of watchfulness would be employed in impressing upon the young pupil the various duties to which he was destined. Among them, even a knowledge of the divers articles of food from which certain orders of the sacred brethren must abstain, exacted no little time and attention; for particular officers were bound to particularized prohibitions; a child intended, for example, to be made chief speaker in the war (*Ska-li-lo-aka*), must never taste of frogs, nor of the tongue or breast of any animal whatever, and so on through a larger catalogue of exceptions than can now be remembered. Most generally the devoting of sons to sacred offices did not take place, however, until they had reached the age of nine or ten. Those thus set apart, when infants, were carried through the same course with the others, during some stage of their discipleship.

In such cases, the priest to whose care a boy was committed, would lead him at daybreak to a mountain's top, give him the purifying drink, and bid him plant his eyes upon the spot where the sun was to rise, so as to catch the first beams of that luminary, from which he was not to withdraw his gaze until the light died away in the west. If he never once took his eyes from the sun during the whole course of the day, he was supposed to be quali-

fied forever after to fulfill his duties during the night as well as the day; but were his eyes withdrawn, even for a moment, all previous labor was lost. During the first day's probation and the succeeding night, the instructing priest remained with the pupil, and both fasted rigidly, and the night was passed in walking and in giving and receiving knowledge upon high and holy themes.

On the following morning the priest took the boy to some more secret part of the mountain, where no female eye could penetrate, and there taught him the mysteries of the divining crystal, how and when it was to be used, and what must be said in all the ceremonies when it was consulted. In this retreat they continued six days, making in all a seven days' fast. During the first two days and the succeeding night they ate nothing; on the evening of the second day, a little after sunset, they only chewed a certain root; then, till the next day after sunset they fasted; subsequently during the whole period they were allowed to chew the specified root only once in the twenty-four hours. But on the seventh day and night the fast was unbroken, as was the watching; and on the morning of the eighth day the priest consulted the divining crystal, to see how long the boy would officiate in the place for which he was destined.

Setting the stone so as to catch the first sunlight, the priest prayed for instruction. If the boy was to live, the symbol considered as referring to that destiny would appear in it in the form of an aged man, with gray hair and a white beard; if not, a man would be seen there with hair and beard both black. The priest would then take the boy to a creek, and direct him to stand in the water with his face toward the east, while he took his own place on the bank, with his face in the same direction and prayed. He would then order the boy to plunge entirely in the water seven times in succession, first with his head toward the east, then to the west, and so on alternately. This being done, the priest took him to a certain house where he offered sacrifices for him. He cleared a place and lighted a holy fire, and placed over it the tip of a deer's tongue and a little flesh. When the destination of the boy was for service among warriors, if the meat crackled, casting a piece or two toward the boy, he would be slain by his enemies; but if the pieces were cast from him, he would be victorious. When the destination was for the civil and not for the military priesthood, or for the office of boiler of the sacred herbs, or for any other of the various orders, the appearances of the sacrifices and the inferences from them would vary accordingly.

One priest might have seven youths under his tutelage, but no greater number. After initiation they would continue occasionally to visit their holy guide. He would then pass a day and night with them in watching, fasting, and teaching. When he perceived that his own death was approaching, he would gather all his pupils around him and repeat his instructions, selecting some one of them to be his immediate successor, and to receive his miraculous crystal as a last bequest. Sometimes the pupil thus honored took the talisman at the moment, but generally not until after the death of his master. It was only to such persons as have been described that the sacred mysteries were disclosed by the ancient Cherokees. To make them known to the uninitiated was considered as provoking sudden or not long to be avoided death, both to the betrayer and listener. Hence it is with extreme difficulty that any information upon these subjects can be brought out from the old men at this day; but more particularly if imagined to be sought for by any white person—all of whom are supposed to feel a contempt for such forms and faith.

NEW PREMIUM LIST.

We are enabled to offer the following inducements to those who are interested in obtaining subscribers to the PHRENOLOGICAL JOURNAL:

A new volume, the Forty-sixth, will commence with the July number. Subscriptions which in the aggregate will entitle the person procuring them to a premium, must date from that time.

CLUB RATES, WITH PREMIUMS.

- 5 copies, \$12, *pr.* one copy to getter-up of club.
 10 " \$24, — one copy "New Physiognomy," \$5.
 20 " \$48, — "Student's Set" of Phrenological Works, \$10, or any books amounting to that value which may be selected from our own list of publications.
 25 " \$60, — "Physiognomy," with "Student's Set," or other books selected as above to the value of \$15.
 30 " \$70, — \$35 of our own publications.
 40 " \$85, — and \$35 " " "
 50 " \$115, — and \$50 " " "

Here is a superior opportunity for parties to add a considerable number of valuable books to their private collections without much or any cost to themselves.

Clubs may be made up at one or a hundred different post-offices, but should be sent in during July and August, if possible.

Premiums will be sent as per order, by post or express, at the cost of the receiver. The postage on "New Physiognomy," when prepaid, is 50 cents. The larger premiums, including books or busts, must go by express or as freight. We are now ready to record new names or re-enter present subscribers on our new books for Volume 46. Let clubs be made up at once.

REGULAR RATE PREMIUMS.

OPEN TO ALL.

Persons sending us lists of new subscribers at the regular rate of \$3 for the year, commencing July next, will be entitled to premiums as indicated in the following schedule, according to the number of said subscribers:

1. 350 subscribers, at \$3 each, will entitle the sender to a seven octave rosewood piano, of Steinway & Sons or Chickering & Sons', as preferred. Value \$625.
2. 300—a seven octave rosewood piano, of Decker's, Boardman & Gray's, Berry's, or N. Y. Piano-forte Co.'s manufacture (among the best in New York), or an excellent Stuart's parlor organ. Value \$500.
3. 225—a seven octave rosewood piano, Grovesteen & Co.'s, or a Mason & Hamlin's cabinet organ. Value \$350.
4. 200—a Grovesteen seven octave rosewood piano—\$300.
5. 175—a Grovesteen seven octave rosewood piano—\$250.
6. 170—an excursion ticket to Paris and back by the best ocean steamers—\$330.
7. 160—a Mason & Hamlin cabinet organ—\$225.
8. 150—a handsome suit of parlor furniture, rosewood or black walnut—\$200.
9. 125—a cabinet organ or harmonium, of Mason & Hamlin's, Estey's, or Carhart & Needham's manufacture—\$150.
10. 100—a superior suit of parlor, dining-room, or bedroom furniture, walnut or oak—\$125.
11. 80—a lady's or gentleman's gold American lever watch, full jeweled, warranted—\$100.
12. 75—a \$90 library, your own selection from any publisher's regular catalogue.
13. 70—an \$80 library, your own selection, or Appleton's new American Cyclopaedia, 16 vols. 8vo.
14. 65—a \$75 library, your choice or selection.
15. 60—a Carhart & Needham melodeon—\$70.
16. 55—a gold lever watch, hunting-case, full jeweled, warranted—\$65.
17. 50—a Florence or Weed sewing machine—\$60.
18. 47—a \$60 library, your selection.
19. 45—a French china dinner set, good quality, about 135 pieces—\$58.
20. 40—one of Wheeler & Wilson's, Grover & Baker's, Willcox & Gibbs', or the Empire sewing machines, as may be preferred—\$55.

21. 35—a complete silver-plated tea set, 6 pieces, warranted of the best quality—\$46.
22. 35—a complete set of carpenter's tools, best quality, with chest—\$45.
23. 30—a silver hunting-case American watch, full jeweled, warranted—\$35.
24. 28—a superior double-barreled shot-gun—\$30.
25. 28—a set of 40 portraits, intended for lecturers on Phrenology—\$30.
26. 25—one of Howard's beautiful new breech-loading rifles—\$28.
27. 23—a china tea set, about 45 pieces, good quality—\$27.
28. 22—\$25 library, your choice.
29. 20—a fine violin, with case, complete, or a silver-keyed flute, or a music-box playing five tunes—\$22.
30. 18—a \$20 library of your own selection.
31. 15—heavily silver-plated water or ice pitcher, or a music-box (four tunes)—\$18.
32. 13—Doty's celebrated washing-machine—\$15.
33. 12—set of fine ivory-handled knives and forks—\$12.
34. 12—Webster's great quarto Dictionary, unabridged, latest edition, 3,000 illustrations—\$12.
35. 10—the Universal Clothes-wringer, best in use—\$10.
36. 8—a gold pen (best quality), with fine silver case and pencil, or copy of "New Physiognomy"—\$8.

Single \$3 subscribers will receive our illustrated chart of Physiognomy, suitable for framing.

Pianos and other musical instruments will be accompanied with all necessary appendages, stool, cover, etc. By sending to the manufacturers specified for catalogues, parties competing for premiums will be enabled to make their own selections.

All goods, instruments, books, etc., will be carefully selected and packed at our own expense, and sent by express or otherwise as the premium creditor may direct.

Persons at a distance may obtain catalogues of books from which to make selections, by inclosing stamps to any preferred publisher.

We wish it to be positively understood that the value of the premiums offered are in accordance with the regular manufacturers' or retail prices, and not in accordance with any advanced or invented standard of our own. Those who would prefer, instead of the premiums Nos. 1, 2, 3, 4, 5, 6, 7, 9, 11, to receive suits of parlor, dining-room, chamber furniture, or libraries of the same value, can signify such preference when sending their lists, and it will be faithfully observed.

We seek in the offering of this somewhat elaborate premium list to subserve some of the substantial wants of nearly every family or person in the land. Articles of a merely ornamental character find no place in the order, for the reason that our JOURNAL essentially aims to promote the substantial good of its readers, and its regular subscribers we know esteem more highly the good, the true, and the useful, than a toy which only flatters the taste for a while and confers no practical benefit.

The premiums, too, are rated on a very liberal basis, leaving scarcely any margin in the way of profit. Mere pecuniary profit is not our object. We wish the agent to be liberally remunerated for his services; though many will work *gratis* for the good they may do. But we especially desire to enlarge the circulation of the only publication in this country which has professedly sought to do with the great subject of Anthropology. Will our friends—some of those many who are enthusiastic in their approval of our course—take this matter in hand? Should not a hundred or so energetically set about procuring subscribers among their acquaintances, it would not be long before we had Fifty Thousand names on our subscription-books. Now is the accepted time; let all who believe in, and would help forward, the cause of social improvement, in its mental, moral, and physical considerations, bear a hand and disseminate the truth by bringing about a more wide-spread circulation of the PHRENOLOGICAL JOURNAL.

EXCUSES FOR DRINKING.

ONE drinks because he's very hot, as we are often told; Another must a tankard take because he's very cold; Another drinks because he's wet, its benefits to try; Another, sure, a beaker gets because he's very dry; Another must a bargain make, and have a glass to strike it! While one and all the liquor take because, in fact, they like it!

Literary Notices.

[All works noticed in THE PHRENOLOGICAL JOURNAL may be ordered from this office at prices annexed.]

A CRITICAL HISTORY OF THE DOCTRINE OF A FUTURE LIFE. With a complete Bibliography of the Subject. By William Rounseville Alger. Fourth edition. Thoroughly revised. New York: W. J. Widdleton, 1866. Price \$5, post-paid from this office.

We are so much accustomed to being questioned on the subject of the hereafter, that we of necessity feel a lively interest in any good work that treats of the future life on natural, philosophical, and religious grounds. Mr. Alger has filled a chink in our library by the preparation of this most elaborate volume. The subject was never so well and so thoroughly handled before.

Part First contains a *résumé* of the various theories concerning the soul's origin, death, the grounds of the belief in a future life, and the soul's destination, entertained by various nations of ancient and modern times. Part Second treats of the doctrines of a future life held by the more prominent nations of historic times and by the principal religious systems, other than the Christian, existing. This is an exceedingly interesting portion of the work, and well repays the perusal. Part Third is devoted to the teachings of the New Testament with respect to the resurrection and the "better life." The views of Christ and the more distinguished among the Apostles are clearly and ably presented. In Part Fourth we have the opinions and practices of the different Christian societies or denominations; and in Part Fifth, historical and critical dissertations treating of the doctrine of a future life in the ancient mysteries, metempsychosis, or transmigration of souls, the resurrection, future punishment, recognition of friends, and cognate subjects.

The book, as a whole, is characterized by much impartiality, fairness, and philosophical discrimination. One of the finest portions of the whole volume is that appropriated to the consideration of the grounds, moral, intellectual, and physical, for a belief in the future life; and we have no doubt that many who now grope in darkness and uncertainty concerning immortality, would find much mental relief in a careful reading of this portion. In the course of the philosophical grounds advanced by the author, he says: "In the material world, so far as we can judge, nothing is ever absolutely destroyed. There is no such thing as annihilation. Things are changed, transformations abound; but essences do not cease to be. * * * Now, as a solitary exception to this, are minds absolutely destroyed? are will, conscience, thought, and love annihilated? Personal intelligence, affection, identity are inseparable components of the idea of a soul. And what method is there of crushing or evaporating these out of being? What force is there to compel them into nothing? Death is not a substantive cause working effects. It is itself merely an effect. It is simply a change in the mode of existence. That this change puts an end to existence is an assertion against analogy, and wholly unsupported."

Again, we find evidence that life integral, sentient, is not terminated by that change called death, in the nature of man's pursuits and feelings. "Our whole life here is a steady series of growing preparations for a continued and ascending life hereafter. * * * There are wondrous im-

pulses in us, constitutional convictions present of futurity, like those prevailing instincts in birds, leading them to take preparatory flights before their migration." The more one lives for immortality, the more confirming tokens of a deathless inheritance his faith finds. Thousand "hints chance-dropped from nature's sphere" reassure us. The belief in a life beyond death has virtually prevailed everywhere and always; no matter how low in the scale of moral and intellectual apprehension a nation or tribe may be, there will be found instinctive notions more or less strongly exhibited of a future state. This argument, from universal consent, should be and is one of the most convincing of testimonies. Who can refute this believing instinct? "God and nature deceive not."

A full list of the books published up to the present time on the subject of a future life, arranged according to their definite topics and in chronological order, prepared by Mr. Ezra Abbot, is bound with the book, and greatly enhances its value.

ON FORCE. Its Mental and Moral Correlates, and on that which is supposed to underlie all phenomena; with speculations on Spiritualism, and other abnormal conditions of Mind. By Charles Bray, author of "The Philosophy of Necessity," etc. London: Longmans, Reader & Dyer. 8vo.

The author of this work takes a forcible view of physical things in general; he resolves all material phenomena by his doctrine of Force. Heat, light, electricity, magnetism, chemical affinity, matter whether solid, liquid, or gaseous, and the sense of feeling are but examples of Force under different conditions or in different relations. The general term Force includes both what we have been accustomed to call matter and spirit. Life and mind, therefore, according to this theory, are merely correlates of Force. These are the main premises on which Mr. Bray bases his argument. He endeavors to show, further, that changes or differences in form, quality, quantity, etc., of matter, and differences in quality, degree, constitution, power, etc., of mind, depend upon the peculiar phenomena and modes of operation of force. Accepting the phrenological structure of the brain, he goes on to say that force is developed in the structure and size of the different organs, rendering them more or less influential according to their greater or less size respectively.

Mr. Bray evidently belongs to that class of free-thinkers among whom we find the names of Hume, Mill, Bentham, Edwards, and Lecky, and therefore his psychological discussions breathe much of the *esprit* of liberalism. A third of the book is occupied by the speculations on Spiritualism, in the course of which some "manifestations" are introduced, with the view to showing their correlation with force. Taken altogether, the book is of an interesting character to those metaphysically inclined, and decidedly unique in the treatment of the subjects considered.

THE RED BRIDGE. A Temperance Story. By Thrace Talmon, author of "Edith Hale," "Captain Molly," "The New Clerk," etc., etc. New York: National Temperance Society and Publication House, 172 William Street. 1867. Price, 87 cents.

This is a very interesting temperance story, full of good moral maxims, and shows the evils of the "fashionable wine cup," in its tendency to pave the way to the drunkard's grave. It is a book that should have a place in every household, where the ultimate welfare of its younger members is at all a matter of concern.

A NEW AND PRACTICAL SYSTEM OF THE CULTURE OF VOICE AND ACTION, and a complete Analysis of the Human Passions, with an appendix of Readings and Recitations. Designed for public speakers, teachers, and students. By Prof. J. E. Frohisher. \$1 75.

Americans are nearly all good talkers, but very few are known as good public speakers or orators, for the reason that sufficient attention is not given to the artistic culture of the voice. How often have we been pained by the wretched delivery of a well-written sermon, or by the uncouth grimaces of a public speaker, whose words, though eloquent and appropriate to his subject, lost nearly all their meaning and force from the disagreeable character of his voice and gesticulation! This book is well adapted to the instruction of those who would speak gracefully and acceptably. Considered as a manual of instruction in elocution, we feel warranted in pronouncing it a superior work. The author has struck the key-note of the whole subject in the very commencement of his treatise. He says, "BE NATURAL."

DAVID COPPERFIELD. By Charles Dickens. Diamond Edition, illustrated. Boston: Ticknor & Fields. Cloth, \$1 50.

This, one of the most interesting among the clever works of Dickens, is well brought out, both as regards the character of its illustrations and the clear and beautiful typography. The illustration of Uriah Heep and his mother is in excellent keeping with the pen portraits of those "marked characters."

THE ENGLISH OF SHAKESPEARE; Illustrated in a Philological Commentary on his "Julius Cæsar." By George L. Craik, Professor of History and of English Literature in Queen's College, Belfast. Edited from the Third Revised London edition, by W. J. Rolfe, Master of the High School, Cambridge, Mass. Boston: Crosby & Ainsworth. Cloth, \$1 75.

Professor Craik did a good work for those who are interested in philology when he prepared his English of Shakespeare. His lucid renderings and explanations of intricate or obscure passages, his references to historical incidents and to well-known phrases in common use, have contributed largely to an understanding and appreciation of the writings of the great dramatist. The American edition brought out by Mr. Rolfe is exceedingly creditable, and of service to teachers and students who are interested sufficiently in the history of the English tongue to avail themselves of the extended researches of others in philology. By a careful study of the commentary on "Julius Cæsar," one will learn more about Shakespeare than he could if he read the entire series of Shakespeare's plays without such learned assistance.

A TALE OF TWO CITIES. By Charles Dickens. With Sixty-four Illustrations. From Original Designs by John McLenan. Cloth, gilt back, \$1 25. Author's American edition. Philadelphia: T. B. Peterson & Bros.

This volume contains one of the best written stories of the distinguished novelist. The publishers appear to have entertained that impression, since the number of illustrations which spice it is quite large, viz., sixty-four, and the paper and general appearance of the book an improvement upon former issues.

THE AMERICAN NATURALIST has reached its third monthly number. It improves on acquaintance, and promises to become a standard work. It is handsomely illustrated and clearly printed. See advertisement.

BACON'S DESCRIPTIVE HANDBOOK OF AMERICA: Comprising History, Geography, Agriculture, Manufactures, Commerce, Railways, Mining, Finance, Government, Politics, Education, Religion, Characteristics, Public Lands, Laws, etc. By George Washington Bacon, F.R.G.S. With Colored Maps. London edition. 12mo. Supplied by Fowler and Wells. \$3 25.

It was suggested to us that every American, before visiting Europe, should procure a copy of this work; and on thinking the matter over, we have come to that conclusion ourselves. There are very few Americans, even, who are thoroughly acquainted with the vast resources of their country. They have a vague idea of its vast extent; its unbounded commerce; its illimitable agricultural capabilities; its ever increasing population; its endless railways, telegraphs, rivers; its religion; its schools; its army and navy, and its glorious history; but they know comparatively little of the details. But here we have an industrious Englishman who has collected a store of information for us, classified it, and now presents it to us in a compact and readable volume, for which he deserves the thanks of all Americans. It is not a mere dry collection of statistics, gathered on the run, but the work contains evidences of deep and earnest labor.

THE RICH HUSBAND. By Mrs. J. H. Riddell, author of "George Geith," "Maxwell Drewitt," "The Race for Wealth," "Phemie Keller," etc. Philadelphia: T. B. Peterson & Brothers. Cloth, \$2.

This is the reprint of a novel which has commanded an extensive sale in England, and doubtless will meet with a like success here. The publishers have always exercised admirable discretion in their selections from the field of English novelists, and "The Rich Husband" does no discredit to their judgment. The work is tastefully and neatly bound, as usual.

WATSON'S RAILROAD MAP OF the United States, Mexico, etc. Pocket style. Cloth. Price, post-paid, \$1.

This is a new and very neatly drawn exhibit of our country and its network of railways. The map is large, nearly five feet square, representing the States and Territories with their counties, principal cities and towns in a style of completeness adapting it for general purposes.

CHAMBERS' ENCYCLOPEDIA. A Dictionary of Universal Knowledge for the People; on the basis of the latest edition of the German Conversations Lexicon. Illustrated by wood engravings and maps. Philadelphia: J. B. Lippincott & Co.

Parts 115 and 116 of this invaluable work have come to hand. The present numbers contain excellent articles on "Trichina Spiralis," "Trichiniasis," "Turkey—Her Language and Literature," and others; bringing the work down to the word "Union."

THE ROUND TABLE, a first-class literary weekly, made a handsome start during the war, but found it prudent to reef sails and lie-to for a time until the storm subsided. The *Round Table* was subsequently newly manned with a capital crew of well-tried men, and again set sail on a voyage around the world. Regular weekly trips are now made. The craft is well freighted with the staunchest and best materials, and is just such an enterprise as all sensible people, who would keep up with the progress of the age should take stock in. It is one of the best advertising mediums for authors and publishers in America, and should have a place in

every private and public library. Terms of subscription are \$6 a year. Address THE ROUND TABLE, New York.

THE DENTAL COSMOS for April is at hand, and is replete with instructive matter of special interest to the dental profession. We notice in it the publication of an excellent article, from an exchange, on "Temperaments; their Influence upon Mentality and Disease in General," which sets forth the distinctive influences of the different temperaments recognized by Phrenology with considerable accuracy. The "Dental Cosmos" is published by S. S. White, Philadelphia.

New Books.

[Among the late issues of the press not elsewhere noticed in these pages, we may mention the following, all of which may be ordered through us, as in various ways and degrees valuable and interesting.]

RIGSIDE EDITION of the Works of Charles Dickens. Twenty-six volumes. 8vo. Containing all the English and American Illustrations. Price in cloth, per vol., \$2 50; half calf, \$4.

HOUSEHOLD EDITION. Fifty-three Vols. Illustrated. Price per vol., cloth, \$1 25.

HURD & Houghton, Publishers, New York, have recently brought out the following:

LAVATER'S PHYSIOGNOMY, printed in the German Language. 8 vols. Half calf, \$1 50 each.

THE SIGNET OF KING SOLOMON; or, the Freemason's Daughter. By A. C. L. Arnold. New Edition, revised and enlarged. Illustrated. Cloth, \$1 50.

MANUAL OF ELEMENTARY LOGIC. For Teachers and Learners. By Lyman H. Atwater. Cloth, \$1 25.

THE BIBLE-READER'S HELP. From the Religious Tract Society, London. Revised and Enlarged. Cloth, 45 cents.

HAND-BOOK OF MINNESOTA; Describing its Agriculture, Commercial and Manufacturing Resources, etc. By Rufus Blanchard. Paper, 35 cents.

A SEQUEL TO "MINISTERING CHILDREN." By Maria L. Charlesworth. Cloth, \$2 05.

THE REV. MR. SOURBALL'S EUROPEAN TOUR; or, the Recreations of a City Parson. By Horace Cope. Illustrated. Paper, 90 cts.

THE ENGLISH OF SHAKESPEARE; Illustrated in a Philological Commentary on his "Julius Caesar." By G. L. Oalk. Edited from the Third Revised London Edition, by W. J. Rolfe. 12mo, pp. xiv., 386. \$1 75.

MOSEY AND HIS MEN: a Record of the Adventures of John S. Mosby, etc. By J. M. Crawford. Cloth, \$2.

ECCE DEUS. Essays on the Life and Doctrine of Jesus Christ. With Controversial Notes on "Ecce Homo." Cloth, \$1 75.

PRACTICAL DIRECTIONS. By Richard M. Hodges, M.D. Second Edition, thoroughly revised. Half sheep, \$2 25.

IRVING'S SALMAGUNDI. [Putnam's Railway Classics.] Paper, 90 cents.

THE HOPES OF HOPE CASTLE; or, Times of John Knox and Queen Mary Stuart. By Mrs. Martyn. Cloth, \$1 20.

FAMOUS AMERICANS OF RECENT TIMES. By James Parton. Cloth, \$3 35.

THE EXPEDITION OF HUMPHREY CLINKER. By T. Smollett. Sq. 16mo, pp. 387. \$1 50.

THE ADVENTURES OF ROBERT RANDOM. By T. Smollett. With a Memoir. \$1 50.

A MOTHER'S LEGACY. By Mrs. S. A. Sproat. Cloth, 40 cents.

HEAVEN AND ITS WONDERS, AND HELL. From Things Heard and Seen. By Emanuel Swedenborg. Demy 8vo, pp. 453. Cloth, \$2 80. Small edition, \$1 50.

GULLIVER'S TRAVELS INTO SEVERAL REMOTE NATIONS OF THE WORLD. By Jonathan Swift. With a Sketch of the Author's Life. Cloth, \$1 50.

THE AMERICAN FRUIT CULTURIST. Containing Practical Directions for the Propagation and Cultivation of Fruit-trees in the Nursery, Orchard, and Garden. With Descriptions of the Principal American and Foreign Varieties Cultivated in the United States. By John J. Thomas. 480 cuts. Cloth, \$3 35.

WELLS' EVERY MAN HIS OWN LAWYER AND FORM BOOK. A Complete Guide in all Matters of Law and Business Negotiations, for every State in the Union. New Edition, revised and enlarged. \$2 25.

GOOD ENGLISH; or, Popular Errors in Language. By Edward S. Gould, Author of "Abridgment of Alison's Europe." 12mo, \$1 75.

To our Correspondents.

QUESTIONS OF "GENERAL INTEREST" will be answered in this department. We have no space to gratify mere idle curiosity. Questions of personal interest will be promptly answered by letter. If questions be brief, and distinctly stated, we will try to respond in the "next number." Your "BEST THOUGHTS" solicited.

AN ORDER FOR BOOKS, JOURNALS, etc. must be written on a sheet by itself. Questions for this department—To CORRESPONDENTS—and communications for the Editor, must be written on separate slips.

SPECIAL NOTICE—Owing to the crowded state of our columns generally, and the pressure upon this department in particular, we shall be compelled hereafter to decline all questions relating to subjects not properly coming within the scope of this JOURNAL. Queries relating to PHYSIOLOGY, PHRENOLOGY, PHYSIOGNOMY, PSYCHOLOGY, ETHNOLOGY, and ANTHROPOLOGY, or the general SCIENCE OF MAN, will still be in order, provided they shall be deemed of GENERAL INTEREST. Write your question plainly on a SEPARATE SLIP OF PAPER, and send us only ONE at a time.

PHYSIOGNOMICAL PROPORTION.—The several features are quite distinctive, and seem to depend chiefly upon the percentage for their respective characteristics. For instance, where the parents possess features of very different types, their child will probably exhibit a blending of those features. He may have eyes like the father, a nose like the mother, or the mother's mouth and the father's ears. Nature aims at harmony and proportion, but there are generative laws or derivative influences which are in accordance with nature and our own reasonable deductions. Artists endeavor to present perfect types of human beauty, i. e., what is generally regarded as approximating to perfection by the community in which they move, and with the views of which they naturally sympathize. The old Greek masters admired a low forehead in woman, and so represented their goddesses in the marble and on the canvas. They also admired a nose mathematically straight and nearly on a line with a vertical forehead. Artists to-

day, although cherishing a deserved admiration for classic talent and beauty, seem to regard a high, broad forehead, in woman as well as in man, as an element of physiological beauty. As phrenologists we indorse them in this. Large eyes are certainly more expressive than small ones—and a small mouth more human than a large one. Considering the features as distinctive, we hardly see how, in a head and face well organized, large eyes should be associated with a large mouth, a large nose, or large ears. We would look for harmony among the several features. If the face be large, we should expect a large nose, rather large mouth, eyes, etc. Eyes bear a nearer relation to the upper portion of the head than the lower, and in fact, so far as actual size is concerned, vary less than other features.

INCREASE OF ORGANS.—Does an organ ever increase in size so as to produce a protuberance half the size of a pigeon's egg? or any protuberance? 2. What is the postage on the JOURNAL?

Ans. We don't look for lumps and protuberances, but for fullness and expansion from the center of the brain outward; though sometimes an organ is so much larger than those surrounding it as to produce a positive protuberance. 2. The postage on the PHRENOLOGICAL JOURNAL to any part of the United States is six cents per year, if paid in advance, or half a cent per number. If paid by the single number, the postage is one cent each.

FROST.—Is it true that after a part of the body has been frozen, that it will get cold or freeze sooner than a part that has not? *Ans.* Yes.

PICTURES, IDOLATRY.—Do the Scriptures teach that a person shall not have his likeness taken? If so, what portion does teach us so? I have frequently been told that it would not be in accordance with the Scriptures to have a likeness taken.

Ans. We know of no injunction in the Scriptures against one having his likeness taken. In the Commandments, however, man is forbidden to "make any graven image," etc., to worship it—that is the only shadow of a disuse that we ever heard of in the Bible. If you do not have a likeness taken for the purpose of worshipping it, or keeping it as an object of worship or idolatry by others, you need have no fears in the matter.

TARDY DEVELOPMENT.—I am nearly nineteen years of age. Nine years ago it was nearly impossible to induce me to attend school, or to read a book or paper. If I did read anything I could hardly remember it till the next morning. Now, there is nothing I like better than study and reading, especially history; and whatever I read I remember. What is the cause of this? Has the brain undergone any change? If so, what? I am conscious of no change, except as I look back and compare my disposition then and now.

Ans. Some of the faculties and propensities mature later than others. The love element comes to its strength not before puberty; the reasoning organs seldom act with as much vigor as do the perceptive until twenty or twenty-five years of age. Sometimes the organs of perception and memory are slow to ripen, and are brought into action through the influence of the ripened reasoning organs; the moral sentiments never, or very rarely, reach their summit of vigor and activity before adult age.

BEST MEDICAL TREATMENT.—Inquiries as to the best treatment for specific diseases reach us from subscribers. We should be happy to specify,

were there such a thing known. At one time bleeding was the great specific; later, mercury was largely administered for almost everything; and at present quinine is a fashionable remedy with a class. Consider the different medical schools—not the isolated portable concerns which sell diplomas for so much a copy, but those having colleges where hundreds are graduated every year—whose students are thoroughly instructed in all the branches. Among these, very different modes of practice are pursued. It would not become us to decide for others which is best, though we may state, we agree with those experienced sages who affirm that "the less medicines we take the better." We keep the works of the different schools, which may be found in our "SPECIAL LIST," sent on receipt of stamp.

DRUG MEDICINES.—Why do you generally discountenance drug medicines? Without medicines, how can chronic diseases be cured?

Ans. Drug medicine never cures—it may aid nature, or provoke it to act, but nature works the cure, or it is never obtained. People think salve cures a wound, when it simply serves to keep the wound warm and moist, and excludes the air, while nature does the healing; a cloth or lint, kept wet with water, is found to be just as good as salve. Correct methods of living, of eating, drinking, exercising, sleeping, and sunshine, will cure chronic diseases, if anything will. Drugs have nearly ruined the health of the world, and those who take the least of them are the best off. The best physician Ohio ever had gave nothing but bread pills, with correct hygienic regimen, for thirty years; but the people were angry when they found they had been cured in so simple a manner.

HYDROPHOBIA.—Where does the disease originate? What is the best method of cure? Are all animals liable to be affected by the bite of one which is rabid? What is the "mad stone?"

Ans. The disease is supposed to originate with animals of the dog and cat kind, and is transmitted by means of virus, imparted by the bite, or perhaps by the saliva applied to a fresh wound. The bite may be only an incident to furnish the raw flesh in which inoculation becomes possible. A steam bath is lately reported to be an effectual remedy. All animals are liable to be poisoned by the bite of one that is rabid. The "mad stone" is, in our judgment, a popular delusion—at least as to any effect to cure hydrophobia.

MEMORY.—One remembers the locality of a sentence on the page better than the number of the page, because Locality is more exercised in the matter than Number. Another seldom notices the number of the page, and does not remember it.

THICK SKULLS denote less activity of brain and mind than thin skulls.

ANIMOSITY.—What is an antidote for "sectarian animosity?"

Ans. Charity, which comes of Christian kindness. In other words, cultivated Benevolence.

BASHFULNESS.—We have given the causes and cure of this mental infirmity in the "Annual of Phrenology and Physiognomy for 1867." Price, postpaid, 20 cents. The perusal of this will put you in the way to overcome the weakness, and to prevent "the embarrassment" of which you complain. The remedy is cheap and effective. Try it!

Publishers' Department.

HOW TO ADDRESS THIS OFFICE.—Among the literary curiosities of the day are many important packets lying in the dead-letter office, which failed to reach their intended destinations, owing to their singular addresses. Fortunately for us, being so generally known throughout the country as phrenologists and publishers, however imperfectly our firm name may be written, providing either of these designations be added, post-masters can readily guess if a letter be intended for us, and forward the same. The usual address for many years has been Fowler and Wells, but many transpose this, and write it Wells & Fowler; still others get it mixed as follows: S. R. Fowler and U. L. Wells; Fowler, Wells & Co.; and Wells, Fowler & Co. Of late, the more frequent address is Wells' Phrenological Journal. Office of New Physiognomy. For The Phrenologist on Broadway. Publisher of "Natural Waists or no Wives." "Phrenological Cabinet." "Craniological Museum." When our No., 389 Broadway, is added, all such letters come direct; but when directed to Boston, Philadelphia, or nowhere in particular, there may be, nay, often is, delay. It is not unusual for our letters to cross the ocean, and after reaching the city of York, in Yorkshire, England, London, Mexico, and even China—a year's pilgrimage—to be returned to us. For these delays we get letters of complaint—properly addressed—and hints that there must be a "screw loose" in our machinery. Is it not surprising that we should be supposed to know which of the twenty or thirty Washingtons, Jeffersons, Franklins, or Mount Vernons is meant, or what county and State our correspondent hails from? He is supposed to know where we reside, and why should not we know where he resides? O that everybody would read and learn "How to Write," and how to address those whom they wish to reach.

In future, to secure prompt attention, it may be as well to address all letters relating to this publication, as follows:

S. R. WELLS,
Editor Phrenological Journal,
389 Broadway,
New York.

If for books, or for anything connected with this office, it may be the same. Letters will reach us, finally, if addressed in any of the ways named above. While one or more of the three who formerly composed the firm may be away, in Europe or other where, the editor is expected to be always at home. Hence letters addressed to him will receive immediate attention, and all orders be promptly filled.

OUR NEW TERMS.—We enlarge the JOURNAL, commencing with the July number, by increasing its pages. The new terms have been fixed, as follows: Yearly subscriptions, payable in advance.

Single copies.....\$ 3 00
Clubs of Five..... 12 00
Clubs of Ten..... 24 00
and an extra copy to the getter up of the club of five, on receipt of \$12. No premiums can be allowed at the above prices. See premium list in another place.

Remittances may be made by check, draft, or post-office order, made payable to S. R. WELLS, New York.

TO SUBSCRIBERS.—We can furnish all the back numbers of the JOURNAL from January, 1866, to all who wish

them. Subscribers should always specify what number they would like their subscriptions to commence with.

CANADA SUBSCRIBERS will please add twelve cents, the amount of the yearly Canada postage on the JOURNAL, to the subscription price, when remitting.

BACK NUMBERS of the JOURNAL, unbound, can be supplied for the years 1861, 1863, 1866, and up to present date, with the exceptions of the July and December numbers for 1865. Bound volumes of the same may be had, extending from 1849 to 1866. Prices on application. \$3 to subscribers.

EXCHANGES will please note our new terms. Instead of \$2, our terms will be, from present date, \$3 a year. Editors, who may wish to do so, may advertise and club this JOURNAL with their own, at \$2. This proposition will hold good up to December, 1867.

MESSRS. BELDING, KEITH & Co., American bankers in London, have published a pamphlet furnishing the rates at which United States bonds and securities are bought and sold over the sea; and besides the special monetary data therein given, they generously offer to render any assistance in their power that may add to the comfort and happiness of their American countrymen who may call upon them; will afford the conveniences of their reading-room, and receive and forward letters in behalf of those availing themselves of the opportunity presented.

POPE'S ESSAY ON MAN.—It is our intention to reprint this work in handsome book form, with all the notes and illustrations. We may defer it until the autumn. When ready, it will be announced in the PHRENOLOGICAL JOURNAL.

We have received a copy of the "Premium List and Regulations for the Illinois State Fair of 1867." The Fair is open to the world, and competition afforded without reserve. The number of premiums is very large, including all classes and species of manufactures, agricultural products, domestic animals, etc. The locality of the Fair will be Quincy; the opening, September 23.

DER PHRENOLOGISCHE JOURNAL ist eine erste Classe monatliche Schrift, gewidmet zu der Ethnologie, oder Rassenbeschreibung, Physiologie, oder die Naturlehre des menschlichen Körpers, Physiognomy, oder Gesichtskunde, mit "Zeichen des Charakters" und wie sie zu lesen. Nur \$3, das Jahr; oder 30 cents das einzelne Heft. Zu adressiren an S. R. Wells, No. 389 Broadway, New York. Ein gutes Mittel für ausserlesene Annoncen.

PROFESSIONAL CLASS OF 1868.—Next winter we expect to instruct another class in theoretical and practical Phrenology. The gentlemen who graduated last winter are meeting with good success as lecturers and examiners. Some of them had been in the field before as phrenologists or as speakers in other professions. These have enlarged their field of knowledge, and thereby greatly enhanced their power of doing good, and of course improved their ability to secure pecuniary success; but those who went for the first time on the rostrum are doing well, some of them much better than their most sanguine hopes had led them to expect. Our new circular is just out, and ready to be sent to all who wish it. Please inclose a

stamp and ask for circular entitled "Professional Instruction in Practical Phrenology." Address this office.

We have had the pleasure of sending to Miss Eliza Jones, of Pittston, Pa., a blind girl, who has long taken a lively interest in our works, a superior piano-forte valued at \$450, as a premium for subscriptions obtained for the PHRENOLOGICAL JOURNAL.

MANY INQUIRERS.—The new subscription rate, \$3, will apply only to subscriptions received after June 1st. All who have paid \$2 for their yearly subscription, dating from January last, will receive the JOURNAL regularly as before, until the close of the year.

LE "PHRENOLOGICAL JOURNAL" et la "Vie Illustrée" est une revue de premier ordre, parvenue à sa 42me année, consacré à la Physionomie, avec les "signes du caractère" l'Ethnologie l'histoire naturelle de l'homme, la Phrénologie et les temperaments, la Physiologie, les lois de la vie et de la santé, la Psychologie, la science de l'âme. Amplement illustré. Mensuel, \$3 par an. Numéros simples 30 cents. Adresse: S. R. Wells, 389 Broadway, New York.

Our thanks are tendered to Hon. N. P. Banks and Lieutenant J. L. Andem, of Washington, for valuable public documents.

HON. WILLIAM LAWRENCE, M.C., from Ohio, will please accept our warmest thanks for a copy—complete—of that very valuable work, "The United States Coast Survey."

AN ERROR CORRECTED.—A lady sends us the following, which shows what way she will vote, one of these days:

Mr. Editor.—Imagine my surprise upon opening the March JOURNAL, to behold the portrait of our townsman, Sydenham E. Ancona! But surprise gave way to consternation to find him denominated as the "Republican Representative from the Eighth Congressional District." Poor old Berks County! would that she could have a Republican candidate! But that can not be until this generation are gathered to their fathers. Why, Berks County is that benighted region, of which you may have heard, the inhabitants whereof still vote and cheer for Andrew Jackson! By the way, I was not born in Berks! I thought of writing at once to inform you of the error, but not wishing to be thought presumptuous, concluded not to; but two of my friends were so surprised and indignant that such a mistake should appear in the JOURNAL—forgetting that we all are liable to err—they forthwith declared a lack of confidence in the PHRENOLOGICAL JOURNAL, and then I determined to write. Know then, all men, that to S. E. Ancona does not belong the honor of belonging to the glorious Republican party. * * * He is now a member of the Fortieth Congress! Excuse me for saying that he is not; he was defeated last autumn by J. Lawrence Getz, who takes his seat as the member from Democratic Berks in the Fortieth Congress. I am most respectfully yours, A. G. J.

We admit and regret our error, and doubt not Mr. Ancona will do the same, when the ladies take him in hand as they have us. Our fair correspondent speaks out with little reserve, and when she takes the field, we advise Messrs. Ancona and Getz to get on the other side of the fence.

TESTIMONIALS.—We have printed a neat three-page circular containing testimonials in favor of Phrenology by learned and eminent men. These may be used by lecturers and others as hand-bills, to great advantage. We can furnish these to lecturers by the thousand, at the cost of paper and printing. Those wishing a copy may send a stamp.

General Items.

GOING TO THE ROCKY MOUNTAINS.—We are pleased to hear that many sensible Americans will spend their summer vacations in our own great West, instead of running after the French show. They would learn something of the extent and resources of Uncle Samuel's Farm—something of his big mountains, big lakes, big trees, and big—newly acquired—ice-house. By the way, why not organize a company, charter a steamer, and make a summer excursion to the Big Cool? Parties can be made up in the East, and go overland to California, thence by steamer to the new territory, which, out of respect to Ben. Franklin, who, with his kite, suggested the electrical telegraph, we would venture to name FRANK-LAND.

DR. LEWIS, of Boston, announces the eleventh annual session of his gymnasium, commencing on the first of July. The importance of physical training is being felt by a world of invalids, and those who can should avail themselves of this excellent means by which to better their constitutions.

CRINOLINE CONTRACTING.—It is a relief to note the change, for the better, in the fashions, reducing the long-worn wiry expanse. Women will wear hoops. They insist on the convenience, gracefulness, and healthfulness of the airy cage. Its use enables them to walk more freely; and when reduced to proper limits we shall let them pass.

TEA AND COFFEE.—These are simply "luxuries," not necessities, and are indulged in very extensively—probably, in many instances, in such excess as to cause nervous headaches, mental irritability, sleeplessness, and probably in some degree to warp the mind, if not to increase a tendency to insanity. We say its excessive use may produce these results. We have never, in any instance, recommended the use of these substances, and we sincerely believe the less used the better. But who will heed our opinion when all the world are against us? Seeing these things advertised in the JOURNAL, have led some to suppose that we approve them. People with common sense must judge for themselves what they will eat and drink. If we advertise pork, cod-liver oil, or quinine, it does not follow that we approve their use, or that we use them at all. If tea and coffee be used as we use them, no serious harm can come of them.

SEARCHING YOUR BAGGAGE.—We think Napoleon has made a great mistake by refusing to permit a visitor whom he has invited from other countries to attend his show, to enter his territory without the humiliation of having his baggage overhauled by police, as though such visitor were a thief or a smuggler. When he said to all the world, "Come to Paris, and bring your friends," it would naturally be supposed that he would be glad to welcome them with something more cordial than with a body of "baggage searchers." But so it is, every American, every Englishman, and everybody else who visits and departs from France, must submit to the humiliating, degrading, degrading search. Ladies will be stripped and their under clothing examined to see if they have lace, jewelry, and so forth, concealed—which proceeding will leave anything but an agreeable impression on the minds of Napoleon's guests. When will this nuisance be abated?

THE END OF A GOURMAND.—

A celebrated character has disappeared from the Palais Royal, Paris. René Lartigue was a Swiss, and a man of about sixty. He spent the third of his life at dinner. Every morning at ten o'clock he was to be seen going into a restaurant, and in a few moments was installed in a corner, which he only quitted about three in the afternoon, after having drunk six or seven bottles of different kinds of wine. He then walked up and down the garden till the clock struck five, when he made his appearance again at the same restaurant, and always at the same place. His second meal, at which he drank quite as much as at the first, invariably lasted till half-past nine. Therefore he devoted nine hours a day to eating and drinking.

[What a task the poor fellow performed! and what a useless life he led! What of his future? let us leave that to his Maker. But we may consider the worthless life he led, and hold him up as an example to be shunned.]

[ENTER RICH HEIRESS.]—

"Good-morning, aunt, how does thee do?" "Very well, I thank thee. And how does thee do?" "Very well. Does thee see my new diamond ear-rings?" "Ah! are they real diamonds?" "Yes; they cost three thousand dollars. My lover gave them to me. How does thee like them?" "Well, I must bear my testimony according to my convictions, and I must say that I would rather know that they were clean linen, than to see thee with those diamonds in thy ears!" Curtain falls.—*New Bedford Standard.*

["Clean linen" indicates character—a clear conscience, for example. Diamonds are as often worn by rogues, jockeys, gamblers, etc., as by honest persons.]

PURE MAPLE SUGAR.—

Al-though our lot is cast far from the "sabbath," in the noisy, bustling, enterprising, wicked city, where "head work" absorbs us, our friends do not forget that we, like other children, have a "sweet tooth." Messrs. N. C. MEKKER, of New York, and PAUL C. HOWE, of Plattsburg, kindly favored us with choice packages of maple sugar from Cortland and Steuben counties, in Western New York. To these gentlemen we return the thanks of all our happy circle who partook of the same; and O what a smacking of lips there was when the rich, luscious saccharine dissolved under their tongues! The following note accompanied one of the packages:

S. R. WELLS: *Dear Friend*—When Montaigne entitled one of his essays, "We Taste Nothing Pure," he had not eaten any maple sugar from Cortland County.

Long ago I used to think that nothing would be finer than for a paper to print standard English poetry. Your beautiful production of the *ES-SAY ON MAN* carries out my idea. After all said and written, there is no poetry in our tongue equal to Pope's. Ever thine, N. C. M.

[We are now getting our mouths ready for "strawberries and cream," and shall save a little maple sugar to sweeten them. Won't that be nice? Why don't folks plant more sugar-maple trees and strawberry vines, so that everybody could have enough?]

CHECK YOUR BAGGAGE.—

In England, no checks are used; trunks, carpet bags, pelisses, bandboxes, and bundles are piled on top of railway trains, and the whole covered over with heavy canvas. When the train arrives at a station, each one is expected to point out his own baggage. If he fails, he has no means of tracing it. Americans are more inventive, and have used checks for years. But we now have something new in this line, recently patented by Mr. G. F. THOMAS, editor of Appleton's Railway Guide, which is the most safe and satisfactory of anything of the kind introduced. It must be adopted at once by railway

companies who keep the comfort and convenience of passengers in view. Mr. Thomas will send descriptive circulars to those who apply.

A NEW BROOM SWEEPS

CLEAN.—All women who sweep—not with costly dresses—give thanks for a boon in the shape of a new broom, recently invented by Mr. Silver, and now being introduced by Messrs. C. A. CLEGG & Co., of 206 Broadway, N. Y. We have seen it, tried it, and like it. All who are interested—all the women of course—should induce their other selves to get one of these new brooms at once. It will do no harm to get half a dozen to give away. What more appropriate present from a young man to a young lady? We know two or three among the phrenological fraternity who have tried them, who now refuse to use any other kind. See advertisement, and send for a circular.

THE NEW YORK MEDICAL

COLLEGE FOR WOMEN was chartered April 14, 1863. The following compose the present Board of Trustees:

President, Mrs. Wm. H. Greenough; Vice-President, Mrs. Edward Bayard; Treasurer, Mrs. Elvina A. Land; Secretary, Mrs. C. F. Wells. Mrs. R. B. Connolly; Mrs. V. C. King; Mrs. L. M. Ward, M.D.; Mrs. E. C. Stanton; Mrs. D. E. Sackett; Mrs. R. T. Holmes; Miss M. B. Devey; Mrs. M. E. Winchester; Mrs. S. L. Porter; Mrs. J. W. White; Mrs. H. G. Blinn.

FACULTY.—Hon. J. V. C. Smith, M.D., Lecturer on Anatomy; J. R. Andrews, M.D., Prof. of Principles and Practice of Surgery; F. L. H. Willis, M.D., Prof. of Materia Medica; S. L. Kilbourn, M.D., Prof. of Physiology; E. P. Fowler, M.D., Prof. of Theory and Practice of Medicine; Anna Inman, M.D., Prof. of Obstetrics; Chas. S. Stone, Prof. of Chemistry; Mrs. C. S. Lozier, M.D., Prof. of Diseases of Women and Children, and Dean.

There were graduated at the recent commencement a number of ladies, who will enter at once into general practice.

It is said there are now some three hundred lady physicians in the United States in full practice, the proceeds of which are from \$2,000 to \$15,000 a year each. One young lady, near New York, has a practice amounting to upward of \$10,000 a year! Her medical education cost not far from \$300, besides her time.

We can name no other calling at present which promises better remuneration than this; nor one in which an uncumbered lady can be more usefully employed. Of course, some men will "pooh, pooh," and charge the ladies with unsexing themselves, becoming "strong-minded," etc.; but what of that? Are not all new movements opposed? Is not Phrenology opposed? Is not Temperance opposed? Has not the Christian religion been opposed from the start? We must expect opposition, even martyrdom, for all brave pioneers. But truth and right will eventually triumph. Our accountability is to God rather than to Mrs. Grundy, or "what will people say." So, who's afraid? The managers of this College want money in order to increase its facilities and its usefulness. Here is their Appeal:

TO ALL WOMEN TO WHOM THIS MAY COME.—GREETING—Ladies: We, the Board of Trustees of the "N. Y. Medical College for Women and Hospital for Women and Children," do most earnestly and hopefully appeal to you for aid.

Our Fourth Collegiate Year terminated with Commencement, March 1st, and our College walls are yet unbuild, having petitioned moneyed and influential men in

vain; sure of success, we turn to you. Build for yourselves and sisters a metropolitan monument, of which the entire nation shall be justly proud.

Our Appeal is to all. Follow your first, your best impulse, and send us a Donation, individually or collectively, as may best suit your pleasure or convenience, of \$1 or more each, and the work is done. [Larger sums, \$5, \$10, or \$50, not declined.]

We are not unmindful of the generous sympathy and aid of noble-hearted men; and we shall not refuse their donations when proffered; besides, a Hospital Fund will always be needed, to relieve and aid suffering, helpless women and children.

Gratefully acknowledging the guidance and care of our heavenly Father in the past, with trustful hope for the future, we doubt not that your aid as well as sympathies and prayers will be ours.

Will Editors and Clergymen's wives please aid? Direct to Mrs. C. F. WELLS, Secretary, care of Fowler & Wells, N. Y. City, or to either of the Trustees.

[It may be proper to add, that young ladies with limited means, desirous of fitting themselves for practice, may attend the College on easy terms, by making arrangements with the Trustees. Those who favor this enterprise may form associations in towns and neighborhoods, select their candidate, raise the means to defray expenses, and send the lady student of their choice to the College, who, when graduated, may settle and practice at home. This is one way to secure the services of a lady physician, and help forward the cause.]

A BULLET IN THE BRAIN.—

About nine months since, a boy residing near Buffalo, N. Y., while amusing himself with a pistol, accidentally discharged it, and the ball entered his brain. The boy came to his senses after a while, and is still alive, though all attempts to extract the ball have been unsuccessful, and would probably result in death. He can not speak, and the ability to read is gone, but the accident resulted in increasing the power of the organ of Calculation, and he now figures up with marvelous celerity very abstruse sums. The above is vouched for.—*Exchange.*

[This is interesting if it be a fact, but it is altogether too vague to prove anything. Name, date, and place should have been stated, to make it satisfactory.]

BARNUM'S PHRENOLOGIST.—

When we named that degenerate specimen of humanity, Barnum's Prof. Livingston, under the head of Drunken Phrenologists, in the April number, we could not predict how soon he would come to grief, although it was evident that his career would not be a long one, judging from the life he led. It is not many weeks since his low conduct disgusted even the virtuous Museum man—the would-be M.C.—who turned him into the streets. The police report in the *New York Tribune* of the 19th April finishes the story of Barnum's bad phrenologist.

HOMICIDE IN THE SEVENTH WARD.—IN-QUEST BY CORONER WILDEY.—Shortly before one o'clock yesterday morning a row occurred in the "Library" (drinking) saloon, No. 17 Jefferson Street, kept by Marcus H. Tallman, between John R. Livingston, residing at No. 31 New Canal Street, and Vincent Cody of No. 393 Cherry Street, and Edward Allen of No. 201 East Twelfth Street. During the fracas, Cody shot Livingston in the head with a pistol, causing a wound that terminated fatally in a few moments. Cody and Allen left the saloon immediately after the occurrence, but were met soon after in Madison Street, near Jefferson, in company with a number of those who had witnessed the affray, by roundsman Whitcomb, and were by that officer taken to the station-house to await the action of the coroner. In the mean time, Police surgeon Bliven had been notified to visit the wounded man, and was soon in attendance, but before his arrival life was extinct. The body was then conveyed to the station-house.

Coroner Wildey was notified, and at eleven o'clock proceeded to the station-

house and held an inquest on the body. A number of witnesses were examined. From their testimony it appears that there were present in the back room of the saloon, just previous to the disturbance, a number of persons, most of whom were partially intoxicated. After the party had taken several drinks, one of the number proposed that they should throw dice. To this Livingston first objected, but finally consented. After a time Cody accused Livingston of fudging the dice. This the latter denied, and with oaths called the party liars and loafers. [This was like Satan rebuking sin.] He then turned to go out into the front room, when he was knocked down by Allen. Cody and Allen then attacked him, and kicked and beat him about the face and head. Livingston attempted to escape them by getting under the counter, but was dragged out, and the attack continued by Cody and Allen. The proprietor of the saloon attempted to stop the row and release Livingston from his assailants. Some of the bystanders called to Allen and Cody to be careful or Livingston would shoot. Cody said: "He'll shoot, will he?" and producing a pistol fired at Livingston. The shot took effect in the forehead, and the wounded man at once fell back and expired in a few minutes. Tallman attempted to detain the assailants, but they shook him off and left the store. [Grocery.] It was claimed by one or two of the witnesses that the pistol used by Cody was taken by him from the deceased. Sergeant Babcock, on examining the body soon after it was conveyed to the station-house, found in one of the coat pockets a pistol holster and a pawn ticket for a pistol, which had been pledged on the 2d inst. Cody and Allen, soon after the occurrence, entered the Seventh Precinct station-house and surrounded themselves. Deputy Coroner Wooster Beach, M.D., made a post-mortem examination of the body, and found that the ball had penetrated the left temple and passed into the brain, causing death. The jury, after a short deliberation, rendered a verdict in accordance with the evidence, Cody being returned as the principal in the affray, and Allen as an accessory before the fact. On the rendition of this verdict, the coroner committed the prisoners to the Tombs without bail, to await the action of the Grand Jury.

Cody is a native of Ireland, aged twenty-nine years. He has long been known to the police as a rough character, and a bully at elections, and has, on several occasions, been arrested for being engaged in pugilistic encounters at primary meetings and elsewhere. On being questioned as to his guilt, he made the following statement: "Deceased pulled a pistol from his pocket, and while I was trying to get it away from him, it snapped in my hand and went off and shot him." The prisoner exhibited a mark on his hand which he said had been made by the hammer of the pistol. Allen is aged twenty years, a native of Ireland, and by occupation a boatman. Like his companion, Cody, he is known as a rough and fighter. He made the following statement: "I am not guilty of the charge. The deceased cocked the pistol at me, and Cody attempted to get it from him, when it went off."

The deceased was a native of the western part of this State, and aged about thirty-three years. [He had been attached to Barnum's Museum for several years, and was known to be not only a drunkard, but something worse. Let other self-styled professors take warning.]

ECONOMY OF CIGAR ENDS.—

Two years ago a society was established in Hamburg, the members of which agreed to preserve all the points of their cigars, instead of biting them off and throwing them away. These ends are collected, and then sold in large quantities, either for the manufacture of snuff or for smoking in pipes. The sum thus raised is applied to the maintenance and education of orphans, and some idea of the extent of the society, and the intensity of its affection for the weed, may be gained from the fact that the cigar ends of two years' saving have brought in a sufficient sum for the maintenance of twenty-two children.—*The papers.*

[Beautiful. Now if the Hamburgers will save all the money they foolishly spend on tobacco and lager beer, they will have enough to educate all the children of that wicked city. Our remarks are equally applicable to the Manhattaners.]

AN ESSAY ON MAN.

IN FOUR EPISTLES TO ST. JOHN, LORD BOLINGBROKE. BY ALEXANDER POPE. WITH NOTES, AND FIFTEEN ORIGINAL ILLUSTRATIONS.

[CONCLUDED.]

WHERE grows? where grows it not? If vain our toil,
We ought to blame the culture, not the soil:
Fix'd to no spot is happiness sincere,
'Tis nowhere to be found, or everywhere:
'Tis never to be sought, but always free,
And fled from monarchs, St. John! dwells with thee.
I. Ask of the learn'd the way! The learn'd are blind:
This bids to serve, and that to shun mankind;
Some place the bliss in action, some in ease,
Those call it pleasure, and contentment these.
Some, sunk to beasts, find pleasure end in pain:
Some, swell'd to gods, confess e'en virtue vain;
Or indolent to each extreme they fall,
To trust in everything, or doubt of all.

Who thus define it, say they more or less
Than this, that happiness is happiness?*

II. Take nature's path, and mad opinions leave;
All states can reach it, and all heads conceive:
Obvious her goods, in no extreme they dwell;
There needs but thinking right, and meaning well;
And, mourn our various portions as we please,
Equal is common sense, and common ease.

Remember, man, the "Universal Cause
Acts not by partial, but by general laws;"
And makes what happiness we justly call,
Subsist not in the good of one, but all.
There's not a blessing individuals find,
But some way leans and hearkens to the kind:
No bandit fierce, no tyrant mad with pride,
No cavern'd hermit rests self-satisfied.
Who most to shun or hate mankind pretend,
Seek an admirer, or would fix a friend.
Abstract what others feel, what others think,
All pleasures sicken, and all glories sink:
Each has his share, and who would more obtain,
Shall find the pleasure pays not half the pain.

Order is Heaven's first law; and this confest,
Some are, and must be, greater than the rest,
More rich, more wise; but who infers from hence
That such are happier, shocks all common sense.
Heaven to mankind impartial we confess,
If all are equal in their happiness;
But mutual wants this happiness increase;
All nature's difference keeps all nature's peace.
Condition, circumstance, is not the thing;
Bliss is the same in subject or in king,
In who obtain defense, or who defend,
In him who is, or him who finds a friend:
Heaven breathes through every member of the whole
One common blessing, as one common soul.
But fortune's gifts, if each alike possess,
And each were equal, must not all contest?
If then to all men happiness was meant,
God in externals could not place content.

Fortune her gifts may variously dispose,
And these be happy call'd, unhappy those;
But Heaven's just balance equal will appear,
While those are placed in hope, and these in fear;

* Physical enjoyment results from the normal exercise of all the faculties and organs of body and brain; but real happiness is only found in the subordination of all the passions and selfish propensities to the moral sentiments, or the spiritual part of man. Happiness results from perfect trust in and submission to God, and from that serene meekness, repose, and obedience which says, "Thy will be done."

Not present good or ill, the joy or curse,
But future views of better or of worse.*
Oh, sons of earth! attempt ye still to rise,
By mountains piled on mountains, to the skies?
Heaven still with laughter the vain toil surveys,
And buries madmen in the heaps they raise.

III. Know, all the good that individuals find,
Or God and nature meant to mere mankind,
Reason's whole pleasure, all the joys of sense,
Lie in three words, health, peace, and competence.
But health consists with temperance alone;
And peace, O virtue, peace is all thy own.
The good or bad the gifts of fortune gain;
But these less taste them, as they worse obtain.
Say, in pursuit of profit or delight,
Who risk the most, that take wrong means, or right?
Of vice or virtue, whether bless'd or curs'd,
Which meets contempt, or which compassion first?
Count all the advantage prosperous vice attains,
'Tis but what virtue flies from and disdains;
And grant the bad what happiness they would,
One they must want, which is, to pass for good.

Oh, blind to truth, and God's whole scheme below,
Who fancy bliss to vice, to virtue woe!

Who sees and follows that great scheme the best,
Best knows the blessing, and will most be bless'd,
But fools the good alone unhappy call,
For ills or accidents that chance to all.
See Falkland dies, the virtuous and the just!
See godlike Turenne prostrate on the dust!
See Sidney bleeds amid the martial strife!
Was this their virtue, or contempt of life?
Say, was it virtue, more though Heaven ne'er gave,
Lamented Digby! sunk thee to the grave?
Tell me, if virtue made the son expire,
Why, full of days and honors, lives the sire?
Why drew Marseilles' good bishop purer breath,
When nature sickened, and each gale was death?
Or why so long (in life if long can be)
Lent Heaven a parent to the poor and me?

What makes all physical or moral ill?
There deviates nature, and here wanders will.

God sends not ill, if rightly understood,
Or partial ill is universal good,
Or change admits, or nature lets it fall,
Short, and but rare, till man improved it all.
We just as wisely might of Heaven complain,
That righteous Abel was destroy'd by Cain,
As that the virtuous son is ill at ease
When the lewd father gave the dire disease.
Think we, like some weak prince, the Eternal Cause
Prone for his favorites to reverse his laws!

IV. Shall burning *Ætna*, if a sage requires,
Forget to thunder, and recall her fires?
On air or sea new motions be impress'd,
Oh, blameless Bethel! to relieve thy breast?
When the loose mountain trembles from on high,
Shall gravitation cease if you go by?
Or some old temple, nodding to its fall,
For Chartres' head reserve the hanging wall?

V. But still this world (so fitted for the knave)
Contents us not. A better shall we have?
A kingdom of the just then let it be:
But first consider how those just agree.
The good must merit God's peculiar care!
But who, but God, can tell us who they are?

* Those with lucrative offices, or with great riches, fear they may lose them, while those without either office or fortune hope to obtain them; and this reminds us of a question, debated by young men, as follows: Which is most enjoyed—anticipation, or realization?

One thinks on Calvin Heaven's own spirit fell;
 Another deems him instrument of hell:
 If Calvin feel Heaven's blessing, or its rod,
 This cries, there is, and that, there is no God.
 What shocks one part, will edify the rest,
 Nor with one system can they all be bless'd.*
 The very best will variously incline,
 And what rewards your virtue, punish mine.
 WHATEVER IS, IS RIGHT.—This world, 'tis true,
 Was made for Cæsar, but for Titus too;
 And which more bless'd? who chain'd his country, say,
 Or he whose virtue sigh'd to lose a day?

VI. "But sometimes virtue starves while vice is fed."
 What then? Is the reward of virtue bread?
 That, vice may merit, 'tis the price of toil;
 The knave deserves it when he tills the soil;
 The knave deserves it when he tempts the main,
 Where folly fights for kings, or dives for gain.
 The good man may be weak, be indolent;
 Nor is his claim to plenty, but content.
 But grant him riches, your demand is o'er?
 "No—shall the good want health, the good want power?"
 Add health and power and every earthly thing—
 "Why bounded power? why private? why no king?
 Nay, why external for internal given?
 Why is not man a god, and earth a heaven?"
 Who ask and reason thus, will scarce conceive
 God gives enough while he has more to give;
 Immense the power, immense were the demand;
 Say, at what part of nature will they stand?
 What nothing earthly gives or can destroy,
 The soul's calm sunshine, and the heart-felt joy,
 Is virtue's prize: a better would you fix?
 Then give humility a coach and six,
 Justice a conqueror's sword, or truth a gown,
 Or public spirit its great cure—a crown.
 Weak, foolish man! will Heaven reward us there,
 With the same trash mad mortals wish for here?
 The boy and man an individual makes,
 Yet sigh'st thou now for apples and for cakes?
 Go, like the Indian, in another life,
 Expect thy dog, thy bottle, and thy wife,
 As well as dream such trifles are assign'd,
 As toys and empires, for a god-like mind.
 Rewards, that either would to virtue bring
 No joy, or be destructive of the thing;

* When it is known and realized that no two persons are organized precisely alike—that we differ in size, shape, height, breadth, quality, capacity, and complexion, the reason why we do not agree in belief, in tastes, in accountability, and in religious opinions becomes at once apparent. It must be clear to all, that though we may resemble each other very closely in general appearance, yet a marked difference between us exists, and a knowledge of Phrenology and Physiognomy makes those differences most palpable. Then, how can it be expected that we who differ in degree of knowledge, in powers of comprehension, in modes of education and development, shall be perfectly agreed with regard to religious opinions? One is born and educated in a Roman Catholic country, another in a Protestant country, another among the heathen—one among Christians, and another among Jews; and is it not natural to infer that each will accept and act according to the teachings of their kin and country? May not the differences of opinion in regard to religious matters be accounted for on these grounds? Do not "birds of a feather flock together?" Why is one a Roman Catholic, and another a Protestant? Why one Presbyterian, and another Baptist? Why one Episcopalian, and another Methodist? Why one Unitarian, and another Universalist? Is the God of the Calvinist a God of rigid justice and severe punishment? [Conscientiousness and Destructiveness] and is Benevolence or unbounded mercy the chief attribute in the God of the Universalist? Is blind belief more common to the Catholic than to the Protestant? Does the Episcopalian manifest more taste and refinement, more Ideality and Sublimity in his church edifices, in his music, in his decorations, in his personal dress, equipage, and surroundings than the plain Methodist? Who is it builds the finest churches, and enriches them with painted windows, etc.? How is it with the Swedenborgians? Have they more of the spiritual element in their phrenological composition?

If we admit an organic difference in the nature of different persons; if each looks at subjects through colored glasses—faculties—peculiar to himself; and if each is sincere, let us at least be tolerant, and not persecute each other on account of honest differences. It is not probable that all the world will come to be perfectly agreed on all points; but it is probable that we may be agreed on general principles. All will agree that each is accountable for the right use of every power of body and mind with which he has been blessed, and that he is to cultivate among other virtues, "the great commandment in the law:—Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind. This is the first and great commandment. And the second is like unto it: Thou shalt love thy neighbor as thyself. On these two commandments hang all the law and the prophets."—*Mat. xxii. 37.*

How oft by these at sixty are undone
 The virtues of a saint at twenty-one!
 To whom can riches give repute or trust,
 Content or pleasure, but the good and just?
 Judges and senates have been bought for gold;
 Esteem and love were never to be sold.
 Oh, fool! to think God hates the worthy mind,
 The lover and the love of human-kind,
 Whose life is healthful, and whose conscience clear,
 Because he wants a thousand pounds a year.
 Honor and shame from no condition rise;
 Act well your part, there all the honor lies.
 Fortune in men has some small difference made,
 One flaunts in rags, one flutters in brocade;

The cobbler apron'd, and the parson gown'd,
 The friar hooded, and the monarch crown'd.
 "What differ more," you cry, "than crown and cowl?"
 I'll tell you, friend! a wise man and a fool.
 You'll find, if once the monarch acts the monk,
 Or, cobbler-like, the parson will be drunk;
 Worth makes the man, and want of it the fellow;
 The rest is all but leather or prunello.
 Stuck o'er with titles and hung round with strings,
 That thou may'st be by kings, or whores of kings.
 Boast the pure blood of an illustrious race,
 In quiet flow from Lucrece to Lucrece:
 But by your fathers' worth, if yours you rate,
 Count me those only who were good and great.
 Go! if your ancient, but ignoble blood
 Has crept through scoundrels ever since the flood,
 Go! and pretend your family is young;
 Nor own your fathers have been fools so long.
 What can ennoble sold, or slaves, or cowards?
 Alas! not all the blood of all the Howards.*
 Look next on greatness: say where greatness lies:
 "Where, but among the heroes and the wise?"

* In some countries men are estimated by their ancestry. In republican America the question is not, "Who was your grandfather or grandmother?" but "What have you done? Have you achieved by your own studies, investigations, or labors success?" If so, you will be appreciated accordingly; but that which your forefathers may have achieved counts nothing to you. Here, men are judged by their merits; there, by their lineage.

"Honor and shame from no condition rise;
 Act well your part—there all the honor lies."

This is eminently democratic in its true sense, as may be seen by the elevation of men of humble sphere to posts of the highest honor and responsibility, who are supposed to be intellectually and morally competent to fill those high positions. In America, every mother is supposed to teach her son that any of the offices in the gift of the people, from corporal to commander, or from path-master to President, are rightfully within the possibility of his reach.

Heroes are much the same, the point's agreed,
 From Macedonia's madman to the Swede;
 The whole strange purpose of their lives, to find,
 Or make, an enemy of all mankind!
 Not one looks backward, onward still he goes,
 Yet ne'er looks forward further than his nose.
 No less alike the politic and wise;
 All sly slow things with circumspective eyes;
 Men in their loose ungarded hours they take,
 Not that themselves are wise, but others weak.
 But grant that those can conquer, these can cheat;
 'Tis phrase absurd to call a villain great;
 Who wickedly is wise, or madly brave,
 Is but the more a fool, the more a knave.
 Who noble ends by noble means obtains,
 Or failing, smiles in exile or in chains,
 Like good Aurelius let him reign, or bleed
 Like Socrates, that man is great indeed.

What's fame? a fancied life in other's breath,
 A thing beyond us, e'en before our death.
 Just what you hear you have; and what's unknown,
 The same (my lord) if Tully's, or your own.
 All that we feel of it begins and ends
 In the small circle of our foes or friends;
 To all beside as much an empty shade
 A Eugene living, as a Cæsar dead;
 Alike or when or where they shone or shine,
 Or on the Rubicon, or on the Rhine.
 A wit's a feather, and a chief a rod:
 An honest man's the noblest work of God.
 Fame but from death a villain's name can save,
 As justice tears his body from the grave;
 When what to oblivion better were resign'd,
 Is hung on high, to poison half mankind.
 All fame is foreign but of true desert,
 Plays round the head, but comes not to the heart:
 One self-approving hour whole years outweighs
 Of stupid starers, and of loud huzzas;
 And more true joy Marcellus exiled feels,
 Than Cæsar with a senate at his heels.

In parts superior what advantage lies?
 Tell (for you can) what is it to be wise?
 'Tis but to know how little can be known,
 To see all others' faults, and feel our own;
 Condemned in business or in arts to drudge,
 Without a second, or without a judge:
 Truth would you teach, or save a sinking land?
 All fear, none aid you, and few understand.
 Painful pre-eminence! yourself to view
 Above life's weakness, and its comforts too.

Bring then these blessings to a strict account:
 Make fair deductions; see to what they mount:
 How much of other each is sure to cost;
 How each for other oft is wholly lost;
 How inconsistent greater goods with these:
 How sometimes life is risk'd, and always ease:
 Think, and if still the things thy envy call,
 Say, wouldst thou be the man to whom they fall?
 To sigh for ribbons if thou art so silly,
 Mark how they grace Lord Umbra, or Sir Billy.
 Is yellow dirt the passion of thy life?
 Look but on Gripus, or on Gripus' wife.
 If parts allure thee, think how Bacon shined,
 The wisest, brightest, meanest of mankind:
 Or ravish'd with the whistling of a name,
 See Cromwell damn'd to everlasting fame!
 If all, united, thy ambition call,
 From ancient story, learn to scorn them all.
 There, in the rich, the honor'd, famed, and great,
 See the false scale of happiness complete!

In hearts of kings, or arms of queens who lay,
 How happy! those to ruin, these betray.

Mark by what wretched steps their glory grows,
 From dirt and sea-weed as proud Venice rose;
 In each how guilt and greatness equal ran,
 And all that raised the hero sunk the man:
 Now Europe's laurels on their brows behold,
 But stain'd with blood, or ill exchange'd for gold:
 Then see them broke with toils, or sunk in ease,
 Or infamous for plunder'd provinces.
 O wealth ill-fated! which no act of fame
 E'er taught to shine, or sanctified from shame!
 What greater bliss attends their close of life?
 Some greedy minion, or imperious wife,
 The trophied arches, storied halls invade,
 And haunt their slumbers in the pompous shade.
 Alas! not dazzled with their noon-tide ray,
 Compute the morn and evening to the day;
 The whole amount of that enormous fame,
 A tale that blends their glory with their shame!
 Know then this truth, (enough for man to know,)
 "Virtue alone is happiness below."
 The only point where human bliss stands still,
 And tastes the good without the fall to ill;
 Where only merit constant pay receives,
 Is bless'd in what it takes, and what it gives;
 The joy unequal'd, if its end it gain,
 And if it lose, attended with no pain:
 Without satiety, though e'er so bless'd,
 And but more relish'd as the more distress'd:
 The broadest mirth unfeeling folly wears,
 Less pleasing far than virtue's very tears:
 Good, from each object, from each place acquired,
 For ever exercised, yet never tired;
 Never elated, while one man's oppress'd;
 Never dejected, while another's bless'd:
 And where no wants, no wishes can remain,
 Since but to wish more virtue, is to gain.

See the sole bliss Heaven could on all bestow!
 Which who but feels can taste, but thinks can know;
 Yet poor with fortune and with learning blind,
 The bad must miss, the good untaught will find;
 Slave to no sect, who takes no private road,
 But looks through nature up to nature's God;*

* Sects are simply organized societies, regulated, though not necessarily governed, in the strictest sense of this term, by by-laws—in other words, creeds. There can be no objection to this, save when pushed to extremes, and when liberty of faith is de-

Pursues that chain which links th' immense design,
Joins heaven and earth, and mortal and divine;
Sees that no being any bliss can know,
But touches some above, and some below;
Learns from the union of the rising whole,
The first, last purpose of the human soul;
And knows where faith, law, morals, all began,
All end in love of God and love of man.

For him alone hope leads from goal to goal,
And opens still, and opens on his soul;
Till lengthened on to faith, and unconfined,
It pours the bliss that fills up all the mind.
He sees why nature plants in man alone,
Hope of known bliss, and faith in bliss unknown;
(Nature, whose dictates to no other kind
Are given in vain, but what they seek they find.)
Wise is her present; she connects in this
His greatest virtue with his greatest bliss;
At once his own bright prospect to be bless'd
And strongest motive to assist the rest.
Self-love thus push'd to social, to divine,
Gives thee to make thy neighbor's blessing thine.
Is this too little for the boundless heart?
Extend it, let thy enemies have part;
Grasp the whole world of reason, life, and sense,
In one close system of benevolence;
Happier as kinder, in whate'er degree,
And height of bliss but height of charity.

God loves from whole to parts: but human soul
Must rise from individual to the whole.
Self-love but serves the virtuous mind to wake,
As the small pebble stirs the peaceful lake;
The center moved, a circle straight succeeds,
Another still, and still another spreads;
Friend, parent, neighbor, first it will embrace;
His country next, and next all human race:
Wide and more wide, the o'erflowings of the mind
Take every creature in, of every kind;
Earth smiles around, with boundless bounty bless'd,
And Heaven beholds its image in its breast.*

Come, then, my friend! my genius! come along;
O master of the poet and the song!
And while the muse now stoops, or now ascends,
To man's low passions, or their glorious ends,
Teach me, like thee, in various nature wise,
To fall with dignity, with temper rise;
Form'd by thy converse, happily to steer,
From grave to gay, from lively to severe;
Correct with spirit, eloquent with ease,
Intent to reason, or polite to please.
O! while along the stream of time thy name
Expanded flies, and gathers all its fame,
Say, shall my little bark attendant sail,
Pursue the triumph, and partake the gale?
When statesmen, heroes, kings, in dust repose,
Whose sons shall blush their fathers were thy foes,
Shall then this verse to future age pretend
Thou wert my guide, philosopher, and friend?
That, urged by thee, I turn'd the tuneful art
From sounds to things, from fancy to the heart;
For wit's false mirror held up nature's light,
Show'd erring pride, WHATEVER IS, IS RIGHT;

nied to its members. We have by-laws in business corporations, and why not have man-made creeds or by-laws equally binding in religious organizations?

Men are not so likely to look "through nature up to nature's God" who have only a "private road." Kindness, sense of justice, social feeling, mutual sympathy, and devotion are awakened by assembling in congregations. We should probably grant all the poet claims in this relation to the matter of looking through nature, but we should supplement to this that higher sentiment which we denominate the Spiritual, which is above the reach of reason and the senses.

* Narrow-minded and bigoted persons indulge a foolish prejudice against those not of their own country, not on their own plane, not of their own color; but the Almighty will judge all charitably—of whatever nation, race, or color—and impartially.

That reason, passion, answer one great aim;
That true self-love and social are the same;
That virtue only makes our bliss below;
And all our knowledge is, OURSELVES TO KNOW.*

* SELF-KNOWLEDGE.—A distinguished American statesman remarked: "When a man properly understands himself, mentally and physically, his road to happiness is smooth, and society has a strong guarantee for his good conduct and usefulness."

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED:

Devoted to Ethnology, Physiology, Phrenology, Psychology, Sociology, Education, Art, Literature, with measures to Reform, Elevate, and Improve Mankind Physically, Mentally, and Spiritually.

S. R. WELLS, EDITOR.

TERMS.—A New Volume, the 46th, commences with the July number. Published monthly, in quarto form, at \$3 a year, in advance. Sample numbers, 30 cents. Club of ten, \$24, and an extra copy to the getter up of club.

NOTICES OF THE PRESS.

The PHRENOLOGICAL JOURNAL grows steadily in variety and value. It is not confined to discussions of Phrenology, but deals with all questions affecting health, progress, and the good of society. —*New York Evening Post.*

It is not necessary, we trust, to accept the doctrines of Phrenology in all their fullness in order to enjoy the PHRENOLOGICAL JOURNAL. Perhaps no publication in the country is guided by clearer common sense or more self-reliant independence. Certainly none seems better designed to promote the health, happiness, and usefulness of its readers; and although we can not imagine a person who could read a number of it without dissent from some of its opinions, we should be equally at a loss to fancy one who could do so without pleasure and profit. —*Round Table.*

The PHRENOLOGICAL JOURNAL is a live, wide-awake, and progressive institution. Its talk about Physiognomy, Ethnology, Phrenology, Physiology, etc., is both interesting and instructive, and its numerous illustrations add to the beauty and value of the magazine. It is the standard in its sphere of journalism, and deservedly popular all over the land. —*Moore's Rural New Yorker.*

Few books will better repay perusal in the family than this rich storehouse of instruction and entertainment, which never fails to illustrate the practical philosophy of life with its lively expositions, appropriate anecdotes, and agreeable sketches of distinguished individuals. —*New York Tribune.*

The PHRENOLOGICAL JOURNAL has portraits and biographical sketches of prominent persons, both of this and foreign countries. It is a magazine conveying knowledge that can not easily be obtained from any other source. —*Providence (R. I.) Evening Press.*

The PHRENOLOGICAL JOURNAL should be in the hands of every one interested in the study of human character. —*Rock Island Daily Union.*

No other journal in America imparts in one year so much valuable information as does this, and certainly no other teaches man so well to know himself. Each single number is worth the entire amount of a year's subscription. —*Cumberland (Md.) Phoenix.*

The AMERICAN PHRENOLOGICAL JOURNAL and LIFE ILLUSTRATED is one of the most pleasant periodicals published. It contains an amount of reading matter far more sensible and instructive than can be found in many journals of greater pretensions. Even those who disapprove of the science of Phrenology as taught, can not fail to perceive the high tone of the paper. Its articles show careful selections. —*National Union, South Bend, Ind.*

This scientific monthly is one of the most useful and beneficial works issued from the American press. It should be read by every family in our country. —*Mystic Star, N. Y.*

This is a journal full of interest to those who are fond of the study of man "fearfully and wonderfully made;" and we all surely are or ought to be. —*Lutheran Observer, Philadelphia.*

There are few periodicals more truly valuable as household companions than this publication, issued by Fowler and Wells, New York city. We always find it readable throughout, and always up to a high standard of instructive family literature. The specialties are health and education, and on these topics its editorials and selections are invaluable. —*Wheeling (W. Va.) Intelligencer.*

It is replete with pages of edification and instruction, and we have seldom perused a periodical in which every line afforded such entertainment for the mind. —*Jewish Record, N. Y.*

The PHRENOLOGICAL JOURNAL is one of the best monthlies published in the United States, and when spoken of in connection with useful, instructive, and interesting reading matter, the very best. This may be considered strong language, but it is our opinion. We have been a subscriber of this periodical for some years, and in nothing our desire to see and read such succeeding copies is stronger than when we look for it. You may say, "Oh! I don't believe in Phrenology!" It is a humbug. That is your opinion, but subscribe for the Journal, and our word for it, you will be stopped. This notice is entirely gratuitous. We do not even exchange with our contributors. Send for a specimen copy, and see how you like it. Address FOWLER AND WELLS, 350 Broadway, New York. —*Blairsville Pa. Press.*

AMERICAN PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED.

SAMUEL R. WELLS, EDITOR.]

The Journal.

Man, know thyself. All wisdom centers there; To none man seems ignoble, but to man.—Young.

HON. SALMON P. CHASE, CHIEF JUSTICE OF THE UNITED STATES.

PHRENOLOGICAL CHARACTER.

It has been said that Americans are long, lank, sallow, and skinny; that they lack stamina; but we present as a refutation of that transatlantic idea, the person of Hon. Salmon P. Chase, the Chief Justice of the United States Supreme Court, whose portrait we present.

In addition to a splendid frame, we find a fully expanded chest, a large heart, ample lungs and stomach, and a brain almost ponderous in bulk, but fine in quality and full of electricity. And what is quite as important, it is symmetrically developed, plump and full in all its parts. There are no hills, hollows, mountains, or valleys, but a grand whole. There are no crevices to be filled up; nor is there whereof to spare—all is in place, and harmonious.

And yet, we would not put such a man at the head of a regiment to lead them on to battle. We would not send him out on an exploring

PORTRAIT OF HON. SALMON P. CHASE.

expedition; but we would put him in a responsible place, where judgment, integrity, dignity, and prudence were required. We would make him a spokesman in the councils—an adviser.

What of his phrenology? Intellectually he is great—great in observation and in reflection.

He would be both philosophical and practical. Nor is he wanting in the ideal, in moral sentiment, in social feeling, or in executive ability. It would be entirely safe to trust him with any responsibility. He will be true to his judgment and true to his integrity. His justice will be

tempered with mercy. There is no malice, vindictiveness, or revenge in his nature. To do right, to do good, to lift the world up and set it forward would be in keeping with his desires. There is strong sympathy combined with practical judgment, devotional feeling guided by reason, while Hope and Faith will be sufficient to buoy him up and sustain him in times of trial or adversity. There is good mechanical if not inventive ability here; so of economy, appreciation of property; so of appetite and love for the good things of life. In short, he is a complete manly man.

If Mr. Chase be no musician, it is simply because those faculties may not have been called out; if not an artist, it is for the same reason. But he has all the organs which go to make up a well-formed human being in accordance with the design of his Creator.

But what are his faults? Simply these. He is more kindly, amiable, and obliging than steadfast, distant, or willful. Were there more Self-Esteem and Firmness, he would probably be a stronger character, would be more absolute, authoritative, and commanding. He is more like Franklin than like Jackson; more like a philosopher than like a ruler. But he has sufficient love of liberty to defend it at any cost, though his nature is to conciliate, to oblige, if not to yield. That he appreciates the good opinion of others is also true; but that he would sacrifice principle to secure it, would not be in accordance with his make-up. Taken all in all, there is far less to criticize than to approve; much more to admire than to deprecate.

BIOGRAPHY.

Our biographical sketch, though brief, presents with distinctness the leading facts and features of a character and a career that has, under the pressure of the times, become as clearly and conspicuously a portion of the history and the glory of the United States, as the impress of the die upon the gold is a portion of our coin. The subject of this sketch is yet in the prime of life, a model of manly size and physical proportion, fresh with the juices of health, and warm with the blood of the kindest humanity. This country expects much of him yet; and here upon this page, and in few words, we desire to express our belief, that his country will not be disappointed.

Salmon Portland Chase was born in the town of Cornish, New Hampshire, on the 13th of January, 1808. At the age of seven years, on the removal of his father to Keene, he was taken to that town and placed at school. At the age of twelve, his father having in the mean time died, he sought the home of his uncle, Philander Chase, then Bishop of Ohio, at Worthington, in that State, and under that excellent and active man pursued his studies for some time. Bishop Chase, having been elected to the Presidency of Cincinnati College, removed to that city for the purpose of entering upon the discharge of the responsible duties thus devolved upon him, taking his

nephew with him. Salmon entered the college forthwith, and was soon raised to the Sophomore class. He continued at Cincinnati only about a year, when he returned to the home of his mother in New Hampshire, and in 1824 entered the Junior class of Dartmouth College, where he was graduated two years after.

These several changes were not the most favorable to Mr. Chase's education, but he improved his opportunities well, and graduated with honor. The world was now before him where to choose, and he was to be the artificer of his own fortunes. The winter succeeding, he went to Washington city, and, receiving good encouragement, opened a classical school for boys. This school was prosperous, and he continued it for about three years, pursuing, at the same time, a thorough study of the law, under the direction of the distinguished William Wirt. Having been admitted to the bar of the District of Columbia, and closed his school in 1829, he removed to Cincinnati in the spring of 1830, and took up his permanent residence in that city—engaging in the practice of his profession.

Working in that probation through which many sleep, Mr. Chase soon made himself known as an earnest thinker, a good writer, and a forcible speaker. He was an accepted contributor to the pages of the *North American Review*, an occasional writer for the *Western Monthly Magazine*, and a favorite member of the intellectual associations and social circles of the city. Among his contributions to the former periodical, which was at the time regarded as the model American work in its department, an elaborate article on "Brougham," and a dissertation on "Machinery," are remembered as having been received by the newspaper press and the literary public with great favor. At this time he prepared an edition of the "Statutes of Ohio," with copious annotations and a preliminary sketch of the history of the State, in three large octavo volumes. The manner in which this work was performed gave him an immediate reputation among the members of the bar, and secured him almost at once a most desirable position in the active commercial community by which he was surrounded. A valuable practice soon sought him out; in 1834 he became solicitor of the Bank of the United States in Cincinnati, and not long after that assumed a like position in one of the city banks.

The first important case that brought him distinctly and prominently before the public, outside of commercial practice, occurred in the year 1837. This was the "fugitive slave case," in which Mr. Chase acted as counsel for a colored woman, claimed under the law of 1793. The same year, in an argument before the Supreme Court of Ohio, in defense of James G. Birney, prosecuted under a State law for harboring a negro slave, Mr. Chase so acquitted himself as to add materially to his already honorable reputation, and inspire general confidence in his learning, skill, readiness, and power as a jurist. His status at the bar was

now an undoubted one. He took rank with the oldest and ablest of practitioners. But the very zeal with which he entered into the cases referred to, and others of a kindred nature—the thoroughness of his preparation, and the ability of his argument—while they fixed his reputation as a lawyer, and rapidly increased the business committed to his charge, at the same time tended to draw him aside from the legitimate and most successful practice of his profession, and start him in a new and untried career.

The extension of the anti-slavery sentiment, and his prominent connection with a class of cases so nearly allied to it, together with the fact that this sentiment was fast receiving vitality in organized forms, gradually drew him into politics. Previous to the year 1841, he had never taken anything like a prominent part in political movements. During this year, his anti-slavery sentiments having been strengthened by observation and reflection, and it appearing certain to him that legitimate aims, which he regarded as of paramount importance, could hope to be attained only through the instrumentality of party organization, he united in a call for the State Liberty Convention of Ohio, and subsequently for the National Liberty Convention of 1843, in the proceedings of both of which he took a part whose prominence was surpassed by that of no man.

Mr. Chase's political career was now fully commenced, and continued with activity and ability. He was chosen a Senator of the United States from Ohio in the year 1849, and served his full term with much distinction. In 1855 he was elected Governor of Ohio, and in 1857 re-elected—administering affairs with great ability and prudence, and by his wisdom and devotion to the interests of the State, commanding respect at home and abroad. In the beginning of 1860 he was again elected to the Senate of the United States.

Throughout the Senatorial service which he had already rendered, the most abundant evidence was afforded of his attachment to the great and free Northwest, whose interests he watched over with the most zealous care. No narrow feelings of sectionalism, however, controlled his actions; and when his responsibilities as Senator were about to be renewed, his vision, which was keen and steady, took a broad national sweep.

Mr. Chase took his seat for the second time, as Senator from Ohio, on the 4th of March, 1861. Two days thereafter, however, yielding to a very general and urgent demand, made by both personal and political friends, and by some who had not till then been either, he resigned that exalted position for the purpose of accepting the laborious and hazardous one of Secretary of the Treasury, to which he had been invited by Mr. Lincoln. His brilliant career in this department, the nerve he displayed, the breadth of intellect he manifested, the ardor of his patriotism, and the wonders wrought by his financial wisdom and skill throughout the first three years of

the rebellion, are so recent and so well remembered, and live so freshly in the hearts of his grateful countrymen, as to render unnecessary anything more than this simple reference. His enduring monument is built of his measures; his best eulogy is written in his acts. He vindicated the wisdom of the President's choice; he both justified and rewarded the confidence of the people.

Much as had been done, the times were still perilous; and when, through death, the highest judicial seat of the nation, if not of the world, became vacant, the same patriotism, the same judgment, the same voice that had in 1861 given into his keeping the seals of the Treasury, in 1864, with confidence strengthened, not diminished, called him to fill that vacant chair. Commissioned by Mr. Lincoln as Chief Justice of the United States on the 6th of December, Mr. Chase was at once confirmed by the Senate, and took his seat upon the bench on the 13th, "having previously," as the records state, "on the same day, taken the oath of allegiance, in the room of the judges, and the oath of office in open court, at his place upon the bench, in the presence of a large number of ladies and gentlemen, who had assembled to witness a ceremony which, in this nation, had taken place but once in sixty-three years preceding."

The visit made by Mr. Chase to the South, after he was commissioned Chief Justice—his tour down the Atlantic coast and up the Mississippi River, undertaken for the purpose of witnessing for himself the condition of the people, and of conversing unreservedly with such, white or colored, as might choose to avail themselves of the knowledge of his presence—the accounts he sent back in his correspondence with the President and others, and the measures he suggested as necessary and expedient for purposes of peace and reconstruction, of order and justice, are strongly calculated to remind one of the fact, that Chief Justice Jay, in the spring of 1794, went out to England as envoy extraordinary, and in the autumn of that year (November 19th) concluded the celebrated treaty which bears his name, while yet Chief Justice of the United States: and of the further fact, that Chief Justice Marshall, though nominated, confirmed, and commissioned as such in 1801, and although he presided on the bench of the Supreme Court during the February term of that year, yet continued to act as Secretary of State till the 3d of March following.

Another parallel may be worth running here, and it is a striking one. In the dignified eulogium so handsomely pronounced by the Senior Associate of the Court, on the occasion of officially announcing to that body the decease of Chief Justice Taney, Mr. Justice Wayne said:

"As his predecessor, our great Marshall, had been, he was made Chief Justice, having but recently held high political office. Both were leaders in support of the policy of the Administration of which they had been Cabinet officers. Each had to meet opposition of talent

and eloquence—Marshall, from those who had the impress of services in our long Revolutionary struggle with England for national independence, and for their conspicuous agency in the formation of the Constitution of the United States; his successor, the opposition of men of talent and virtue who had, as legislators and in arms, carried the nation through a successful war with the same power in support of its commercial interests and its rights of navigation."

And his successor (completing the parallel), the opposition of the men of "talent and eloquence" who plunged our nation into its third and bloodiest war, combined with "the opposition of men of talent and virtue" who have not scrupled to aid, countenance, and sustain those who bear "the impress," "as legislators and in arms," of having begun and made necessary that desolating struggle, the end of which, whether yet reached or not, restores to our nation "its commercial interests," and establishes throughout our dominions, for all time to come, not only the "rights of navigation," but also the rights of MAN.

While a student of law, and during the first years of his practice at the bar, history, biography, mechanics, politics, and general literature, each received a due share of Mr. Chase's attention. And during the period embraced between the first three or four years after attaining to his majority, few men of his years in the country had as nobly stored minds, or exhibited more striking marks of good mental discipline. With a mind comprehensive, discriminating, and sufficiently retentive, he brought to whatever task he undertook the graces of learning and the force of logic; and when he left it, whether complete or incomplete, the evidences were abundant of keenness of insight, extent of view, thoroughness of reflection, and strength of reasoning. The same breadth of premise, exactness of statement, logical sequence, completeness of consideration, and power of conclusion that have since, in a more remarkable degree, characterized his career as a jurist and a statesman, marked all his better efforts during the period under view. In public discourses, newspaper writings, occasional lectures, and contributions to periodical literature—in each of which departments he did a few things carefully, and not many things, "hastily and with a bad pen"—these traits are observable.

During his student life, Mr. Chase often wooed the muses successfully; and in later years, as a recreation, and from early love, he has indulged in similar pastimes; and amid the turbulence of politics has often retired for peaceful enjoyment to the quiet of a library stored with the master songs of the world, ancient and modern. Among recent literary recreations in which we have known him to engage, is the translation of various specimens of the Latin poets into an English form, which presents with striking excellence the wit and beauty of the original. One such effort is that of the eleventh Epigram

of the sixth book of Martial, with which we conclude this sketch.

"IN MARCUM."

"No real friendships now-a-days," you say:
"Pylades and Orestes, where are they?"
Alike Pylades and Orestes fared;
The bread and thrush of each the other shared;
Both drank from the same bottle; both partook
The self-same supper from the self-same cook.
You feast on Lucrines; me Peloris feeds;
In daintiness your taste not mine exceeds.
Cadmean Tyre clothes you; coarse Gallia me;
How loved by sackcloth can rich purples be?
Who wants me in Pylades, Mark I must prove.
To me Orestes:—who wants love, must love.

NOTE.—*Lucrines*; the finest oysters were taken from the Lucrine Lake. *Peloris*; a Sicilian promontory near which shell-fish of inferior quality but large size were taken. *Cadmean Tyre*; Tyre, named from Cadmus a Phœnician, celebrated for purples. *Gallia*; whence were brought coarse woolen cloths for servants' wear, by a permissible license, perhaps, called *sackcloth*.

PHRENOLOGICAL THEORY OF MAN'S ORGANIZATION.

[CONTINUED.]

For the benefit of those of our readers who have but recently given attention to the subject of Phrenology, we shall examine those faculties as now defined, arranging the name of the faculty in small capitals, and the definition of it in italics, and it will be perceived that there is no ground whatever for the foolish notion which some entertain, that Phrenology and Revelation are antagonistic, but that the Bible recognizes the existence of those faculties in man, and lays down rules for their guidance.

AMATIVENESS. *Reciprocal attachment and love of the sexes—sexual love.*—"Be fruitful and multiply."—Gen. i. 28. Restriction—"Whoso looketh on a woman to lust after her, hath committed adultery already with her in his heart."—Matt. v. 28.

CONJUGAL LOVE. *Union for life—the pairing instinct.*—"Therefore shall a man leave his father and mother, and shall cleave unto his wife, and they shall be one flesh."—Gen. ii. 24. Restriction—"What therefore God hath joined together, let not man put asunder."—Matt. xix. 6. "Moses, because of the hardness of your heart, suffered you to put away your wives, but from the beginning it was not so. And I say unto you, Whosoever shall put away his wife, except it be for fornication, and shall marry another, committeth adultery: and whoso marrieth her that is put away, doth commit adultery."—Matt. xix. 8.

PHILOPROGENITIVENESS. *Parental affection and tenderness—love of offspring and of children generally—fondness for pets, especially young animals—and for the infirm and helpless.*—The existence of this faculty is recognized from Genesis to Revelation. For its guidance we have: "And, ye fathers, provoke not your children to wrath, but bring them up in the nurture and admonition of the Lord."—Ephes. vi. 4. "He that spareth the rod hateth his son."—Prov. xiii. 24. "No man ever hated his own flesh."—Ephes. v. 29.

ADHESIVENESS. *Friendship, susceptibility of attachment, sociability, union, and clinging of friends.*—"A friend loveth at all times."—Prov. xvii. 17. "There is a friend that sticketh closer than a brother." "Faithful are the wounds of a friend." "He that hath friends must show himself friendly."—Prov. xviii. 24. "Ointment and perfume rejoice the heart, so doth the sweetness of a man's friend."

INHABITIVENESS. *Love of home and country.*—"By the rivers of Babylon there we sat down; yea, we wept when we remembered Zion. We hanged our harps on the willows in the midst thereof. For there they that carried us away captive required of us a song, and they that wasted us required of us mirth, saying, Sing us one of the songs of Zion. How shall we sing the Lord's song in a strange land? If I forget thee, O Jerusalem, let my right hand forget her cunning. If I do not remember thee, let my tongue cleave to the roof of my mouth; if I prefer not Jerusalem above my chief joy."—Ps. cxxxvii. The younger widows who do not love home are condemned: "And, withal, they learn to be idle, wandering about from house to house, and not only idle, but tattlers also, and busy-bodies, speaking things which they ought not." The young women were taught to be "keepers at home."—Tit. ii. 5.

CONCENTRATIVENESS, CONTINUITY. *Application, the power of mental concentration and continuity.*—Our Saviour continued "all night in prayer."—Luke vi. 12. "Give attendance unto reading."—1 Tim. iv. 13. "Apply thine heart to understanding."—Prov. ii. 2. The continual round of ceremonies in the Jewish law required a high degree of exercise of this faculty, and the Christian likewise is required to exercise it constantly; we are to "pray without ceasing," and the Saviour's direction to watch and pray can never be obeyed without a high degree of exercise of this faculty as well as of Cautionness.

VITATIVENESS. *Love of life as such; unwillingness to die.*—We presume few will controvert the remark of Satan as recorded in Job ii. 4: "All that a man hath will he give for his life."

COMBATIVENESS. *Propensity to resist, defend, and oppose.*—The existence of this faculty is recognized throughout the greater part of the Old Testament. David says, "Blessed be the Lord my strength, which teacheth my hands to war and my fingers to fight."—Ps. cxliv. 1. The Jews were commanded to fight to exterminate the idolatrous nations from the land; but the Christian is under a different law. He is not to return evil for evil; he is, however, to fight "the good fight of faith," earnestly contend for the faith once delivered to the saints, and to dispute, as Paul did, with the enemies of the cross of Christ."

DESTRUCTIVENESS. *Propensity to destroy, exterminate, inflict pain.*—The Jews were commanded to exterminate the idolatrous nations in Canaan, but though they were thus commanded to exercise this faculty, yet its undue exercise was restrained by the law which said, "Thou shalt not kill." The Christian is also under the law. Instead of exterminating our

enemies, we have the command, "Love your enemies; bless them that curse you, do good to them that hate you, and pray for them that despitefully use you." "Whoso hateth his brother is a murderer, and ye know that no murderer hath eternal life abiding in him." We are also urged to the proper use of this faculty by St. Paul, who says, "Be instant in season, out of season."—2 Tim. iv. 2; and the Preacher saith, "Whatsoever thy hand findeth to do, do it with thy might."—Eccles. ix. 10.

ALIMENTIVENESS. *Appetite for sustenance, desire for nutrition, relish for food and drinks.*—Behold I have given you every herb bearing seed that is upon the face of the earth, and every tree in the which is the fruit of a tree yielding seed, to you it shall be for food.—Gen. i. 29. "Every moving thing that liveth shall be meat for you; even as the green herb have I given you all things."—Gen. ix. 3. Restriction—"This our son is stubborn and rebellious; he will not obey our voice; he is a glutton and a drunkard. And all the men of his city shall stone him with stones that he die."—Deut. xxi. 20. "Be not drunk with wine wherein is excess."—Eph. v. 18. Among the enemies of the cross of Christ are those "whose end is destruction, whose god is their belly."

ACQUISITIVENESS. *Propensity to acquire substance, desire to amass wealth.*—The Jewish law regulated to a considerable degree the extent to which this faculty might be exercised. "If thou lend money to any of my people that is poor by thee, thou shalt not be to him a usurer, neither shalt thou lay any usury upon him."—Ex. xxii. 25. "If thy brother be waxed poor and fallen in decay with thee, then thou shalt relieve him, yea, though he be a stranger or a sojourner, that he may live with thee. Take thou no usury of him." The inordinate exercise of this faculty (covetousness) is frequently condemned in the Old and New Testaments. "Thou shalt not covet thy neighbor's house, thou shalt not covet thy neighbor's wife, nor his man servant, nor his maid servant, nor his ass, nor any thing that is thy neighbor's."—Ex. xx. 17. Covetousness is condemned as idolatry.—Colos. iii. 5. There is, however, a covetousness which is lawful: "Covet earnestly the best gifts."—1 Cor. xii. 31. Nothing like fraud in the acquisition of property is allowable: "defraud not."

SECRETIVENESS. *Self-control; propensity to secrete, to conceal, and to suppress the expression of the other mental operations; policy; tact.*—Any exercise of this faculty not bordering upon guile or deception is allowable. Joseph at the meeting with his brethren exercised this faculty within due bounds. Our Saviour, when walking with the two disciples near Emmaus, also exercised this faculty within proper bounds: "And they drew nigh unto the village whither they went; and He made as though he would have gone further. But they constrained him, saying, Abide with us." Of the improper exercise of this faculty there are many examples mentioned in the Bible—Jacob's deception of his father to obtain the

blessing of the first-born, and many other cases too numerous to mention.

CAUTIONSNESS. *Solicitude about consequences; apprehension of danger; instinct of fear; care; anxiety.*—Of cautions intended for this faculty the Bible is full. The Saviour says, "Rather fear him who is able to destroy both soul and body in hell;" and for those whose fears prevent them from serving the Lord, it is expressly declared that the "fearful" shall have their part in the lake which burneth fire and brimstone, which is the second death.

APPROBATIVENESS. *Love of approbation; desire for the favorable estimation and good opinion of others; ambition for distinction and popularity; love of fame.*—Of the existence of such a faculty, we presume none will doubt; political history and numberless essays on "ambition" attest too well its existence. The pernicious influence of this faculty has an exceedingly wide range, and we shall not attempt to trace it, but merely present, as we promised, clear Scriptural proof of its existence. In John xii. 43, we read that some of the chief rulers did not confess their faith in the Saviour because "they loved the praises of men more than the praises of God." For its normal exercise we have the following in Rom. xiv. 18: "For he that in these things serveth Christ is acceptable unto God and approved of men."

SELF-ESTEEM. *Self-respect; dignity; self-reliance; independence.* This faculty in excess, and in combination with others, degenerates into pride and arrogance, and overbearing dogmatism. The Bible is full of condemnations of pride too numerous to quote. Humility is especially acceptable in the sight of God, but this does not imply absence of self-esteem; for in that case the individual would not possess self-respect enough to prevent him from degrading himself frequently. A due degree of self-esteem is absolutely necessary, hence we have the explicit command, "For I say, through the grace given unto me, to every man that is among you, not to think of himself more highly than he ought to think; but to think soberly, according as God hath dealt to every man the measure of faith."—Rom. xii. 3.

FIRMNESS. *Stability; perseverance; decision.*—This faculty large (other things being equal), renders the possessor very acceptable in the sight of God. He chose the most obstinate nation on earth as his own beloved people; and the Lord carries his disapproval of wavering, fickle-minded persons to such an extent that he will not hear their prayers. James commands us to ask in faith, "nothing wavering." "For he that wavereth is like a wave of the sea, driven of the wind and tossed. For let that man not think that he shall receive anything of the Lord."—James i. 6. "Therefore, my beloved brethren, be ye steadfast, unmovable, always abounding in the work of the Lord."—1 Cor. xv. 58. Similar injunctions are found in 1 Cor. xvi. 13; Gal. v. 11; Phil. i. 27; 1 Thess. iii. 8; 2 Thess. ii. 15.

CONSCIENTIOUSNESS. *Moral principle; sense of justice; regard for duty; feeling of moral*

accountability.—Our Saviour gives the best definition of this faculty ever given: "Blessed are they that hunger and thirst after righteousness, for they shall be filled."—Matt. v. 6. One of the qualifications of a deacon was holding fast the mystery of the faith in a pure conscience. There are many other references to this faculty: we are told that in the latter times there will be some "having their consciences seared with a red-hot iron."—1 Tim. iv. 2. And with reference to those who disregard the promptings of this faculty, Paul says, in 1 Tim. i. 19, "which some having put away concerning faith have made shipwreck" (of themselves implied).

HOPE. Expectation; anticipation; tendency of the mind to contemplate the future with bright anticipations of happiness and success.—Paul (Rom. viii. 24) says, "We are saved by hope. But hope that is seen is not hope, for what a man seeth, why doth he yet hope for?" "Hope to the end for the grace that is to be brought unto you at the revelation of Jesus Christ." (1 Pet. i. 13.)

MARVELOUSNESS OF SPIRITUALITY. Wonder; credulity; disposition to believe what is not proved, or what are considered supernatural manifestations; faith.—"But without faith it is impossible to please him, for he that cometh to God must believe that he is, and that he is a rewarder of them that diligently seek him."—(Heb. xi. 6.) The normal scope of faith includes the whole of revelation. In the exercise of our faith we must take heed that we be not led astray by any false doctrines. "Neither give heed to fables and endless genealogies, which minister questions, rather than godly edifying which is in faith."—(1 Tim. i. 4.)

VENERATION. Worship; adoration; devotion; deference; reverence for what is considered above us.—"I am the Lord thy God which brought thee out of the land of Egypt, out of the house of bondage. Thou shalt have no other gods before me. Thou shalt not make unto thee any graven image, or any likeness of anything that is in heaven above, or that is in the earth beneath, or that is in the water under the earth; thou shalt not bow down thyself to them, nor serve them, for I the Lord thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me."—Ex. xx. For the exercise of this faculty in our earthly relations we have, "Honor thy father and thy mother, that thy days may be long in the land which thy Lord thy God giveth thee." "Likewise, ye younger, submit yourselves unto the elder. Yea, all of you be subject one to another, and be clothed with humility, for God resisteth the proud, and giveth grace to the humble. Humble yourselves, therefore, under the mighty hand of God, that he may exalt you in due time."—1 Pet. v. 5, 6.

BENEVOLENCE. Desire for the happiness of others; sympathy; compassion; kindness; charity.—"Take heed that you do not your alms before men to be seen of them, otherwise ye have no reward of your Father which is in heaven. Therefore when thou doest thine

alms, do not sound a trumpet before thee as the hypocrites do in the synagogues and in the streets, that they may have glory of men. Verily, I say unto you, they have their reward. But when thou doest thine alms, let not thy left hand know what thy right hand doeth, that thine alms may be in secret, and thy Father which seeth in secret, himself shall reward thee openly."—Matt. vi. The correlate function of this faculty—*gratitude*—holds a most important place in the plan of redemption. "In this was manifested the love of God towards us, because that God sent his only begotten Son into the world that we might live through him. Herein is love, not that we loved God, but that he first loved us, and sent his Son to be the propitiation for our sins. We love him because he first loved us."—1 John iv.

ELOQUENCE.—ITS DIVERSITY.

BY HON. JOHN NEAL.

CONTENTS.—What is Eloquence?—Diversity of Opinions—A Lexicographer's Definition—Its Indefiniteness—Illustrations of Eloquent Sayings—Demosthenes, and Action—Pericles, Richard Brinsley Sheridan, Rufus Choate, Edward Everett, Mirabeau, Daniel Webster, Henry Clay, William Pinkney, etc., their Style, with Illustrations—True Eloquence based on Probity—False Eloquence, the Politician, the Lawyer, the Actor—An apt Definition difficult—Is Virtue or Vice to be encouraged—Where should we look for Oratorical Example—Admonitory—How Jean Jacques Rousseau reasoned Himself into Error—First Impressions Profitable—The Promptings of Conscience should be Respected—The Popular Idea of Eloquence, and its Effect.

WHAT is generally understood by eloquence? We are all acquainted with it, as we think, and are ready to acknowledge its power—the power, that is, of what we call eloquence; but who will undertake a definition? a comprehensive and satisfactory definition? What it is not, we all know, whether we have to do with the thunder and lightning of Pericles, the calm, subtle, insinuating logic of Demosthenes, accompanied with outbursts of magnificent declamation; or with Chatham, Burke, or Sheridan; or Patrick Henry, Webster, or Clay, each wholly unlike all the others. It is not rhetoric. It is not oratory. It is not declamation. It is not acting. It is not pantomime, like that of Roscius, when he challenged Cicero to a trial of their respective merits upon the stage—Cicero to speak, and Roscius to illustrate by action.

We have eloquent looks, eloquent written language, eloquent attitudes, without sound or speech. Paintings are eloquent; and the statue "that enchants the world" is said to be eloquent. And so, too, thought may be eloquent; and we have all heard of eloquent blood, eloquent eyes, and eloquent tears, and many of us have seen the eloquent bearing of those who were speechless, or too far off to be heard. Are these mere figures of speech? and, if so, are they not conclusive? Do they not show the greatest confusion of thought among a people who believe eloquence to be, not only a gift, but a power in the land, amounting sometimes to inspiration? and that while poets are born, orators are only made?

A LEXICOGRAPHER'S DEFINITION.

In a country like ours, where public speakers have the whole world for a stage, and all our public men are obliged to talk face to face with the people, either in person or by proxy, it would seem that we ought to have somewhat clearer notions of what is called eloquence than appear to prevail just now.

Let us see how it is understood by our highest authorities? Dr. Johnson says it is the power of speaking with *fluency* and *elegance*. Then Paul himself was not eloquent, for he was "in bodily presence weak; in speech contemptible;" and he who stood upon Mars' Hill, and declared to the philosophers, and rhetoricians, and scoffers and blasphemers of Athens, that "Unknown God" whom they ignorantly worshiped, preferred writing to speaking.

And Jeanie Deans, with her incoherent broken-hearted appeal in lowland Scotch, could not have been eloquent, whatever else she may have been, though we have always thought her so. Nor Meg Merrilies, though she may lift us off our feet with her terrible denunciations. Nor Robert Burns himself, when he tells of the murderer, and of the murderer's knife with "grey hair stickin' to the haft."

And Scipio Africanus, when he interrupted the judges on the second day of his trial, saying, "Tribunes and fellow-citizens! on this day, *this very day*, did I conquer Hannibal and the Carthaginians—let us go to the Capitol together and offer thanks to the immortal gods;" and was instantly followed by the whole body of the people, leaving the Tribunes "alone in their glory," was anything but eloquent, there being no display of "elegance" or "fluency."

And when the dying Opechancanough, then drawing nigh to his hundredth year, heard the trampling of many feet in his lodge, and commanded his attendants to lift his eyelids, and rising up in his bed saw Sir William Berkely among the crowd, and said to him, "Had it been my fortune to take Sir William Berkely prisoner, *I should not have made a show of him to my people*," the reproof, though terrible and burning, was not eloquent, since it could not have been characterized by "fluency" or "elegance."

DEMOSTHENES' OPINION—ITS APPLICATION.

According to Demosthenes, eloquence was *action*—that is, action was the first, second, and third requisite; and so it seemed to be with Roscius, and with that Athenian orator who gesticulated like a man in a boat; and so with Hortensius, who was nicknamed *Dyonisia*, after a celebrated stage dancer, on account of his extravagant action.

Yet with the ancients, eloquence and oratory, instead of being what they are now, unprepared, or at least unwritten, and in a measure spontaneous outflows of the overloaded heart and brain, were neither more nor less than dramatic exhibitions. Richard Brinsley Sheridan, Rufus Choate, and Edward Everett, and even Mirabeau (some of whose best speeches were

written for him by Dumont), committed theirs to memory, and acted them before the people. But how few are they that can do this, whatever may be the time allowed. Not one out of a thousand, perhaps, could learn a speech by heart, as Everett and Choate did, by reading it over once, after having written it carefully out. Consider the labor of Demosthenes and the preparation of Cicero, both being trained as the wrestlers and runners were, day after day, and year after year, before the time of exhibition—the former haranguing the sea, clambering heights with pebbles in the mouth, and rehearsing underneath a naked sword.

But we are a busy people—and the business we have on hand admits of no such delay. What we do in our halls of legislation, or in our courts of justice, or on the platform, must be done quickly. And therefore we must either adopt a new definition of eloquence, or give up the idea of being eloquent, as the ancients were.

According to Webster, *rhetoric* is "the science of oratory; the art of speaking with propriety, elegance, and force; the power of persuasion or attraction; that which allures or charms;" and *oratory* is "the art of speaking well, or of speaking according to the rules of *rhetoric*;" and eloquence is "the power of expressing strong emotions with fluency and force." Are not these definitions almost interchangeable? And if so, ought we to wonder at the confusion of thought I complain of, which everywhere prevails upon the subject?

ILLUSTRATIONS OF STYLE.

"If I mistake not," says Hume, "our modern eloquence is of the same style or species with that which ancient critics denominated *Attic eloquence*, that is, calm, elegant, and subtle." How unlike the general idea entertained of Demosthenes, who is held by our rhetoricians to have thundered and lightened at will, like the Olympian Pericles—"calm, elegant, and subtle, which instructed the reason more than affected the passions, and never raised its tone above argument or common discourse." Lord Erskine and Lord Mansfield were illustrations of this style; and Burke and Grattan, Curran and Sheridan, especially where the latter introduces, according to Moore, the MS. exclamation of "My God!" as if carried away by a sudden outburst of indignation, were samples of that eloquence which we are so fond of, and which led William Wirt astray, and even William Pinkney at times; and Webster himself, when he prepared for a cast that should astonish the natives, while he was trout fishing. "I made that," said he to a friend, who was complimenting him on the fine effect of the passage where he mentioned the morning drum-beat of British military power, as the earth revolved upon its axis—"I made that while I was fishing in this neighborhood." And of course that portion of his great speech was adapted to the illustration, instead of the illustration being a sudden flowering of the speech itself. With Curran it was not so—nor was it so with Wirt—for both

were constitutional poets, and neither could help illustrating, as he flashed along on his way upward; and though Curran prepared the celebrated passage, "No matter whether an African or Indian sun burned upon him; no matter in what disastrous battle his liberties may have been cloven down; no matter with what ceremonies he may have been doomed upon the altar of slavery," etc., long before he used it, it was not because he felt himself unable to do as well spontaneously, under excitement or provocation, but because he was not sure of the excitement or the provocation. With Mr. Pinkney, it was always downright labor—sheer drudgery. Having no imagination, he had to elaborate, and forge and hammer his metaphors, and lay them aside for use like so many unlighted thunderbolts; for Pinkney was a logician and a giant, and had no business with poetry or embellishment. Erskine was the model he kept in view, and all his wanderings from that standard were spurious and counterfeit, and wholly out of place.

Yet all these men were eloquent; and while no two were alike, the fame of their eloquence, whether studied or unstudied, spontaneous or prepared, has filled the world with admiration. What then is eloquence? Or, in other words, differing as they did among themselves in most things, what had they in common? Was it earnestness, or truthfulness, or imagination? Were they all alike entertaining, or persuasive, or convincing, and each in a way of his own?

A SOLUTION OF THE ANOMALY.

Perhaps we may be helped to a solution by referring to the *written* eloquence of a great and good man who seemed to have pretty decided notions upon the subject, though he had not the gift of speech. John Milton says, and "there were giants in those days"—"True eloquence, I find to be none but the *serious and hearty love of truth*." * * * When such a man would *speak*, his words, like so many nimble and airy servitors, trip about him at command, and in well-ordered files, as he would wish, fall aptly into their places."

And why not, if such a man would *write* instead of *speaking*. Is speech indispensable? If so, what is to become of written eloquence? and who shall venture to speak of eloquent thought? Must we have the sound of the human voice, gesticulation, rhetoric, and at last declamation? Are wailing and anguish and inarticulate cries to go for nothing?

A SOUND BASIS.

Blair says, "In order to be a truly eloquent or persuasive speaker, *nothing is more necessary than to be a virtuous man*. This was a favorite position among the ancient rhetoricians." Undoubtedly Milton was right—"a *serious and hearty love of truth*" must lie at the foundation of all that deserves to be called eloquence, whether written or oral; and so was Dr. Blair. "Nothing can be more necessary for the speaker or writer, who desires to be eloquent, than to be a *virtuous man*."

And yet, how little do we see of that "serious

and hearty love of truth," on the platform or off; and how little of the *virtuous man*, among those who are renowned for eloquence, either at the bar or in the senate chamber—in speech or in writing! From Pericles down to Mirabeau, and from Mirabeau down to the captivating Sargent, Prentiss, William Pinkney, Henry Clay, or Daniel Webster, how often have we found the miraculous gift of speech employed to make "the worse appear the better reason," and the splendid gifts of the orator blinding us to the faults of the man!

Of course, therefore, the pre-requisites insisted upon by Milton and Blair, and the ancients, are wholly overlooked, or lost sight of by the millions who are forever celebrating the eloquence of these men. But however much they may disagree among themselves in their preferences and reasons, they all agree in this, that define eloquence as you may, these men were all eloquent, and each in his own way—each holding fast by his individuality, however much he might affect, or counterfeit, or pretend.

AN APT DEFINITION DIFFICULT.

Is it not clear, then, that the received definitions of eloquence are worthless? And quite as clear, that no definition is likely to be framed comprehensive enough, and yet sufficiently distinguishing, to satisfy the admirers of men so wholly unlike in their style of speaking? At the least, we can only say what true eloquence should be, founded on a serious love of truth, and upheld by a virtuous life.

We are often told that we have no business with the private character of those who "play well their parts;" that, if a tragedy be well represented, whether it be by Edmund Kean or John Kemble, Mrs. Siddons, Miss O'Neil, or Madame Vestris, we have nothing to do with their business off the stage. But, surely, if we hear virtuous sentiments from the lips of a wanton, of a profligate, we feel outraged. The unfaithful wife can not play Portia or Cordelia; and the shameless, heartless wretch, who, as a wronged husband, demands our sympathy on the stage or off, when everybody knows that his own wife has more to complain of, instead of bringing tears into our eyes, provokes a smile of derision, and converts the deepest tragedy into a miserable farce, and the finest moral lessons into something worse.

IS VIRTUE OR VICE TO BE ENCOURAGED.

And yet people ask, and people too of pretty good common sense are not ashamed to ask, if they can buy as good beef and mutton of the fellow that abuses his wife, and get as good a speech from a lawyer who abuses other people's wives, why they should not buy of the former and employ the latter? In other words, they ask whether it may not be good policy, or at any rate convenient, to encourage brutality and vice, if thereby a few pennies or a few steps may be saved? Are examples or any worth in this world? Are we permitted to overlook the essential distinctions between the virtuous and the vicious? And will not "the Judge of all the earth" hold us to a strict

account, if by our thoughtlessness we confound such distinctions? Will not our children suffer at first—and then our neighbors—and then our whole country, before the reckoning is finished?

Just so with our orators. They are public performers. In general, if they have a great reputation, they are the indiscriminate defenders of right and wrong, ready for a fee to counterfeit all the passions—to trample on the truth, to browbeat witnesses, and bamboozle juries, for the help of murderers and burglars, and pirates and thieves and highwaymen, the more atrocious the better, since the worse their cases the more money they get, and the more reputation. And this they call obedience to the oath they have taken, and being faithful to their clients. As if a man might not defend the foulest murderer, reeking with his mother's blood, according to law, and with due reverence for the privileges of humanity, without sacrificing the truth; as if, in short, because the law permits an advocate to share the plunder of a highwayman, or a bank robber, or a deliberate murderer, without reproach, though all but lawyers would be held answerable if they but touched the blood-money or sheltered the criminal, therefore the advocate is bound to lie the case through, to misrepresent the facts, and set aside the law, if by so doing he can save the culprit, and send him back to his old business, abundantly encouraged and strengthened for new enterprises.

Now, as most of our public speakers are lawyers; and as most lawyers—perhaps we might say all—have these notions of duty to their clients, or their cause, what becomes of that "serious and hearty love of truth" which Milton supposes to lie at the foundation of all true eloquence?

ADMONTORY.

Young man, beware! You are about joining, or you have already joined, a debating society. Of course, upon every question that comes up, there are at least two sides. Generally speaking there is most truth on one side, and most untruth on the other. Beware! You are at liberty to choose either side, nevertheless, and may do so, and argue on either side without offending your conscience. But how? By professing to believe what you do not believe? By pretending to be much in earnest, and thereby misleading others? No, indeed. But you may present, with all the clearness and force you are master of, all the considerations that occur to you in favor of the wrong side—taking care to urge them, not as convictions, but as arguments, and leaving others to answer them if they can.

ELOQUENCE.

The truth—plain wholesome truth—is not often attractive or palatable. Brilliant paradox and startling untruth are always captivating. It is for you to guard against the witchery of untruth, by exposing it, honestly and fairly.

Jean Jacques Rousseau had a great prize question propounded to him. I forget the

terms, but he was at liberty to attack or defend civilization. His first thought was to launch forth, in his eloquent way, in support of civilization; but after considering a while, he saw that anybody might manage that side of the question; but who was sufficient for the other? And so, the "self-torturing sophist, wild Rousseau," undertook the defense of barbarism, and succeeded—in convincing himself. Certainly the essay was very clever, amazingly eloquent, and so ingenious, that one is lost in admiration of the man's adroitness. But he paid the penalty for taking such a delusion to his heart; for he lived and died in the belief that he had only championed the truth, and that savage life was altogether preferable to the civilized.

FIRST IMPRESSIONS PROFITABLE.

Let no man belie his first impressions. His views may change, and if so, he need lose no time in saying so; but let him never belie himself, nor tamper with his understanding or conscience, lest he may be found at last nearly destitute of both, although celebrated for his eloquence. I have known such cases; and I see about me, every day, men whose understandings and convictions are for sale—whose consciences are "up for Cowes, or a market;" who take sides upon every great question that arises, not according to their honest convictions, but according to their interest, or, in other words, according to the pay they are to receive; which pay may be in money or fame, in place or power. Eloquent men are they in the judgment of the people they abuse; and at the worst, very amusing, when we see them trying to swallow themselves, after having undergone all sorts of transformations, in social or political life.

THE POPULAR IDEA OF ELOQUENCE.

And now, once more, what is understood by eloquence? "Only this, and nothing more,"—namely, that some persons have the power of entertaining, and of almost persuading, or convincing, their friends and associates, and those who entertain similar opinions, hour after hour, without falling asleep themselves, or allowing others to fall asleep; and this power the multitude mistake for eloquence.

But what should be eloquence? Ask Milton. Ask Blair. And then ask yourself, as in the presence of God, and abide by the answer, if you ever hope to be distinguished for true eloquence.

One word more. Do not be discouraged, if you feel a desire to be distinguished as an orator, to make a noise through the newspapers, or to be talked about for your eloquence. Any live man who is able to convince or persuade while sitting, may do better standing, "after he gets the hang of the school-house;" in other words, he may if he will, become an advocate, a platform-speaker, a preacher, or a lecturer, and be courted and followed, if he will only consent to talk instead of declaiming—to be natural instead of being artificial. But he must never imitate, much less adopt, the style, voice, or bearing of another. It is always easier to

imitate an imitator than to copy the original. Hence the caricatures of Kean. They are only the successive stages of exaggeration. Edward Everett spoiled half the Unitarian preachers of the country; and they the other half, with a few glorious exceptions; like Holly and Pierpoint and Channing; and Daniel Webster scores of young lawyers, who insisted on being ponderous and solemn, or unwieldy and slow, without regard to the magnitude of the subject or the thought, because Daniel Webster, unlike Milo, began life with carrying, not the calf, but the bull.

Be yourself: and be nobody else. Maintain your individuality, at all hazards; and in time, you will not only be understood but respected. An imitator can never go beyond a certain point. At best he is only a penumbra: at the beginning, the shadow of a shade—and only a shadow at last, without substance, muscle, or character. Conventional tones, such as almost always distinguish different classes of Christian preachers, the Methodists, the Quakers, the Episcopalians, the Unitarians, and the orthodox, for example, are not only disastrous but preposterous; and so with conventional pauses and repetitions, and cadences and gestures. All gesticulation should be characteristic and spontaneous, unstudied and unprepared, like intonations. Above all, reverence yourself—cultivate "a serious and hearty love of truth;" and then, if you are not truly eloquent in the estimation of your fellow-men, you will be something better. Bear in mind, that public speaking is painting. There must be light and shadow, with alternations at every change of thought; that emphasis is contrast; and that whether you raise or lower the voice—or hurry or slacken your speed—contrast is always emphasis.

THE MORAL EXCHANGE.

THE latest reports from this quarter exhibit the following summary. We trust that before long the several ratings will undergo material changes more favorable to general investment.

Honor—Scarce. Old stock exhausted, and the new will be a complete failure.

Virtue—Old growth nearly consumed; young growth, prospects very unpromising.

Honesty—None in market.

Patriotism—First quality scarce, and none to be disposed of. Second quality easily bought on speculation at 100 per cent. discount.

Prudence—All in the hands of old stockholders, and held close.

Modesty—Stock badly damaged. None for sale to street speculators.

Vice—Market overstocked.

Pride—Market glutted.

Politeness—Cheap. Holders unwilling to dispose of any at present rates.

Scandal—None at wholesale. Dealt in chiefly by hawkers and peddlers at retail.

Religion—None genuine on hand. Stock generally adulterated. Very few investments.

Love—None offered, except for greenbacks.

Talent—Scarce article. Controlled mainly by the PHRENOLOGICAL JOURNAL. Sold exclusively for greenbacks, at \$3 per annum.

Our Social Relations.

Oh, happy they—the happiest of their kind—
Whom gentle stars unite, and in one fate
Their hearts, their fortunes, and their beings blend.—*Thomson.*

DOMESTIC ARITHMETIC; OR, STRIKING AN AVERAGE.

BY MRS. GEORGE WASHINGTON WYLLYS.

"WOMEN are re-mark-ably extravagant now-days!"

So Mr. Pinkster says, and Mr. Pinkster ought to know, if matrimony and milliners' bills can post a man up in such things. Twice a year Mr. Pinkster takes an account of stock at the store, and great is the turmoil thereof. Of course it is necessary to know just how much he is worth; but it never occurred to Mr. Pinkster to investigate matters at home, and attach a proper valuation to his wife!

How much is Mrs. Pinkster worth, *en grande toilette* (in full dress), "anyhow?" as the little ones say—that is, setting her own intrinsic value (Golconda is nothing to it) aside. Take out your pencil and tablets, meditative husband, and see! Silk dress, seventy-five dollars at least—Mrs. Pinkster is not a believer in "cheap silks"—cloak, fifty; bonnet, twenty—Mr. Pinkster selected it himself—don't like to have *his* wife looking like a dowdy. Furs—nice mink that will last ten years—one hundred dollars; watch and chain, one hundred more. Lace veil, five; gloves, two; linen collar and sleeves, two; sleeve buttons, six; crinoline and other sundries, about ten dollars; boots five (and very neat little Number Twos they are!); and you have Mrs. Pinkster complete, valued at three hundred and seventy-five dollars!

"Three hundred and seventy-five dollars!" says Mr. Pinkster to himself, slowly wagging his head backward and forward over the incontrovertible numbers—"that's a great deal of money—a great deal of money!"

So it is. Nobody thinks for an instant of denying that fact. And now, Mr. Pinkster, since you are so mathematically inclined this evening, suppose we go into another little calculation.

Who made your last set of new shirts? "Why—Mrs. Pinkster; but that is nothing." Nothing, eh? Do you happen to know that the making of a dozen shirts at a dollar and half each—the least you could have hired them made for—is eighteen dollars? Who nursed you through the weary six weeks of typhoid fever last spring? "Mrs. Pinkster; but it was her business." Yes, and if it had been a hired nurse's business, it would have cost you seven dollars a week. There's forty-two dollars on the "per contras." Who has kept house so daintily for you during the last year? "Mrs. Pinkster; but isn't she my wife?" Yes; but you must remember that Jenkins' housekeeper—Jenkins is a forlorn wretch who has never married—demands twenty dollars per month, and grumbles ominously at that. Let us see—twelve months, at twenty dollars per month,

ALBERT VICTOR CHRISTIAN EDWARD.

is just two hundred and forty dollars! Who ripped your overcoat all to pieces last week, and re-lined and re-trimmed it so neatly? a job that your tailor would have asked ten dollars for, and not have completed it half so artistically? Mrs. Pinkster, to be sure. Who made your last summer's suit of white linen, with such exquisite finished and pearly stitches, to save the seamstress' bill of fifteen dollars? Who goes into the kitchen and burns her pretty face to the color of carmine, to make the pies and puddings you delight in? because a regular cook would demand fifteen dollars a month for wages, and Bridget does very well at ten. Is five dollars a month, for twelve months, nothing? Verily, it is a saving of sixty dollars in the Pinkster pocket!

There is three hundred and eighty-five dollars at once! What does that look like? Is Mrs. Pinkster an advantageous possession, or is she not? Regarded merely as an investment, does not Mrs. Pinkster "pay?"

It would take ink enough to fill the river Styx to detect all the trifling little economies that she practices about the house, while Mr. Pinkster is reading the newspaper down at the store, with his heels several inches higher than his head; and no pen that ever was manufactured could describe the small, encouraging ways she has, and the cheerful atmosphere she diffuses around her, like a perpetual stream of artificial sunshine! Ah, Mr. Pinkster! you might hire your shirts made, and your plum puddings seasoned, but money won't buy those other things. They don't happen to be marketable commodities!

And now, Mr. Pinkster, do you entertain any objection to "being added up" yourself? You are not extravagant, oh, no! Men never are.

Your suit—a very nice quality of broadcloth—a gentleman can't well wear anything commoner—was eighty-five dollars; your overcoat, a year ago, cost sixty. Your big "Cooper" watch, with its cable chain, was "a bargain" at two hundred and fifty, and your pet seal ring was ten. Your hat cost eight dollars, and

your double-soled boots fourteen; gloves, three, and gold-headed cane, twelve; while your scarf was four, and the carved coral head of Bacchus that fastens it, was ten. Put down ten dollars more for flannel under-garments, super extra hose, and other necessities for keeping the "human form divine" comfortable, and you will find that the outer case inclosing Mr. Pinkster amounts to nearly four hundred and seventy dollars!

"You never would have supposed it could count up so?" Perhaps not, but when you made that sweeping assertion about women being so "remarkably extravagant," did you take the trouble to make any supposition on the subject?

Mr. Pinkster, there are too many of your stamp in the world. Women have enough faults to criticise, and enough mistakes to atone for, without bearing the burden of your unnecessary comments and false assertions! A woman can't very well defend herself unless she happens to own a pen and knows an editor. Then, indeed, she stands some little chance! But women in general have to suffer these floating slanders meekly and in silence. Job was undoubtedly a patient man; but if the manifold endurance of woman in this century could be made known, Job would be nowhere at all!

A LITTLE PRINCE.

WHAT a pretty little pet! We have here a sprig of royalty indeed, the first-born of the beautiful Princess of Wales, formerly Princess Alexandra of Denmark. The name of the little prince is Albert Victor Christian Edward; he was born January 8th, 1864, and baptized with this long name on March 10th, 1864. He is now a little two-year-old, and no doubt enjoys his bread-and-butter and his playthings the same as other little boys who have no royal blood in their veins and were not born with silver spoons in their mouths. It is rather an attractive face, thoughtful and "cunning." But he has a will of his own, and very much likes to have his own way. There are possibilities here of some magnitude, but we will not predicate anything very remarkable. It is scarcely possible that he will greatly surpass his parents, who may be very good, if not very great. Who would think such a pretty little fellow would be a great king of a great nation—a ruler over thirty millions of intelligent people, whose scepter should sway them all?

In France, they have another little boy very much like this, who is being fitted for an emperor. We are informed that he rolls his hoop, flies his kite, and rides his hobby-horse the same as other little boys. The little Frenchman is an only son, while the little Englishman has already two or three little brothers and sisters, for whom places or thrones are to be provided. But where is our little Andy Johnson? Ought we not to be looking after a successor? On second thought, we have it. Instead of one, two, or three royal babies, we have several millions equally competent, all of whom eat

pudding and milk, and hurrah for the "stars and stripes." The little Englishman has his lion, the little Frenchman his eagle, and the little Americans also have their bird, which is equally ugly, and can screech. Wonder if the eagles will ever pull the hair of the lion and make him roar?

What pretty eyes! What a pretty mouth to kiss! How every mother's heart throbs when she thinks of her own little cherub! and how proud, ambitious papas walk up and down in contemplation of their succession! Wonder if they shut the little boy up in a dark closet to punish him, or do they use the birch? We don't believe in boxing ears, in dark closets, or in whipping. Mr. Beecher once remarked, that "to strike children about the head is barbarous, unchristian, brutal. This should never be done, especially as nature has provided a good deal better place."

Oh, what a little rosebud! Isn't he sweet? How pretty his hair curls! But we must kiss him good-bye for the present. We may in a few years try him again.

CRUSHED FLOWERS.

BY HOPE ARLINGTON.

"Oh, mamma, see! we dot a pitty botay!" eagerly cried a bright little boy of four years, holding in his chubby hands the spoils of a long and patient search through the fields on a hot August afternoon.

"We dot a pitty botay!" again he cried, reaching it out toward his mother, who stood in the doorway of her pleasant cottage.

The little hands clasped only the blossoms of a few common weeds; but the large blue eyes looked at them so tenderly, so exultingly, as though they had been the choicest flowers, then turned to seek a look of sympathy in the mother's face. From my window I watched the two. What will the mother do? I thought. Will she clasp the little tired, heated form to her heart, and thank God that he has placed within it a soul filled with such love of beauty that it can find it in the simplest or the rudest of his works? Will she thank him for showing her so plainly the way by which this

PORTRAIT OF EDWARD CARSWELL.

young soul, intrusted to her care, may be led very near the Author and Creator of beauty?

She did not do this. She said, "Oh, you dirty boy! Throw those poison things right away, and don't you ever let me see you with any more!" The "pitty botay" dropped, the lips quivered, the eyes filled with tears. God saw the struggle, but the mother did not. She turned away, and gave no soothing word to soften the disappointment and sorrow of her sensitive child.

The little feet had run, and the little hands had toiled in vain; ah! worse than vain, for the flowers so reluctantly thrown away at the mother's harsh bidding were not to be compared with the beautiful soul-blossoms withered and crushed by her want of appreciation and sympathy.

Poor, tired, little boy! unless God folds you soon in his arms of love, there are lonely hours of bitter anguish in store for you—darker ones, it may be, of temptation and sin! So I thought as the little grieved face came up before me that night, and my pillow was wet with tears before I slept. Oh, mothers! strive to understand and appreciate your children, for unless you do, their young lives will be desolate!

EDWD CARSWELL, THE ORATOR.

PHRENOLOGICAL CHARACTER.

MR. CARSWELL has a large-sized brain of the best quality on a moderately-sized body. His head measures something more than twenty-three inches in circumference, while the weight of the body probably does not exceed 150 pounds. In order that the brain might be well balanced, this weight should be increased to 180 pounds; but the quality being fine, and his habits temperate, he is tough, wiry, and enduring. We can not, however, predict long life for such an organization if living amid the whirl of mental excitement in public life. If he would tone down, cool off, and take life more passively, avoiding excessive excitement, he could hope to live into old age and escape both disease and the doctors. But he is impulsive, full of enthusiasm and enterprise. He is even impetuous, and might properly be called a "perpetual motion." There is no mud in his brain—nothing dull, slow, or stupid. He is sharp, keen, wide awake,

and intense. His danger lies in overdoing rather than in not doing enough.

Mr. Carswell's prominent phrenological developments are those of Benevolence, Ideality, Sublimity, Approbativeness, Mirthfulness, Individuality, Eventuality, Human Nature, and Language. Imitation is also decidedly large. He can do anything he sees done, though far from being simply an imitator. Indeed, he is an inventor—full of plans, projects, and schemes as a watch is full of wheels.

His social nature is strong, and he would become much attached to wife, children, home, and friends. But such a man would make himself at home everywhere, adapting himself to all conditions and circumstances, for he is indeed a "universal genius."

Should we be called upon to give this gentleman a professional prescription, it would be this:

Exercise the brain less and the body more. Abstain from stimulants and narcotics, including tobacco in all its forms; sleep regularly and abundantly; eat moderately of the most suitable vitalizing food, and avoid sedentary life. Live much in the open air; ride a horse,

row a boat, climb the hills, work on a farm; for recreation take occasional voyages at sea, or trips across the Rocky Mountains, and you may make life more a happiness to yourself and a blessing to others.

Mr. Carswell evidently inherits many of his better qualities from his mother, such as benevolence, kindness, mirthfulness, ideality, language, and the social affections. It is probable, however, that he has his father's love of liberty and sense of independence. As to a pursuit, he can do one thing as well as another; but his more appropriate sphere would be in literature or in the natural sciences.

BIOGRAPHY.

Edward Carswell, the celebrated Canadian Temperance Orator, well known in the United States as a lecturer and moral reformer, was born at Ware, England, February 19, 1832. His father, who was a jeweler, emigrated to Canada when young Edward was only four years of age, and there he received his early education. Naturally gifted by nature with wit and extraordinary power of conversation, and being of an open and lively disposition, when entering upon manhood he was eagerly courted by society, which, as is too often the case, resulted in laying the foundations of habits of intemperance. Happily, however, his moral nature did not become entirely blunted; and from this youthful folly may perhaps be traced the commencement of a career which has since been so honorable and so successful. Sober thought convinced him of the perils that such a course would inevitably bring, and he resolved to become a total abstainer, and in 1852 he joined the Oshawa Division of the Sons of Temperance, a connection which he has ever maintained.

When Mr. Carswell entered the Temperance cause, he did not intend to remain simply a "member"—he became a "worker;" and in 1857 we find that he held a high position in his Division, and was sent as one of its representatives to the Grand Division of Canada West; and four years afterward was elected G. W. A.—the second highest office in the gift of that body. The election to this office rendered him eligible for membership to the National Division—the supreme deliberative body of the Order—and in the following year he was initiated into that body at a conference held at Hamilton, Canada West; and at the same session was elected M. W. C.

Mr. Carswell was then well known in Canada, and for some years, as an able and popular lecturer on Temperance; but he distinguished himself at that session by a powerful and eloquent address which at once introduced him to the highest and best minds of the Order who were there as representatives from nearly all the States of the Union and the British Provinces.

Since that time Mr. Carswell's voice has been heard in nearly every city of the North American continent from Halifax to New Orleans, with the best results to the cause he advocates

and his own enviable reputation. His evidences of success and usefulness are not to be found merely in the ephemeral eulogies of the press, but he has built up a memento of his visit in every place where he has ever lectured, that had previously no Temperance Society, by organizing one before he departed. Nothing but the severest illness ever prevented him from keeping an engagement to lecture; and he has been known to walk forty miles through the roughest part of Pennsylvania in mid-winter, when he could not obtain a conveyance.

By profession Mr. Carswell is a scenic artist, and many of his paintings have obtained a deserved popularity. He has, however, what New Englanders term a "faculty," and can and has employed himself in some department of almost everything. A very amusing and truthful instance of this versatility is related by a gentleman who one day came a distance to see him. "In the morning," he says, "I found him icing and ornamenting a wedding cake; in the forenoon he took six pictures in a photograph gallery; at noon he sold a man's furniture by public auction; in the afternoon he engraved a coffin-plate, wrote a humorous poetical sketch for the local paper, and painted part of a scene of a panorama, and concluded the labors of the day by delivering a temperance lecture in the evening."

Mr. Carswell has a Canadian reputation as a prose writer, and some poems of his have an extended reputation. The following, "I wish I was an Editor," "Our Church is clad in Mourning," and "Maine," have gone the rounds of the press. He has also written songs which have been set to music and become very popular.

Much of Mr. Carswell's success in portraying the dreadful effects of intemperance—its many phases, and characteristic effects upon the human form and features—is due to his having been, like his compeers Gough and Hewlett, numbered with the "knights of the buskin." He performed several engagements in Canada and the United States under an assumed name. This association has been of great service to him, and was fortunately severed in time to prevent his jovial, open-hearted, and generous nature becoming a prey to the many temptations which beset such a life. As an actor, Mr. Carswell was very successful. Time and temperance would have given him a leading place in that profession. Fortunately his energies have been devoted to and employed in the production and exposition of his own clear, vivid, and fervent thoughts and feelings upon the great subject of Temperance, rather than in reproducing the thoughts and words of dramatists.

ALONE I walked the ocean strand,
I stooped and wrote upon the sand
My name, the year and day;
As onward from the spot I passed,
A wave came rolling high and fast,
And washed my lines away.

POETICAL MOSAIC.

THE curfew tolls the knell of parting day
In every clime from Lapland to Japan;
To fix one spark of beauty's heavenly ray,
The proper study of mankind is man.
Tell—for you can—what is it to be wise?
Sweet Auburn, loveliest village of the plain;
The Man of Ross, each lisping babe replies,
And drags at each remove a lengthening chain.
Ah! who can tell how hard it is to climb
Far as the solar walk or milky way?
Procrastination is the thief of time,
Let Hercules himself do what he may.
'Tis education forms the common mind,
The feast of reason and the flow of soul;
I must be cruel only to be kind,
And waft a sigh from Indus to the pole.
Syphax, I joy to meet thee thus alone,
Where'er I roam, whatever lands I see;
A youth to fortune and to fame unknown,
In maiden meditation fancy free.
Farewell, and whereso'er thy voice be tried,
Why to yon mountain turns thy gazing eye?
With spectacles on nose and pouch on side,
That teach the native moralist how to die.
Pity the sorrows of a poor old man,
Whose beard descending swept his aged breast;
Laugh where we must, be candid where we can,
Man never is, but always to be blest.

OCTAVIA.

STUDIES IN PHYSIOGNOMY—No. 1.

WHEN we find material for physiognomical contrasts among living heads, or persons whose names and characters are parts of the world's history, there is certainly a substantial ingredient in the comparisons drawn which renders them especially interesting to the reader. That substantial ingredient—reality—sometimes, however, is fruitful of displeasure or annoyance. Displeasure to a reader who, from his reading or acquaintance, has formed a different opinion of the persons contrasted from that of ourselves; annoyance to ourselves lest we have been unjustly severe in our strictures, or have deduced erroneous inferences from premises which we had been led to believe on trustworthy evidence to be correct. It is difficult to tell the truth at all times. It is an undesirable task to delineate the character of a notorious villain, even when he bears "the mind's expression in his face." There is the sentiment of mercy which would soften the asperities of criticism when we sit calmly down to scientifically develop the nature of even a Jeffries, a Robespierre, a Palmer, or a Probst. Society is accustomed to regard the disciples of Science as an order of men without sentiment or feeling—merely delving among the arcanæ of nature in a manner zealously but coldly intellectual. When, however, we consider the true nature of the occupation of these delvers—primarily, opening up to view the marvelous works of the Infinite God; secondarily, adding

to their own accumulations of worldly wisdom, though it may be in some cases without a fervent recognition of the mercies of Providence who has piled up the great store-house of nature for his creatures' use and good—we are constrained to exclaim, "Truly the undevout astronomer is mad!"

Like Dante's sinner, who though immersed in water to his chin can not swallow a single

FIG. 1.—THE STUPID.

drop in alleviation of his burning thirst, so these cool philosophers amid the innumerable testimonials of a Divine hand ministering to the necessities and enjoyments of man, while they with apt Causality perceive their adaptation, they discern not spiritually their origin. There is something that savors of enchantment in the realms of natural philosophy. The beautiful organisms, the striking correlations, the wonderful combinations which are to be constantly met with in the realm of matter, excite an interest and an enthusiasm for their examination which none but those who have pursued a scientific profession can comprehend. The intellect runs riot in the expanse of knowledge, and absorbs all interest to the neglect of the spiritual nature. Yet there have been Newtons and Mitchells among the *savants*, whose learning helped them to a more comprehensive and therefore more adorable estimate of the "Father of lights."

Even in Phrenology, a science which recognizes and points out man's relation to his Creator, there have been men, zealous, earnest investigators, who have drowned the spiritual in the physical; but from the very nature of the calling, such men are few among those who have carefully investigated the doctrines of Phrenology. Discerning, then, the humane and spiritual in our practical applications of scientific principle, it is next to impossible to wield a trenchant pen in treating of the foibles and shortcomings of dead or living subjects. Has one an inferior organization, a meagre development of the moral faculties, a powerful development of the propensities, we can not but be compassionate him; although we must acknowledge that he might have done better had he perseveringly endeavored to improve himself. We censure such a one for not trying to modify his nature—for sullenly permitting his propensities to draw him into the pit of degradation.

We purpose in this article to present some contrasts of an extreme character, to the end that they may be the more striking; and it is to be hoped they will not hit any of our readers in any respect. The ancient physiognomists were disposed to thus depict anger, jealousy, hatred, lust, avarice, etc., approximating apparently to the climax of those passions as they supposed them to be personified in the man over whom these respective vices had obtained complete dominance.

Theophrastus of Eresus, a pupil of Plato and the successor of Aristotle in the Lyceum at Athens, was conspicuous among the ancient philosophers for learning and a general knowledge of human nature. Among the writings of this great teacher, which have survived the lapse of ages, are his "Characters." In their succinct portrayments of marked dispositional tendencies and confirmed mental organizations, he exhibits a comprehensive knowledge of men not often met with in the elaborate details of modern analysis of character, and his subjects are as fresh to-day as they were 2,000 years ago. Man is the same congeries of dispositions, freaks, fancies, and desires—the same impressible and susceptible "mold of clay." Opportunities and privileges have changed much with the revolution of centuries, but the same motives, the same passions, propensities, the same incentives practically influence the great round of humanity. There has been no change in the organization of man. Therefore we can introduce the pen-pictures of an ancient physiognomist with the strong expectation of their receiving due attention from the reader.

Morbid or abnormal conditions of temperament usually accompany deranged mental manifestation. The cerebral harmony being destroyed, the physiognomy or external physique in its entirety shows a correspondent state of aberration. Slow and torpid in physical and mental constitution, man at first may be characterized by great gravity and deliberation in thought and action. Yielding to the tendencies of his nature, making no decided effort to overcome the lethargic influences which are creeping upon him, because efforts of all kinds are distasteful, he becomes wearisome and annoying to his associates on account of his slowness and inaction; and then the vital temperament having altogether degenerated into the lymphatic, he becomes stupid and ungainly. His slothful mind can not take clear impressions of daily events in their quick transitions. He lives rather in the past than the future. When he does attempt to grapple with the present, his uncertain susceptibilities and blunted senses lead him into all sorts of absurdities, and make him a butt for the arrows of the witty and mirth-loving. Such a man the stupid face in fig. 1 indicates. It is one of this sort who, after he has laboriously made some simple calculation, turns to his neighbor to ask what is the amount. When attending any place of amusement or religious services, he is often left asleep by the departing assembly. He mislays articles of value, or puts them away

in his endeavors for security, so that he can not find them when wanted. He makes his appearance to pay obligations before or after their maturity, and forgets to cancel the bond which he has paid. In conversation, his stupidity becomes most strikingly apparent. He bursts into a horse-laugh at some passing remark of an acquaintance which is far from challenging

FIG. 2.—THE FEARFUL.

the mirth of others, and makes most irrelevant and incoherent replies to questions addressed to him—joining often in a laugh which is at his expense, but which he stupidly considers the effect of a witty remark of his own. Liberal dinners and much wine have worked their will upon him, and converted his brain into gravy and his body into fat.

Turning to fig. 2, we see a lean and hungry wretch—a man of nerves, of acute sensibilities, of painful impressions. His large and overwrought brain is a prey to himself. He scarcely lives; the unremitting nervous anxiety which besets him speedily exhausts all the energy and vitality he can obtain. He is restless, impatient, peevish, fearful. His tendencies have grown upon him, as in the case of the "huge mountain of flesh" already described, but have made him cadaverous and gaunt. His large Cautiousness renders him apprehensive of danger and misfortune and uncertain of his wealth, if he has any. His Marvelousness is large enough to furnish the back-ground of his dark mysterious forebodings, and lend a color of fascination to the horrible in his thoughts; and his large Secretiveness contributes to render him suspicious and unconfiding. His Hope is blighted; he sees nothing in life to encourage or animate him; but gloomy and despondent, querulous and impatient, he casts a cloud upon all those who approach him. Miserable in himself, he comprehends not joy in others, and would have others even as himself.

How great the contrast presented by these two portraits! How repulsive, both!

Thou wouldst my guardian angel be?

Alas! thou know'st not what the task.

The ange, that shall guardian me

Must suffer more than I can ask.

I would not have one pang of mine

Pass from this bosom into thine.

**HARRIET BEECHER STOWE AND
OCTAVIA WALTON LE VERT;
OR, THE WOMAN OF THE NORTH AND THE
WOMAN OF THE SOUTH CONTRASTED.**

PARTIAL or partisan judges will see all the graces and virtues in the person who represents their own opinions. It will therefore be quite natural for our Southern brethren and sisters to see in the face of the Alabama beauty all that is lovely and lovable; and even without bias, all may see in that intelligent expression great kindness, devotion, integrity, and affection. Madame Le Vert's person is gracefully modeled; she is neither too large nor too small, but is between the extremes, and is just such a character as one and all would admire and love. That is a handsome face and a nicely modeled head. It is even rather than angular, and so is the character. The face speaks generous hospitality; the mouth cheerfulness; the lips affection; the chin, nose, eyes, cheeks, etc., true womanly delicacy. There is nothing repulsive or objectionable. All is calm, serene, placid, obedient, humble, hopeful, and trusting.

In the likeness of Mrs. Stowe, something more emphatic may be seen. There is strength and force in every feature. The artist, however, has failed to do justice to his subject. To our eye, this face indicates amiability as well as great executiveness. But the engraver represents her organization less fine in texture than is the fact. Among the more prominent organs in this brain may be named Conscientiousness, Benevolence, and Veneration; while Imitation, Causality, Comparison, Ideality, and Sublimity are next in prominence. The entire group of perceptive faculties may be classed with the first named as among the largest. The love element, or social nature, though strong, would be subordinate to intellect and moral sentiment. She is a woman of thought rather than of impulse; and her motto would be "utility" rather than display.

Is she radical and reformatory? She is sincere and just. Is she resolute and courageous? She is meek and kindly. Is she severely critical and intellectual? So she is imaginative and emotional. If not a beauty—she is a power. If not delicately feminine, neither is she helpless or effeminate. If she represents the rugged, the strong, and the resolute, it is simply in keeping with her own nature and organization.

[Our worthy contributor L. L. continues the analysis from another stand-point.]

As the physiological laws of different latitudes are becoming better understood, our philosophers and thinkers incline more and more strongly to the belief, that climate exercises as potent an influence upon the formation and development of character as even race itself. Without stopping to illustrate this idea by examples, we may say that the wide contrast between the two representative women whose names stand at the head of this article, is, to a great extent, the result of the contrast between the climate of Florida and that of Massachusetts.

OCTAVIA WALTON LE VERT.

This effect of zone is probably more marked in woman than in man. It is his prerogative and glory to brave and conquer every variation of temperature from the equator to the pole. It is her destiny to adjust herself to the skies under which she is born. If these are mellow and warm, she will unconsciously and instinctively open her heart to all the gentle impulses and balmy breath of nature. She will enjoy the beauty and fragrance of flowers, the melodies of song, the gushing life of tropical exuberance, and become in her being and character at once a type and a reflection of the gorgeous fullness and the pervasive fragrance amid which her days pass.

What but a life of social brightness, mellow sympathies, and unclouded joyousness could we expect as a sequel to a childhood passed on the coast of Florida, where, in her own vivid words, Mrs. Le Vert says her first memories were "of the orange and live-oak trees shading the broad veranda; of the fragrant acacia, oleander, and cape-jasmin trees which filled the parterre sloping down to the sea-beach; of merry races with my brother along the white sands, while the creamy waves broke over my feet and the delicious breeze from the Gulf played in my hair; of the pet mocking-birds in the giant oak by my window, whose songs called me each morning from dream-land."

Turn now from such a childhood to the household of the New England minister in Massachusetts forty years ago. For nearly half the year the streams are sealed with frost; the trees are leafless, and apparently dead; the air is cold; nature is forbidding; and however man may breast the severities of the climate, woman must seek her enjoyment by the fire-side in the amenities of household life. In addition to this, the limited income of a Congregational minister in those times made industry and economy prime laws in such a family. While the daughter of the Governor

of Florida was frolicking with her brother on the sea-beach, and romping through the orange groves, or playing hide-and-seek among the roses in January, or picnicking with army officers beneath the magnolia groves, the child of the New England divine—the great champion of orthodoxy—was carefully economizing her time, so that between the making of beds, the sweeping of floors, and the washing of dishes she might eke out time for the mastery of her lessons at school. Be sure her dress pocket was ample and ever filled with some interesting book to be read in every moment of leisure, and the stores of knowledge thus at all times and everywhere laid away in the cells of memory were kept fresh and ready for immediate and constant use. A mind like Mrs. Stowe's, naturally active and vivid, living at the very focus of controversial theology, must have been rapidly developed by the perpetual stimulus of the fireside discussions and the public ministrations to which she was a constant listener. Accustomed to hear the abstract principles of right and of justice laid bare and analyzed by the master-hand of her reverend father and his compeers, she would naturally inquire with respect to all social and moral questions into their essential merits, and consider, not what was agreeable or pleasant or profitable for one's-self, but only what is in accordance with truth, justice, and the highest reason. Such a brain, with a heart inclined to love virtue, and inheriting benevolence and faith from a pious parentage, could find pleasure only in intense intellectual activity, and that activity in the direction of beneficence and moral improvement. A childhood and girlhood thus passed must have resulted in giving ideas, activity, effectiveness, and humanitarian convictions, which are, as we think, the distinguishing characteristics of representative Northern women.

If we turn now to the sunny-tempered child of the South, we find as much benevolence in the composition of Mrs. Le Vert as in that of Mrs. Stowe, but vastly different in its manifestation. Instead of striving to ameliorate the condition of large classes of degraded or suffering humanity, she devotes herself with untiring assiduity to dispensing happiness to those immediately within the charmed circle of her voice and her presence. She is the light, and warmth, and brightness of the circle in which she moves. She soothes the heart of the sorrowful, and breathes repose and sympathy upon the restless and way-worn, suggests the lighter occupations that give relief from life's endless toil and endeavor, and seems herself the embodiment of the sentiment, the amiability and grace, and the humanitarian feelings which are the distinguishing characteristics of representative Southern women.

But it will never occur to her to write a book exposing the little vices of virtuous people, for she will throw around her an atmosphere repressing or concealing them, and evoking whatever is amiable and agreeable, so that neither she herself nor those around her shall see or

suffer from aught unpleasant or ill-timed.

The genius of Mrs. Le Vert is *social genius*. Nearly forty years since she began to figure as a favorite and a belle in the gay and polished circles that graced the hospitable mansion of the Governor of Florida. From that day until the present moment no woman in America has been more remarkable than Mrs. Le Vert for the immense number of persons whom she could call by name, and with whose history she is acquainted, both in this country and in Europe; and the throngs of personal admirers of all ages and both sexes amid which she has lived, and moved, and had her being. Let us look at her phrenologically. Individuality, or the faculty of remembering persons that one meets, their names and faces, and the general facts of their personal history, is largely developed. One of the most remarkable characteristics of Mrs. Le Vert is the smoothness and

facility with which all her mental operations proceed. She not only never forgets, but she never makes an effort to remember. The names of that immense number of acquaintances which a fashionable lady is likely to make, seem ever present in her memory. If she converses with a person five minutes, and then does not see him for five years, she will call his name instantly upon meeting him, and probably resume the topic of conversation which was broken off five years before. Numberless instances of this sort are related by all her acquaintance as proofs of her astonishing memory. In this way she is always able to bestow that most delicate and insinuating of all flatteries, the conviction that *you* have made a deep and favorable impression upon her mind. Combined with this marvelous power of recollection, Mrs. Le Vert has the most exuberant social fertility. She is never at a loss for a suggestion as to what amusement, what excursion, what trip or journey, or what sort of a party, or what style of entertainment will be most agreeable with the group of friends of which she is the cynosure. If she is at a Southern watering-place, one day she will suggest a picnic, to be followed on the next by an excursion to some remarkable locality; this to be succeeded by a sailing-party, and the next day a grand dinner. If she is with a traveling-party, her advice as to when to go to Saratoga, and when to visit Newport, when to make the tour of the White Mountains, and under what circumstances to visit Niagara, is incomparable. In connection with these brilliant social characteristics, Mrs. Le Vert has always displayed qualities of heart as amiable as her mental powers are remarkable. In one of the numerous sketches of Madame Le Vert, she is described as "made up without antipathies." The legend of the old Italian sun-dial seems to be written on her heart: "*Horas non numero nisi serenas*" (Hours I do not count, unless they are sunny). Probably no prominent social character in the United States has ever led so long and brilliant a career, and yet inflicted so little pain, either by exciting envy, by invidious comparison, by a convenient rec-

HARRIET BEECHER STOWE.

ollection, or by the severer stings of irony and sarcasm. Domestic affliction she has had; and sometimes, no doubt, she has found that detraction and scandal are the thorns upon the rose of popular esteem, or, as Cicero says, "Envy is set over against glory;" but all this has thrown no cloud upon her sunny spirit. One of the warmest of her eulogists, herself a glowing writer, thus portrays this characteristic of Mrs. Le Vert: "Prejudiced by no sectarian dogmas, influenced by no sectional jealousy, she opens wide the portals of her heart, and folds the whole world of humanity in her loving and kindly embrace. With her a humane eclecticism has taken the place of a partial creed. She looks upon all her race with an 'infinite pity and infinite love,' and therefore the arts, literature, society, and systems of all countries through which she has journeyed are kindly viewed and liberally interpreted."

Yielding to the fascinations of her presence, and warmed by her ever vivid sympathy with all the joys as well as the sorrows of life, one does not miss in her the restless, and earnest intellectual activity of a high and strenuous soul. Yet, in summing up the intrinsic value of such a character as Madame Le Vert's, we can not but compare her to the magnolia grandiflora of her own native groves. The perfume that exhales from her language and her writings is evanescent rather than penetrating—delightful rather than permanent—sweet, not lasting.

Harriet Beecher Stowe must be pronounced, on the whole, the most brilliant and the most famous of American female prose writers now living. Though a constant contributor to various magazines, and the authoress of several books, her fame will rest upon the work which immediately after its publication gave her a national reputation. Her brain teems with all sorts of valuable social ideas, and the range of her activity takes in alike the delicate fireside problems and those of larger import and wider scope.

In society, Mrs. Stowe has never been, and can never be, the burning and shining light that has for so many years illuminated Southern salons; but nobody carries into society an eye keener to detect or a pencil more facile to portray the various characteristics and the different phases of life there represented. Receiving and retaining every impression which social life is

capable of making upon a finely organized intellect, she retires to her composing-room, and with brilliant grouping and artistic coloring weaves her conclusions, her convictions, and her lessons into stories which fascinate by their natural grace, delight by their beauty of language, and tend to elevate society by their high moral tone.

How many thousands have wept over the death of Eva! How many thousands, as they lingered over the fascinating page, have found their teeth clenched as their eye ran down the lines which recite the fearful story of Uncle Tom's torture! And ten years ago, how many hundreds of voters, who had up to that time been conservative, rose from the perusal of that book thoroughly radical in their political convictions! While the giant wrong was being smitten by a hundred sledge-hammers wielded by brawny arms, the wit of this one woman dealt it a home-thrust which proved to be like the word of the Lord, a "divider between the joints and the marrow." Her delicate bodkin reached the heart of the monster, and slavery never recovered from that stab.

In person, the authoress of "Uncle Tom's Cabin" is slender but agile, compact and highly organized. Her faculties are so harmonized as to work with the utmost smoothness. No one of her mental powers is so wonderful as the memory of Mrs. Le Vert; but in poise and effective vigor of mind Mrs. Stowe has probably no superior among the writers of her sex. Her mental concentration and endurance are very great. She can carry on her trains of thought and weave one of her charming narratives while engaged in domestic duties. Michelet speaks of the manner of her labor as follows: "Some one asked the charming and illustrious Mrs. Stowe under what circumstances she had written 'Uncle Tom's Cabin?' 'While I was keeping the pot boiling,' she replied."

When the future literary historian of this country sums up the performances of the first half of this century, the names of Prescott and of Bancroft will stand first in their departments. In fiction, he must pronounce "Uncle Tom" as the most charming, and at the same time the most effective, novel which the times produced. Mrs. Le Vert is also an authoress, but her style is as different from that of Mrs. Stowe's as the splendor of a Brussels carpet is from the beauty of a parterre of roses.

One records her convictions, the other dashes off her impressions; one tells us of countless pleasant things she saw and innumerable kind people she met, while the other gives us the lesson and the wisdom of foreign travel—tells us what Europe is, and what it is not; delights us with little cabinet gems of pen-and-ink painting and trenchant outlines of character.

The difference between these two women is, to a great extent, a sectional difference. One is a good type of the Northern woman, the other as fair a specimen of the Southern lady. The contrast is a radical one. The Northerner regards life a failure if it is not effective, and his ideal of woman is of a person fitted to aid and advance all the prime interests of society. The Southerner, on the other hand, regarding life mainly as a scene of enjoyment, looks upon woman as a creature of delight; and woman in that society rarely rises above the standard there fixed for her. Hence a person like Mrs. Le Vert, formed to captivate Southern hearts and to be the delight of Southern society, appears to us of the northern clime more splendid than useful, more ornamental than valuable.

On the other hand, a person like Mrs. Stowe, diffident and retiring in general society and somewhat eccentric, must seem to a Southerner far more strenuous and earnest than is consistent with his ideal of the loveliness and the repose he seeks in the society of woman. L. L.

NEW YORK, JULY, 1867.

"If I might give a short hint to an impartial writer, it would be to tell him his fate. If he resolved to venture upon the dangerous precipice of telling unbiased truth, let him proclaim war with mankind—neither to give nor to take quarter. If he tells the crimes of great men, they fall upon him with the iron hands of the law; if he tells them of virtues, when they have any, then the mob attacks him with slander. But if he regards truth, let him expect martyrdom on both sides, and then he may go on fearless, and this is the course I take myself."—*De Foe*.

THE PHRENOLOGICAL JOURNAL AND LIFE ILLUSTRATED is published monthly at \$3 a year in advance; single numbers, 30 cents. Please address, SAMUEL R. WELLS, 330 Broadway, New York.

THE NEW VOLUME.

THE PHRENOLOGICAL JOURNAL now enters upon its FORTY-SIXTH Volume! Never before was it so large, so highly appreciated, nor so liberally patronized. Whether its mission has been nearly accomplished, or only just begun, the future will disclose. Its doctrines are now so generally accepted, that we have no further controversy. It is only the ignorant, the prejudiced, or the bigoted who ever attempt to throw crooked sticks in the way of its prosperous and onward march. When all we claim is understood and conceded, what more is there for us to do? This: we are not only to show its truth, but the application of PHRENOLOGY to all the great interests of life, and to apply it. There is the great Common School interest—that incomparable civilizer—that wonder of modern times, with its academic, scientific, and classical departments, to be reformed and improved. There is the question of a correct theology—a religion in harmony with man's organization and necessities—in which *all* may be more nearly agreed, and work together; of government—whether it shall be despotic, monarchical, or self-regulating, representative, republican; of the causes, right treatment, and management of the insane; of the cause and prevention of crime; of the choice of pursuits—callings the most appropriate to each; and, most important of all, its application to personal development and self-improvement.

Our best educational systems—great, and even glorious, as they are—are yet faulty, inasmuch as the temperament, natural disposition, and capabilities of the object to be educated are not properly understood. All are governed, treat-

ed, managed like machines, and educated alike, as though there were not the most marked constitutional differences among the pupils of every school. These differences PHRENOLOGY points out, and indicates the manner in which each mind may be called out, and the faculties of each more fully developed.

Then the question of MARRIAGE must be settled on scientific principles, so that it shall be determined who are and who are not adapted to each other, and how to harmonize where differences exist. All these, and a thousand other matters which concern every human being, belong appropriately to our investigations, and come within the scope of the PHRENOLOGICAL JOURNAL. Our field is large, the harvest is ripe, and the laborers are few. This is the only serial publication in the language devoted to these objects. It has found favor with many good men; is received into the best families; is largely patronized by the clergy, lawyers, physicians, naturalists, artists, teachers, authors, students, merchants, mechanics—indeed, by all intelligent classes, and its influence is steadily increasing in all parts of the world. That it has been the forerunner of important changes in the intellectual, social, and moral condition of man, those who have read it in the past will readily grant. That it shall in future be even more potent for good is the fixed desire and determination of its conductors.

Reader! our case is stated; the matter is before you. What part, if any, do you propose to take in this work? Will you simply sip honey from the flower, or pluck the fruit from the vine, and quietly enjoy these luxuries? Or will you assist in fertilizing the shrub and vine which produces the fruits, that *others* may also partake thereof and be refreshed? Will you selfishly read the JOURNAL alone, and, sponge-like, absorb its contents without giving thereof to a neighbor? If it be "more blessed to give than to receive," what a capital opportunity is here offered to obtain a great blessing! We know very well that the "laborer is worthy of his hire," and that one can not work "free, gratis," and "find himself." But something may be done on the score of benevolence, friendship, affection. Would you show your gratitude for favors received? Send the

JOURNAL a year to the one whose kindness you would repay. Would you be kept in constant remembrance of the most beloved? Order the JOURNAL to be sent a year to that one's address. Is your son or your daughter from home, or away at school? What frequent visitor would prove more welcome or cheering than the JOURNAL? Is your minister a subscriber? Do not ask him if he would like it, but send it to him. Is it among the magazines in your public library or reading-room? No other journal among a hundred would be more studied. Can you not place it there?

Are you foreman, assistant, accountant, or an apprentice in a large shop where there are twenty or more operatives at work? Can you not get up a club among these men and women? Has your fellow-student ever read a number? Show him this. Then there are your neighbors, Mr. BROWN, Mr. SMITH, and Mr. JONES, who would subscribe for it on *your* recommendation. What do you think? Is it worth your while to do so? You *may* get no thanks, or you may get more kicks than coppers, for meddling with the matter. Then of what account to *you* is this thing? However, show them your JOURNAL, and *then* if they wish to subscribe, they may do so on their own account. Will you do it?

This JOURNAL can not consent to go a begging; nor is it a subject of charity. It proposes to give an ample equivalent for all it gets. It will do *more* than this. Not only shall every dollar of its receipts be expended on its pages, but the time, talents, and best energies of its conductors shall be put with its receipts. Its terms of subscription shall not much exceed its actual cost of production. All its profits shall be divided among its subscribers and co-workers. More than this we will not promise. Is it not enough? Can any do more, or better?

We make an early start for the next station,—December,—with a well-provided train—conductors, engineers, stokers, brakemen, porters, baggage-masters, iced-water boys—reporters, newsmen, phrenologists, physicians, preachers, housekeepers, and all the paraphernalia for a most enjoyable (six months) excursion through and around the world. The bell rings. Shake hands! All aboard! We are off! Good-bye!

THE SPIRIT OF THE AGE.

THE SPIRIT OF THE AGE is "*electricity and steam.*" The TELEGRAPH and the LOCOMOTIVE are emblems of the nineteenth century. How soon the modes of using these may be improved or superseded by something superior, now unknown, we can not predict. All the elements of nature—water, air, light, heat, electricity, magnetism, and so forth—are to be subjugated to the use of MAN. All these God-given powers will be used as means for a still higher and more universal civilization and development. Just in proportion as mankind are brought into a more intimate communication and contact, will they rise. Barbarism is seclusion and exclusiveness. Civilization is education, art, commerce, invention, mechanism, navigation, railways, steamers, and the like. The world progresses. The present surpasses all previous periods for mental activity and for the celerity with which material improvements are being made. Till now, who ever heard of new railways being laid in a wild, unsettled country at the rate of three miles a day! Look at that incomparable work now going forward across the Rocky Mountains! Look at that other wonder, a five-mile railway tunnel through the Hoosac Mountains! The Atlantic and other ocean cables have been laid, and still other cables will soon wire the world together. Suspension bridges cross stupendous rivers, and city is united to city, and people to people.

But what of our moral, social, and political condition? Here, too, under God, there are evidences of progress and improvement. Serfdom in Russia and slavery in America have been abolished. The right of self-government is everywhere asserted. A "divine right" for any one man to rule is everywhere denied. Equal rights for all are everywhere demanded.

The education of children is no longer optional with ignorant or indifferent parents, but for the good of the state and the nation, God be thanked! is now, and is to be, COMPULSORY.

Scientific organizations are reaching out in all directions. Explorers are on every sea, lake, river, and mountain. Minerals, men, and monkeys are alike

brought into view, and our knowledge increased.

Missionary work at home and abroad is progressing; Sunday-schools are flourishing; church-building and religious enterprises are liberally encouraged. Barbarism *must* give way to Christianity. Every human being has an interest at stake. Each should do something, and come up promptly to do the work allotted him. There is no place for idlers in God's great vineyard. Let each put his shoulder to the wheel and help set the world ahead. Reader, what are *you* doing? Are all your faculties being used? or are they dormant? Remember the parable of the talents! *The right use* of what you have will be the measure of your reward. He who does little or nothing for the good of himself or his fellows will find little or nothing to his credit in the Book of Life. You who have realized the truth, that it is more blessed to give—and to do—than to receive, will need no urging from us.

Are you inventive? Give the world the benefit of it. You will be none the poorer, but much richer, in gratitude to God. Are you mechanical? Build yourself a monument in the hearts of the people. Are you a preacher? exhort, preach, and pray, "Let thy kingdom come!" Are you rich? "Let your light so shine that others may see your good works, and glorify your Father in heaven." Are you a publisher? Print only good books. A merchant? Weigh your goods on the scales of *justice*. A parent or a teacher? Remember, *example* is more powerful than precept. A phrenologist? Thank God for the good it may do you, and for the good you may do with it. Use it wisely, humbly, meekly, truthfully. Avoid flattery, egotism, vanity, tricks, and even all *appearance* of evil. When called on to describe an unfortunate, do it carefully, kindly, but truthfully; neither magnify, "nor set down aught in malice." Encourage the weak and timid; restrain the willful and careless. To the downcast, desponding, and hopeless; to the proud, arrogant, and haughty; to the dissipated, selfish, and sordid; to high and low, rich and poor, educated and ignorant, preach the true gospel it declares. Point *all* to the Great Example, who came to guide and to save, and the world shall be the better for your having lived and labored in it.

MONOPOLY.—It has been said that "two of a trade can never agree." It is natural for selfish men and women to want all the glory, all the money, and all the attentions. So it is with certain animals. The little petted poodle snaps and snarls if the mistress kindly notices another dog. The little canary and Pretty Polly show marked indications of jealousy when other birds sing and are praised. It is the same with children. How "tempery" little Charley becomes when a little sister takes the place on mamma's lap he formerly occupied. He wishes the red-faced little thing somewhere else. So in artistic circles—each wishes to be regarded as the bright particular star. Is it not the same in every circle of singers? Would not many an orator, poet, painter, author, lawyer, physician, surgeon, or preacher like to be *preferred*? Will not merchants sometimes sell at less than cost to monopolize the trade? Do not steam-boat men and stage proprietors sometimes carry passengers "free gratis," and give them their dinners, to command the traffic? Yea, verily! it is simply unregenerated human nature. But to what extent is this thing justified? Is not he the best Christian who first looks after the comfort and happiness of others? We know two or three small-minded, though much puffed phrenologists who are so foolish as to feel annoyed at the success of others whom they fear may eclipse them. As though Phrenology belonged to them! They are "would-be monopolists." The globe will not cease its accustomed revolutions when they depart, though there will be so much less egotism and bombast in the world. It is the present policy of *this* office to "lend a hand" to every good effort, by whomsoever made, in the interest of any good cause. Our readers know very well what we think of both quack doctors and quack phrenologists, of counterfeits and of the genuine article. We will have nothing to do with self-entitled "Professors," big or little, high or low, old or young, except to expose them; but all intelligent, sober, good, religious men shall have our best encouragement and support. Let all guard against low, mean jealousy. The more magnanimity a senior shows to a junior the better. Reader, are *you* a would-be monopolist? "Live, and let live."

AMERICAN ORATORY AND STRONG DRINK.—During the late session of the American Congress, a Temperance Society was organized, composed of Cabinet officers, Senators, and Representatives. The members met in the House of Representatives, and gave expression to their views in speeches and orations which for stirring eloquence, strong sense, and pathos have seldom if ever been surpassed. Indeed, the utterances by several of our ablest statesmen on that occasion must become the sentiment of civilization. So profoundly were we impressed by these brief and pointed speeches that we at once determined to put them into the handsomest print, and give them to the world. They are now beautifully embalmed "by the art preservative of all arts," and may be had by the hundred or thousand, at the cost of ~~paper and printing~~. The book makes forty-four pages, octavo, and single copies will be sent ~~free~~ on any address for twenty-five cents. Orders should be addressed to S. R. Wells, 389 Broadway, New York. It is just the thing for lecturers, preachers, teachers, editors, debaters, and all who aspire to speak in public.

EMINENT AMERICAN CLERGYMEN. **BIOGRAPHICAL AND PHRENOLOGICAL SKETCHES,** **WITH PORTRAITS.**

THE Baptist denomination has acquired a position which may be compared with the High Church Episcopalian, or Old School Presbyterian, with reference to the standard of morality raised, and the rigid system of ordinances and requisitions laid down. This is especially the case with that branch of the order which is known by the term "Close Communion Baptists."

Large Firmness, Conscientiousness, Veneration, and rather influential Self-Esteem, with an active intellect, are among the prominent faculties found in most of the representatives of this Church. So far as earnestness, piety, and sincerity, in the prosecution of Christian work is concerned, it can not be denied that the Baptist is unsurpassed; and as regards social intercourse, friendly attachments, and co-operative parish work are concerned, this denomination ranks in importance and influence with the first.

Besides our ordinary group of distinguished American clergymen, we present Rev. Dr. Spurgeon, who is the most popular representative of this denomination in England.

BARNAS SEARS, D.D., was born in Sandisfield, Mass., Nov. 19th, 1802. He graduated at Brown University, Providence, R. I., in 1825. In 1829, having completed his theological studies at Newton, Mass., he became the pastor of the First Baptist Church in Hartford, Conn., where he remained for two years, when he was appointed to a professorship in the Hamilton Literary and Theological Institution (now Madison University), N. Y. In 1833 he went to Europe, and studied for several years at Halle, Leipzig, and Berlin; and upon his return he was appointed to a professorship in the Theological Seminary at Newton, where he remained twelve years, during the latter part of that period being President of the Institution. In 1843, on the resignation of the late Horace Mann, he was made secretary and executive agent of the Massachusetts Board of Education. In Aug., 1855, he was unanimously elected President of Brown University. Dr. Sears has published an edition of "Nöhdén's Grammar of the German Language;" "Classical Studies," consisting of essays on ancient literature and art, with the biography and correspondence of eminent philologists, prepared in conjunction with the late Prof. B. B. Edwards of Andover, and C. C. Felton of Harvard; "Ciceronia, or the Prussian Mode of Instruction in Latin;" "Select Treatises of Martin Luther in the Original German;" "Life of Luther, with special reference to its earlier periods and the 'Opening Scenes of the Reformation';" a revised and enlarged edition of Roget's "Thesaurus of English Words and Phrases;" together with numerous reports on education, occasional addresses, and contributions to the "Christian Review," "Bibliotheca Sacra," and other periodicals. Dr. Sears was several years editor of the *Christian Review*. He has lately resigned the presidency of the Brown University to accept the general agency of the Peabody Southern Educational Enterprise.

Dr. Sears' features manifest much dignity and self-reliance, together with forbearance and modesty. He has a close, studious expression, dwelling more in the sphere of thought than in the domain of observation. Though the organ of Language is large, the influence of other faculties is such, that he is probably more a thinker and writer than a speaker—more given to the carefully worded statements of the manuscript than to free and untrammelled extemporaneous expression. He possesses qualities which admirably adapt him to a literary or philosophical pursuit. He possesses method, discrimination, taste, and ready judgment. Benevolence is one of his most prominent phrenological developments.

See how his head towers up at this point! and its influence is all the greater because of the comparatively small side head—Acquisitiveness, Destructiveness, Secretiveness being moderate. We can safely state, that in selecting this gentleman for the philanthropic work just entered upon, that the right man will be found in the right place.

RICHARD FULLER, D.D., pastor of the Seventh Baptist Church, Baltimore, Md., was born in Beaufort, S. C., in 1808, his father being a planter there. He was early sent to Harvard College, where he applied himself diligently to his studies, and took his degree with his class, although he had left college at the end of his junior year. On his return to Maryland he commenced the study of the law, and was admitted to and practiced at the bar. During a severe attack of illness, his mind was turned toward religion, and on his recovery he became a member of the Episcopal Church. He afterward became a convert to the Baptist persuasion, was baptized, abandoned the law, and devoted himself to a preparation for the ministry; and after pursuing his theological studies for a year he was ordained, and took charge of the Beaufort Baptist Church, where, besides

ability to discern character. He reads those with whom he comes in contact literally as he would a book, and therefore is able to adapt his manner and language so as to secure the desired result. He is strongly emotional. In discourse he is not so much marked by argument as by feeling. He appeals to the moral sentiments rather than the intellect, and his efficiency is therefore all the more striking. He should be known for his social qualities, for the readiness with which he becomes attached to others and others to him. He has large Benevolence, Veneration, and Conscientiousness, while Human Nature appears to be decidedly prominent. There is oratory in that face, and Ideality, Sublimity, and executiveness in the brain. Nature blocked him out on a liberal scale. Speaking after the manner of the world, we should ascribe to Dr. Fuller the qualities of an actor, in which all the various shades and phases of human character would be portrayed.

ISAAC WESTCOTT, D.D., pastor of the Bloomingdale (Forty-second Street) Baptist Church, New York, was born at Plymouth, Mass., April 10, 1804. He pursued his academic and theological studies at Methuen, in that State, and subsequently preached three years as a licentiate in the Baptist ministry at Dunbarton. In 1831 he was ordained, and took the pastoral charge of the Baptist Church at Whiting, Vt., where he remained also three years. He was next called to Stillwater, where his pastorate extended over the long period of eighteen years. In 1850 he was called to the Laight Street Baptist Church, New York. He next went to Gloversville, Fulton Co., N. Y., where after a service of four years he was called to Newburg, where he labored other five years, after which he was called to his present position in New York. He received the degree of D.D. from Rochester University a few years ago. In appearance, Dr. Westcott is somewhat under the average height, and of round, full person. He is popular with all classes and ages, and is a great favorite with the young. He may be regarded as a representative in his denomination. He is a self-made man, raised to the ministry out of the body of the church. He is known for his eminent piety; his life has been a practical one; he has labored for the good of his fellow-men, and his success has been marked. It is a fact worthy of record, showing the natural energy of Dr. Westcott, that in every field of labor, with the single exception of Laight Street, New York, a new church edifice has been erected during his pastorate, and more than fifteen hundred persons baptized. As a preacher, his style is common sense, and partakes largely of the pathetic. Whatever he says is the result of the living feeling within, and in this way

PORTRAIT OF REV. DR. SPURGEON.

his regular duties as pastor, he found time and enjoyment in making excursions as an evangelist, preaching the Gospel among the slaves. In 1836, his health having become impaired, he spent a year in Europe, and on his return with recruited energies, resumed his labors in Beaufort with great success. In 1847 he took charge of the church over which he is now pastor.

As a pulpit orator, Dr. Fuller has few equals; and a marked feature of his preaching is a highly spiritual and evangelical element. He has a full, round, manly form, tall and dignified; a frank, open countenance; a clear, deep, and musical voice; and with warmth, earnestness, and depth of pathos he carries his audience along with him, and awakens in the heart of even the hardest a responsive throb. When not in the pulpit, he is generally engaged in visiting and praying with his people; and being remarkably easy and pleasant in his manners, though dignified, he thus wins his way to the hearts of his hearers.

Dr. Fuller's is an open, earnest, ardent nature. The temperament is one of unusual susceptibility. Whatever interests and is entertained by him, he is inclined to become enthusiastic in its advocacy. He has unusual

his ministry is especially effective. Dr. Westcott has now been forty years engaged in the Gospel ministry, and is still hale and energetic in his work.

Dr. Westcott's brain is large and active, and the quality good. He is evidently his mother's son, partaking largely of her spirit and disposition. The head is high in Veneration, Conscientiousness, and Benevolence. He is practical in every sense of the word. His organization is not developed in the direction of the visionary or the superstitious. He has a very warm, even ardent nature. His social attachments are strong, and these manifest themselves in his religious work. He is an earnest, hearty man, both in speech and action. His Language is large; he clothes his thoughts in ready words; and stimulated by an emotional nature he would speak eloquently. The perceptive faculties are large. He is the opposite of a fastidious man. He looks to purposes and appropriateness rather than to ornamentation or temporary pleasure. He has a sense of his own worth, which enables him to be steady and progressive against opposition. He is not easily influenced by others; not easily swayed from a chosen line of conduct. Uniformity and consistency are marked on every feature.

GEORGE W. EATON, D.D., LL.D., President of Madison University, N. Y., was born in Huntingdon County, Penn., July 8, 1804. In the following year his parents removed to Ohio, and settled on a farm in Delaware County, then on the frontier. From early childhood he manifested great intellectual quickness; which together with no great fondness for the narrow sphere of action on his father's farm, he being the ninth of a family of twelve, resulted in his being sent, at the age of fifteen, to a collegiate school in Worthington, Ohio, where he attained great proficiency in classical and mathematical studies. Here he formed a warm, boyish friendship with Salmon P. Chase, the Chief Justice of the United States (whose portrait graces our present number) which has continued to the present. In 1822 he entered the Freshman Class of the Ohio University at Athens, where he remained two years; but discovering the difficulties experienced by a kind father in furnishing means, he resolved to relieve him, and with commendable spirit left the College, went to Virginia, taught for three years, and with accumulated earnings returned North, entering from the Junior Class of Union College in the fall of 1827, which institution he graduated in 1829, with all the honors of the College. In the same year he was elected Fellow, the highest honor that could be conferred upon a graduate then, and spent a year as tutor. In 1830 he accepted the principalship of Union Academy, Belleville, Ohio, and in the following year received simultaneously the appointment to the professorship of Rhetoric and History in Hampden Sydney College, Virginia, and to the professorship of Ancient Languages at Georgetown College, Kentucky, the latter of which he accepted. In 1833 he was called to the professorship of Mathematics and Natural Philosophy in the Collegiate Department of the Institution at Hamilton, N. Y., now Madison University. There he has been ever since, successively occupying the chairs of Mathematics in the University proper, of Ecclesiastical History and of Biblical Theology, in the Theological Seminary. In 1836 he was appointed President of the University, succeeding Stephen W. Taylor, LL.D., which position he still holds. In 1840 his Alma Mater conferred upon him the degree of D.D.; and some years subsequently the degree of LL.D. was conferred upon him by the Union University in Tennessee. Dr. Eaton's published productions consist mainly of Discourses, Lectures, and Essays, which contain evidence of eminent literary ability and a high order of eloquence. His religious life is inspired by a sincere desire to spread the triumph of the cause which he advocates; more especially to raise the standard of Christian education and culture, general and ministerial. Unbigoted and unsectarian in his feelings, loving all who love Christ in sincerity, loving man as man, and ardently desiring that all may be good and happy, an enemy to none, and delighting to render any one a good service, are the chief elements of Dr. Eaton's religion.

Dr. Eaton's organization is eminently delicate, both with regard to its susceptibilities and adaptability. He should be an earnest and usually an accurate student of human nature. His perceptions of character are keen and clear. Although appreciative of the refinements of life, his whole character is so thoroughly pervaded by a sense of the practical, that he may be said to be a practical man, to look upon life in its varied aspects from a practical stand-point. His religious nature is developed more in the direction of active measures, whether co-operative or individual, than in the direction of sentiment and emotion. He has more Benevolence than Faith or Veneration. He appreciates public sentiment, and is much influenced by that appreciation in the carrying out of whatever enterprises he may inaugurate for the benefit of society. He has a stronger sense of personal obligation and duty than a disposition to be stiff, precise, or domineering. While he would have his views cordially accepted by others, he is not one to insist upon them with the stiffness of the dogmatist. He should be a cordial, courteous, frank, genial man in society. A spirit like this would impress itself on all with whom it comes in contact.

WILLIAM R. WILLIAMS, D.D., pastor of the Fifty-fourth Street Baptist Church, New York, was born in New York city, October 14th, 1804. After the usual academic studies he entered Columbia College, where he graduated with the highest honors of his class, in 1823. Subsequently he studied law, and for a time

practiced it. In 1829, or 1830, he became a member of the Oliver Street Church, New York, and on Dec. 17th, 1833, was ordained at the constitution of Amity Street Baptist Church as pastor, where he labored for many years. In 1867 he assumed the charge of the congregation in Fifty-fourth Street, over which he now ministers.

Dr. Williams has published "Religious Progress," "Lectures on the Lord's Prayer," a volume of "Miscellaneous," with several Introductory Essays to books of other writers and various occasional sermons and addresses. His writings are peculiar for their spirituality and devotion, affluence of illustration—especially historical illustration—for a vigorous, racy, figurative style, remarkable for breadth, variety, and power, and a brilliant and fervid imagination. Dr. Williams' theological position is that of a Calvinist of the school of Andrew Fuller, with liberal feelings toward all evangelical bodies. His leading characteristics are fervor and depth of piety, unaffected modesty and simplicity of style, coupled with inflexibility of principle. He is of studious and retiring habits, profound in his attainments, an excellent linguist, and takes delight in the study of authors among the English Puritans, the early Methodists, and the Jansenists of the French Catholic Church. In appearance he is of middle size, pale, thin, contemplative, and intellectual.

A distinguished divine of the Presbyterian Church in New York said of Dr. Williams, on being asked by an individual from abroad as to who deserved to be placed foremost among the eminent ministers in that city, replied: "If piety, humility, comprehensive scholarship, wide acquaintance with history, unusual attainments in literature, together with a refined taste and rare genius as a writer, constitute a great man, then William R. Williams, of the Baptist Church, is the man for whom you inquire."

The countenance of Dr. Williams indicates great susceptibility and intensity, the mental temperament predominating. There is an exhibition of considerable wear upon his constitution, from the undue activity of the brain and nervous system. Dr. Williams possesses, too, a strongly marked will. Fortunately, he has inherited a tenacious physical constitution. There is much of steel wire and gristle in him. Were not this the case, he would have ere this succumbed to the pressure of his mental assiduity. His apprehensions are quick; his thoughts are quick; his actions are quick; his conclusions are rapidly drawn. He must think quickly to think accurately. Observe how nicely and sharply those features are chiseled! Notice his large Causality and Language; the latter supplemented as it is by large Ideality, Sublimity, Spirituality, Mirthfulness, and a superior intellect in general, he should be known as a writer and speaker of eminence. He should, however, be careful to guard against undue cerebral activity, by judiciously selected diet, by plenty of sleep and moderate outdoor exercise. Would not riding a horse be useful to one of this temperament?

JOHN DOWLING, D.D., pastor of the Berean Baptist Church, Bedford St., New York, was first settled as a pastor in New York city in the year 1836, and is one of the oldest and most popular of the Baptist clergy. He was born and educated in England, although he has spent by far the larger portion of his life in America. The place of his birth was Pevensey, on the sea-coast of Sussex, in England, memorable as the landing-place of William the Conqueror in 1066, and near the town of Hastings, where, at the memorable battle of Hastings, the Norman Conqueror, soon after landing, triumphed over the Saxon monarchs of England. Overhanging the house in which Dr. Dowling was born may still be seen the ivy-crowned walls of Pevensey Castle, which once sheltered the soldiers of King William—even in his day, an ancient ruin of Roman origin, covering several acres.

The date of Dr. Dowling's birth was May 12th, 1807, and he has therefore just completed his sixtieth year. Removing at an early age to the city of London, although his parents and his ancestors, for several generations, had been zealous adherents of the Established (Episcopal) Church, he became a member of the Eagle Street Baptist Church at the age of seventeen, under the care of the Rev. Joseph Ivimey, the historian of the English Baptists. His youth was devoted chiefly to study and literary pursuits. At the early age of nineteen he accepted an appointment as instructor in the Latin language and literature, at the Clapham Rise Classical

Institute, in the suburbs of London; and two years later he became instructor in the Hebrew, Greek, Latin, and French languages, in a similar institution in Buckinghamshire, under the care of Rev. Ebenezer West.

Soon after his marriage in 1829, Mr. Dowling established a classical boarding-school in Oxfordshire, a few miles from Oxford University, which continued in a flourishing condition until he disposed of it to his successor for the purpose of removing to America. While principal of that academy, he published three school-books, which for many years were in general use, and are still in use in some of the schools of Great Britain. During all this time, also, he frequently officiated as a preacher in the pulpits of the neighboring pastors.

In 1832 he resolved to make America his future home. He was induced to this course in part on account of the fearful commotions and riots which then prevailed in his native land relative to the Reform agitation, and in part on account of the taxation and oppression inseparable from a monarchical government, and from the union of Church and State. He preferred a republican government, and was much influenced by the fact that America was a promising field of usefulness, and presented greater facilities to a father in bringing up a family of children and settling them comfortably in the world. Upon arriving in America, he received a unanimous call to the pastorate of the Baptist Church at Catskill, and was ordained over that church November 14, 1832, where he preached the Gospel with great success for two years, and afterward for two years at Newport, R. I. In 1836, he commenced his ministry in New York city, where he has, from that time, continued to labor, with the exception of a few years in Providence and in Philadelphia. In August, 1836, he was installed as pastor of a Baptist church then worshipping in the old Gothic Masonic Hall in Broadway, at that time standing opposite the New York Hospital. On this occasion, the installation sermon was preached by Rev. Dr. Spencer H. Cone, and the other services were performed by Doctors Archibald MacLay, Charles G. Sommers, William R. Williams, and Jonathan Going. Dr. Dowling also preached for some two or three years as pastor of the Broadway Baptist Church in Hope Chapel.

In 1844 he first became pastor of the Berean Baptist Church, Bedford Street, New York, where he still continues to preach the Gospel to large congregations. He is now in his second pastorate with his present charge, having accepted a call to Philadelphia in 1832; but in 1836 resumed the charge of the Bedford Street Church, at their urgent and unanimous request.

The success of Dr. Dowling as an author has been no less marked than his success as a preacher. In addition to frequent contributions to our religious periodical literature, introductory essays to several works, and several anniversary sermons and college addresses, he has, during that time, written and published several works which have obtained a very large circulation and a wide celebrity. Among them are the "History of Romanism," a large octavo volume of 784 pages, of which some thirty thousand copies have been published and sold; "Power of Illustration," "Nights and Mornings," "Judean Offering," etc., etc. Twice, since his settlement in America, Dr. Dowling has been made the recipient of collegiate honors. In 1834, soon after his removal to Rhode Island, the honorary degree of Master of Arts was conferred upon him by Brown University, under the Presidency of Rev. Dr. Wayland; and in 1846, soon after the publication of his "History of Romanism," the degree of Doctor of Divinity from Transylvania University, under the Presidency of Rev. Dr. Bascom.

A Baptist clergyman thus describes him: "*Indomitable perseverance and untiring industry* in endeavoring to do good are striking traits in Dr. Dowling's character. His preaching, when he has time to thoroughly prepare his discourses, is ratiocinative, pathetic, and powerful. Large audiences flock to hear him. We must not omit another characteristic, which we believe to be very essential for every minister of the Gospel, and that is the remarkably kind manner in which he treats his brethren. He is always ready to take a brother in need by the hand, and go out of his way to introduce such a brother into a place of usefulness."

Dr. Dowling is probably the largest man in the group. He stands six feet and three inches high, and weighs two hundred and seventy-five pounds. In build, he is not unlike the late General Scott. His brain is large in proportion, measuring twenty-four inches in circumference. All the conditions for health and long life are clearly indicated. He is erect, active, and vigorous. His circulation, breathing, and digestion are excellent. There are no indications of consumption or premature decay here. Socially, he is one of the most loving and affectionate of men. Though somewhat combative, he is the opposite of a belligerent who would seek controversy. His love for money is very moderate. He is cautious, guarded, and prudent. Ambition is subordinate to Benevolence, Conscientiousness, and a desire to do good and do right. Is steadfast and true to his convictions; is moderately hopeful, though never desponding; is eminently devotional and trusting. Though Ideality and Sublimity are prominent, their influence is secondary. He is mirthful, playful, jovial, and even witty. He will scarcely ever outgrow a boyish youthfulness. He is a good observer, a profound thinker, and a capital writer and speaker. With more ambition for worldly honors and display, he could have taken a foremost place even in the councils of a nation. He is the enemy of no man, and can have no enemies.

SAMUEL FRANCIS SMITH, D.D., was born in Boston, October 21, 1808. He graduated from Harvard College in 1829, and studied theology at Andover for three years, and for the next eighteen months was editor of the *Baptist Missionary Magazine*, published in Boston. In 1834 he was ordained pastor of the First Baptist Church, Waterville, Me., and at the same time elected Professor of Modern Languages in Waterville College, both which posts he filled till 1842, when he removed to Newton, Mass., and became pastor of the First Baptist Church, and editor of the *Christian Review*. He continued his charge of the latter till 1849, when it was removed to New York, and remained in the pastorate at Newton till the summer of 1854, when he resigned, and has since been engaged in literary pursuits and editing the publications of the American Baptist Missionary Union. From his early youth Dr. Smith has contributed largely, both in prose and verse, to periodical literature. During his collegiate and theological course he was a large contributor to the "Encyclopedia Americana." The well-known national hymn, "My Country, 'tis of thee," is one of his earlier productions. In 1843, in connection with the Rev. Baron Stow, he compiled the "Psalmist," a rich collection of psalms and hymns. His other publications are "Eric Gems," poems original and selected, and "Life of Rev. Joseph Grafton," besides occasional sermons. He also contributed a large portion of the songs in the "Juvenile Lyre," edited by Lowell Mason.

Dr. Smith possesses a strongly marked organization. There is much positive decision and matter-of-fact in his character. He has an exceedingly high head. The temperament being of the nervous or mental cast, he is inclined to exalt the practical, to perceive in the relations which exist between man and man in society a quality which partakes strongly of the spiritual and devotional, and indicates the workings of Providence in the affairs of men. His piety is that of benevolence, veneration, and conscientiousness, guided by a cultivated intellect rather than by blind superstition. He has a keen insight into character. He is the clear, earnest, apt speaker rather than the verbose talker. He does not ignore the respect of others. His social feelings are warm and earnest. He discerns in society the true field of Christian labor. His tastes are refined, his imagination fervid, but he does not overflow with emotion, so that his expressions mark a spontaneous disposition. His productions would be characterized by care and critical acumen. That is an expressive face, indicating a definite, analytical, descriptive, racy mind. There is nothing dull, heavy, or opaque. All is clear, animated, and sensible. There is dignity, decision, perseverance, and will-power here. His poetry will be more descriptive than imaginative.

ROBERT TURNBULL, D.D., pastor of the First Baptist Church, Hartford, is by birth and education a Scotchman, having been born in Whiteburn, Linlithgowshire, Scotland, September 10, 1800. He re-

ceived a liberal education, and proceeded while young to the University of Glasgow, where he graduated, after which he attended the lectures of Chalmers, Wilson, and others, at Edinburgh. His theological course proper was pursued at Glasgow, on the completion of which he was led to adopt the views of the Baptists, and, after preaching for a short time in Scotland and England, came to the United States in 1833, where he was for about two years the pastor of the Baptist Church in Danbury, Conn. In 1835 he went as a home missionary to Detroit, Michigan, and became pastor of the First Baptist Church in that city. In 1837 he returned to New England, at the call of the South Baptist Church, Hartford, Conn.; and in 1839 he was called to the Boylston Street (now the Harvard Street) Baptist Church, in Boston, where he labored till 1846, when he received and accepted a call from the First Baptist Church in Hartford, Conn. He has remained pastor of this church since that time, winning with each year a stronger influence, not only among his own people, but in other denominations. As a preacher, Dr. Turnbull is eminently scholarly, with great breadth of culture. He is at the same time highly evangelical and earnest. Some of his sermons, for beauty of style and grandeur of thought, are seldom equaled, and hardly ever surpassed. He has much of the fervor, glow, and eloquence of his countrymen, rare command of language, great facility as an extemporaneous speaker, and a most retentive memory. His more elaborate and carefully prepared discourses are models of a nervous and polished English style. He has been, amid all his pastoral and pulpit labors, a very diligent student, and has made himself thoroughly familiar with the metaphysical theories of the German, French, and British schools of philosophy. He has also devoted much attention to general literature and to the discussion of theological topics. His principal published works are "The Theatre," "Olympia Morata," "Vinet's Vital Christianity," a translation, "The Genius of Scotland," "The Genius of Italy," "Theophany, or the Manifestations of God in Christ," "Vinet's Miscellanies," "Pulpit Orators of France and Switzerland," "Christ in History, or the Central Power," and "Life Pictures, or Sketches from a Pastor's Notebook." He also edited Sir William Hamilton's "Discussions on Philosophy," with a historical introduction, conducted for several years the *Christian Review*, a Baptist quarterly periodical, and has been a large contributor to religious periodical literature. His "Genius of Scotland" has been reprinted in Scotland, as high a compliment as could have been paid to its accuracy and worth. His "Christ in History" has shown most fully the "hiding of his power," as one of the best thinkers and writers of our times. He received the degree of D.D. from Madison University in 1851.

Dr. Turnbull is one of the most genial of men, high-minded, and ever true as a friend. His mild eye, beaming with kindness, and his pale intellectual face alike indicate the man, the scholar, and the minister of Christ. In a word, he ranks as one of the ablest writers and preachers of this generation, honored of all, and beloved of the good.

Dr. Turnbull possesses to a considerable extent the intensity, earnestness, and application of the Scottish character. The intellectual lobe is largely developed, the reasoning organs being large, and susceptible of high cultivation. He is possessed of much critical and discriminating acumen. His natural tendency is to studiousness. He is more a thinker than a talker, and on this account his statements, whether they be extemporaneous or carefully prepared before delivery, exhibit marks of deep thought and attention. He should be deeply versed in the relations of society, of the influences which men naturally exercise. Although endowed by nature with much agreeableness, or ability to please, he may exhibit at times abruptness, because his mind becomes thoroughly occupied by a line of thought, so that he can not immediately transfer his attention to any new subject which may be presented. His Language indicates decision, definiteness, and force rather than fluency. Work, work, is clearly depicted here. The mind or spirit which uses this brain is restless, active, and impatient. It is wearing out the vital machinery, and unless mental repose be soon obtained the body will be exhausted. There is something of the Cicero and something of the Cassius here.

THOMAS ARMITAGE, D.D., pastor of the Fifth Avenue Baptist Church, New York, was born in England in 1819, and came to America at the age of nineteen. He is a descendant of Sir John Armitage, of Barneley, Yorkshire, whose descendants hold good rank among the English nobility. The precepts of a pious mother, who was a member of the Methodist persuasion, made a deep impression upon his mind; and at the extremely early age of fifteen we find him licensed to exhort in the Methodist Church. Six months after he was licensed to preach, and delivered his first discourse at Attercliffe Common, near Sheffield, with such marked success that it was the means of converting quite a number of his hearers. After three or four years of successful labor as a local preacher in England, his attention was turned toward the liberal institutions and the promising field of religious labor in the United States. After coming to this country, he preached first in Suffolk County, L. I.; then in Watervliet, Albany County, N. Y.; and next in the Garretson Station Methodist Episcopal Church, Pearl Street, Albany, and subsequently in other places, inaugurating extensive and extraordinary revivals. He soon attained an eminent and influential position in the Methodist Church. In 1839, having occasion to attend the ceremonial of baptism as performed in the Baptist Church, he was so deeply impressed that he commenced a series of careful investigations into the doctrine, practice, and government of the Baptist Church, and after six months' careful consideration he became fully persuaded that in that denomination he would find a more congenial religious atmosphere. Withdrawing then from the Methodist Episcopal Church, he was baptized by Rev. Dr. Welsh into the fellowship of the Pearl Street Baptist Church, Albany, and was shortly afterward ordained as a minister, and was called to the Norfolk Street Church, New York, over which congregation he is still settled, who now worship in the Fifth Avenue Baptist Church, corner of Forty-sixth Street and Fifth Avenue. The honorary degree of A.M. was conferred upon Dr. Armitage by Madison University at the age of twenty, and fourteen years later the degree of D.D. was conferred by Georgetown College, Ky. Since 1856 he has been the president of the American Bible Union. He is an eloquent and powerful preacher; a splendid orator—with a voice beautifully clear and musical—often soaring into the ideal, or the realms of wild and impassioned eloquence. His thoughts are highly original; and being endowed with the greatest gifts of eloquence, a man of extended learning and the highest social culture, he is enabled to hold one of the foremost places among the incumbents of the Baptist pulpit.

Dr. Armitage has an intense, earnest nature; his life is full of enthusiasm and fervor. Inheriting the feminine cast of intellect, his intuitive knowledge of truth flashes upon him instantly; his mind is full of facts and relations, which are always on hand; and though his language is only fairly indicated, yet this peculiar, intuitive character of his intellect enables him to bring his ideas clearly forth with only a moderate amount of colloquial talent. Firmness is large; he is positive, and strongly inclined to take a position of independence and authority. As a preacher he would be more ethical in his teachings than subservient, more inclined to instruct people how to do justly and love mercy than to walk humbly. Dogmatic theology is no part of his creed. He is a leader, not a follower of men; he would make innovations as a reformer, yet would not be averse to adopting unpopular truths. Whatever Dr. Armitage thinks to be duty, he performs for the earnest love of it, with a spirit of philanthropy and love for his fellow-men which gives him great influence in awaying the minds and molding the character of others. There is a free, frank openness, without concealment, which introduces him at once into the confidence of another. Such a temperament is capable of almost constant effort without exhaustion, there being so little mental friction. Kindness and affection are his more prominent traits of character.

REV. SIDNEY A. COREY, pastor of Murray Hill Baptist Church, New York, was born at Leroy, Jefferson County, N. Y., October 6, 1822. In his early life he was an actor, but becoming seriously interested in religious matters, he abandoned the stage,

and finally completed his education and studied theology at Madison University, where he graduated. In 1841 he was ordained to the Baptist ministry at Sing Sing, N. Y., where he preached for eighteen months. In 1843 he came to New York, where a church was erected for him in Eleventh Street; afterward removed to Twelfth Street for increased accommodations. In 1856-7 a magnificent church edifice was erected for his congregation at the corner of Fifth Avenue and Thirty-fifth Street; but in the following year, bringing with it the great financial crisis, the congregation, unable to pay for a debt incurred of one hundred thousand dollars, the church building was sold, and Mr. Corey's congregation removed to a church in Thirty-fifth Street. In 1862 the congregation again removed to a commodious edifice in Twenty-eighth Street, near Broadway, and subsequently to the church on Murray Hill, where they now worship. As a preacher, Mr. Corey's style of address is thus stated by a lady critic: "He illustrates his text with lively anecdote, spicy commentary, and solid facts—now warming up into the realms of imagination, now descending again into the prosaic reality. If we were called upon to describe his peculiar eloquence, we should say it was the *flowery* style. He garlands every sentence with rhetorical flowers—he polishes and refines—there is a soft, romantic, sentimental atmosphere around his discourses. There is a delusive, *unreal* radiance around his eloquence, like the strange supernatural light of the winter moon. He covers his subject with blossoms of fancy and ideality, as the robins in the nursery tale covered the babes in the wood with forest leaves. In all his sermons there is deep religious fervor and earnestness of appeal, sometimes dramatically expressed, but always appropriate and seldom surpassed."

Mr. Corey has highly distinguished himself also as a religious lecturer. In appearance he is kindly, courtly, and gentlemanly. Cheerful and hopeful, he is always welcome. Polished and gentlemanly, fluent and entertaining in conversation, his companionship is sought for the profit and pleasure it imparts.

Mr. Corey stands not far from six feet high, is well proportioned, erect, and stately. He is blessed with a good degree of self-reliance, a high degree of firmness, and a strong love of approbation, and is not wanting in self-esteem. These qualities combining with a fine intellect, which is highly cultivated, with mirthfulness, imagination, and an aptitude for any calling, fit him for a leader. His Benevolence is large, and his sympathies active and strong. Veneration, Hope, and Spirituality are also large; and he is profoundly devout, eminently spiritual, with exalted hopefulness. He is full of feeling, impulse, and emotion, and could scarcely prevent himself from manifesting these strong characteristics always and everywhere. He is without cunning or concealment, and enters instantly into the nature of those he meets. There is poetry, music, art, and oratory combined in him.
